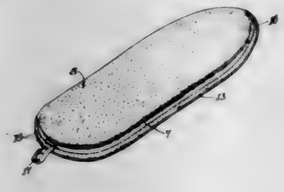
# REISSUES

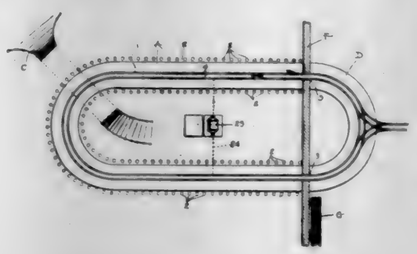
## NOVEMBER 3, 1925.

16,194. **PRESSER FOR VELOUR, BOLIVIA, ETC.** RUBIN BASS, Brooklyn, N. Y. Filed Apr. 10, 1925. Serial No. 22,235. Original No. 1,453,697, dated May 1, 1923, Serial No. 592,241, filed Oct. 4, 1922. 6 Claims. (Cl. 68—11.)



1. A pressing device comprising a cloth foundation having wire needles projecting therefrom and a backing stitched to the foundation by lines of stitches traversing over the surface thereof to hold the backing to the foundation and prevent the needles from working loose.

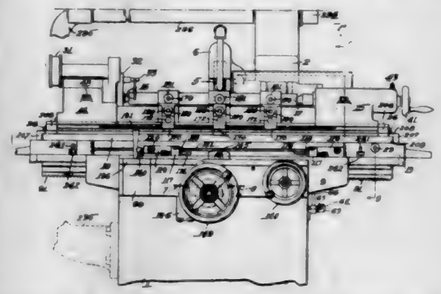
16,195. **METHOD OF FEEDING PEOPLE.** JOHN M. BAITINGER, St. Paul, Minn. Filed Apr. 2, 1924. Serial No. 703,826. Original No. 1,442,211, dated Jan. 16, 1923, Serial No. 308,885, filed July 5, 1919. 16 Claims. (Cl. 186—1.)



1. In a food serving mechanism, a table, a plurality of normally open food receptacles adapted to be successively moved along said table to accessibly display said food, means for maintaining some of said food receptacles at a predetermined temperature and means for interchangeably attaching said temperature maintaining means upon other of said receptacles.

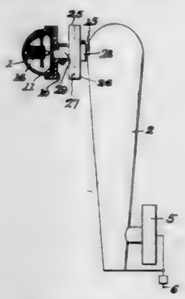
16,196. **GRINDING MACHINE.** JOHN BATH, Worcester, Mass., assignor to John Bath & Company, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed May 25, 1925. Serial No. 32,854. Original No. 1,202,018, dated Oct. 24, 1916, Serial No. 701,754, filed June 5, 1912. 33 Claims. (Cl. 51—95.)

1. A grinding machine including in its construction a cross feed carriage, a work holding slide mounted on said carriage and movable transversely to the feed of the latter, and mechanism for automatically driving said slide, including a gear supported on a stationary part of the machine and having a length as great as the distance of feeding of said carriage, a gear mounted upon the



carriage in mesh with and movable longitudinally of said driving gear, and further gearing driven by the second named gear and connected with the work holder.

16,197. **SOUND-REPRODUCING DEVICE.** PATRICK B. DELANY, South Orange, N. J.; James H. Delany executor of said Patrick B. Delany, deceased. Filed July 9, 1923. Serial No. 650,482. Original No. 1,415,807, dated May 9, 1922, Serial No. 214,951, filed Feb. 1, 1918. 8 Claims. (Cl. 179—100.1.)

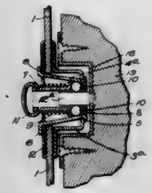


1. A sound reproducing device comprising: a sound reproducing instrument having a tubular sound wave directing member, a telephone transmitter of the current-generating type mounted on the side of said tubular member in position to be actuated by sound wave disturbances within said member, and a telephone circuit within which said transmitter is included.

16,198. **CURTAIN FASTENER.** JOHN L. PETERSON, Grand Rapids, Mich., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed June 25, 1925. Serial No. 39,612. Original No. 1,471,570, dated Oct. 23, 1923, Serial No. 570,828, filed June 26, 1922. 11 Claims. (Cl. 24—211.)

11. A flush type separable fastener installation including a socket-retaining part countersunk into a recess in

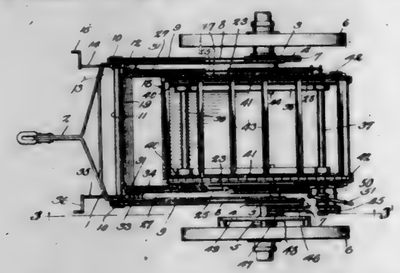
a rigid support and means for securing said socket-retaining part to said support and having its outer end lo-



cated in substantially the same plane as the outer face of the support.

---

16,199. EXCAVATOR. JESSE E. SCHULTZ, Albany, Wis., assignor of one-third to Ray Webb and one-third to Colonel Dixon, both of Albany, Wis. Filed Sept. 17, 1925. Serial No. 57,012. Original No. 1,537,558, dated May 12, 1925, Serial No. 733,408, filed Aug. 21, 1924. 16 Claims. (Cl. 37—4.)

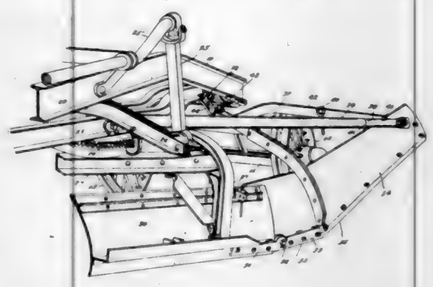


1. The combination with supporting wheels and a frame carried therebetween, of a scoop movably mounted within the frame, an endless loading device mounted for swinging movement within the scoop, and means for actuating the loading device to pile material within the scoop.

---

16,200. DITCH-FORMING GRADER. JOSEPH D. ADAMS, deceased, late of Indianapolis, Ind., by Roy E. Adams and William Ray Adams, Indianapolis, Ind., administrators, and Roy E. Adams, Indianapolis, Ind., assignors to J. D. Adams & Company, a Partnership composed of Roy E. Adams, William Ray Adams, Leona H. Adams and Helen J. Adams as individuals, and Roy E. Adams, William Ray Adams and S. E. Henry, as trustees. Filed June 6, 1925. Serial No. 35,503. Original No. 1,507,552, dated Sept. 2, 1924, Serial No. 405,318, filed Aug. 23, 1920. 16 Claims. (Cl. 37—155.)

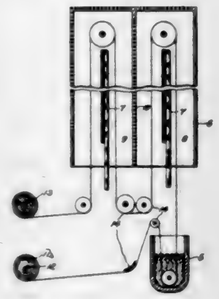
1. A ditch-forming road grader, comprising the combination of a wheel-supported frame and a ground-cutting element, two adjustable lifting devices mounted on said frame and operable independently of each other, and thrust-transmitting members connecting said lifting de-



vices with transversely spaced points on said cutting element, said cutting element including two blade members vertically angularly adjustable relative to each other.

---

16,201. MANUFACTURE OF LAMINATED MATERIAL FROM SPINNABLE TEXTILE WOVEN FABRICS AND AN ADHESIVE BINDER. EMILE J. GUAY, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Sept. 22, 1925. Serial No. 57,975. Original No. 1,541,641, dated June 9, 1925, Serial No. 705,111, filed Apr. 8, 1924. 3 Claims. (Cl. 154—2.)



3. In the manufacture of material of the character described from spinnable textile woven fabric and an adhesive binder, the method of applying the adhesive binder primarily to the surface of the fabric which comprises first saturating the fabric with a solution of the adhesive binder, then drying the saturated material in an initial manner so it can be readily handled, and finally drying it in a vacuum so that the rapid ebullition of the solvent will carry the adhesive binder to the surface of the material.

# DESIGNS

## NOVEMBER 3, 1925.

68,609. TWO-WAY PLUG. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 22, 1925. Serial No. 13,184. Term of patent 14 years.

The ornamental design for a two-way plug substantially as shown.

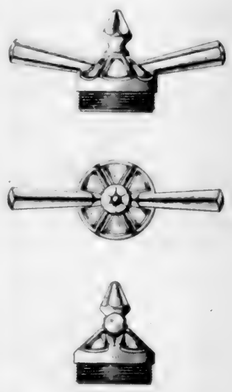
68,616. LAMP-POST. WILLIAM DILL, Rushville, Ind. Filed June 16, 1925. Serial No. 13,795. Term of patent 14 years.

The ornamental design for a lamp post substantially as shown.

68,617. RADIATOR CAP. EAMES DONALDSON, Buffalo, N. Y., assignor to The Bronzo Alumina Corporation, a Corporation of New York. Filed Aug. 10, 1925. Serial No. 14,371. Term of patent 14 years.



The ornamental design for a radiator cap, substantially as shown.

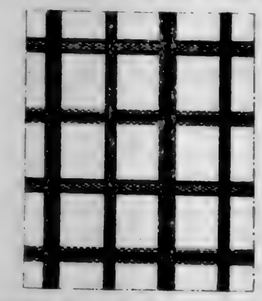
68,618. FEED-TROUGH SWITCH. JOHN B. DOWNING, Orange, N. J., assignor to Beaver Machine & Tool Co. Inc., Newark, N. J. Filed Aug. 27, 1925. Serial No. 14,608. Term of patent 7 years.

The ornamental design for a feed trough switch as shown.

68,619. CANDY UNIT. SAMUEL I. EPSTEIN, Brooklyn, N. Y. Filed Mar. 7, 1925. Serial No. 12,628. Term of patent 7 years.

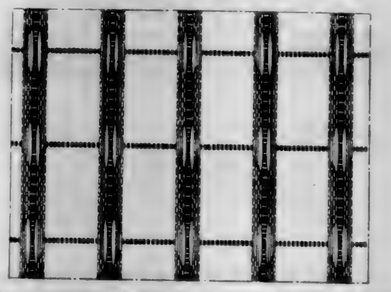
The ornamental design for a candy unit as shown.

68,620. TEXTILE FABRIC. THOMAS W. ESTES, New York, N. Y., assignor to Estes & Blum, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1925 Serial No. 13,265. Term of patent 3½ years.



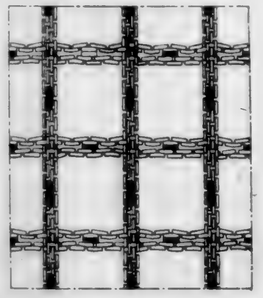
The ornamental design for a textile fabric as shown.

68,621. TEXTILE FABRIC. THOMAS W. ESTES, New York, N. Y., assignor to Estes & Blum, Inc., New York, N. Y., a Corporation of New York. Filed May 2, 1925. Serial No. 13,302. Term of patent 3½ years.



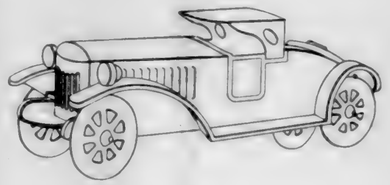
The ornamental design for a textile fabric as shown.

68,622. TEXTILE FABRIC. THOMAS W. ESTES, New York, N. Y., assignor to Estes & Blum, Inc., New York, N. Y., a Corporation of New York. Filed May 4, 1925. Serial No. 13,319. Term of patent 3½ years.



The ornamental design for a textile fabric as shown.

68,623. TOY ROADSTER. CLARENCE E. FLORKEY, Dayton, Ohio, assignor to The Schieble Toy and Novelty Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 25, 1922. Serial No. 4,089. Term of patent 14 years.



The ornamental design for a toy roadster, as shown.

68,624. CEILING PLATE FOR LIGHTING FIXTURES. HARRY E. GOLDSTEIN, Indianapolis, Ind. Filed Aug. 1, 1925. Serial No. 14,296. Term of patent 7 years.

The ornamental design for a ceiling plate for lighting fixtures substantially as shown.

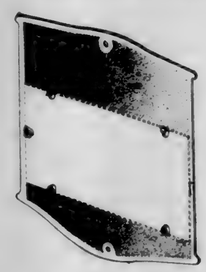
68,625. BADGE. HARRY W. HAHN, Washington, D. C. Filed June 27, 1925. Serial No. 13,926. Term of patent 3½ years.

The ornamental design for a badge, as shown.

68,626. TRAFFIC-SIGNAL STANDARD. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 11, 1924. Serial No. 10,440. Term of patent 14 years.

The ornamental design for a traffic signal standard as shown.

68,627. NAME-PLATE HOLDER. BRYSON D. HORTON, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 27, 1922. Serial No. 4,422. Term of patent 14 years.

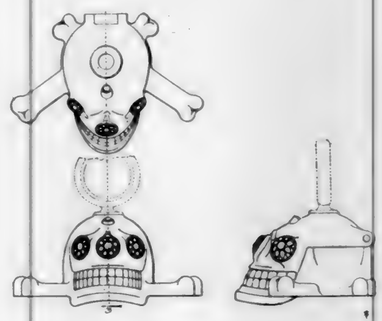


The ornamental design for a name plate holder as shown.

68,628. BADGE. BRUNO E. JACOBS, Ripon, Wis. Filed Sept. 3, 1925. Serial No. 14,702. Term of patent 14 years.

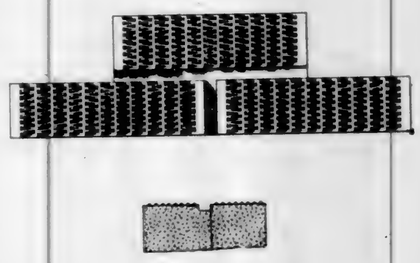
The ornamental design for a badge, as shown.

68,629. RADIATOR CAP. JOSEPH C. JUNEAU, Aurora, Ill. Filed Jan. 12, 1925. Serial No. 12,007. Term of patent 3½ years.



The ornamental design for a radiator cap, as shown.

68,630. BUILDING BLOCK. EDWARD A. LONG, Newcastle, Pa. Filed June 6, 1925. Serial No. 13,692. Term of patent 14 years.



The ornamental design for a building block, substantially as shown.

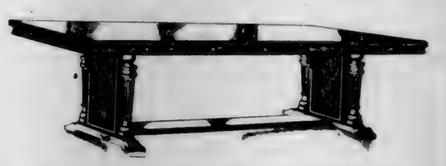
68,631. BOTTLE OR SIMILAR CONTAINER. CHARLES LIONEL MARCUS, New York, N. Y. Filed July 5, 1924. Serial No. 10,071. Term of patent 3½ years.

The ornamental design for a bottle or similar container as shown.

68,632. FINGER RING. JACK MARTIN, New York, N. Y., assignor to The Guarantee Finding Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed July 25, 1925. Serial No. 14,219. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

68,633. TABLE. JOSEPH R. MCCARGAR, Grand Rapids, Mich. Filed Aug. 24, 1925. Serial No. 14,573. Term of patent 7 years.



The ornamental design for a table, substantially as shown.

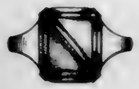
68,634. BADGE. GEORGE C. MCCARRON, Kansas City, Mo. Filed Sept. 19, 1925. Serial No. 14,834. Term of patent 14 years.

The ornamental design for a badge, as shown.

68,635. OXFORD. GEORGE MILLER, New York, N. Y. Filed Aug. 20, 1925. Serial No. 14,538. Term of patent 14 years.

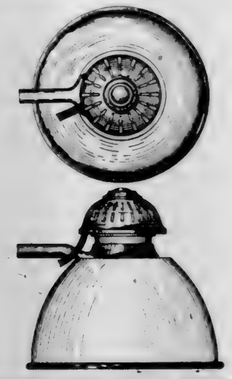
The ornamental design for an oxford, as shown.

68,636. FINGER RING. ISRAEL A. POSNER, Providence, R. I. Filed Sept. 17, 1925. Serial No. 14,803. Term of patent 7 years.



The ornamental design for a finger ring, as shown and described.

68,637. THERAPEUTIC LAMP. JAY J. REKAR, Los Angeles, Calif. Filed Oct. 20, 1924. Serial No. 11,133. Term of patent 3½ years.

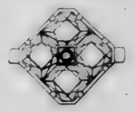


The ornamental design for a therapeutic lamp, as shown.

68,638. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 16, 1925. Serial No. 13,462. Term of patent 7 years.

The ornamental design for a ring, as shown.

68,639. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 13,475. Term of patent 7 years.

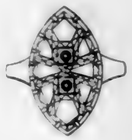


The ornamental design for a ring, as shown.

68,640. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 18, 1925. Serial No. 13,476. Term of patent 7 years.

The ornamental design for a ring, as shown.

68,641. GEM-SET RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed July 16, 1925. Serial No. 14,113. Term of patent 7 years.

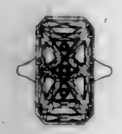


The ornamental design for a gem-set ring, as shown.

68,642. FINGER RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed July 16, 1925. Serial No. 14,114. Term of patent 7 years.

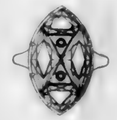
The ornamental design for a finger ring, as shown.

68,643. FINGER RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,636. Term of patent 7 years.



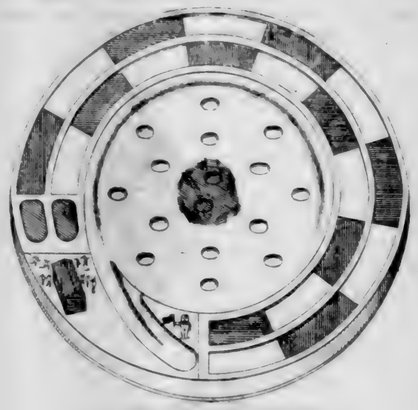
The ornamental design for a finger ring, as shown.

68,644. GEM-SET FINGER RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed Aug. 29, 1925. Serial No. 14,637. Term of patent 7 years.



The ornamental design for a gem-set finger ring, as shown.

68,645. GAME BOARD. FRANK S. RODE, Jeannette, Pa. Filed Jan. 18, 1923. Serial No. 4,931. Term of patent 7 years.

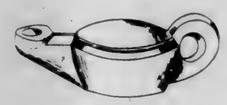


The ornamental design for a game board, as shown.

68,646. WALKING CANE. ERNEST H. ROSS, Iowa City, Iowa. Filed July 6, 1925. Serial No. 14,005. Term of patent 14 years.

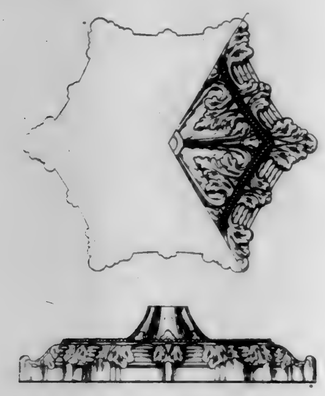
The ornamental design for a walking cane, as shown.

68,647. RECEPTACLE FOR SKIN CREAM. CONRAD SCHÜMMELFEDER, Osnabruck, Germany. Filed Sept. 10, 1925. Serial No. 14,745. Term of patent 14 years.



The ornamental design for a receptacle for skin cream as shown.

68,648. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,987. Term of patent 3½ years.

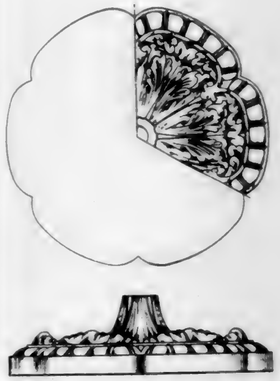


The ornamental design for a lamp base as shown.

68,649. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,988. Term of patent 3½ years.

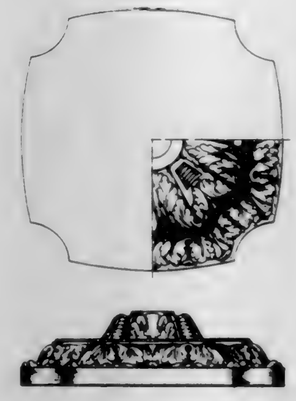
The ornamental design for a lamp base as shown.

68,650. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,989. Term of patent 3½ years.



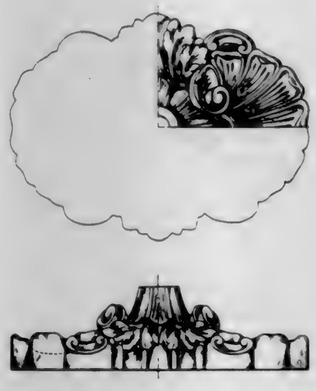
The ornamental design for a lamp base as shown.

68,651. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,990. Term of patent 3½ years.



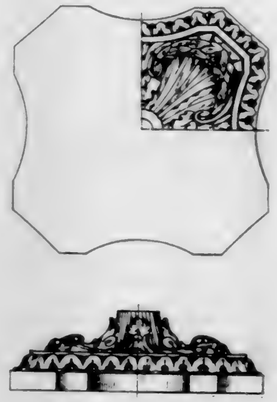
The ornamental design for a lamp base as shown.

68,652. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,991. Term of patent 3½ years.



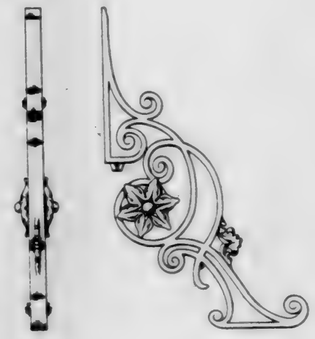
The ornamental design for a lamp base as shown.

68,653. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,992. Term of patent 3½ years.



The ornamental design for a lamp base as shown.

68,654. LAMP BRACKET. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,993. Term of patent 3½ years.



The ornamental design for a lamp bracket as shown.

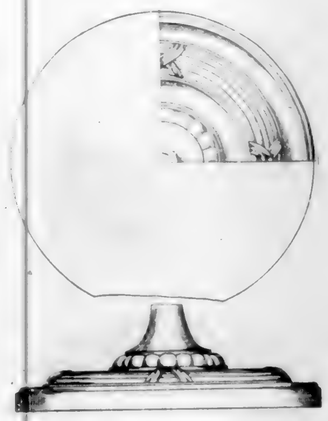
68,655. LAMP BRACKET. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,994. Term of patent 3½ years.

The ornamental design for a lamp bracket as shown.

68,656. LAMP BRACKET. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,995. Term of patent 3½ years.

The ornamental design for a lamp bracket as shown.

68,657. LAMP BASE. LOUIS SEVERUS, Chicago, Ill., assignor to Art Lamp Manufacturing Company, Chicago, Ill. Filed Apr. 3, 1925. Serial No. 12,996. Term of patent 3½ years.

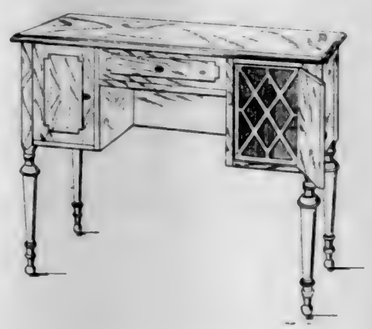


The ornamental design for a lamp base, as shown.

68,658. LIGHTING-FIXTURE PART. PAUL SIPTROTT, New York, N. Y., assignor to Royal Metal Lighting Fixture Company, Inc., a Corporation of New York. Filed Sept. 16, 1925. Serial No. 14,799. Term of patent 3½ years.

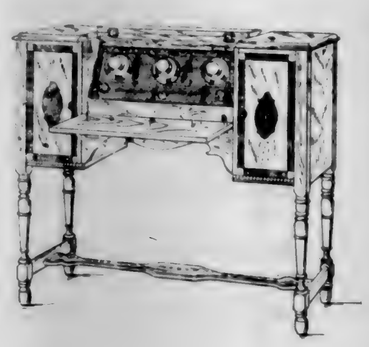
The ornamental design for a lighting fixture part, as shown and described.

68,659. RADIOTABLE. CHARLES B. SMITH, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 5, 1925. Serial No. 14,321. Term of patent 7 years.



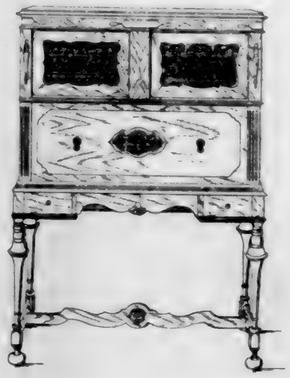
The ornamental design for a radio table substantially as shown.

68,660. CONSOLE RADIORECEIVER. CHARLES B. SMITH, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 5, 1925. Serial No. 14,322. Term of patent 7 years.



The ornamental design for a console radio receiver substantially as shown.

68,661. CONSOLE RADIOCABINET. CHARLES B. SMITH, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 5, 1925. Serial No. 14,323. Term of patent 7 years.



The ornamental design for a console radio cabinet substantially as shown.

68,662. CHAIR. WILLIAM A. SNOW, Winchester, Mass. Filed Aug. 17, 1925. Serial No. 14,497. Term of patent 14 years.

The ornamental design for a chair, as shown.

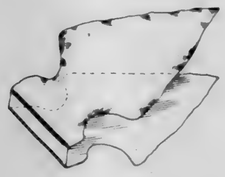
68,663. ARM CHAIR. WILLIAM A. SNOW, Winchester, Mass. Filed Aug. 17, 1925. Serial No. 14,498. Term of patent 14 years.

The ornamental design for an arm chair as shown.

68,664. TABLE. WILLIAM A. SNOW, Winchester, Mass. Filed Aug. 17, 1925. Serial No. 14,499. Term of patent 14 years.

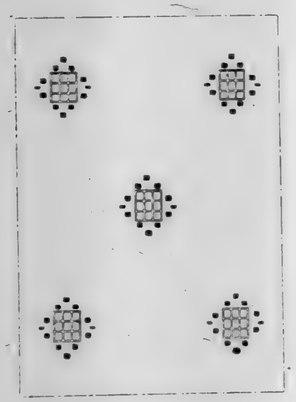
The ornamental design for a table as shown.

68,665. BOOKLET COVER. FRED F. SOWL, Duluth, Minn. Filed June 19, 1925. Serial No. 13,827. Term of patent 7 years.



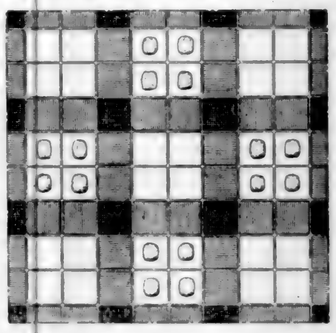
The ornamental design for a booklet cover, as shown.

68,666. TEXTILE FABRIC. IRA STRAUSS, New York, N. Y., assignor to Rosenstein-Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,405. Term of patent 7 years.



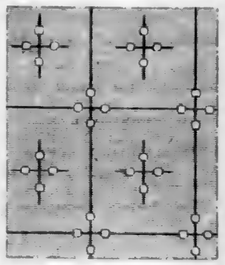
The ornamental design for a textile fabric, as shown.

68,667. TEXTILE FABRIC. IRA STRAUSS, New York, N. Y., assignor to Rosenstein-Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,406. Term of patent 7 years.



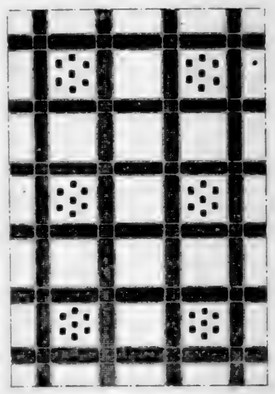
The ornamental design for a textile fabric, as shown.

68,668. TEXTILE FABRIC. IRA STRAUSS, New York, N. Y., assignor to Rosenstein-Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,408. Term of patent 7 years.



The ornamental design for a textile fabric, as shown.

68,669. TEXTILE FABRIC. IRA STRAUSS, New York, N. Y., assignor to Rosenstein-Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 14,409. Term of patent 7 years.



The ornamental design for a textile fabric, as shown.

68,670. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,825. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

68,671. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,826. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

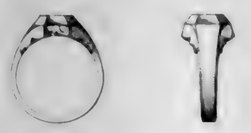
68,672. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,827. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

68,673. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,828. Term of patent 3½ years.

The ornamental design for a finger ring, as shown.

68,674. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,829. Term of patent 3½ years.

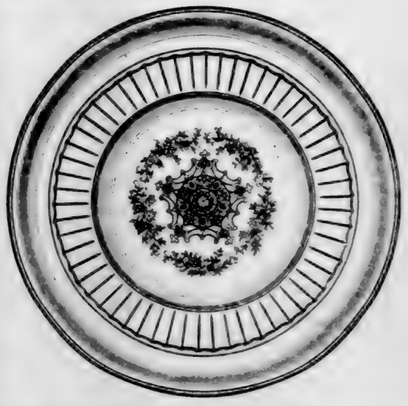


The ornamental design for a finger ring, as shown.

68,675. FINGER RING. ABRAHAM SUDEROV, New York, N. Y. Filed Sept. 19, 1925. Serial No. 14,830. Term of patent 3½ years.

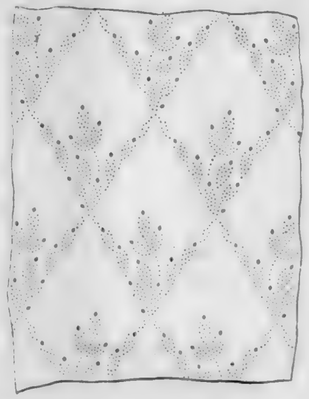
The ornamental design for a finger ring, as shown.

68,676. PLATE OR SIMILAR ARTICLE. HOMER J. TAYLOR, East Liverpool, Ohio. Filed Sept. 17, 1925. Serial No. 14,800. Term of patent 7 years.



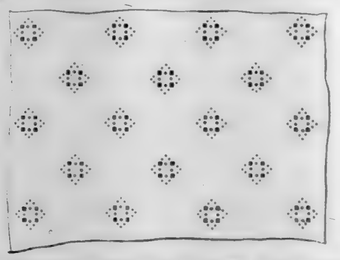
The ornamental design for a plate or similar article, as shown.

68,677. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1924. Serial No. 10,610. Term of patent 3½ years.



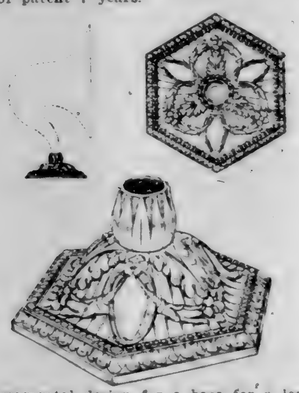
The ornamental design for flocked voile fabric, as shown.

68,678. FLOCKED VOILE FABRIC. EDWARD B. VANDERGAW, Brooklyn, and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1924. Serial No. 10,613. Term of patent 3½ years.



The ornamental design for flocked voile fabric, as shown.

68,679. BASE FOR A LOUD SPEAKER. WALTER VAN GUILDER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 3, 1925. Serial No. 13,986. Term of patent 7 years.

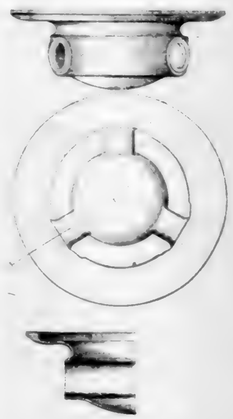


The ornamental design for a base for a loud speaker substantially as shown.

68,680. LIGHTING FIXTURE. WALTER VON NESSEN, Brooklyn, N. Y., assignor to Efcolite Corporation, a Corporation of New York. Filed Sept. 11, 1925. Serial No. 14,757. Term of patent 3½ years.

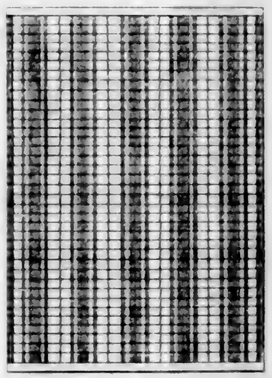
The ornamental design for a lighting fixture, substantially as shown.

68,681. LIGHTING FIXTURE. WALTER VON NESSEN, Brooklyn, N. Y., assignor to Efcolite Corporation, a Corporation of New York. Filed Sept. 11, 1925. Serial No. 14,756. Term of patent 3½ years.



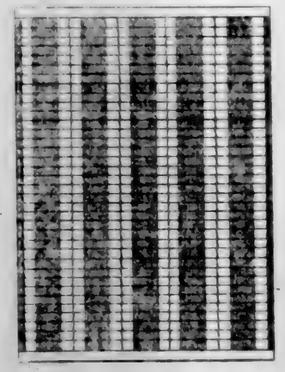
The ornamental design for a lighting fixture, substantially as shown.

68,682. PORCH SHADE. GEORGE A. WALKER, Waukesha, Wis. Filed Sept. 15, 1924. Serial No. 10,777. Term of patent 7 years.



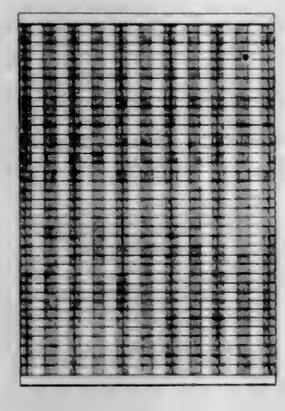
The ornamental design for a porch shade as shown and described.

68,683. PORCH SHADE. GEORGE A. WALKER, Waukesha, Wis. Filed Sept. 15, 1924. Serial No. 10,778. Term of patent 7 years.



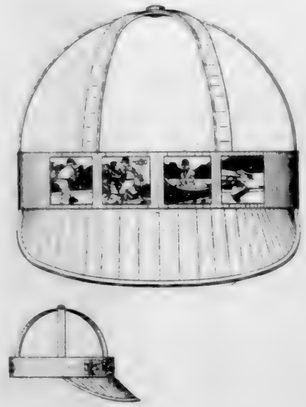
The ornamental design for a porch shade as shown and described.

68,684. PORCH SHADE. GEORGE A. WALKER, Waukesha, Wis. Filed Sept. 15, 1924. Serial No. 10,779. Term of patent 7 years.



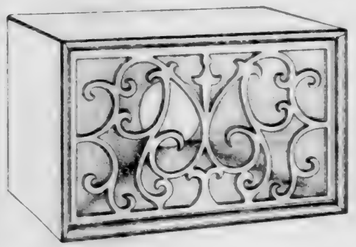
The ornamental design for a porch shade as shown and described.

68,685. CAP. EMIL B. WEINROTT and LESTER A. WEINROTT, Moline, Ill. Filed Aug. 15, 1925. Serial No. 14,432. Term of patent 7 years.



The ornamental design for cap as shown.

68,686. CABINET FOR LOUD-SPEAKER RADIORE-PRODUCERS. CHARLES D. WHITE, East Orange, N. J., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Aug. 29, 1925. Serial No. 14,632. Term of patent 14 years.

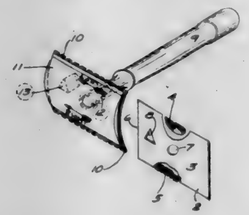


The ornamental design for a cabinet for loud speaker radio reproducers as shown.

# PATENTS

## GRANTED NOVEMBER 3, 1925.

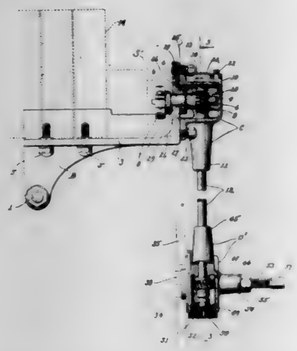
1,559,536. SAFETY RAZOR. WILLIAM H. ALDEN, Jr., Bryn Athyn, Pa. Filed Dec. 22, 1921. Serial No. 524,240. 4 Claims. (Cl. 30—12.)



1. In a safety razor of the hoe type the combination of a holder and a double-edged blade, the blade having both edges sharpened with a rake toward the same end, and interlocking means between the blade and the holder insuring mounting of the blade upon the holder with the rake always in the same direction, and means to indicate to the user the direction in which said rake extends.

---

1,559,537. MAGNETO DRIVING CONNECTION FOR GAS ENGINES. FREDERICK W. ANDREW, Brooklyn, N. Y., assignor to Eisemann Magneto Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 30, 1922. Serial No. 591,482. 23 Claims. (Cl. 123—149.)

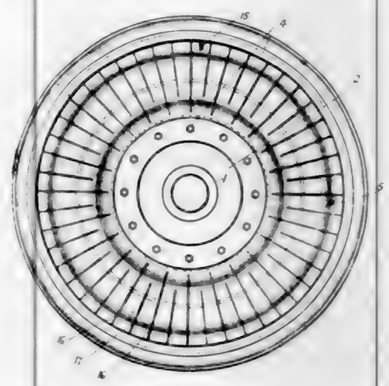


5. In combination with a gas engine, a polygonal member fixed on the engine shaft near the projecting outer end thereof, a gear on the projecting end of said shaft, means for coupling said gear to said member, said means being slidable on said shaft into and out of engagement with said member, a magneto associated with the engine, and driving connections between said gear and the magneto.

---

1,559,538. DISK WHEEL. STERLING W. ALDERFER, Akron, Ohio. Filed Dec. 19, 1923. Serial No. 681,509. 9 Claims. (Cl. 301—63.)

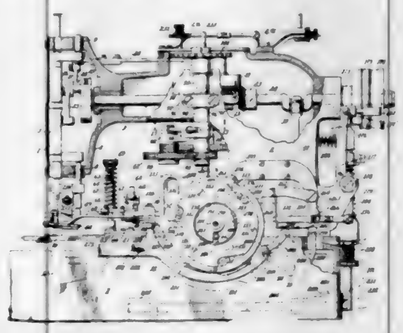
1. In a wheel construction, a hub, an intermediate disk and a tire carrying rim supported upon the outer periphery of the disk, the disk being reversely curved in radial cross-section and provided with a plurality of open radial slots extending from adjacent the rim to



adjacent the bolt circle, and open slots intermediate the first named slots but terminating short of the inner ends thereof.

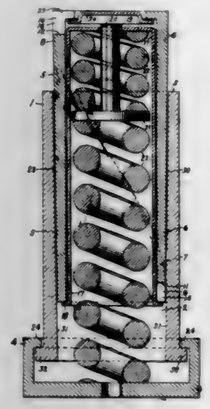
---

1,559,539. BUTTONHOLE-SEWING MACHINE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed July 23, 1921. Serial No. 487,001. 24 Claims. (Cl. 112—73.)



1. In a buttonhole sewing machine, the combination with stitch-forming mechanism, a work-holder, and means for relatively moving them to sew about a buttonhole, of an auxiliary rotary control element stationary during the sewing, a continuously rotating power element, a clutch connection between said elements for causing the rotary control element to turn with a continuous motion for a partial rotation prior to sewing and for a second partial rotation subsequent to sewing, each of said partial rotations being followed by a period of rest, devices auxiliary to the stitch-forming mechanism in the buttonhole producing cycle, and means driven by said rotary control element and connections for operating said devices.

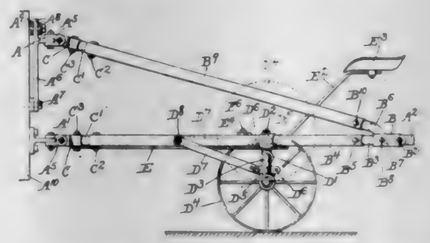
1,559,540. DRAFT GEAR. WALTER M. AUSTIN, Swissvale, Pa. Filed June 17, 1920. Serial No. 389,605. 24 Claims. (Cl. 213—23.)



1. A draft gear comprising a housing having a tapered interior bore, two oppositely disposed resilient friction members the engaging surfaces of which have a large pitch and a resilient member disposed between one end of the housing and the corresponding end of one of the resilient friction members.

---

1,559,541. TRAILER FOR TRACTORS. WILLIAM I. BALLENTINE, La Porte, Ind., assignor to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed Feb. 6, 1922. Serial No. 534,429. 16 Claims. (Cl. 280—33.44.)

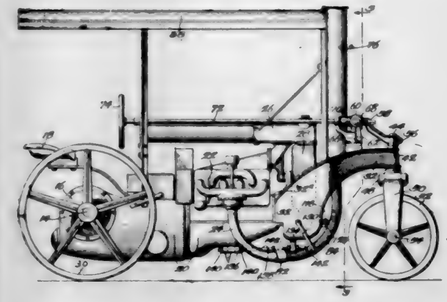


1. A tractor draw bar trailer comprising a plurality of superposed A frames, means for pivoting them at their apices to the tractor and at their rear ends to each other, a rotatable axle secured to the lower of said A frames, offset portions at each end thereof, wheels secured to said offset portions, and means for rotating said axle to raise and lower said wheels.

---

1,559,542. THREE-WHEEL ROAD ROLLER. WILLIAM T. BEATTY, Flossmoor, and FRANK S. DAVIS, Homewood, Ill., said Davis assignor to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1922. Serial No. 606,184. 9 Claims. (Cl. 180—20.)

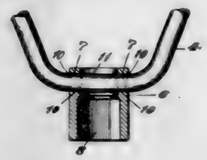
1. In a machine of the class described, a pair of spaced rear rollers, a front roller in advance of the rear rollers, an engine mechanism for propelling the machine, having a case sustained by the rear rollers and extending toward the front roller, a separate frame secured to the front portion of the engine case, operatively connected to the front roller, the frame being hollow adjacent to the engine case, an engine crank shaft in the



case with its end projecting inside the frame, and means operable from the side of the frame for manually turning the crank shaft.

---

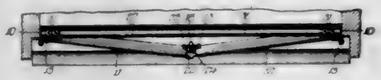
1,559,543. METHOD OF ATTACHING A TOOL HEAD TO ITS HANDLE. FRANKLIN HUBBARD BELLOWS, Worcester, Mass., assignor to Walden-Worcester, Incorporated, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1922. Serial No. 580,624. 4 Claims. (Cl. 76—114.)



1. The method of making a tool comprising forming a tool head having an opening therethrough, positioning a handle in said opening with its end portions extending beyond the surface of the head, and bending said end portions in such manner as to distort the intermediate portion within the opening whereby to restrain movement of the tool head thereon.

---

1,559,544. CASEMENT WINDOW. CHARLES S. BOCK, Chicago, Ill., assignor to Andrew Hoffman Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 21, 1923. Serial No. 675,992. 8 Claims. (Cl. 189—69.)

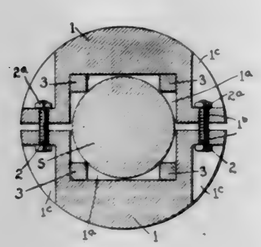


3. In a casement window, a frame, two pivotally connected sashes, and a plurality of fixtures having portions associated with the frame for sliding movement of the fixtures in substantially fixed relation to a plane of the frame and resiliently flexible portions associated with the sashes for swinging movement of the sashes about pivotal axes on the fixtures.

1,559,545. SLIDE FOR FURNITURE AND THE LIKE. ROBERT S. BOOTH, Waterbury, Conn., assignor to Berbecker & Rowland Manufacturing Company, Waterville, Conn., a Corporation of Connecticut. Filed Nov. 29, 1921. Serial No. 518,535. 4 Claims. (Cl. 16—42.)

1. The combination with an article of furniture, of a slide member connected thereto, said slide member comprising a disk having an annular portion providing a convexity designed to form an annular bearing surface, the upper edge of said annular portion being adapted to contact the article of furniture for receiving the loads at all points on said upper edge, said disk being provided with a central portion forming a convexity, the upper surface of which is spaced from the article of furniture and the undersurface of which is spaced from the bearing surface and from the floor, and means involving a centrally located member having one end connected to the central portion of the disk forming the convexity, and the other end secured to the article of furniture, said member being adapted to transmit a portion of the load to the central convexity of the disk.

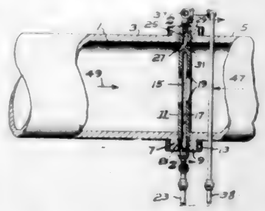
1,559,546. SHAFT COUPLING. JESSE L. BOSKET, Binghamton, N. Y. Filed Sept. 29, 1922. Serial No. 591,409. 2 Claims. (Cl. 287—111.)



1. A shaft coupling, comprising two complemental members adapted to surround the abutting ends of two aligned shafts, each member having an angular longitudinal groove in its inner face of greater width than the diameters of the shafts, and adapted to loosely receive the shafts: means for forcibly drawing the members together: angular changeable keys adapted to be placed in the angles of said grooves, and when so placed one of the angular portions of each of said keys being adapted to engage the related angle of said groove, and another angular edge of each key to bite the shafts when said members are drawn together, substantially as described.

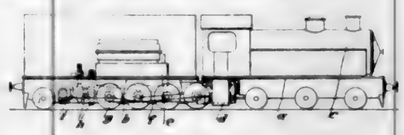
1,559,547. PRESSURE-RESPONSIVE DEVICE. FRANCIS H. BROWN, Glen Olden, Pa. Filed Mar. 25, 1920. Serial No. 368,665. Renewed May 10, 1923. 17 Claims. (Cl. 73—167.)

1. A device of the character described, comprising a plate having an orifice therein, a circumferential groove in said plate communicating with said orifice, a port extending through said plate from the periphery thereof to said groove, a port extending from the periphery of said plate having a mouth opening at one face of



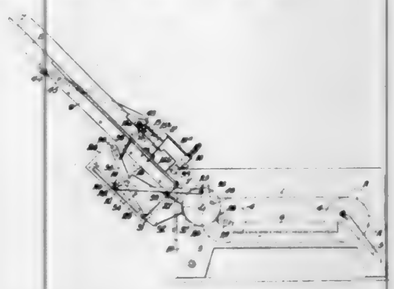
said plate, and a port extending from the periphery of said plate having a mouth opening at the opposite face of said plate.

1,559,548. COMBINED STEAM AND INTERNAL COMBUSTION ENGINE LOCOMOTIVE. JACOB BUCHLI, Winterthur, Switzerland. Filed Dec. 4, 1924. Serial No. 753,774. 2 Claims. (Cl. 105—62.)



1. A combined steam and internal combustion engine locomotive in which the steam generator is supported upon one vehicle unit or truck and the steam and internal combustion engine cylinders together with their joint power transmission mechanism are carried by a separate truck or vehicle.

1,559,549. AUTOMATIC FEEDING DEVICE FOR PRINTING PRESSES. CHARLES ASHTON HENRY BULLOCK, London, England. Filed July 23, 1923. Serial No. 653,313. 5 Claims. (Cl. 271—21.)

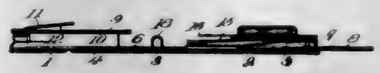


1. A feeding device for printing machines, comprising a magazine whereon the paper to be fed is supported, a supporting slip adapted to engage the bottom edge of the stack of sheets of paper, means for releasing automatically the supporting clip when about to feed the top sheet, means for holding the sheets firmly at a point adjacent one of the lower corners of the upper sheet, means adapted to be periodically moved across and in contact with such lower corners of the top sheet whereby the sheet is buckled between such corner and the point where it is held and removed from beneath the supporting clip which is again returned to a position in engagement with the sheets and means for feeding the upper sheet forward into the machine when such sheet has been released from the buckling and holding means.

1,559,550. ATTACHMENT FOR EYEGLASSES. HOUSTON M. CARROLL, Sr., San Antonio, Tex. Filed Jan. 26, 1924. Serial No. 688,743. 2 Claims. (Cl. 88—55.)

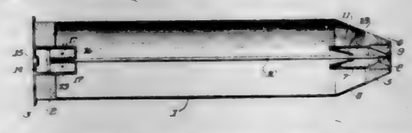
1. The combination with a pair of glasses including a bridge of a nose-engaging prop including a shank carried by the bridge, and a transverse foot on the lower end of the shank and extended in opposite directions on both sides of the shank, the nose-engaging prop slanting downwardly and outwardly with respect to the lens-plane of the glasses, and the foot being curved to fit upon the nose of the wearer of the glasses.

1,559,551. PORTFOLIO. NICK CHIVILY, New York, N. Y. Filed July 14, 1924. Serial No. 725,844. 2 Claims. (Cl. 150—34.)



1. A portfolio of book form comprising cover portions and a transverse hinge portion, the ends of said cover portions being bent back and extending to a point adjacent said hinge to reinforce said cover portions, a flexible lining superimposed upon said cover portions and hinge portion, the lining being fixed at one end to one said cover portion, the other end of said lining being free from said second cover portion, whereby a pocket is formed between said lining and said second cover portion, transverse strips attached to the ends of said lining to form pockets for the reception of stationery, said transverse strips being provided with a plurality of straps to receive stationery accessories.

1,559,552. FIREARM CARTRIDGE FOR SCENIC EFFECTS. BRUCE E. CLARKE, Kansas City, Mo. Filed Feb. 26, 1925. Serial No. 11,625. 14 Claims. (Cl. 102—12.)

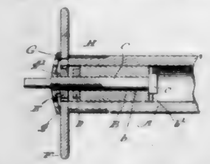


1. In a cartridge for spectacular effects, a chamber for smoke-simulating medium, a reservoir for gaseous expelling medium, and means for releasing said smoke-simulating medium and expelling medium at will.

10. In a cartridge of substantially the character described, a body portion, a thrust rod, a piston on said thrust rod, a cylinder surrounding said piston, and a gas generator in position to deliver gas under pressure to said piston.

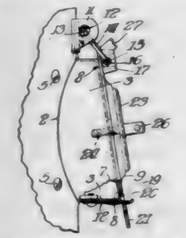
1,559,553. JACK SPOOL. HARRY D. CLINTON, Johnson City, N. Y. Filed June 19, 1925. Serial No. 38,351. 6 Claims. (Cl. 242—124.)

1. The combination, in a device of the character described, of a barrel having a bushing inserted in one end thereof, said bushing having a longitudinal opening therethrough and a recess at the inner end thereof extending across said opening, a bolt inserted in said opening having an intermediate threaded portion and an oblong head on its inner end fitting in said recess, the free end of said bolt projecting beyond the outer end of said bushing, a nut screwed on said bolt so as to draw said head into said recess, a second nut screwed on said bolt adjacent the first named nut, a disk-like device screwed on said bolt adjacent said second nut, and a spool-



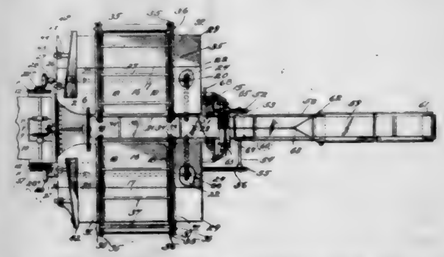
head interposed between said second nut and said device said head having a central polygonal opening therein fitting over said second nut so as to cause the nut and head to rotate together; said device having a centrally disposed part adapted to contact with said second nut and a peripheral portion adapted to contact with the outer side of said head for clamping the latter tightly against the end of said barrel.

1,559,554. DOOR STRUCTURE FOR HEATERS. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 14, 1923. Serial No. 674,634. 15 Claims. (Cl. 126—190.)



1. In a heater, the combination of a door, a seat against which the door closes, means for supporting the door comprising a door hinge having a laterally shiftable axis, and a door fastener adapted to exert a tension on the door for shifting the hinge axis to clamp the door against the seat.

1,559,555. KAFIR-CORN FEEDING AND HEADING MACHINE. JOSEPH E. CROWN and JOHN R. HAINING, Agra, Kans., assignors of one-third to W. C. Whitney, Agra, Kans. Filed Dec. 10, 1923. Serial No. 679,635. 4 Claims. (Cl. 130—27.)

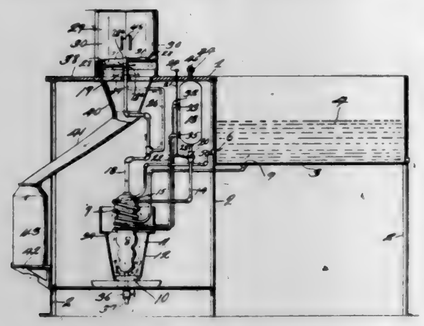


1. The combination with a machine having threshing mechanism at its front end and a hood overlying such mechanism and provided with a mouth at its front end,

of a rotary cutter bridging such mouth and in shearing relation to the upper and lower edges thereof, and a pair of inwardly travelling side conveyors adjacent and spaced apart at their inner ends a distance less than the diameter and terminating at opposite sides of the axial plane of the cutter; said hood having side extensions for its mouth to permit the heads of grain carried to opposite edges of the cutter by the conveyors, to enter the hood.

---

1,559,556. MILK-CAN CLEANER AND STERILIZER. JAMES A. DARY, Ottawa, Kans. Filed Feb. 14, 1922. Serial No. 536,439. 2 Claims. (Cl. 141—7.)



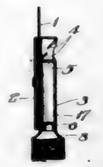
1. A can washing device comprising a table, a cylindrical casing disposed on said table, said casing being formed from segmentally shaped independently movable sections, a water supply pipe at one side of the casing, perforated horizontally disposed pipes pivotally connected to the water supply pipe and adapted to receive water therefrom, said horizontally disposed perforated pipe being secured to the casing sections and a pipe extending upwardly through the table into the casing.

---

1,559,557. OPHTHALMOSCOPE. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Oct. 19, 1922. Serial No. 595,494. 19 Claims. (Cl. 88—20.)

1. In an instrument of the character described, a reflector, a source of light in line therewith, a translucent member adjacent to the light source, and a light condensing system comprising two condensing lenses mounted in fixed spaced relation to each other, one lens being positioned at approximately its focal length from said translucent member and the second lens positioned between the first lens and the reflector.

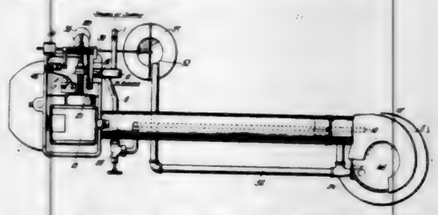
1,559,558. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Feb. 15, 1923. Serial No. 619,085. 3 Claims. (Cl. 88—20.)



1. In a diagnostic instrument, a handle, a source of light, a body portion having a sight opening, a reflector adjacent to said sight opening, a casing in line with said light source and said reflector and connected with said body portion, a condensing lens in said casing and interchangeable couplings for connecting said handle with said casing, one or more of said couplings containing different light controlling means.

---

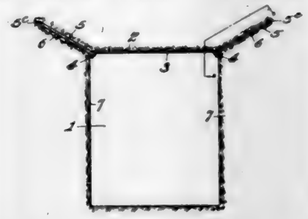
1,559,559. OIL BURNER. ROBERT L. DORAN, Chicago, Ill. Filed June 24, 1925. Serial No. 39,290. 5 Claims. (Cl. 158—28.)



1. In a burner of the class described, a cylindrical burner-head closed at the bottom and having an opening at the top of less diameter than the diameter of the burner-head, and a fuel and air inlet entering the side of the burner-head in a tangential direction in order to produce a swirling head and to the flame, said fuel and air inlet comprising a conduit for air and a conduit for fuel inside the air conduit, said air conduit terminating in a nozzle gradually reduced in diameter toward its discharge end, said nozzle being formed to provide a receiving pocket for the unatomized fuel at its lower side, a fuel operated shut-off device for the fuel, and a conduit leading from said pocket to said fuel operated shut-off device.

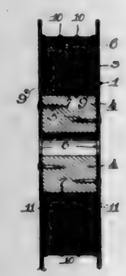
---

1,559,560. ROOF SUPPORT FOR MINES. WALTER H. DOUGHTY, Martins Ferry, Ohio. Filed Feb. 11, 1924. Serial No. 691,866. 2 Claims. (Cl. 61—45.)



1. A roof support for mines comprising a metal bar for closely underlying the roof, said bar having downwardly extending hook-like end terminals, and an anchor-like suspension rod adapted to be engaged with said terminals and embedded in diagonally extending directions in the mine walls.

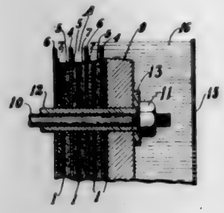
1,559,561. REEL FOR TAPE AND LIKE TEXTILES. FREDERICK EDINGER and ALBERT J. GELOW, Three Oaks, Mich., assignors to Warren Featherbone Company, Three Oaks, Mich., a Corporation of Michigan. Filed Aug. 27, 1923. Serial No. 659,490. 4 Claims. (Cl. 206—59.)



1. A reel for narrow textiles comprising a relatively stationary molder consisting of a cylindrical body having end walls extending beyond the periphery thereof, and a core rotative on said body, and provided with radial partition walls spaced apart longitudinally of said core, and forming a plurality of spaces therebetween, and slits cut in the partition walls intermediate said spaces whereby a plurality of unsevered bolts may be wound on to said core.

---

1,559,562. STORAGE BATTERY. THOMAS A. EDISON, West Orange, N. J. Filed May 25, 1923. Serial No. 641,868. 8 Claims. (Cl. 136—146.)

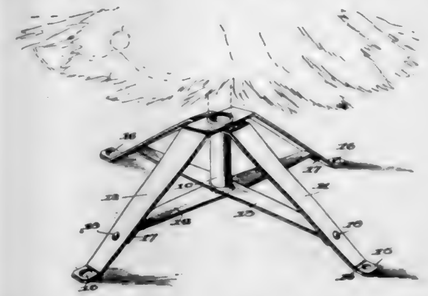


1. Means for separating the electrode elements of storage battery cells comprising a member formed of asbestos and containing a carbonate adapted to be subsequently eliminated to thereby increase the porosity of the member, substantially as described.

---

1,559,563. TREE STAND. GEORGE EDMISTER, Lincoln, Nebr. Filed May 26, 1925. Serial No. 32,980. 3 Claims. (Cl. 248—38.)

1. A tree stand including inverted U-shaped supporting arms crossing one another at their centers and having depending extensions provided with outer angular feet, brace arms also crossing one another at their centers and extending horizontally between the extensions of the supporting arms and rigidly attached thereto, and a



tubular holder mounted centrally and vertically through the crossing central portions of the supporting and brace arms.

---

1,559,564. METHOD OF TREATING PIPE AND BOILER COVERINGS. ALVIN M. EHRET, Mount Airy, Pa. Filed Apr. 6, 1925. Serial No. 21,207. 3 Claims. (Cl. 154—28.)

1. The method of treating pipe and boiler covering composed of carbonate of magnesia and asbestos fibres which consists in treating the same with a solution of bicarbonate of magnesia.

---

1,559,565. COLLAPSIBLE TUBE CONTAINER. FREDERICK E. FARNUM, Boston, Mass. Filed July 7, 1925. Serial No. 41,964. 4 Claims. (Cl. 221—60.)

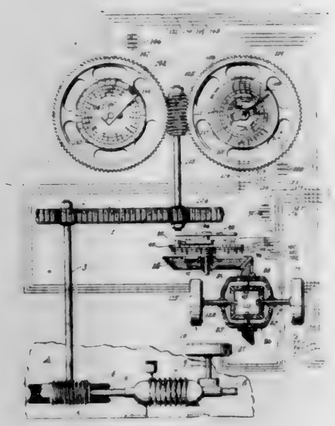
1. A collapsible container for paste or the like embracing in its construction a tubular body of flexible sheet material having a discharge orifice at one end and having its opposite end edges clamped between a sealing strip, said strip comprising an elongated blank of thin sheet metal folded along a medial line to embrace the end edge portion of the tube and being provided at one end with a pivotally attached handle arranged to swing from infolded position against the clamping strip to extended position to serve as a handle.

---

1,559,566. MEANS FOR CONTROLLING THE MOVEMENTS OF ORDNANCE MEMBERS, SIGHTING INSTRUMENTS, AND THE LIKE. STEPHEN A. FARRELL, Brooklyn, N. Y., and MALCOM R. MCNEILL, Chicago, Ill., assignors to Automatic Gun Control Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,909. 32 Claims. (Cl. 89—41.)

1. In apparatus of the class described, in combination, a member to be trained, turret operating means, gyro-

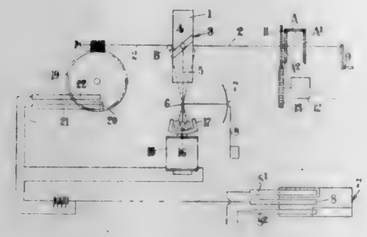
scopic means operating on said member to be trained to control the movements thereof to compensate for undesirable movements



of the vessel, gyroscopically operated contacts for controlling the action of said motor, and manually controlled means operable jointly with at least one of said gyroscopically controlled means for controlling the movements of the respective movable element.

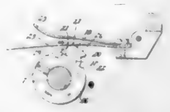
---

1,559,567. RELAY AND THE LIKE. JAMES WEIR FRENCH, Glasgow, Scotland, assignor to Barr and Stroud, Limited, Glasgow, Scotland. Filed Dec. 22, 1923. Serial No. 682,285. 11 Claims. (Cl. 172—237.)



1. A relay system having transmitter mechanism and following mechanism, the transmitter mechanism comprising a displaceable device displaceable about a position of synchronism by rotation to an unlimited extent, two motive elements, one capable of displacing said device, the other capable of replacing said device, a control element displaceable about a mean position through the intermediary of the displaceable device, and retaining means for the control element, for the purposes set forth.

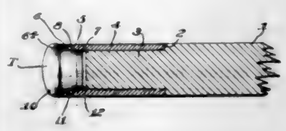
1,559,568. LOOPER-THREAD-CONTROLLING MECHANISM. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 27, 1922. Serial No. 547,278. 8 Claims. (Cl. 112—248.)



1. In a sewing machine, an oscillatory shaft, a thread-nipper, and a nipper operating toggle element pivotally connected to said shaft and having a wiping engagement with said thread-nipper.

---

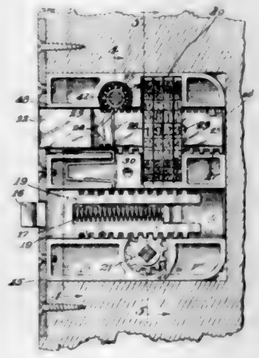
1,559,569. BILLIARD CUE. GEORGE GERENDA, Duquesne, Pa. Filed June 23, 1925. Serial No. 39,027. 3 Claims. (Cl. 273—68.)



2. The combination in a billiard cue of a wooden shaft, a metal ferrule adapted to be retained on the forward end thereof, said ferrule having an open flaring end and a double diameter bore therethrough, and a resilient tip having a cylindrical base portion adapted to fit into the smaller bore of the ferrule, and an enlarged head portion adapted to bear against the flaring forward edge of the ferrule.

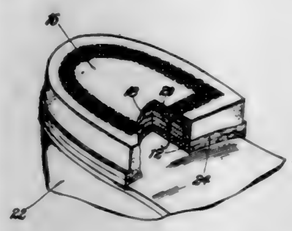
---

1,559,570. PERMUTATION LOCK. PIOTR GIBA, Chicago, Ill. Filed May 23, 1925. Serial No. 32,440. 7 Claims. (Cl. 70—53.)



1. In a lock of the class described, guide members, permutation disks thereupon, said permutation disks being adapted for rotary movement upon said guide members, a bolt within said guide members, said guide members remaining stationary in respect of said bolt, teeth upon said bolt, and means within said permutation disks engaging said teeth for holding the bolt locked.

1,559,571. ART OF HEEL ATTACHING. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 7, 1925. Serial No. 1,109. 4 Claims. (Cl. 12—147.)



1. That method of producing a tight edge joint between a heel top section made of material subject to shinkage and a heel base section which consists in forming upon the outer face of the heel base section a protuberant portion of sufficient height to fill the space in the attaching face of the top section created by shrinkage, and attaching the top and base sections, in register with each other, to a shoe.

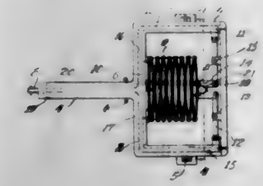
---

1,559,572. METHOD OF PRODUCING ENAMELED METAL SIGNS. CHARLES KAPNER, Bellaire, Ohio. Filed June 12, 1925. Serial No. 36,677. 3 Claims. (Cl. 41—26.)

1. The method of producing enameled metal signs, which consists in shaping a single sheet metal blank to form a pair of parallel bars and sign characters of skeleton form between and united at their ends to said bars, and then successively applying to said bars and characters a base coating of enamel, baking said coating, applying a second coating of enamel in the color to be borne by said bars, firing this second coating, applying a third coating of enamel in a contrasting color to be borne by said characters, wiping said third coating from said bars only, and finally baking the portion of said third coating borne by said characters.

---

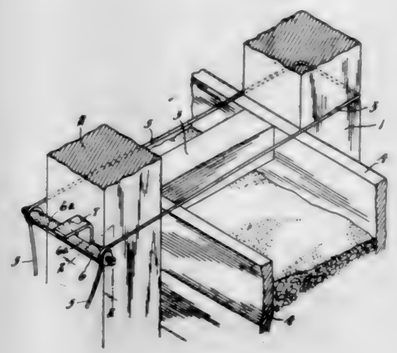
1,559,573. TEMPERATURE COMPENSATOR FOR SPRING SCALES. GEORGE M. LUDLOW, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1921. Serial No. 519,581. 7 Claims. (Cl. 265—69.)



1. In combination with a weighing lever having an adjustable part moving longitudinally thereof for changing its leverage, a thermostat carried by said lever and expanding and contracting thereon in directions longitudinal of the lever, a connection between said thermostat and said part through which each movement of the thermostat is imparted to the adjustable part in reverse direction, and a counterbalance weight moved by the expansion and contraction of the thermostat, in the same directions therewith.

---

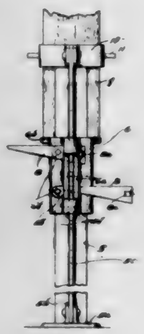
1,559,574. CLAMPING DEVICE FOR CONCRETE FORMS. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed July 12, 1924. Serial No. 725,712. 4 Claims. (Cl. 254—16.)



1. A clamp of the class described comprising a spindle having an intermediate portion adapted to engage a support, said spindle having end portions apertured to have a wire or rod pass therethrough, and a set screw threaded into each end of said spindle and extending longitudinally thereof adapted to engage said wires or rods in said apertures and clamp the same in position.

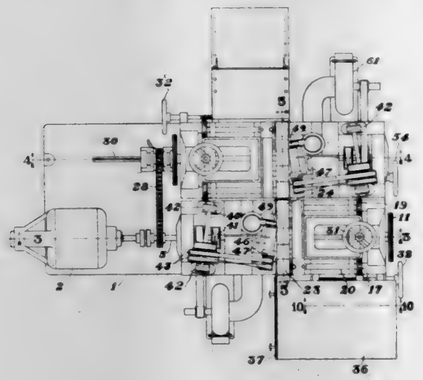
---

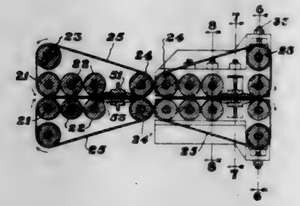
1,559,575. SHORE AND TRENCH BRACE. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed June 29, 1925. Serial No. 40,273. 7 Claims. (Cl. 25—104.)



1. A shore comprising a standard, a timber-supporting bracket slidable thereon, and members adapted to pass through said standard and bracket for successively moving said bracket upward along said standard.

1,559,576. DECKLING MACHINE. FRANK C. MEDICK, Columbus, Ohio. Filed June 30, 1924. Serial No. 723,283. 12 Claims. (Cl. 92—68.)





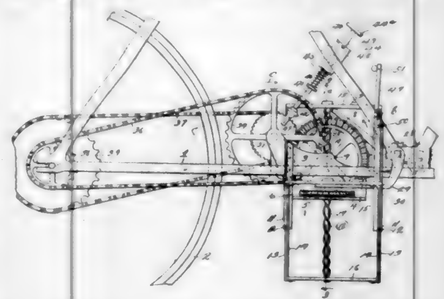
4. In a machine of the character described, a combination of two separate units each consisting of a plurality of feeding rolls and a plurality of webs operated by said rolls, means for synchronizing the movement of the two units and for synchronizing the various rolls of each unit, deckling devices arranged on opposite sides of the web, one deckling device being located in advance of the other a pre-determined distance, and reinforcing devices placed adjacent to the points where the deckling devices operate to prevent buckling of the web.

1,559,577. CLOTHESLINE. FRANK MOORE, Toronto, Ontario, Canada. Filed Jan. 19, 1925. Serial No. 3,288. 2 Claims. (Cl. 68—3.)

1. As a new article of manufacture a line embracing at least two members suitably permanently twisted together and when in use adapted to be under constant tension in order to maintain said members in close relationship, and a spreading device mounted on said members and adapted to be moved longitudinally of said line to separate said members at the locations desired, for the purpose specified.

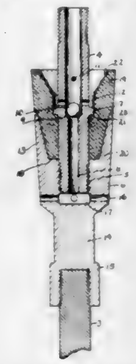
1,559,578. DRIVING MECHANISM. HUMPHREY F. MORGAN, Newark, N. J. Filed Mar. 7, 1925. Serial No. 13,812. 10 Claims. (Cl. 74—54.)

10. In a driving device, a supporting frame, a driven rotatable member supported on the frame, a worm wheel supported on the frame for rotation and held against axial movement, said worm wheel having a pivoted toothed bore, a worm reciprocating in the direction of its length through the bore of the worm wheel and in mesh with the teeth of said bore, said pivoted teeth cooperating with the worm whereby the worm wheel will



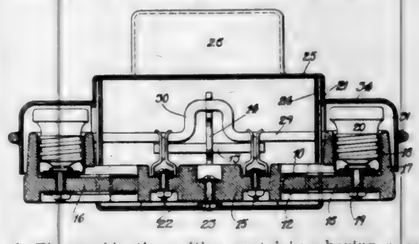
be rotated upon a downward movement of the worm and will freely rotate on the worm upon an upward movement of the worm.

1,559,579. PUMP. OSMYN MOWERS, Houston, Tex. Filed Aug. 11, 1924. Serial No. 731,512. Renewed Sept. 18, 1925. 5 Claims. (Cl. 103—225.)



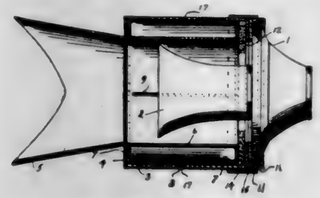
1. In a pump, a plunger comprising a tubular head, an annular flange thereon, a cup shaped coupling having a threaded central recess therein to receive the lower end of said head, a cup of flexible material adapted to fit within said coupling and between the same and said flange, and an outer shoulder on said flexible cup fitting over the upper end of said coupling said head being constructed to allow passage of fluid therethrough to clear said cup of sand.

1,559,580. SWITCH AND FUSE MOUNTING. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Jan. 6, 1923. Serial No. 611,022. 6 Claims. (Cl. 200—50.)



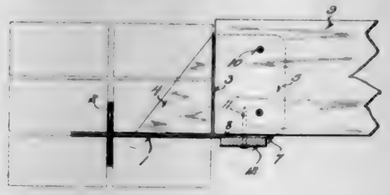
1. The combination with a metal box having a cover and carrying within it a switch, of a support of insulating material on which parts of said switch are mounted, said support having extensions beyond the opposite side walls of the box constituting insulating castings and fuse sockets in said casing in circuit with the terminals of said switch.

1,559,581. MUFFLER DEVICE FOR TELEPHONES. KARL J. NASH, Kansas City, Mo. Filed June 1, 1925. Serial No. 34,013. 2 Claims. (Cl. 179—188.)



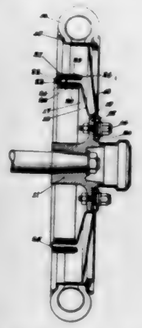
1. In a muffler device for telephones, the combination with the telephone transmitter, of a cylindrical casing, a hollow cylindrical body within said casing and provided at its opposite ends with external annular flanges slidably bearing on the inner side of the wall of said casing and forming with the walls of the casing and the body an annular chamber about the body, a plurality of longitudinally extending apertures in the wall of said body and adapted to provide communication between the interior of the body and said chamber, a concentric band having its inner end slidably mounted on the inner end of said casing and its outer end mounted on the peripheral edge of the transmitted case, a flexible resilient washer of absorbent material mounted in the inner end of said band and adapted to encircle the neck of the transmitter mouth piece, and a mouth piece combined with the outer end of said casing and horizontally aligned with the mouth piece on the transmitter when projected into said body.

1,559,582. JOIST-SUPPORTING BRACKET. JOHN NELESSEN, De Pere, Wis., assignor of one-third to Henry Toonen and one-third to John L. Schnitzler, both of De Pere, Wis. Filed Mar. 26, 1924. Serial No. 701,960. 1 Claim. (Cl. 72—108.)



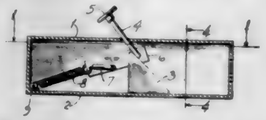
The combination of a wall composed of a plurality of bricks, a joist supporting bracket comprising a rectangular plate adapted to be inserted between successive tiers of bricks and to reach the second brick from the face of the wall, said rectangular plate having a pair of pins therethrough adapted to be positioned between adjacent rows of bricks, an open top socket integral with said plate and projecting outwardly from said wall and having a rear wall and a side wall, and a bottom provided with inwardly directed flanges, and a web joining the rear wall of said socket with said plate and adapted to be positioned between the ends of adjacent bricks, the side walls of said socket being apertured, a joist positioned in said socket and resting upon the flanged bottom thereof, and bolts passing through the side walls of said socket and through said joist.

1,559,583. VEHICLE BRAKE. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 2, 1923. Serial No. 666,121. 6 Claims. (Cl. 188—264.)



3. A brake drum comprising a main body portion, an annular friction-receiving portion at the outer periphery of said body portion, a second friction-receiving portion spaced from and concentrically arranged with respect to said first mentioned annular friction-receiving portion, a supporting means between said annular portions whereby the space between the outer surface of said first mentioned portion and the inner surface of said second mentioned portion is maintained entirely free from any obstruction.

1,559,584. TOOTH CLEANER. WILLIAM P. NICKKANEN, Portland, Oreg. Filed Oct. 26, 1921. Serial No. 510,609. 1 Claim. (Cl. 74—14.)



In a tooth cleaner, a housing, a casting within said housing comprising spaced triangular sides, an oscillating lever having one bent end and adapted for movement over one of the sides of said casting and through the top of said housing, a crank shaft arranged in said housing, a link connecting said lever and crank shaft, and a spring connecting said link and housing.

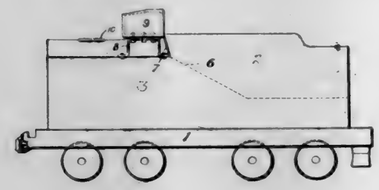
1,559,585. FAUCET. BENGT A. PETTERSSON, Lund, Sweden. Filed July 15, 1924. Serial No. 726,146. 1 Claim. (Cl. 251—95.)

In a faucet, the combination of a tubular body surrounded at its upper end by an annular flange and having a lateral passage communicating with the bore of said

body, a valve sleeve rotatably mounted in said body and extending below the lower end thereof, said sleeve having an opening through its side adapted to register with said lateral passage, a nut threaded on the lower end of said sleeve, a plug removably mounted in said sleeve, having a central bore open at its lower end and provided with an opening through its side adapted to register with the opening of said sleeve, means detachably connecting said sleeve and plug together, said plug having its lower end extending below the end of said sleeve and having an internal recess, a flexible discharge pipe detachably fitted in said recess and depending from the plug, a handle formed integral with the upper end of said plug and extending at right angles thereto, a stem formed integral with and depending from said handle adjacent the annular flange of said body, a cross bar formed integral with the lower end of said stem, the inner end of said cross bar engaging the under side of said flange and adapted to register with a slot in said flange when the valve is closed to permit removal of said plug, and a lateral plate extending from said body beneath said slot having an aperture adapted to register with the aperture through the outer end of said cross bar when the valve is closed whereby said valve may be locked in a closed position.

---

1,559,586. LOCOMOTIVE TENDER. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Apr. 13, 1925. Serial No. 22,819. 6 Claims. (Cl. 105—231.)



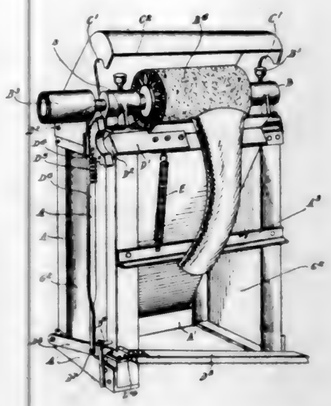
1. In a locomotive tender, a water tank, a baffle plate extending transversely of the tender at the end of said tank, the top of said tank sloping inwardly and upwardly from the tops of the tank side walls and the lower portions of the ends of said baffle plate, and a separate member at the center of said tank projecting upwardly above said baffle to form an extension of the middle portion of said baffle.

---

1,559,587. SHOULDER-STRAP HOLDER. JOHN V. PILCHER and JOHN F. BABBITT, Louisville, Ky.; said Babbitt assignor of his entire right to said Pilcher. Filed Nov. 13, 1924. Serial No. 749,701. 5 Claims. (Cl. 241—12.)

1. An article of the class described, comprising a carrying member having means for attachment to a garment, and a retaining member comprising an elastic tape having one end permanently attached to said carrying member adjacent one end thereof, said tape having its free portion provided with a hook for engaging an eye in the carrying member.

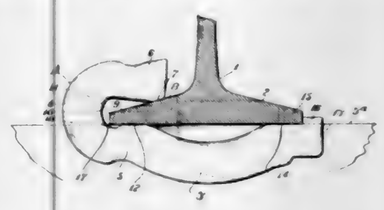
1,559,588. TIRE BUFFER. HUGO REICHEL, Chicago, Ill. Filed Sept. 24, 1924. Serial No. 739,518. 2 Claims. (Cl. 15—40.)



1. In a buffer, a brush and means for rotating it, a supporting element pivoted adjacent said brush and adapted to support the article to be buffed, yielding means for holding said supporting element normally withdrawn from contact with said brush, and means for rotating it toward said brush, comprising a segment, a rack in mesh with said segment, and a treadle element, connected to said rack, and adapted to be contacted by the foot of the operator.

---

1,559,589. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1925. Serial No. 3,008. 20 Claims. (Cl. 238—330.)



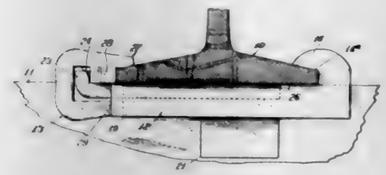
1. A rail-anchor formed of a single continuous bar of metal comprising a downwardly bowed portion adapted to extend beneath the rail-base and engage the tie, and a hooked end portion extending from one end of the bowed portion and adapted to be flexed about one rail-base flange and engage the upper and lower surfaces thereof so as to hold the other end of the bowed portion in engagement with the bottom surface and vertical edge of the other rail-base flange.

---

1,559,590. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 24, 1924, Serial No. 715,537. Divided and this application filed Jan. 17, 1925. Serial No. 3,009. 12 Claims. (Cl. 238—325.)

1. A rail anchor comprising two interlocking members, one of which is made of sheet metal and formed at one end with means for engaging one edge of a rail base and

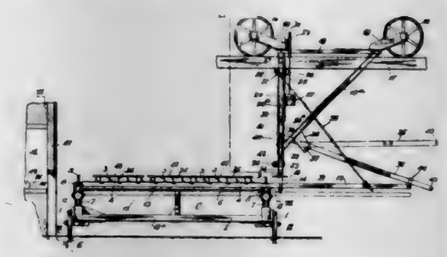
provided at the other end with a flange normally extending at an acute angle to the longitudinal axis of the rail and spaced away from the adjacent edge of the rail



base; the other of said members being provided with means having a wedging engagement between said flange and the adjacent edge of the rail base.

---

1,559,591. METHOD OF AND APPARATUS FOR LOADING AND UNLOADING ENAMELING FURNACES. ROBERT A. WEAVER, Lakewood, Ohio, and ARTHUR STOCKSTROM, St. Louis, Mo. Filed Oct. 31, 1923. Serial No. 672,025. 19 Claims. (Cl. 214—26.)



1. In apparatus for loading and unloading enameling furnaces, the combination of a charging fork adapted to be moved into and out of the furnace to load and unload the furnace, and a transfer table adapted to be loaded with the work to be deposited in the furnace, said transfer table being adapted to be moved transversely across the path of movement of said charging fork, said charging fork being adapted to carry suitable racks for supporting the work in the furnace, and said transfer table being adapted to support the load directly over said racks carried by said charging fork, said charging fork being adapted to be raised and to thereby lift the work from said transfer table to said racks on said charging fork, and said transfer table being adapted to be removed out of its position in the path of the charging fork.

---

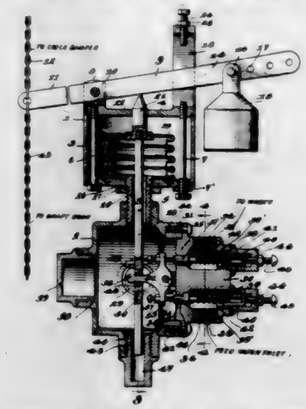
1,559,592. LUBRICANT. MILTON F. WEBSTER, Alameda, Calif., assignor, by mesne assignments, to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Sept. 7, 1922. Serial No. 586,789. 1 Claim. (Cl. 87—9.)

A lubricating compound for use on valve parts and the like subjected to gasoline and water consisting of a mixture of substantially eighty per cent castor oil and twenty per cent carnauba wax.

---

1,559,593. REGULATOR FOR HEATING FURNACES. JOSEPH A. WELSH, Dunkirk, N. Y. Filed Oct. 6, 1923. Serial No. 666,959. 9 Claims. (Cl. 122—449.)

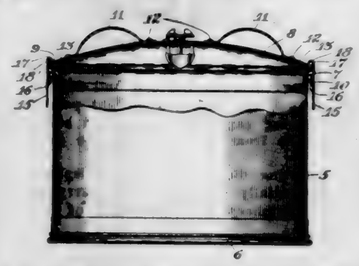
1. In a regulator of the character described, a pressure controlled diaphragm, a rod actuated by the diaphragm, draft controlling means governed by the rod, fluid supply and pressure relief valves, and a rocker device op-



eratively associated with said rod for actuating said valves on reverse movements of the rod.

---

1,559,594. DETACHABLE COVER FOR WATERLESS COOKERS. ROBERT H. WENTORF and ERNEST A. KEILER, West Bend, Wis., assignors to West Bend Aluminum Company, a Corporation of Wisconsin. Filed Aug. 24, 1923. Serial No. 659,048. 4 Claims. (Cl. 53—1.)



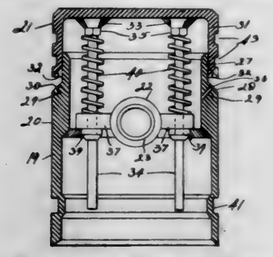
3. A locking device for a boiler having a cover therefor, a bead around the top thereof, and a plurality of latches made of substantially flat material pivotally carried by said cover having upwardly and inwardly inclined depressed tongues formed integrally therewith and normally actuated by gravity to engage the underside of said bead for securing the cover to said boiler.

---

1,559,595. ENGINE AND PISTON. AUGUSTUS ALBERT WEST, Philadelphia, Pa. Filed Aug. 21, 1923. Serial No. 658,527. 16 Claims. (Cl. 123—78.)

14. The combination with an engine including a cylinder provided with the usual exhaust and a supplementary exhaust, of a piston consisting of a skirt having a reduced waist, an exterior inclined, shoulder with a channel formed therein from which lead ducts passing through the skirt to provide communications between the interior and exterior of the skirt, integral bearings within the skirt and integral apertured webs formed with the bearings and skirt, a head consisting of an end wall and skirt slidably mounted on the waist of the skirt, the edge of said skirt beveled to coincide with the inclined shoulder, said edge of the petticoat coacting with the shoulder to limit the inward movement of the head and acting to force excess lubricant through the ducts, rods having threaded connection with the end wall of

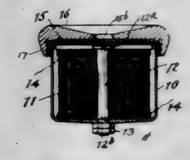
the head and passing through the apertures in the webs, means on said rods for coaction with the webs to limit the outward movement of the head, and springs coiled about the rods below the webs and attached to said



webs and the free ends of the rods to force the head outward, said piston normally covering the supplementary exhaust and the head being forced inward relative to the skirt on the firing stroke to uncover said supplementary exhaust.

---

1,559,596. TELEPHONE RECEIVER. JOSEPH A. WILLIAMS, Cleveland, Ohio. Filed Apr. 21, 1922. Serial No. 555,821. 16 Claims. (Cl. 179—120.)

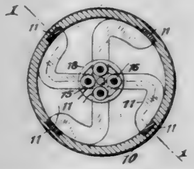


1. A telephone receiver comprising a coil, a cup-shaped housing enclosing the coil and adapted to convey flux through the base and upright portion thereof, the flux carrying capacity of the base being substantially the same from the region of the center to the periphery.

14. A vibrating diaphragm for a telephone receiver having substantially the same flux carrying capacity adjacent its periphery as in the region of the center.

---

1,559,597. TELEPHONE RECEIVER. JOSEPH A. WILLIAMS, Cleveland, Ohio. Filed May 1, 1922. Serial No. 557,583. 3 Claims. (Cl. 179—117.)

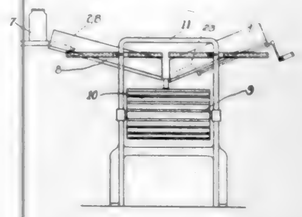


1. In a telephone receiver, a cup-shaped housing formed of insulating material and having a plurality of permanent magnet elements embedded therein and extending from near the open end of the housing downwardly toward the base and inwardly along the base toward the center, said elements having similar magnetic poles adjacent the axis of the housing.

---

1,559,598. BOTTLE-POSITIONING DEVICE. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed July 19, 1923. Serial No. 652,491. 10 Claims. (Cl. 198—33.)

1. In a device of the class described, the combination of a downwardly inclined chute for receiving and directing bottles neck end foremost, a second upwardly inclined chute for receiving at its lowermost end the bottles as they are discharged from the lower end of



the first mentioned chute and means carried by the second chute for deflecting the bottles to a position transversely of the chutes.

---

1,559,599. STABILIZING SOLUTION CONTAINING LOOSELY-COMBINED OXYGEN. VICTOR WINTSCH, Jr., Zurich, Switzerland, assignor to R. H. Comey Company, Camden, N. J., a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,415. 6 Claims. (Cl. 23—251.)

5. The stabilization of solutions containing loosely combined oxygen with a soluble pyrophosphate salicylate.

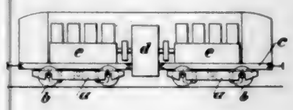
---

1,559,600. STABILIZER FOR SOLUTIONS CONTAINING LOOSELY-COMBINED OXYGEN AND PROCESS OF MAKING THE SAME. VICTOR WINTSCH, Jr., Zurich, Switzerland, assignor to R. H. Comey Company, Camden, N. J., a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,416. 6 Claims. (Cl. 260—11.)

1. A stabilizer for permitting of only slow liberation of oxygen in solutions containing loosely combined oxygen consisting of a soluble pyrophosphate salicylate.

---

1,559,601. LOCOMOTIVE HAVING COMBINED INTERNAL-COMBUSTION AND ELECTRIC PROPULSION SYSTEM. EUGEN ZBINDEN, Bern, Switzerland, assignor to Sulzer Frères Société Anonyme, a Corporation of Switzerland. Filed Dec. 5, 1924. Serial No. 754,033. 3 Claims. (Cl. 105—35.)

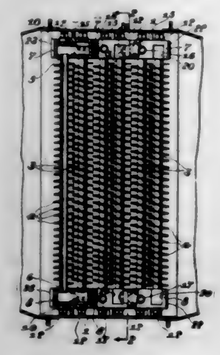


1. In an electrically propelled internal combustion locomotive the combination of two bogies with an electric generator supported by the frame of the locomotive between the two bogies and driven by two internal combustion engines arranged at either end thereof.

---

1,559,602. HEAT-EXCHANGE APPARATUS. HANS J. ZIMMERMANN, Philadelphia, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 14, 1922. Serial No. 574,927. 5 Claims. (Cl. 257—154.)

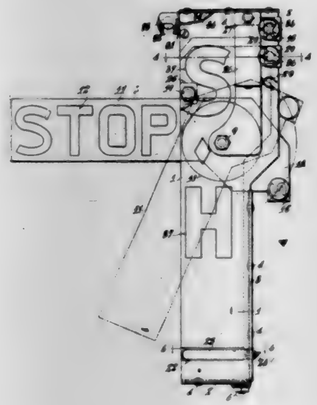
3. In heat exchange apparatus, the combination of a plurality of heat exchange units, each unit comprising a plurality of tubes, hollow terminal members secured to the opposite ends of said tubes, inlet and outlet pipes, the inlet pipe being connected to one of said hollow terminal portions and the outlet pipe to the other of said hollow terminal portions, and each terminal portion being provided with a pocket at its opposite ends, said pockets opening upon the ends of said portions and the outer side walls of which are adapted to lie against the



outer end portions of the adjacent walls of adjacent terminal portions, the said outer end portions being provided with screw bolts which are adapted to project through openings into the said pockets and means for fastening the said screw bolts within said openings.

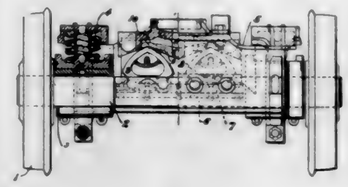
---

1,559,603. DIRECTION INDICATOR. JERIE EVICH, Santa Barbara, Calif. Filed June 17, 1924. Serial No. 720,705. 11 Claims. (Cl. 116—53.)



1. A device of the class described comprising, a housing, indicator arms pivoted in the housing and adapted to lie within the confines of the same when inactive and for being extended from the housing to an active position, and a stop and tension device for holding the arms in frictional engagement and for stopping the same at the proper extended position.

1,559,604. LOCOMOTIVE TRUCK. GEORGE H. GIBSON, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 10, 1925. Serial No. 1,621. 6 Claims. (Cl. 105—189.)



1. In a truck, a frame, a rocker having movement transversely of the plane of its rocking motion, a bearing mounted on said rocker, and a chafing plate on said frame adjacent said rocker and bearing for limiting said movement of said rocker relative to said bearing.

---

1,559,605. SIGN. FRANK M. GINGER, Eldorado, Kans. Filed May 26, 1925. Serial No. 33,028. 3 Claims. (Cl. 40—102.)

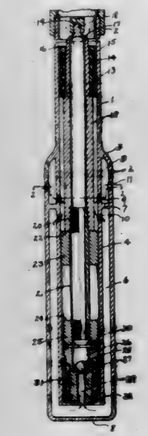
1. A signal comprising, in combination, a plate provided with spaced outstanding ears, said ears being provided with slots having corresponding ends enlarged, a second plate having outstanding arms insertible through the slots of the ears of the first plate, said arms when within the enlarged portions of the slots permitting the second plate to be swung to overlie one or the other end portion of the first plate, said arms when within the restricted portions of the slots holding the second plate against rotation.

---

1,559,606. PUMP. ELLSWORTH GRAY, Houston, Tex. Filed Jan. 5, 1925. Serial No. 520. 6 Claims. (Cl. 103—179.)

1. In a pump, a pump barrel having an inner wall open at its lower end, an outer wall spaced from the inner wall of the pump barrel, a partition closing the space between the said walls at an intermediate point, the lower end of the outer wall being closed, said outer and inner walls having openings therein above the intermediate partition, the inner walls having lateral openings below said partition, a pump plunger, a valve ring slidable on the lower portion of said pump plunger, means

to limit the movement of said ring on said plunger, whereby the openings in the inner wall of the working barrel below said partition will be closed during the



greater portion of the downward stroke of the plunger and be open during the greater portion of the upward stroke, in the manner described.

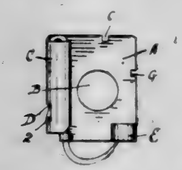
---

1,559,607. AUTOMOBILE BUMPER. WILLIAM J. GROTENHUIS, Chicago, Ill., assignor to Biflex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed June 22, 1922. Serial No. 570,115. 2 Claims. (Cl. 293—55.)

1. An automobile bumper comprising a pair of resilient bars secured in flatwise contact adjacent the ends of the forward portion thereof, the outer bar being extended laterally and thence rearwardly and inwardly to form the looped ends of the bumper, and the inner bar being bent rearwardly and inwardly short of the extremeties of the looped ends of the bumper, the free ends of said bars being brought together in flatwise contact to form rearwardly disposed attaching members extending transversely of the points of attachment.

---

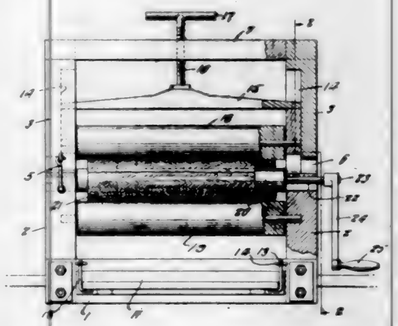
1,559,608. SORTING DEVICE FOR LAUNDRY WORK. AUSTIN GUDMUNDSEN and FRANK E. DOLE, Salt Lake City, Utah. Filed May 5, 1924. Serial No. 711,032. 4 Claims. (Cl. 40—19.5.)



1. A laundry pin comprising a plate having a hole centrally therein and key ways in its edges; a guide case on one face thereof having a recess in its edge; a pin slidable in said case with one portion adapted for operation through said recess to lock and unlock another portion shaped as a point; a base having a tube secured thereon on which said plate is slidable; a guide strip secured on said base parallel with said tube; a longitudinal rib on said guide strip against which said pin may be moved to unlock it; a testing clip pivoted on said guide strip having key ribs on its inner face over which said recesses in said plate may be moved.

---

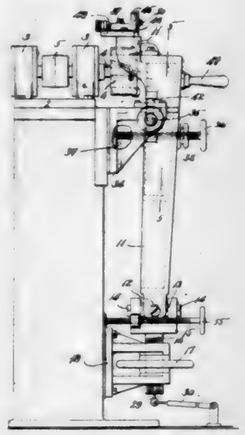
1,559,609. CLOTHES MANGLE. NILS E. GULLERUD, Maddock, N. Dak. Filed May 16, 1925. Serial No. 30,856. 6 Claims. (Cl. 68—13.)



2. In a mangle, a two part frame, a roller journaled in the lower part an adjustable member mounted in the upper part, a roller journaled in the adjustable member, slots in the abutting ends of the two parts, an intermediate roller mounted in the slots, means for removing the intermediate roller and means for rotating the intermediate roller.

---

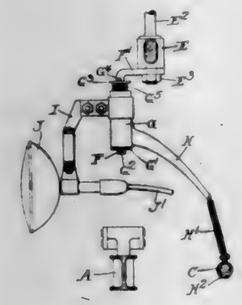
1,559,610. HEEL-SHAPING MACHINE. NICHOLAS L. GULLERUD, Peabody, Mass. Filed Jan. 8, 1924. Serial No. 684,945. 8 Claims. (Cl. 12—47.)



1. In a machine of the character described, the combination of a rotatable internal cutter head; a work holder disposed crosswise of the axis of said head and pivotally supported at a point off set at one side of said axis so that one end of said holder is movable toward and from the cutter head, and a heel holding clamp on said work holder by which a heel is held and positioned on the work holder whereby its shank lip is caused to enter said internal cutter head when the work holder is swung toward the latter.

---

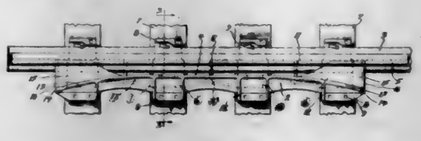
1,559,611. DIRIGIBLE-SPOTLIGHT BRACKET. GEORGE WALTER HAMAN, La Porte, Ind. Filed Jan. 30, 1924. Serial No. 689,435. 3 Claims. (Cl. 240—62.)



1. In combination with a vehicle having a steering gear and supporting frame, a movable light mounting supported from said vehicle and including a base mounted on said vehicle, and a lamp carrying portion mounted for rotation on said base and provided with a lever arm, springs attached to said lever arm and directly a portion of the steering gear, whereby said lamp carrying portion is moved with the movement of said steering gear said springs forming the entire connection between said steering gear and said lever arm.

---

1,559,612. TRACK GUARD RAIL. PAUL HAMILTON, Greensburg, Ind., assignor to Jay V. Wescott, Chicago, Ill. Filed Mar. 20, 1924. Serial No. 700,593. 3 Claims. (Cl. 238—19.)

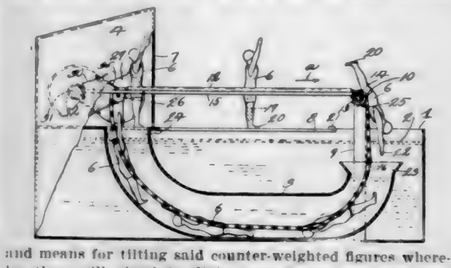


1. In a track guard rail the combination of a base portion, a guard portion extending along said base and disposed at its intermediate portion at an acute angle with the base and extending upwardly toward a traffic rail to which the guard rail is applied and having the upper portions thereof adjacent the ends thereof gradually turned away from the traffic rail and forming vertical end portions, transverse ribs bridging said angle of the base and guard portion at intervals along the intermediate portion of said guard portion and extended therefrom toward the traffic rail to engage the same under the head thereof, and depth guard formations at the ends of said guard portion and extending therefrom toward the traffic rail and adapted to engage the same under the head thereof.

---

1,559,613. FIGURE TOY. ALICE M. HAMMER, Hillsboro, Oreg. Filed May 13, 1924. Serial No. 713,009. 7 Claims. (Cl. 46—40.)

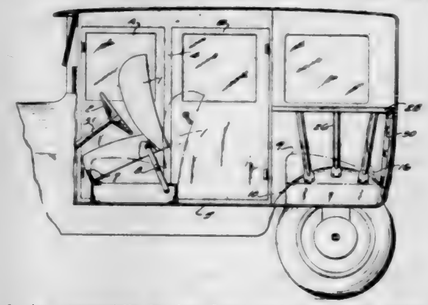
1. A figure toy comprising a tank adapted to receive water therein, an endless conveyor, counter-weighted pivoted figures carried by said conveyor, a pipe in said tank and through which said endless conveyor extends



and means for tilting said counter-weighted figures whereby they will simulate diving operations into the tank and pipe.

---

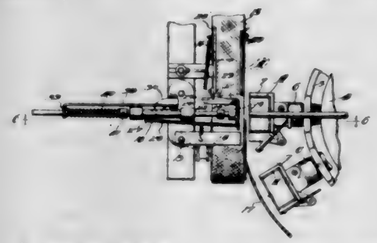
1,559,614. AUTOMOBILE. FREDERICK J. HAYNES, Detroit, Mich., assignor to Dodge Brothers, Inc., Detroit, Mich., a Corporation of Maryland. Filed Aug. 12, 1922. Serial No. 581,298. 3 Claims. (Cl. 296—28.)



1. An automobile having front and rear seats, upholstered sections adjacent said rear seat, and a pair of doors rearwardly of the front seat, the back of the front seat being located to the rear of a plane passing through the forward edge of the door, means whereby the back of the front seat may be shifted forward to clear the door space, means for detachably fastening the rear seat and its support to the floor of the car, and means for detachably fastening the upholstered sections to the car body so as to be held by resilient pressure, whereby when the said rear seat and upholstered sections are removed the portion to the rear of the front seat is rendered substantially unobstructed.

---

1,559,615. MECHANISM FOR TRANSFERRING CARTON OR OTHER ARTICLES. GEORGE HOEPNER, Chicago, Ill. Original application filed May 15, 1922, Serial No. 561,045. Divided and this application filed Oct. 29, 1923. Serial No. 671,481. 35 Claims. (Cl. 198—21.)

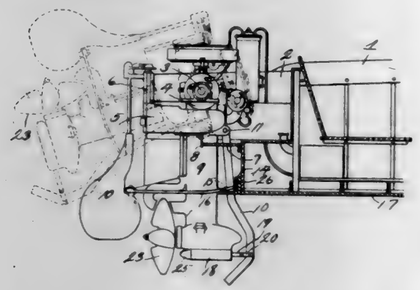


1. A movable conveyor, a pusher member arranged above and adapted to reciprocate transversely of the latter between a position in which it lies on one side

of the conveyor and a position in which it extends across the conveyor, means for actuating said pusher member, a stationary member, and a dog cooperating directly with said members to lock the pusher member in a position overlying the conveyor, said dog being located in the path of and being adapted to be tripped by an object carried toward said pusher member by the conveyor.

---

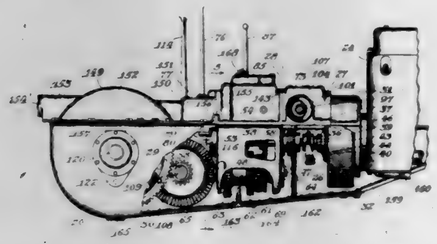
1,559,616. OUTBOARD MOTOR. LOUIS J. JOHNSON, Mishawaka, and HARRY L. JOHNSON, Indianapolis, Ind., assignors to Johnson Bros. Engineering Corporation, South Bend, Ind. Filed June 16, 1924. Serial No. 720,318. 10 Claims. (Cl. 115—17.)



1. The combination with a pivotally mounted motor, said motor being carried by a boat, of a guard for the free end of said motor, said guard being yieldably mounted on the motor and yieldable in relation thereto and forming means whereby initial shocks will be taken up.

---

1,559,617. TRACTOR. EDWARD A. JOHNSTON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 24, 1921. Serial No. 524,570. 22 Claims. (Cl. 180—54.)

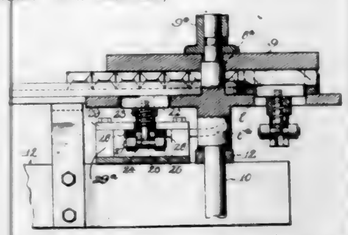


1. In a tractor, a main frame having a broad and shallow front part, a relatively narrow and deep rear part, a wall separating the two parts whereby a reservoir for lubricant is provided in the rear part, a transmission assembly closing the reservoir adjacent the partition and extending thereinto, differential gearing mounted in the reservoir at the opposite end, a removable cover closing the reservoir over the differential gearing, and driving connections in the reservoir between the transmission and differential.

7. In a tractor, the combination of steering wheels and driving wheels, a main frame formed from a single piece of metal, means for supporting the front end of the frame on the steering wheels, a driving shaft extending thru the rear end of the frame and supporting the frame on the driving wheels, a differential secured to the driving shaft within the frame, a second shaft journalled in the frame and driving the differential, one end of the said shaft extending laterally through the frame and provided at said end with means whereby a braking action may be exerted thereon, a transmission housed within the frame and driving the second shaft, a transverse partition providing with the rear end of the frame a reservoir for lubricant, and an engine mounted on the front end of the frame for driving the transmission.

---

1,559,618. PACKAGE-DELIVERY MECHANISM FOR WRAPPING MACHINES. ANDREW KAPPES and ANTON F. R. GERSTMAYR, Chicago, Ill., assignors to Wm. Wrigley, Jr. Co., Chicago, Ill., a Corporation of West Virginia. Filed Aug. 15, 1923. Serial No. 657,467. 4 Claims. (Cl. 198—25.)



2. In a device of the character described, the combination of an article delivery track having an abrupt turn intermediate its ends, a rotative turn-table located at the turn in said track, and comprising discs between which the articles are advanced, and a series of spring actuated article engaging members, carried by one of said discs and adapted to shift successive articles in frictional contact with the other disc, during their advance movement about the turn.

---

1,559,619. CORRUGATED NAIL EXPANSION. JOHN KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, Plainfield, N. J. Filed Nov. 12, 1924. Serial No. 749,360. 8 Claims. (Cl. 85—23.)

3. A new article of manufacture comprising a nail expansion shield formed from sheet metal bent back on itself and fluted or corrugated to permit flexibility in the driving of a nail and to insure the maximum grip or bond when expanded and provided with weakening means to permit a secondary expansion of a portion of the shield at an angle to the main expansion.

---

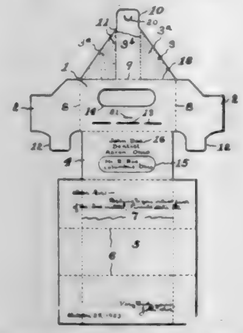
1,559,620. ALLOY AND METHOD. FREDERICK W. KARITZKY, Garwood, N. J., assignor to Henry B. Newhall, Plainfield, N. J. Filed Dec. 31, 1924. Serial No. 758,974. 6 Claims. (Cl. 75—1.)

1. An alloy comprising about 85% of zinc, 10% of aluminum and 5% of tin.

---

1,559,621. COMBINED ENVELOPE AND LETTER SHEET. JOHN A. KAYE, Sault Ste. Marie, Ontario, Canada. Filed Dec. 10, 1923. Serial No. 679,543. 3 Claims. (Cl. 229—92.7.)

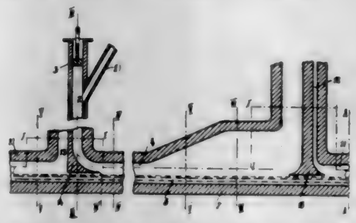
1. A combined envelope and letter sheet comprising an envelope front having a plurality of slots formed therein adjacent the upper edge thereof, a letter sheet integral with the envelope front and connected to the upper edge thereof, said letter sheet being adapted to be folded against the front, end flaps at the ends of the envelope front which are foldable against the folded letter sheet, and a bottom flap foldable over the end



flaps and connected thereto by an adhesive, the bottom flap and end flaps being each formed with a tongue which is foldable around the upper edge of the envelope and insertable through a corresponding one of the slots in the front of the envelope.

---

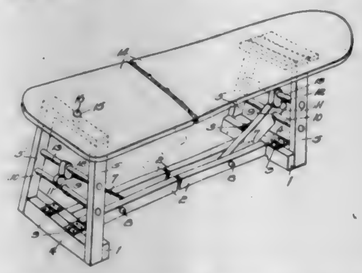
1,559,622. PRODUCTION OF COMBUSTIBLE GAS. MAX KLÖTZER, Dresden, Germany. Filed July 31, 1924. Serial No. 729,314. 4 Claims. (Cl. 48—92.)



1. Process of producing combustible gas from carbon and an oxygen carrier, consisting in glowing a mixture of powdered fuel and steam into a gas generating chamber over a molten heat radiating slag bath, stirring by pulsation said fuel mixture over said slag bath, and gasifying said fuel mixture by the radiated heat from said slag bath.

---

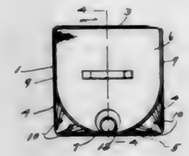
1,559,623. IRONING TABLE. WILLIAM KOLB, St. Louis, Mo. Filed Nov. 28, 1921. Serial No. 518,371. 1 Claim. (Cl. 68—10.)



In a folding ironing table structure, a pair of end frames having upwardly converging side members constituting supporting legs, a base, hinges connecting the end frames with the base, a stationary round connecting the side members of each end frame, a round revolubly supported at its ends by the side members of each end frame, a cam member fixed to each revolubly supported round, a pair of brace members pivotally connected at their inner ends to the base, a recess formed in the lower face of each brace member at their outer ends adapted for contact with the stationary rounds when in operative position, a recess formed in the upper face of each brace member adapted for contact with the cam members of revoluble rounds for locking the end frames in operative position and a board supported by said end frames.

---

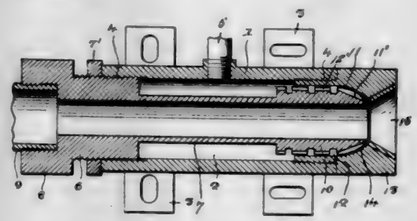
1,559,624. CONTAINER FOR LIQUIDS. PHILIP E. KOPP, Kansas City, Mo. Filed June 23, 1924. Serial No. 721,728. 1 Claim. (Cl. 220—1.)



In a container for liquids, a flat rectangular lower end wall, a flat upper end wall having a portion having its perimeter corresponding to the perimeter of half the area of said lower end wall and a portion having a periphery describing a semicircle, a hollow body having the lower ends of its vertical walls united to said lower end wall to thereby provide a rectangular form to the lower portion of the body in cross section and having its upper portions of its vertical walls united to said upper end wall to thereby provide for the upper portion of the body a form partly rectangular and partly semicircular in cross section, and a filling and emptying spout mounted in the semicircular portion of said upper end wall and at the peripheral edge thereof at a point substantially ninety degrees of arc of said periphery.

---

1,559,625. BURNER. PAUL W. KUTIS, Proctor, Minn. Filed Feb. 21, 1924. Serial No. 694,336. 1 Claim. (Cl. 158—75.)

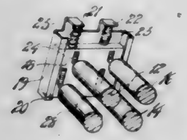


A liquid fuel burner, comprising a body having a tubular bore, threaded at the ends thereof, and having a central steam inlet, a liquid fuel conducting nozzle having a thickened portion which is threaded and which is screwed in one end of the body, a jamb nut screwed in the said thickened portion of the nozzle and contacting the end of the body through which the nozzle enters, said nozzle having a headed end, whose outer portion is cone-shaped, said head having spaced circumferential grooves and spaced longitudinal passages for intersecting the circumferential grooves, and the cone-shaped head of the nozzle having passages aligning with the first mentioned passages but which last mentioned passages are struck at angles of approximately 25 degrees, and a nose piece screwed in the second end of the body and having a bore terminating in a conical end to receive the

head of the nozzle and the conical end thereof therein, and said nose piece having an inwardly flared mouth which communicates with its bore and with the bore of the nozzle.

---

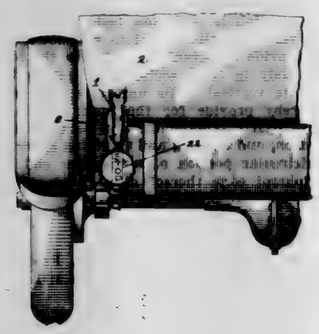
1,559,626. RAILWAY INDICATOR. THOMAS E. KYNISTON, Spokane, Wash. Filed Mar. 2, 1925. Serial No. 12,540. 3 Claims. (Cl. 40—99.)



1. In an indicator as described the combination with an operating shaft and roller thereon of an endless web and a plurality of rollers adjacent said roller, a plurality of spaced rollers for said web, bearing blocks for the respective ends of said spaced rollers, housings for the blocks, and tension springs interposed between said housings and blocks for the purpose described.

---

1,559,627. DIRECTION INDICATOR. ROBERT B. LAMBERT, Napa, Calif. Filed Oct. 3, 1923. Serial No. 666,355. 2 Claims. (Cl. 177—327.)

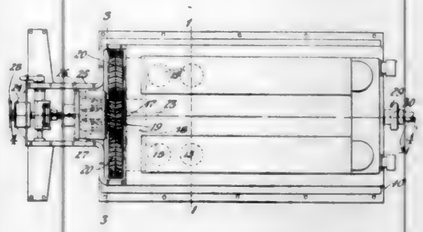


1. A direction indicator for automobiles comprising a bracket mounted upon the back of an automobile; a pointer rotatably mounted upon the upper portion of the bracket and adapted to be turned to any of a plurality of direction indicating positions for indicating a contemplated turn or stop; electrical means for illuminating the pointer; a stop signal mounted upon the bracket immediately below the pointer; an electric lighting element mounted within the stop signal; an electric contact mounted upon the top of the stop signal and connected to the lighting element therein; and a contact mounted upon the end of the pointer and electrically connected with a source of electrical energy, said contact being arranged to engage the contact upon the stop signal when the pointer is moved to the stop position and thereby complete a circuit through the lighting element to illuminate the stop signal.

---

1,559,628. GAS ENGINE. ELWOOD T. LARKIN, Buffalo, N. Y., assignor to Charles A. Criqui, Buffalo, N. Y. Filed Jan. 30, 1924. Serial No. 689,530. 5 Claims. (Cl. 74—7.)

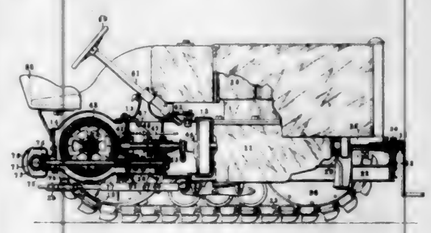
1. A gas engine comprising a hollow intermediate driven shaft, a main driving shaft extending lengthwise through said intermediate shaft, means for connecting and disconnecting said driving and intermediate shafts, crank shafts arranged on opposite sides of said intermediate and main shafts, power cylinders arranged on opposite sides of said intermediate and main shafts



and each containing a piston operatively connected with one of said crank shafts, and means operatively connecting said crank shafts and intermediate shaft.

---

1,559,629. TRACTOR. THOMAS C. LEAKE, New York, N. Y., assignor to Bear Tractor Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Oct. 10, 1921. Serial No. 506,637. 8 Claims. (Cl. 180—91.)



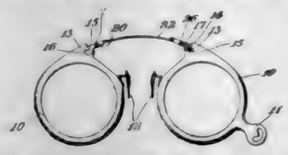
4. A tractor construction including in combination, a unitary power generating unit including an encased engine, housings for enclosing the separate parts of the engine, the transmission gearing, and the driving gearing, said housings being formed as separate units and secured together in alignment to form in effect a unitary power generating unit, the driving gear housing extending transversely of the tractor and enclosing the transverse driving shaft which is operatively connected to the traction elements of the tractor, a rigid generator unit supporting frame pivoted to the tractor at the transverse rear axis thereof, and surrounding said generating unit, a connection for suspending the forward end of said supporting frame upon said traction elements, said power transmission connections including a plurality of interconnected shafts, and an auxiliary power attachment detachably connected to the unitary power element and being adapted for coupling with one of said interconnected shafts, said auxiliary power attachment including a pulley with its axis disposed parallel to the rear axis of the tractor and the unitary assembly of power transmitting elements being arranged for attachment to or removal from said unitary power elements as a unit.

---

1,559,630. EYEGLASSES AND THE LIKE. ALVIN L. LEIBE, Irvington, N. J. Filed Feb. 28, 1924. Serial No. 695,670. 2 Claims. (Cl. 88—42.)

1. The combination with a pair of eye glass frame rims and a flat bowed spring, of a channelled clip fixed to each rim and having its outer portion in-turned to

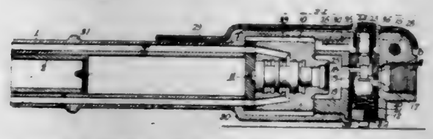
constitute a socket partially open on one side, a flat bowed spring having reduced ends to engage in the sockets, said ends terminating in further reduced por-



tions rolled to present open eyes capable of passing through the partially open space in said sockets, and a screw engaged in each clip to engage with said eyes.

---

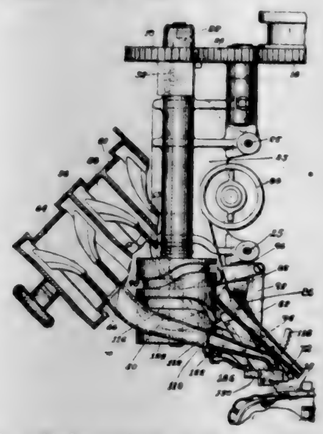
1,559,631. PNEUMATIC TOOL. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed July 30, 1919. Serial No. 314,373. 4 Claims. (Cl. 121—35.)



1. In a pneumatic tool, the combination of a barrel, a throttle head secured to the rear end thereof and having a live air passage and an exhaust port, a self closing throttle valve for said passage, and a valve opening lever pivoted on said head at the rear of said valve and extending over the valve toward the forward end of said barrel, said lever having engagement between its ends with said valve for opening said valve upon the movement of said lever toward said barrel, said lever being curved transversely to conform to the curvature of said barrel and provided in its portion extending over said valve with an exhaust port in communication with the exhaust port in said head.

---

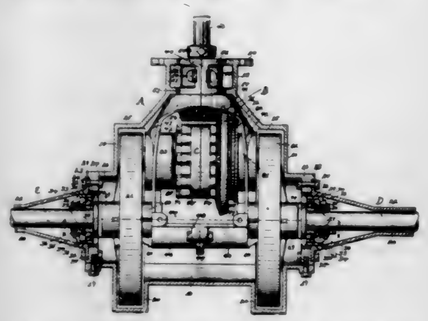
1,559,632. TOE-BINDING MACHINE. BERNARD T. LEVEQUE, Wenham, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 31, 1917. Serial No. 539,910. Renewed Feb. 28, 1922. 109 Claims. (Cl. 12—2.)



1. In a binder applying mechanism, the combination with means for inserting a fastening, of means to guide a binder in position to bind a shoe upper progressively from one side of the shoe around to the other side, and means to manipulate the binder into a form to cause it to be secured by the fastening to the shoe.

---

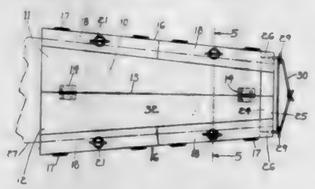
1,559,633. DRIVING-AXLE STRUCTURE FOR AUTOMOBILES. THOMAS J. LINDSAY, Indianapolis, Ind., assignor to Lindsay Auto Parts Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 25, 1918. Serial No. 241,853. 36 Claims. (Cl. 74—99.)



1. A driving axle structure, comprising a main housing, a driving mechanism composed of a driving shaft and a differential train adapted to be driven thereby, and a frame or casing for said driving mechanism forming therewith a unit for independent separable attachment within said main housing when the axles are in normal position upon the structure, the said axles being provided with gears on their inner ends and co-operating with the differential train to drive the axles, the said gears being carried by the frame and being separably connected with the ends of the axle.

---

1,559,634. TROUSERS-PRESSING DEVICE. BURTON H. LOCKE, Orange, Mass. Filed Mar. 26, 1925. Serial No. 18,421. 4 Claims. (Cl. 223—19.)



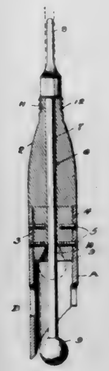
1. A trouser pressing device comprising a base-board composed of two longitudinal sections, and a strip held in hinged relation to the outer side of each section, said strips being positioned to cooperate with a common face of said base-board, and means for holding each strip in pressure cooperation with said common face of said base-board, and a hinged connection between the two sections of said base-board, said hinged connection allowing the said sections to fold on the face opposite the cooperating face thereof, for the purpose set forth.

---

1,559,635. BAILER HEAD. FRED LOVE and CHARLES SHAW, Healdton, Okla., assignor of one-half to Wirt Franklin, Ardmore, Okla. Filed Apr. 11, 1924. Serial No. 705,747. 1 Claim. (Cl. 166—19.)

A bailer head having a tapered upper portion and a depending shank portion adapted to fit within the upper end of a well bailer, said shank portion being provided

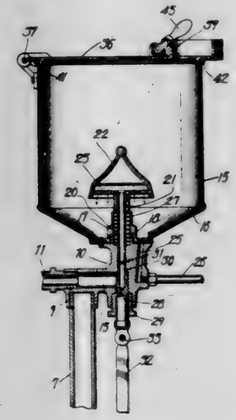
with an inverted conical striking face and a centrally disposed bore extending through said tapered portion, and a reciprocable rod extending through said central bore and between the conical wall of said striking face



and formed with a spherical striking head at its inner extremity, whereby upon reciprocation of said rod the spherical striking head is caused to impinge the conical wall of said striking face and be directed into axial alignment with said central bore.

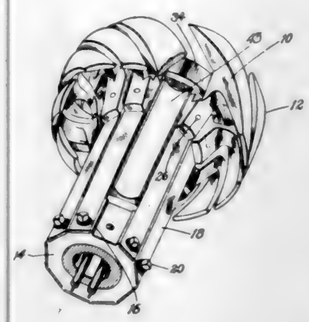
---

1,559,636. HAT-STEAMING DEVICE. SPIROS C. MARKATOS, New York, N. Y. Filed June 12, 1923. Serial No. 644,980. 1 Claim. (Cl. 223—26.)



In a hat renovating apparatus, the combination of a boiler, a casting and an offset support connecting the casting to said boiler, a steam chamber mounted on the casting, a combined inlet pipe and valve extending through the casting and into the chamber, a combined steam separating baffle and hat support attached to the upper end of the inlet pipe, said inlet pipe having apertures communicating with the interior of the casting when the valve is in open position and foot operated mechanism attached to the lower end of the inlet pipe.

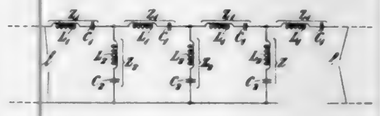
1,559,637. FINISHING MACHINE. FRANK A. E. MARSH, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 5, 1925. Serial No. 578. 9 Claims. (Cl. 12—105.)



2. A finishing tool comprising a carrier member, sectional work-rubbing members, flat springs attached to said carrier member at one end and supporting the sectional members at their other ends, and a cushion of relatively soft material interposed between the free ends of the springs and the carrier member.

---

1,559,638. WAVE FILTER. WILLIAM H. MARTIN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 26, 1920. Serial No. 376,763. 9 Claims. (Cl. 178—44.)



1. A wave filter for an electric circuit, said filter having a plurality of like recurrent sections, each section comprising lumped impedance in series with the circuit and lumped impedance adjacently in shunt thereto, both of said impedances being like types of resonant circuits and so proportioned that the filter approximately suppresses all frequencies lying outside a pre-assigned band extending between two frequencies other than zero or infinity and substantially completely suppresses a certain pre-assigned finite frequency other than zero.

---

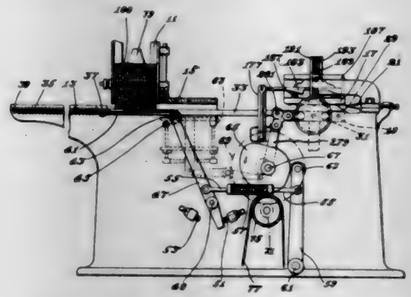
1,559,639. REVOLVING WINDOW SASH. JOHN MATZELLE, Cleveland, Ohio. Filed May 4, 1921. Serial No. 466,831. 5 Claims. (Cl. 20—49.)

1. In a window structure comprising a casing and a sash therein, the combination with a stile member of said sash, of a strip member interposed for lateral movement between said stile and said casing, means for pivotally connecting said members, and means preventing said strip from turning with said sash, said members having respectively an inter-engageable ridge and groove, and the first mentioned means comprising a pair of plates, one having a ridge and the other a groove respectively aimed with the first mentioned ridge and groove, and one plate having a tubular boss and oppositely disposed projections spaced therefrom and the other a central boss receiving opening and spaced depression disposed therearound to releasably receive said projections,

a pin passing through said boss, said central opening and said strip, and provided with a head, and a collar disposed at opposite sides of said strip, and a flat spring interposed between said head and the adjacent plate.

---

1,559,640. SPLITTING MACHINE. JAMES G. NORTON, Eltingville, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 9, 1920, Serial No. 415,810. Renewed Jan. 5, 1924. 44 Claims. (Cl. 69—11.)



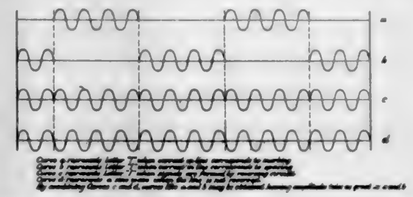
1. A machine of the class described, having in combination, means for determining the amount of variation of an article with respect to a selected characteristic, and means controlled by the variation-determining means for changing that characteristic.

44. A machine of the class described, having in combination, means for determining the amount of variation of an article with respect to a dimension thereof, and means controlled by the variation-determining means for effecting a change in the article with respect to that dimension.

---

1,559,641. SIGNALING WITH PHASE REVERSALS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 28, 1923. Serial No. 659,754. 16 Claims. (Cl. 178—66.)

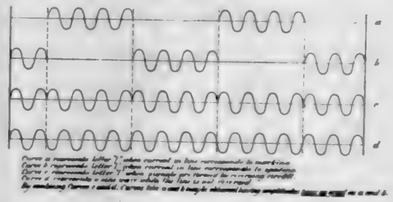
1. The method of signaling, which consists in transmitting a wave of constant amplitude and frequency but reversed in phase at intervals to indicate signals, and combining at the receiving station with the wave thus



transmitted, a wave of substantially the same amplitude and frequency but unreversed in phase.

---

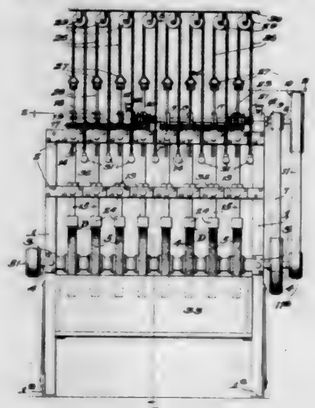
1,559,642. SIGNALING WITH PHASE REVERSALS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 28, 1923. Serial No. 659,755. 11 Claims. (Cl. 178—66.)



1. The method of signaling, which consists in transmitting a wave of constant amplitude and frequency but reversed in phase at intervals to indicate signals, producing at the receiving station under the control of said wave a wave of similar amplitude and frequency without phase reversals, and combining the two waves at the receiving station.

---

1,559,643. MACHINE FOR POLISHING OR GRINDING GLASS KNOBS AND SIMILAR ARTICLES. JAMES CHESTER POWELL, Byesville, Ohio, assignor to Cambridge Glass Company, Cambridge, Ohio. Filed Dec. 7, 1922. Serial No. 605,422. 3 Claims. (Cl. 51—105.)

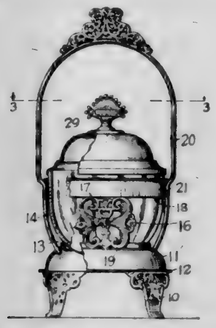


1. In a polishing machine, a frame, a series of rotatable abrasive members carried by the frame, two series of vertical slidable and spaced shafts carried by the frame, means to slide the shafts, work holders carried by the

shafts, a gear on each shaft, gears mounted on the frame in the spaces between the shafts of each series and meshed with the gears of the shafts, a second gear on one shaft of each series of shafts, a horizontal shaft, a pair of gears on the horizontal shaft meshed with the respective second gears of the said two shafts, and means to drive the horizontal shaft.

---

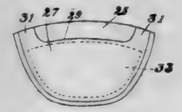
1,559,644. BOWL. MORRIS RELKIN, New York, N. Y. Filed Nov. 26, 1924. Serial No. 752,285. 3 Claims. (Cl. 65—15.)



1. A utensil of the character described comprising a stand, a sheet metal lower support forming part of said stand, a substantially horizontal outstanding flange on said support, legs attached to and curved to fit the periphery of said flange, an upper cylindrical support in said stand, a substantially horizontal slotted flange outstanding from and integral with said upper support adapted to have spoons suspended in the slots thereof, connecting members in said stand joining said upper and lower supports in spaced relation, handle members for said stand directly connected to and aiding in maintaining said upper and lower supports in spaced relation, and a removable bowl maintained in position in said stand by said supports.

---

1,559,645. SHOE STIFFENER AND METHOD OF MAKING IT. FRED RICKS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 18, 1923. Serial No. 669,429. 9 Claims. (Cl. 36—77.)

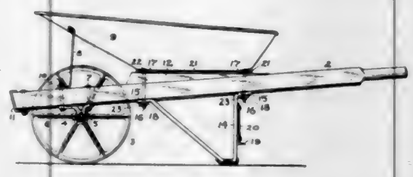


1. A toe stiffener for boots and shoes comprising a plurality of superposed layers of absorbent fabric impregnated with a thermoplastic material and securely united together, the middle portion of the upper of the layers being cut away at the rear end of the stiffener to expose an uncut portion of the lower layer whereby the rear margin of the stiffener has comparatively thick end portions and a thinner intermediate portion.

---

1,559,646. WHEELBARROW. RALPH R. ROEMER, Cleveland, Ohio, assignor to The Cleveland Wheelbarrow and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 14, 1923. Serial No. 638,866. 2 Claims. (Cl. 280—52.)

1. A wheelbarrow, comprising spaced handles having a pair of legs and bracing straps at their bottom sides, separate connecting straps and a plate seated on said connecting straps at the upper side of said handles, bolts extending through said plate, straps, legs and handles uniting them together, a tray removably seated upon said



plate, and a separate set of bolts detachably securing said tray to said plate and straps at points relatively near said handles.

---

1,559,647. POCKETKNIFE-DISPLAY CABINET. HENRY G. ROTH, Wheeling, W. Va., assignor to Ott-Heiskell Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Nov. 20, 1922. Serial No. 601,909. 2 Claims. (Cl. 211—16.)

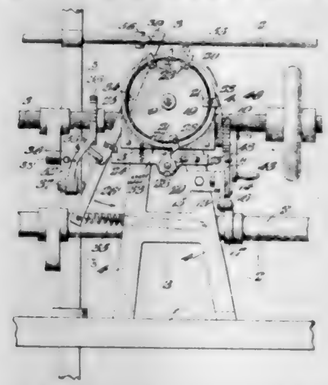
1. A pocket-knife display cabinet comprising a substantially upright casing having a transparent glass door closing the front thereof, and pins mounted in the rear wall of said casing and projecting forward into the interior of the latter, said pins being arranged in pairs for supporting thereon one or more knives, the pins of each pair being relatively spaced to underlie the knife handles adjacent to opposite ends of the latter, the pins of some of said pairs being disposed in horizontal planes and being adapted to engage the handles closely adjacent to the angles formed between said handles and the depending half-open opposite end blades, and the pins of others of said pairs being disposed in inclined planes in which the uppermost pin of each pair is adapted to engage a superposed knife in the angle between the handle and a depending half-open blade, and the lowermost pin underlies the opposite end of the handle.

---

1,559,648. AUTOMATIC-STOP FOR KNITTING MACHINES. FRITZ E. SCHULZ, Philadelphia, Pa., assignor to Schletter & Zander Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 10, 1924. Serial No. 719,043. 11 Claims. (Cl. 66—7.)

1. In a straight-bar knitting machine the combination of a main driving shaft, a cam shaft operated thereby, a disc rotatably carried by a fixed part of the machine,

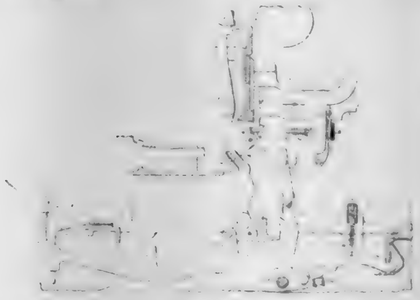
trip-fingers carried by said disc, means operative between said cam shaft and disc for step-by-step movement of said disc, a toothed wheel fixed to said main driving shaft and trip-mechanism including a detent to engage



said wheel and a pivotal finger arranged in the path of travel of said trip-fingers for stopping retrograde movement of said main driving shaft.

---

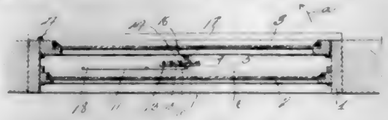
1,559,649. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 28, 1923. Serial No. 677,361. 13 Claims. (Cl. 197—27.)



1. In a type action for typewriting machines, the combination of a type bar that turns always on a single fixed pivot, a finger key, and intermediate actuating connections which include a close sliding fit pin and slot connection between the type bar and one of its actuating members which limits the depression of the key before the type bar reaches the printing position.

---

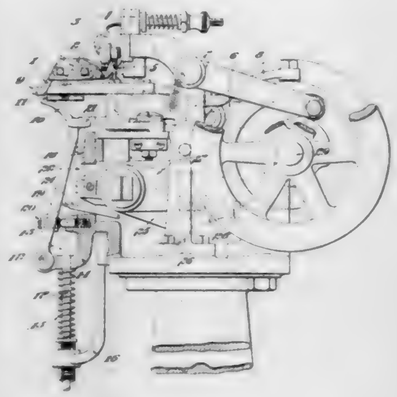
1,559,650. STORM-WINDOW HOLDER. SEVERT M. SEVERSON, Albert Lea, Minn. Filed Mar. 6, 1923. Serial No. 623,131. 1 Claim. (Cl. 292—263.)



The combination with a hinged storm window, said window being carried by a window frame, a sash slidably mounted in the window frame, of an adjusting and holding device for said storm window and entirely disposed between the storm window and the window sash, said adjusting and holding device comprising an arm pivotally connected to the storm window, said arm being formed from a plurality of pivotally connected sections foldable into registration with each other, and a clamping device carried by the window sill between the sash and storm window and cooperating with all of said plurality of pivotally connected sections, said clamping member comprising a U-shaped bracket, said bracket having its transverse portion downwardly offset, thereby forming shoulders between which the pivoted sections of the arm extend, a clamping jaw carried by one of said shoulders and pivotally connected thereto, and a set screw extending through said jaw and the transverse portion of the bracket for securely clamping the arm between the jaw and bracket and the shoulders carried by the bracket.

---

1,559,651. STITCH-SEPARATING MACHINE. JOHN SMITH, Earls Barton, and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 13, 1921. Serial No. 484,367. 9 Claims. (Cl. 12—41.)



9. A machine of the class described having, in combination, an indenting tool, means for actuating the tool to cause it to locate the intervals between stitches on a shoe sole and to feed the work, a rigid work rest having a single arm arranged at the side of the indenting tool toward which the work is fed to leave the space on the other side of the tool unoccupied for feeding the work close to the heel, and a work support under the tool to hold the work against the rest.

---

1,559,652. METHOD OF TREATING CERAMIC MIXTURES. HARRY SPURRIER, Chicago, Ill. Filed Jan. 24, 1924. Serial No. 688,351. 5 Claims. (Cl. 25—156.)

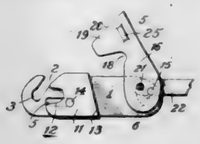
1. The process of treating ceramic mixtures consisting of evacuating the gases from the mass, and suddenly breaking the vacuum.

---

1,559,653. CHAIN LOCK. CHARLES A. STUCKER and WILLIAM MCCANDLESS, Davenport, Iowa. Filed July 28, 1923. Serial No. 654,372. 9 Claims. (Cl. 24—241.)

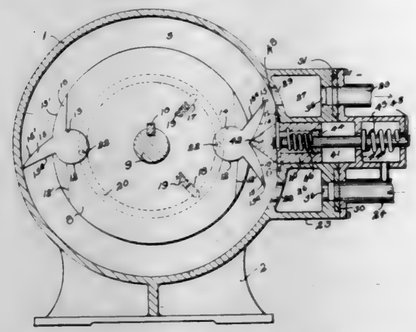
1. A lock of the character described for connecting the ends of a chain comprising a body having a slot therein to receive one end of the chain, a slide carried by the body and adapted when in one position to close

the slot and when in another position to open the slot, and a latch connected to the body and adapted when in one position to engage the slide for holding it in position to close the slot and when in another position to allow free movement of the slide upon the body, the opposite end of the chain being connected to the latch.



---

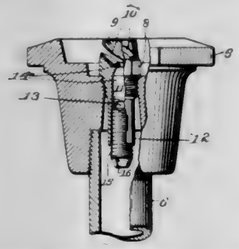
1,559,654. FLUID MOTOR. JOHN SWENDIG, Harrison, and GEORGE H. LAWRENCE, Coeur d'Alene, Idaho. Filed July 25, 1922. Serial No. 577,313. 5 Claims. (Cl. 121—93.)



1. The combination in a fluid motor with its casing and rotor and admission and exhaust ports for said casing, of an, oscillatable piston carried by said rotor having opposed spreading-vanes, a normally fixed abutment in the path of movement of said vanes and adapted to oscillate said piston, and locking means on said abutment adapted to be released by contact from a piston vane whereby when the motor is reversed said abutment is withdrawn from normal position.

---

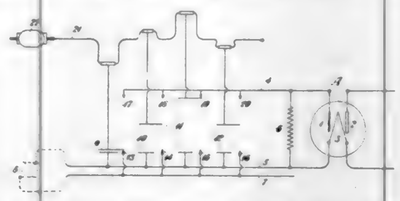
1,559,655. SPRINKLER HEAD. WALTER VAN E. THOMPSON, Los Angeles, Calif. Filed Jan. 16, 1923. Serial No. 613,023. 2 Claims. (Cl. 299—18.)



1. A sprinkler head comprising an outer casing having a central aperture therethrough, said aperture being of different diameters, portions of the casing forming said aperture being threaded; a spray member having a slot therein in the head thereof and a central bore of different diameters extending from near the top of the head to and through the body, said spray member being removably secured in said outer casing, said spray member having a body of less diameter than the aperture in the outer casing below its engagement with the casing and having transverse ports near the upper part of said body which is below its engagement with the casing; and being internally threaded; and an externally screw threaded plug in said body adapted to wholly or partially close said ports.

---

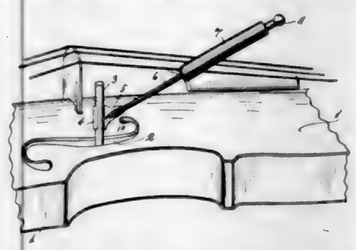
1,559,656. METHOD OF AND MEANS FOR INCREASING VOLTAGES. I. JAY THORP, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 26, 1921. Serial No. 464,709. 3 Claims. (Cl. 179—171.)



1. A source of potential, a device to which voltage from said source is to be applied, a condenser having its plates connected to said source, mechanical means for periodically and uniformly pulling one of the plates of said condenser away from the other while maintaining the charge thereon constant, and means for discharging said condenser plate on said device.

---

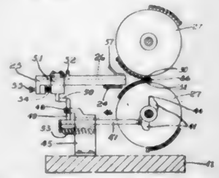
1,559,657. VIOLIN-SOUND-POST SETTER. CHARLES H. TODD, New Richmond, Wis. Filed May 22, 1923. Serial No. 640,674. 14 Claims. (Cl. 84—277.)



13. A violin sound post setting device comprising, a semi-cylindrical sleeve for receiving the sound post, a support extending at an inclination to the axis of said sleeve, and means carried by and movable longitudinally of said support toward said sleeve and into contact with said post.

---

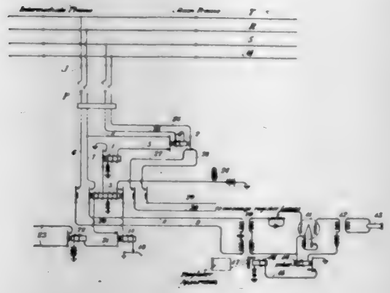
1,559,658. PRESS FOR EMBOSSING METAL. ALBERT B. UNDERWOOD, Cincinnati, Ohio, assignor to The Edwards Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 1, 1923. Serial No. 665,813. 6 Claims. (Cl. 101—5.)



1. In a device of the class described the combination with rotatable rollers, co-operating dies mounted on the peripheries of the rollers, cams on the side of one of the rollers, a grooved guide mounted with its one end adjacent the rollers, a feed block mounted for reciprocation on the guide, fingers on the block and extending into the grooves in the guide and means comprising a spring, a cam rod, a lever and a link for reciprocating the feed block as the rollers are rotated.

---

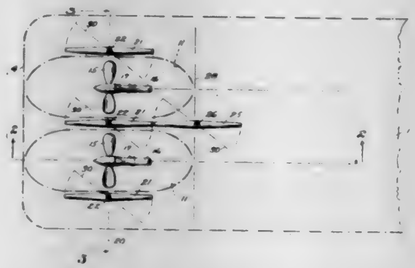
1,559,659. SERVICE-OBSERVING EQUIPMENT FOR AUTOMATIC TELEPHONE SYSTEMS. JAMES N. WALTERS, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 27, 1923. Serial No. 648,083. 4 Claims. (Cl. 179—27.)



1. In an automatic telephone system, a subscriber's line terminating at a central office, a service observing circuit, switching means at said central office for bridging said observing circuit across said line, said observing circuit including a vacuum tube amplifier and a polarized relay in the plate circuit of said tube.

---

1,559,660. RUDDER CONSTRUCTION FOR TOW-BOATS. CHARLES E. WARD, Charleston, W. Va., assignor to The Charles Ward Engineering Works, Charleston, W. Va., a Corporation of West Virginia. Filed Apr. 8, 1925. Serial No. 21,680. 13 Claims. (Cl. 114—163.)

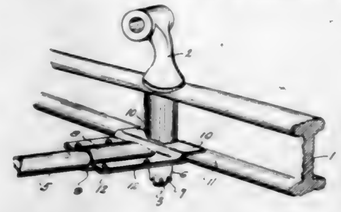


1. In a tow boat the combination of a plurality of chambers; a propeller located in each chamber; pair of rudders associated with each chamber; and an additional rudder longitudinally disposed to one of the rudders in said pair of rudders.

---

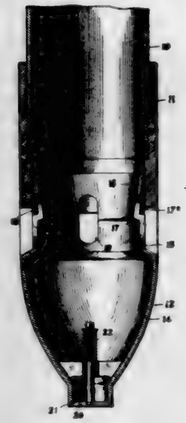
1,559,661. RADIUS-ROD SUPPORT. ANGELO C. ANTOINE, Mobile, Ala. Filed Aug. 11, 1924. Serial No. 731,388. 3 Claims. (Cl. 267—66.)

1. A radius rod attachment of the character described, comprising a pair of elements, means to clamp them about the radius rod adjacent to the axle, means on one element forming a shoulder adapted to engage a shoulder on the radius rod so as to positively prevent endwise slippage thereon away from the axle, and means on the other element adapted to overhang a part of the axle, as and for the purposes described.



---

1,559,662. CASING-SHOE GUIDE. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, a Corporation of California. Filed Mar. 14, 1923. Serial No. 624,948. 1 Claim. (Cl. 166—4.)



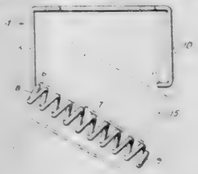
In combination with a well casing, a guide member adapted to be fitted to the end thereof to protect and guide said casing, said guide member comprising a hollow body portion, a sleeve formed as a continuation of the upper end of said body portion, the upper end of said sleeve being upwardly and outwardly tapered and insertible in the end of the casing, the lower end of said sleeve being of a diameter substantially the same as the largest diameter of said tapered portion whereby a shoulder will be formed between said tapered portion and the remainder of the sleeve, segmental wedges surrounding said tapered portion above said shoulder, said wedges having tapered inner faces coinciding with the taper of said tapered portion of the sleeve, and serrated outer faces engageable with the interior surface of said casing, said sleeve having openings formed therein whereby said wedges may be driven upwardly to firmly hold the guide member in place on the casing.

---

1,559,663. TOILET-PAPER HOLDER. ERNEST S. BALDWIN, Oakland, Calif. Filed Aug. 4, 1924. Serial No. 730,104. 1 Claim. (Cl. 211—31.)

A toilet paper holder comprising a wire frame and a cylindrical core of wire, the frame formed with a flat portion having a pair of arms projecting angularly therefrom and the core formed with a central opening at each end thereof, the end of one arm of the frame formed

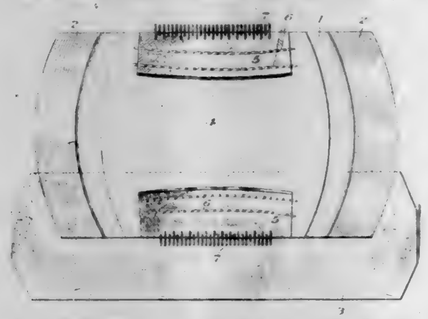
with an eye to hingedly and inseparably engage the core through one of its end openings, and the end of the other arm of the frame formed with a hook for the removable insertion of the latter through the opposite end



opening in the core, and the flat portion formed with an eye adjacent each arm for the reception of wall securement means therefor and also to provide reislience to effect insertion and disinsertion of the hooked end of the arm in the said core opening provided therefor.

---

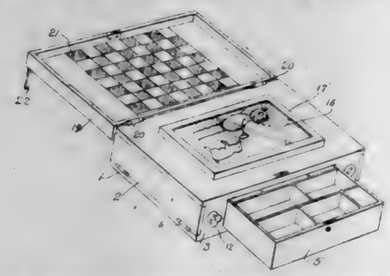
1,559,664. BLOW-OUT BOOT. JOHN A. BARNES, Dallas, Tex., assignor to Fowler Company, Incorporated, Dallas, Tex., a Corporation. Filed June 16, 1925. Serial No. 37,488. 5 Claims. (Cl. 152—24.)



2. A blow-out boot comprising a body portion, a reinforcing and strengthening strip positioned along the edge of the body portion with its outer edge flush with the edge of the said body portion, means for attaching said reinforcing and strengthening strip to said body portion at a point remote from the edge of the body portion, and fastening means passing through said reinforcing and strengthening strip and through the body portion of the boot.

---

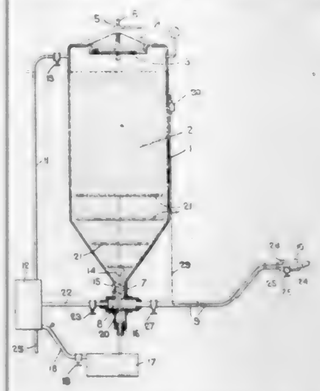
1,559,665. EDUCATIONAL DEVICE. RAY C. BEERY, Pleasant Hill, and ROBERT CRAIG, Dayton, Ohio; said Craig assignor to said Beery. Filed Mar. 14, 1924. Serial No. 699,174. 1 Claim. (Cl. 35—12.)



An educational device comprising a permanent transparent writing surface and a strip containing a series of illustrations adapted to be successively presented immediately beneath said surface and in contact therewith, whereby the several illustrations may be traced on said writing surface as desired.

---

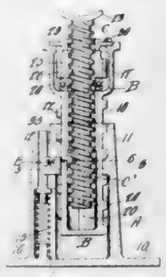
1,559,666. PNEUMATIC PLASTERING MACHINE. NAPOLEON M. BERNIER, Cambridge, Mass. Filed Mar. 12, 1925. Serial No. 14,928. 3 Claims. (Cl. 91—45.)



1. In a pneumatic plastering machine, the combination with a tank having a discharge port, of a receiving chamber with which said port communicates, a feed screw for feeding material from the tank through the discharge port into the receiving chamber, a delivery pipe connected to the receiving chamber and extending at right angles to the discharge port, a source of compressed air supply, means to connect the latter with the opposite end of the tank from the discharge port, and means for delivering air under pressure into the receiving chamber at angles to the discharge port.

---

1,559,667. SCREW JACK. CHRISTIAN BIRNBAUM and EDWARD J. GUTMAN, Cleveland, Ohio. Filed Jan. 30, 1923. Serial No. 615,817. 7 Claims. (Cl. 254—102.)



7. An apparatus of the character described comprising, a base, an adjusting screw threaded into said base and having a portion of each thread cut away, a dog mounted in said base and adapted to normally enter said cut away portions to arrest the rotation of said adjusting screw in one direction and to automatically recede out of said cut away portions upon the rotation of said adjusting screw in the opposite direction and to selectively permit the rotation of said adjusting screw in either direction by manual manipulation thereof, a power screw adapted to slide unrotatably in said adjusting screw, a worm wheel mounted in said adjusting screw and threaded to said power screw, a worm mounted on said adjusting screw in mesh with said worm wheel, and a worm shaft journaled in said adjusting screw and extending outside thereof and provided with means to engage an operating handle.

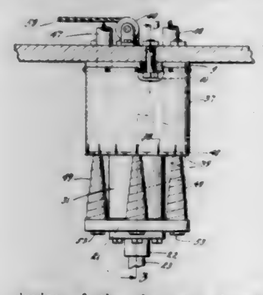
---

1,559,668. METHOD OF CONNECTING CABLES AND WIRES. HAROLD M. BROWN and WILLIAM G. BROWN, Chicago, Ill. Filed Apr. 7, 1923. Serial No. 630,459. 4 Claims. (Cl. 29—155.5.)

1. The method of securing conductors of electricity in electric connection and to permit convenient release thereof, which comprises placing portions of said conductors in a retaining member having intersecting openings, and then pressing soft metal upon said portions within said openings to lock said conductors in position so that said metal and portions may be pressed back for withdrawing said conductors.

---

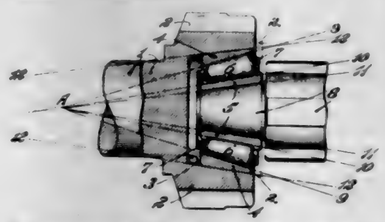
1,559,669. LIGHTING-FIXTURE HOLDER. HAROLD M. BROWN, Chicago, Ill., assignor of one-half to Oscar E. Fuchs, Chicago, Ill. Filed Sept. 26, 1924. Serial No. 740,002. 21 Claims. (Cl. 240—66.)



3. In a device of the character described, the combination with a supporting body having a retaining seat, a rotatable sleeve having means adapted to rest in said seat, a stud member extending into the sleeve and having means affording a guide in the supporting body, means whereby to support the stud member on the rotatable sleeve, a base member secured to the stud member, and cooperative terminal contacts carried by said supporting body and said base member respectively.

---

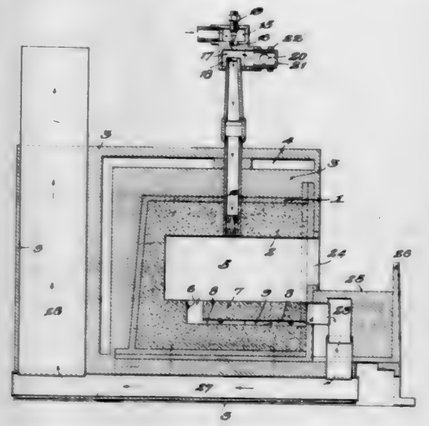
1,559,670. POCKET-BEARING CONSTRUCTION. TRACY V. BUCKWALTER, Canton, Ohio, assignor to Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed June 21, 1924. Serial No. 721,459. 3 Claims. (Cl. 308—214.)



1. The combination of two shafts in axial alinement and a conical roller bearing between them, one of said shafts having an axially conically recessed gear at the end thereof, and the adjacent end of the other shaft being tapered and extending inside of the recess, said bearing comprising a cone mounted on said tapered end and conical rollers, and the apex of the inner surface of said cone being substantially coincident with the apex of the outer or bearing surface thereof.

---

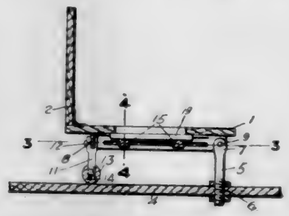
1,559,671. SOLDERING-IRON FURNACE. ERNEST L. BULLOCK and ELMER S. UMSTEAD, Providence, R. I. Filed Apr. 27, 1925. Serial No. 26,076. 9 Claims. (Cl. 158—7.)



1. A soldering iron furnace comprising a chamber lined with fire brick and having a recessed bottom, and a loose fire brick in the bottom recess defining therewith an outlet passage to a flue.

---

1,559,672. AUTOMOBILE DRIVER'S SEAT. ALFRED ERNEST BUNT, Toronto, Ontario, Canada. Filed Apr. 10, 1925. Serial No. 22,175. 1 Claim. (Cl. 155—14.)



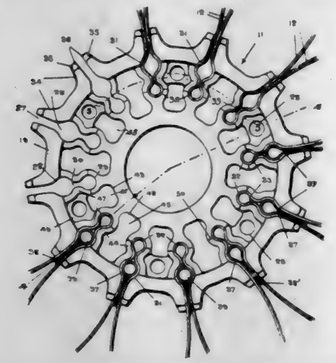
In an automobile seat, the combination with the seat frame, of a U-shaped supplemental frame having longitudinally sloted side arms, standard supports upon which the ends of the side arms are pivotally mounted, transverse bars having reduced ends slidable within the slotted arms of the supplemental frame, means for securing the transverse bars from moving within the slotted arms, and a support for the rear portion of the supplemental frame.

---

1,559,673. WHEEL-HUB CONSTRUCTION. JOHN WORTH CARNAHAN, Washington, D. C., assignor to Carnahan Industrial Engineering Corporation, Bridgeport, Conn., a Corporation of Delaware. Filed July 19, 1922. Serial No. 575,975. 7 Claims. (Cl. 301—80.)

1. A spoke-holding member having spoke-receiving slots and resilient portions along the edges of said slots, and

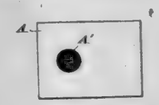
spokes formed from strips driven edge-wise into said slots, said member and spokes having a tapering fit



so that said portions are sprung and brought under strain when the spokes are driven into the slots.

---

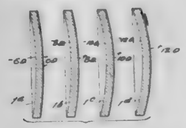
1,559,674. COLOR MOTION-PICTURE PHOTOGRAPHY. ARTHUR W. CARPENTER, New York, N. Y. Filed Jan. 18, 1923. Serial No. 613,405. 10 Claims. (Cl. 88—16.4.)



1. The method of making pictures in a plurality of colors for projection upon a viewing screen, consisting of making a plurality of photographic negatives by taking a separate exposure of each of a plurality of objective views each of said views representing a different portion of a complete view that is to appear in the completed picture, making a separate positive print from each of said negatives, independently coloring each of said prints with a different arbitrarily selected color, whereby that part of each print forming a part of the picture will be distinctively colored, and superposing said prints to form a single picture area upon material permitting the passage of light.

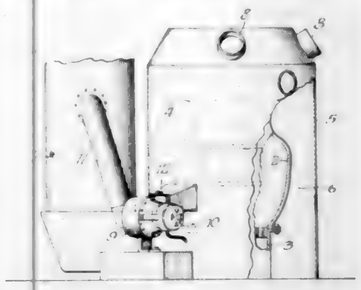
---

1,559,675. SET OF FUSED BIFOCAL-LENS BLANKS. GEORGE A. CLEMENT, Mount Vernon, N. Y., assignor to Patent Optical Company, Inc., a Corporation of Delaware. Filed July 1, 1924. Serial No. 723,481. 3 Claims. (Cl. 88—54.)



1. A product in the manufacture of bifocal lenses that have their entire bifocal sides finished entirely to continuous curves, comprising a set of bifocal lens blanks progressing from lowest to highest addition and each formed by fusing a small piece of glass having a relatively high index of refraction into a plus countersink in the plus side of a major piece of glass of lower index of refraction, the set being made up of a plurality of series classified according to the finished curve on the bifocal side, the curve being the same for all the blanks of each series but different for the several series, and each series being made up of a plurality of units of progressively higher additions.

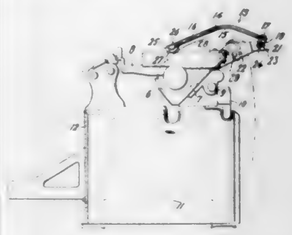
1,559,676. FURNACE. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1923. Serial No. 648,871. 8 Claims. (Cl. 126—99.)



1. The combination with a furnace comprising inner and outer casings with an intermediate air heating space having an exhaust opening at the top and a cold air duct leading into the lower end thereof, of an air circulating device arranged outside of and permitting unobstructed circulation through the cold air duct and aforesaid air heating space, and comprising a smaller duct leading from the cold air duct and terminating at the outer casing of the furnace and having a blower interposed between the ends thereof for withdrawing air from the cold air duct and discharging same into the air heating space in an upward direction.

---

1,559,677. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, deceased, late of New York, N. Y., by Michael J. Corcoran, New York, N. Y., administrator, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 21, 1923. Serial No. 653,041. 14 Claims. (Cl. 197—186.)

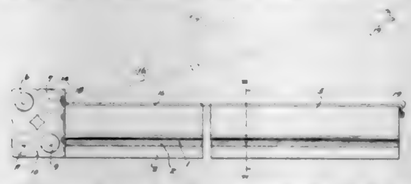


1. In a typewriting machine, the combination with a platen and a carriage therefor, of a sound-deadening and sound-absorbing canopy placed over and above the carriage and platen, said canopy including a foraminous sheet placed next to the carriage and platen, and a sheet of sound-absorbing material extended over the back of the foraminous sheet, the latter designed and intended to have the sound waves propagated by the typewriting machine strike thereon and be broken up thereby and the sheet of sound-absorbing material absorb any of said sounds that may reach it, whereby the sounds emanating from the typewriting machine that reach the canopy will be broken up, deadened and absorbed.

---

1,559,678. GAME RACK. STANLEY COWEN, San Francisco, Calif. Filed June 11, 1924. Serial No. 719,316. 5 Claims. (Cl. 273—150.)

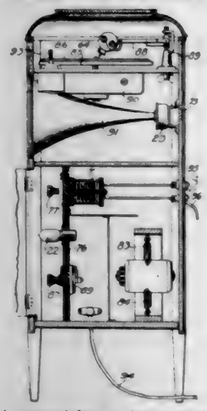
1. In a game rack, an inclined member having a concave front surface in combination with a foot piece therebelow, said member and foot piece adapted to support a series of tiles out of contact with said concave surface and a substantially horizontal ledge adjacent said member and a plurality of counter holders mounted on a



metallic base at one end of said member said base struck up forming end stops for tiles carried on said member and on said ledge.

---

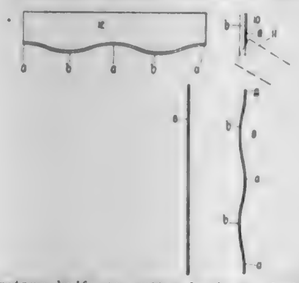
1,559,679. SIGNALING APPARATUS. EDWARD B. CRAFT, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1922. Serial No. 548,214. 6 Claims. (Cl. 179—100.1.)



1. A cabinet comprising a loud speaking receiver, an electric phonograph reproducer, a high frequency receiving set for detecting ultra-audio frequency signals, an amplifier common to said reproducer and said receiving set and switching mechanism for causing said amplifier to be operated at times by detected high frequency signals and at other times to be operated by signals from said reproducer for effecting the operation of said loud speaking receiver.

---

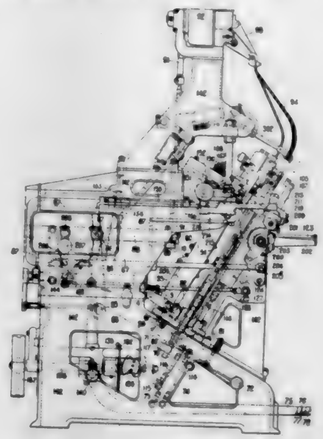
1,559,680. ROTARY KNIFE OR CUTTER. MARK THOMAS DENNE, Warlingham, England. Filed Oct. 30, 1920. Serial No. 420,783. 2 Claims. (Cl. 164—70.)



1. A rotary knife or cutter having a body provided with an annular cutting edge that is arranged to make a cut in a line at an acute angle to the axis of rotation, the portion of the body on which the cutting edge is formed being distorted in a direction transversely to the thickness thereof to form an undulating cutting edge of such a shape that it alternately advances progressively and recedes progressively in the direction of said line during the rotation of the cutter.

---

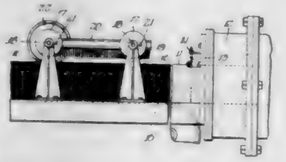
1,559,681. PULLING-OVER MACHINE. MARK THOMAS DENNE, Highgate, London, England. Filed Feb. 21, 1921. Serial No. 446,773. 13 Claims. (Cl. 12—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A pulling over machine having in combination, a last support, a plurality of pincers, automatic power-actuated means for actuating said pincers to lay the marginal portion of the upper over the edge of the sole of the last, and other power-actuated means operable throughout the operation and entirely under the control of the operator to bring about a relative movement of the last support and all the pincers simultaneously, to stretch the upper about the last.

---

1,559,682. MACHINE FOR PRODUCING BRICK FACES. IVAN N. DOUGHTY, Danville, Ill., assignor to Western Brick Company, Danville, Ill., a Corporation of Illinois. Filed May 6, 1925. Serial No. 28,296. 12 Claims. (Cl. 25—1.)



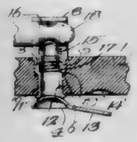
1. Apparatus for forming plastic surfaces which comprises a plurality of elements having substantially hemispherical ends and means for bringing said ends into and out of engagement with the surface.

---

1,559,683. ELECTRIC SWITCH. HARRY A. DOUGLAS, Bronson, Mich. Filed Apr. 17, 1922. Serial No. 554,273. 1 Claim. (Cl. 173—259.)

The combination with a mounting board having an opening therethrough formed with three portions of successively increasing sizes whereby two steps or shoulders are formed in said opening; of a terminal post

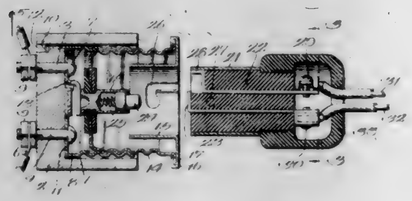
having a head receivable in the opening portion of largest size and resting upon the shoulder thereat, said post being also formed with two parts of different sizes in addition to said head and formed with bores of different transverse dimensions with the larger bore in the larger part, these additional post parts substantially respec-



tively fitting the remaining two portions of said opening; a spring within the larger bore and abutting against the shoulder between the two bores; and a contact in the larger bore and pressed outwardly by said spring, said post having a flange on its end opposite the head of the post and engageable with said mounting.

---

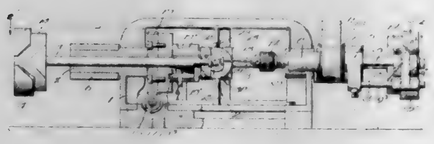
1,559,684. SOCKET. HARRY A. DOUGLAS, Bronson, Mich. Filed Oct. 20, 1923. Serial No. 669,788. 3 Claims. (Cl. 173—344.)



1. The combination with a metallic socket; of a mounting base of insulation for said socket; two binding posts upon said base; and a leaf spring contact within said socket secured to said base by one of said binding posts and extending across the axis of said socket which has an ear portion secured to said base by the other binding post.

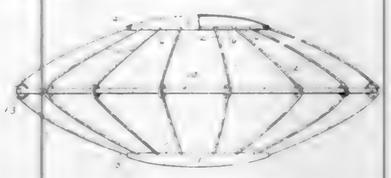
---

1,559,685. DRILLING MACHINE. HARRY A. DOUGLAS, Bronson, Mich. Filed Nov. 1, 1923. Serial No. 672,114. 1 Claim. (Cl. 77—21.)



A work holder including two substantially parallel work-holding pins each formed with a recess on a side thereof opposite the recessed side of the other; a support for said pins; and tool guides, each recess having a guide aligned therewith.

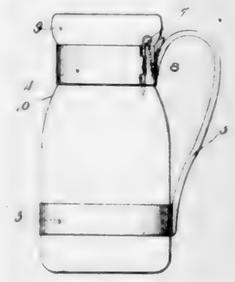
1,559,686. MATTRESS. CHARLES Z. EDELSON, JACOB GOLDEEN, and MILTON D. TARLOW, Portland, Oreg. Filed Feb. 4, 1924. Serial No. 690,654. 5 Claims. (Cl. 5—351.)



3. In a mattress, the combination of an octagonal ring; a pair of convex covers placed above and below the center of said ring; a plurality of bow springs loosely hinged on said ring and having their ends hinged to said cover.

---

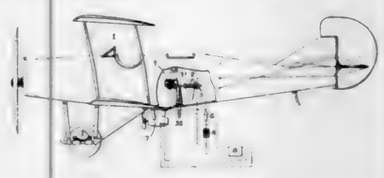
1,559,687. BOTTLE HOLDER. SALLY FAIRCHILD, Concord, N. H. Filed Apr. 8, 1924. Serial No. 705,043. 1 Claim. (Cl. 215—100.)



A bottle holder comprising a solid lower band, an upper band consisting of two arcuate portions hinged together, a handle rigidly interconnecting said lower band and one of said portions of the upper band intermediate its ends, the hinge connection between said upper band portions being remote from the connection between the handle and said upper band, and means for connecting together the free ends of said arcuate portions to provide a firm band for clasping the neck of the bottle below the lip thereof when the holder is applied to the bottle over the top thereof.

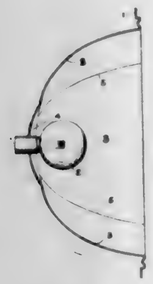
---

1,559,688. APPARATUS FOR PHOTOGRAPHIC CARTOGRAPHY. SHERMAN M. FAIRCHILD and EDMUND R. MORTON, New York, N. Y.; said Morton assignor to said Fairchild. Filed Mar. 1, 1923. Serial No. 622,039. 4 Claims. (Cl. 95—125.)



1. In combination with an aeroplane, a camera mounted with freedom for adjustment on said aeroplane, a gyroscope for positioning the camera, and means for causing the gyroscope to precess continually in substantial coincidence with a radius of the earth.

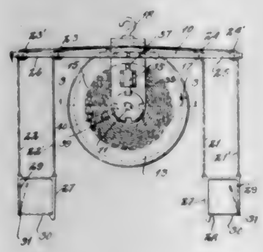
1,559,689. AUTOMOBILE HEADLIGHT REFLECTOR. CHARLES GENTLE, Hamilton, Ontario, Canada, assignor of one-half to Alexander Donald, Hamilton, Province of Ontario, Canada. Filed Mar. 20, 1924. Serial No. 700,638. 6 Claims. (Cl. 240—41.)



1. In a parabolic automobile headlight reflector, in combination a central parabolic reflecting portion, a plurality of non-parabolic reflecting portions depressed in the wall of the reflector and arranged around the parabolic portion, and ribs separating the non-parabolic portions and extending from the vicinity of the forward edge of the reflector to the outer edge of the parabolic portion.

---

1,559,690. TOBACCO-LEAF CONVEYER. JULIUS GOLON, Suffield, Conn. Filed June 30, 1925. Serial No. 40,559. 2 Claims. (Cl. 254—140.)

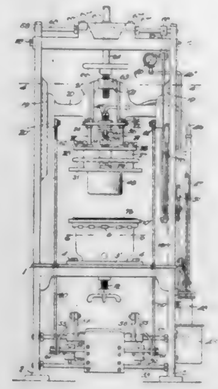


1. In a tobacco leaf conveyer, a plurality of rotating spring controlled drums, groups of cables on each drum, frames at the ends of said cables, each comprising a straight bar and a shouldered side bar, a lower bar pivotally attached to said straight bar and adapted to rest upon the shoulder of said side bar allowing insertion of a load into said frame and closing of the bottom thereof.

---

1,559,691. APPARATUS FOR IRONING HATS. FRANCISCO GONZALEZ and MIGUEL SUAREZ, Habana, Cuba. Filed June 12, 1922. Serial No. 567,731. 2 Claims. (Cl. 223—81.)

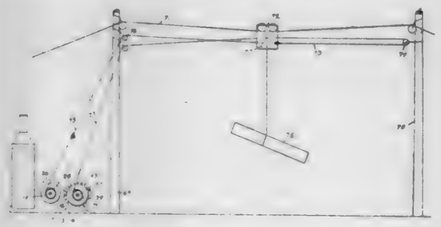
1. An apparatus for ironing hats, comprising, a supporting structure, a male last, a female last, a movable frame carried by the supporting structure and carrying the male last, frame moving mechanism for interengaging the lasts, and a second means for forcing the lasts together, said second means comprising, a threaded shaft adjustably threaded into said movable frame, and having a smooth portion slidable in an apertured portion of the supporting structure, and means for exerting pressure on the free end of the threaded shaft, whereby to force the lasts into closer engagement, the last said means comprising, a pivoted operating lever, a pivoted shaft positioned adjacent the apertured portion of the supporting



structure, a link connection between the operating lever and pivoted shaft, and a cam member, carried by the pivoted shaft, and operable by the operating lever, to bear against the end of the threaded shaft.

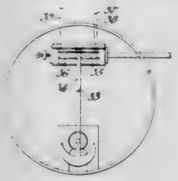
---

1,559,692. INTERGEARED SKYLINE LOGGING ENGINE. SIDNEY B. GORBUTT, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed Mar. 5, 1924. Serial No. 697,039. 3 Claims. (Cl. 254—185.)



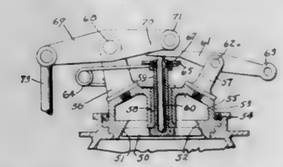
1. In an intergeared logging engine, the combination of spaced frame members; a drive shaft mounted across said frames; unequal pinions secured on said drive shaft; a skidding drum shaft journaling across said frames; a skidding drum loose on said skidding drum shaft; a skidding gear tight on said skidding drum shaft and meshing with the smaller pinion; a band friction between said skidding drum and its gear; an air-actuated friction applying means for said band; a haulback drum shaft mounted across said frame; a haulback drum secured on said haulback drum shaft; a haulback gear loose on said haulback drum shaft and meshing with the larger pinion; a band friction between said haulback gear and drum; a holdback gear loose on said haulback shaft; a band friction between said holdback gear and haulback drum; and means for actuating said bands on said haulback drum consisting of a cylinder mounted between each gear and its drum, having a piston and levers arranged to actuate said bands, with valve means for admitting air to either the cylinder on the holdback or haulback gear side of said haulback drum and to exhaust air from the opposite cylinder.

1,559,693. ELECTRIC CONTROL SYSTEM. JOHN C. HALE, Tarrytown, N. Y., assignor to Research Corporation, New York, N. Y. Filed Nov. 2, 1921. Serial No. 512,368. 6 Claims. (Cl. 200—56.)



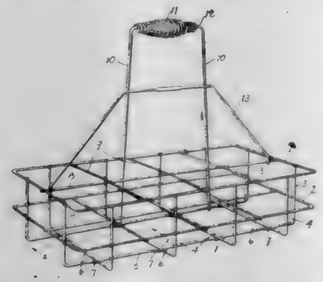
1. In an instrument of the class described, the combination with an indicating pointer, of conductors disposed on opposite sides of the pointer in planes substantially parallel with the plane of motion of the pointer, means for angularly moving the conductors about an axis in the said plane of motion and an electric circuit having its ends connected to the said conductors.

1,559,694. INTERNAL-COMBUSTION-ENGINE VALVE. WILLIAM HARPER, Jr., New Bloomfield, Pa., assignor, by mesne assignments, to Gas Turbine Corporation, New York, N. Y., a Corporation of Delaware. Original application filed May 12, 1919, Serial No. 296,358. Divided and this application filed Dec. 8, 1921. Serial No. 520,911. 3 Claims. (Cl. 123—90.)



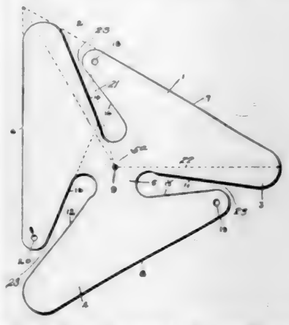
1. In an internal combustion engine, a spring closed exhaust valve provided with a hollow stem, an actuating rod in the stem, a lever engaging said actuated rod, and a rocker engaging said lever at spaced points so as to suddenly vary the leverage during opening of the valve.

1,559,695. BOTTLE CARRIER. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Apr. 4, 1925. Serial No. 20,689. 3 Claims. (Cl. 220—19.)



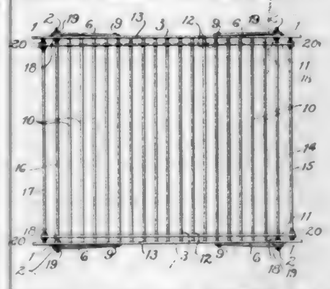
1. The combination of top and side frame members comprising integral side and end portions, upright side and end members secured to the inner sides of said frame members, said side and end members having longitudinal and transverse bottom bars integral therewith, the longitudinal bottom bars being disposed below the transverse bottom bars and having downward offsets therein in which the transverse bottom bars are disposed so that the upper edges of the longitudinal and transverse bars are in substantially the same horizontal plane, the offsets of said longitudinal bar constituting supporting feet for the carrier, the side frame member being disposed in a plane above the bottom bars, and longitudinal and transverse partition members disposed in crossed relation with their ends secured to the end and side portions respectively of the frame members providing compartments with the transverse and longitudinal bottom bars intersecting centrally thereof providing bottoms for the compartments.

1,559,696. PIN WHEEL. JOHN HEBERLING, Rochester, N. Y., assignor to Bastian Brothers Company, Inc., Rochester, N. Y., a Corporation of New York. Filed May 31, 1924. Serial No. 716,939. 1 Claim. (Cl. 46—14.)



A wind wheel blank having a central portion and three symmetrically arranged blade forming elements, each connected to the central portion by a reduced neck, said blade forming elements having two oppositely extending arms, the distance between the extreme end of one arm and the center of the central portion being greater than the distance between the extreme end of the other arm and the center of the central portion and the elements being separated by recesses whose mouths lie entirely to one side of straight lines drawn from the center of the central portion to those outermost portions of the blade forming elements which are to form the tips of the blades, said recesses being of such shape that when the shorter arms are curved over the longer arms, the resisting surfaces formed by such shorter arms will extend less than one half of the lengths of the blades.

1,559,697. PORTABLE TOURIST'S GRATE. MELVIN G. HENN, St. Louis, Mo. Filed Sept. 13, 1922. Serial No. 587,945. 6 Claims. (Cl. 126—30.)

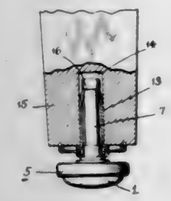


1. A portable tourist's grate consisting of a plurality of substantially parallel grid bars, a pair of oppositely disposed distance bars extending transversely to the grid bars and having means for holding the grid bars against lateral movement, a side bar corresponding to each distance bar operating to hold the grid bars against longitudinal movement, and means for securing the side bars and the distance bars together.

1,559,698. COMB AND CLIP. LEO A. HENTER, Hot Springs, Mont. Filed Mar. 17, 1924. Serial No. 699,907. 4 Claims. (Cl. 24—3.)

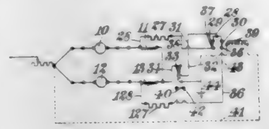
1. In a device of the class described the combination of a comb, and a U-shaped clasp secured to the comb and comprising an attaching leg secured to the comb by means of rivets which at the opposite side of the comb from the side to which the leg is secured provide a pair of spaced projecting heads, a bight portion extending upwardly of the end of the comb in an arcuate relation thereover, and a resilient tongue extending along the opposite side of the comb from that side adjacent which the attaching leg is secured, said tongue providing at its free end a ball shaped head extending into the space between the projecting heads of said rivets.

1,559,699. FURNITURE SHOE. WALTER F. HEROLD, Newark, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 5, 1921. Serial No. 520,199. 1 Claim. (Cl. 16—42.)



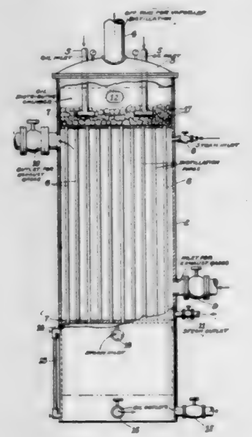
In a furniture shoe of the factory shoe type, the combination of a cast bearing member having a rounded lower surface, the lowest point of which is at the center thereof, adapted to slide on the floor and having a central recess extending downwardly from its upper surface, a disc having a central opening therein, a surface adapted to bear against the upper surface of said member and a downturned edge secured to the edge portion of said member, and a pintle having its lower end extended through the opening in said disc into said recess, and having an enlargement in said recess, and a shoulder above the disc, said parts serving to rivet the pintle fixedly to the disc.

1,559,700. ELECTRICAL CURRENT-OPERATED CONTROLLING MECHANISM. LESLIE BARNETT HEWITT, London, England. Filed Aug. 22, 1923. Serial No. 658,750. 13 Claims. (Cl. 172—179.)



2. An electric motor control system, comprising the combination with the electric motor of a device for varying the ratio of the current passing through the motor armature to that passing through the field circuit, by weakening the latter, a magnet coil receiving the motor current and comprising a plurality of coil parts, an armature for said coil, operative connections between the coil armature and the field-weakening device whereby the latter is controlled by the said coil armature, and means comprising a current-supply lead to each coil part and so arranged that currents of different magnitude, by being passed through different lengths of the coil, can have the same operative effect upon the coil armature.

1,559,701. METHOD OF DISTILLING OIL. LEON E. HIRT, Los Angeles, Calif. Filed Mar. 2, 1920. Serial No. 362,678. 5 Claims. (Cl. 196—85.)

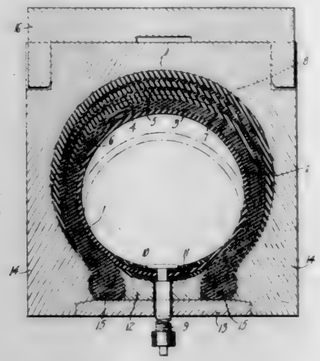


1. The method of distilling oil, comprising producing a flow of the oil in thin films through a series of tubes in which the distillation takes place and pressing a gaseous medium other than the hydrocarbon being distilled through the tubes to mechanically remove vaporized constituents of the oil, substantially as described.

1,559,702. VULCANIZING PROCESS. ERNEST HOPKINSON, New York, N. Y. Original application filed Mar. 7, 1921, Serial No. 450,193. Divided and this application filed Jan. 8, 1924. Serial No. 684,932. 3 Claims. (Cl. 18—53.)

1. That method of vulcanizing tire tubes and casings which consists in, assembling an incompletely vulcanized annular tube and casing in nested relation with a sub-

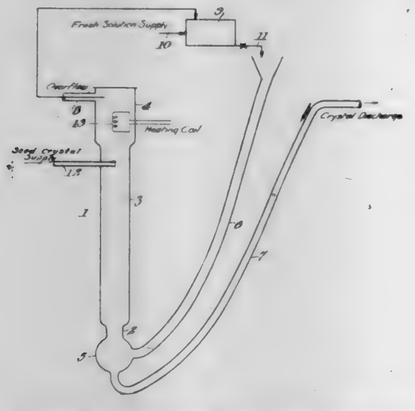
stance between them preventing their union during vulcanization, completely enclosing the nested tube and



casing in mold members, and simultaneously vulcanizing both the tube and casing while maintaining a wall-compacting fluid pressure on the interior of the tube.

---

1,559,703. PROCESS AND APPARATUS FOR CRYSTALLIZATION. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 5, 1923. Serial No. 649,715. 13 Claims. (Cl. 23—273.)

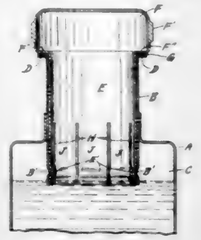


1. Process of crystallizing which comprises maintaining a suspension of crystals of a material to be crystallized in an ascending current of a solution of the material, inducing the deposition of material from said solution upon the crystals in suspension, and supplying crystals to be grown to said ascending current of solution by introducing a relatively small stream of a supersaturated solution of the material into said ascending current of solution.

---

1,559,704. FILLER TUBE AND PLUG. GEORGE E. HUBBARD, Hastings, Minn. Filed Dec. 20, 1924. Serial No. 757,294. 1 Claim. (Cl. 220—24.)

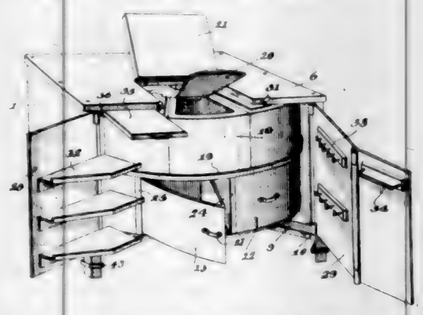
In a filler tube plug for containers the combination of a fixed tube in the container and communicating with the interior thereof, a filler plug comprising a tubular body adapted to be slidably inserted in said fixed tube, an enlargement on the plug adapted to serve as a hand hold, said fixed tube having a circular inwardly directed groove adjacent its inner end and said tubular body of the plug having a circular inwardly directed groove portion adapted to frictionally engage the first mentioned groove and yieldable means for disengaging said grooved



parts to release the plug, said disengaging means consisting of a number of circularly arranged, elongated resilient tongues formed of the lower end of said plug by cutting slits longitudinally therein from its bottom end.

---

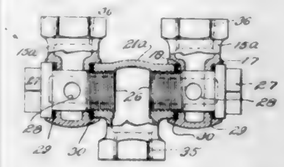
1,559,705. ROTARY KITCHEN CABINET. JOHN W. JACKSON, Augusta, Ga. Filed Dec. 21, 1922. Serial No. 608,221. 7 Claims. (Cl. 211—21.)



1. A cabinet including a housing, a shaft revoluble and detachably mounted within the housing, a series of receptacles detachably supported upon the shaft, a top detachably mounted on the housing and forming a journal for the upper end of the shaft, a door arranged in the top in such position that the uppermost receptacles may be brought into registration therewith, and doors on the sides of the housing for affording access to others of the receptacles.

---

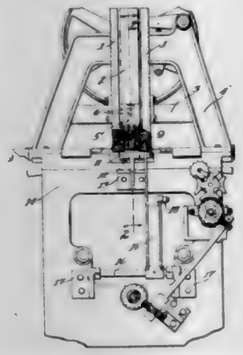
1,559,706. PIPE FITTING. JOHN F. JENNINGS, Cleveland, Ohio. Filed June 30, 1923. Serial No. 648,686. 3 Claims. (Cl. 277—18.)



1. In combination, a faucet having passage-ways extending transversely therethrough, a hollow bolt having a shoulder engaging one side of the faucet and having a shank extending through the faucet and projecting beyond the opposite side, there being a passage-way extending laterally through the bolt and providing communication between the interior of the bolt and the interior of the faucet, and a discharge member in threaded engagement with that portion of the bolt protruding from the faucet, the end of the bolt adjacent the member being open to provide communication between the member and the interior portion of the bolt.

---

1,559,707. COLLAPSED-CARTON-FEEDING DEVICE FOR CARTON-FILLING MACHINES. RUEL A. JONES, Covington, Ky., assignor to R. A. Jones and Company, Incorporated, Covington, Ky., a Corporation of Kentucky. Filed Dec. 17, 1921. Serial No. 523,237. 9 Claims. (Cl. 271—44.)



1. The combination of a magazine for holding a stack of normally collapsed cartons, an ejector for extracting the end carton of the stack from the magazine providing a base support for the cartons in the magazine, having a pair of tangs for sustaining the carton at two points along a rear edge of the carton, means for reciprocating said ejector, and yielding means intermediate of said tangs for sustaining the carton at a forward edge.

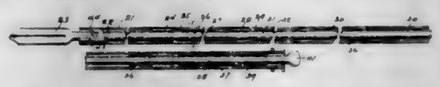
---

1,559,708. MATTRESS AND METHOD OF MAKING THE SAME. WALTER HARRISON KELSEY, Hutchinson, Kans. Filed Apr. 11, 1924. Serial No. 705,910. 11 Claims. (Cl. 5—355.)

1. In a mattress, a substantially rectangular boxing, ticking adapted to be secured to the boxing to form the mattress casing, and stuffing for filling the mattress casing, the said ticking having curves at the sides and ends thereof.

---

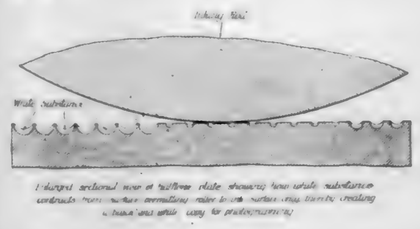
1,559,709. ROCK DRILL. MOSES ARTHUR KNAPP, Oakland, Calif. Filed Sept. 18, 1920. Serial No. 411,064. 39 Claims. (Cl. 255—42.)



1. In a rock drill, a composite drill rod comprising a tube, a rod disposed within said tube and means elastically holding the rod to the tube.

---

1,559,710. REPRODUCING HALF-TONE PRINTING PLATES. EDWARD A. KUNZ, Wilmette, Ill. Filed May 8, 1922. Serial No. 559,485. 3 Claims. (Cl. 95—5.7.)

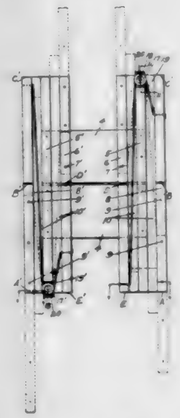


Enlarged sectional view of halftone plate, showing how white substance controls more surface permitting water to run surface may thereby creating a clean and white copy for photographing

1. Steps in the improved process of reproducing a printing plate consisting in rubbing chalk upon said plate to fill up the depressions thereof but leaving the printing surface clean, hardening said chalk, rolling up the printing surface with black ink and photographing the treated plate.

---

1,559,711. EXTENSION TABLE. CARL C. KUSTERER, Grand Rapids, Mich., assignor, by direct and mesne assignments, of one-third to St. Johns Table Company, Cadillac, Mich., and one-third to Albert Stickley, Grand Rapids, Mich. Continuation of application Serial No. 805,797, filed Dec. 10, 1915. This application filed Mar. 30, 1916, Serial No. 87,726. Renewed Feb. 4, 1925. 7 Claims. (Cl. 45—9.)



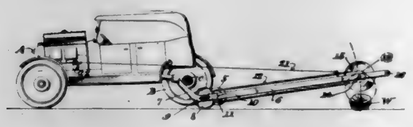
1. In an extension table, slides comprising a central member adapted to attach to the bridge of the table, slide members at each side secured to the opposite portions of the table top, intermediate free slides disconnected from both the bridge and the top, with clearance spaces at the top, oppositely disposed grooved pulleys on the opposite ends of the said central slides, and cable connections from the outer slides over the said pulleys to the inner slides and extending through said clearance spaces, disposed to equalize the opposite movements thereof, coacting for the purpose specified.

---

1,559,712. POWER-TRANSMISSION FOR AUTOMOBILE-OPERATED TOOLS. ROBERT HOWARD LAKE, Takoma Park, Md. Filed Jan. 21, 1924. Serial No. 687,595. 7 Claims. (Cl. 143—46.)

7. A power transmission attachment for automobiles comprising a frame pivoted at one end and carrying drive means for connection to a rotating part thereof,

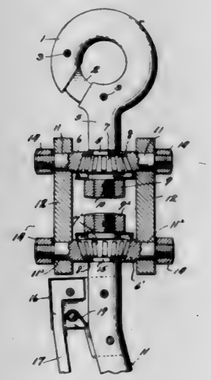
means to support the attachment adjacent the automobile when said frame is so placed and in contact with said rotating part, a tool on the free end of the frame, transmission means between the tool and the drive means, a



handle for oscillating the frame about its pivot to depress the tool to its work, and means comprising the weight of the automobile to counterbalance the frame and to return the tool to normal position.

---

1,559,713. SWIVEL HOOK. FRED C. LESTER, Wichita Falls, Tex. Filed June 16, 1925. Serial No. 37,497. 1 Claim. (Cl. 294—82.)

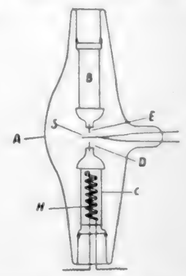


A swivel hook comprising, in combination, a pair of bearing plates each provided with oppositely disposed outstanding trunnions, straps connecting said bearing plates and engaged with the trunnions, a bearing hook operatively engaged with one of the bearing plates, and an elevating hook operatively engaged with a second of said bearing plates, the opposed faces of the bearing plates being provided with bowls and roller gear assemblies fixed to said hooks and engaging within the bowls of the bearing plates.

---

1,559,714. ART OF RELEASING ELECTRONS IN VACUUM DISCHARGE DEVICES. JULIUS EDGAR LILIENFELD, Leipzig, Germany, assignor of one-tenth to John H. Brickenstein. Filed Mar. 8, 1920. Serial No. 364,215. 18 Claims. (Cl. 250—35.)

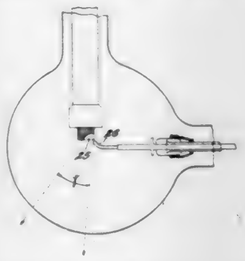
1. A device for releasing electrons comprising a sealed envelope evacuated to such high degree that ionization is substantially prevented and unheated electrodes separated by a gap sufficiently short to permit the start-



ing of the discharge between the cold electrodes upon the application of a suitable voltage.

---

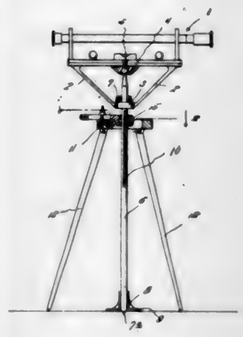
1,559,715. HIGH-VACUUM TUBE. JULIUS E. LILIENFELD, Kew Gardens, N. Y. Filed Sept. 29, 1921. Serial No. 504,088. 9 Claims. (Cl. 250—35.)



1. In high-vacuum devices of the character described, a device for limiting X-ray emanations to a predetermined area, which comprises an anode having a cavity whose orifice corresponds to the said area and a cathodic point directed into said cavity and in close proximity thereto.

---

1,559,716. SURVEYOR'S INSTRUMENT. GEORGE W. LINGLE and JOSEPH KERKHOFF, Kenosha, Wis. Filed July 3, 1924. Serial No. 724,057. 2 Claims. (Cl. 248—3.)



1. A device of the kind described comprising a tripod having a ring-like head at its upper end, a ground engaging rod passing downwardly through and beyond said head, an instrument holder swivelly mounted upon the upper end of said rod, means for disposing and maintaining said holder in right angular relation to the rod, and a universal and sliding connection between the rod and head of said tripod, whereby to permit the tripod to be bodily adjusted vertically upon or eccentrically to said rod.

---

1,559,717. METHOD OF AND MEANS FOR CUTTING BLANKS FROM IRREGULAR-SURFACED MATERIAL. GEORGE A. LIPPINCOTT, Philadelphia, Pa. Filed May 9, 1922. Serial No. 559,677. 8 Claims. (Cl. 79—16.)

1. The herein described method of cutting blanks from material having a face of irregular contour, comprising securing against one face of the material a template having a series of means for engaging a suitable support, said means being arranged as close together as the size of the blank to be produced will permit, and the material of the template being such as to permit it to conform to irregularities in the contour of the surface to which it is applied, successively positioning the support engaging means on a suitable support, and effecting relative movement between a cutting tool and the material on a path co-axial with the support.

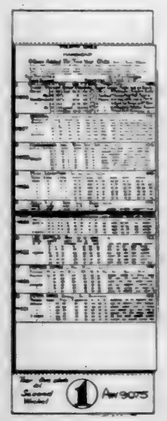
---

1,559,718. SPRAYER. GEORGE W. LISK, Clifton Springs, N. Y. Filed Oct. 23, 1924. Serial No. 745,448. 1 Claim. (Cl. 200—142.)

A spraying device comprising a liquid tube, an air tube, and a bracket for connecting the adjacent end portions of said tubes, said bracket being formed from an elongated flat strip of material having its opposite end portions bent back to overlie the intermediate portion of the strip, the extremities of said returned portions being correspondingly beveled, the intermediate portion of the strip being folded along the line between the opposed beveled edges to bring the bends for the returned portions in substantially perpendicular relation, the bend for one of the returned portions being enlarged to provide a barrel to snugly receive an end portion of the air tube, the bend for the second returned portion being formed into a sleeve to snugly receive an end portion of the liquid tube.

---

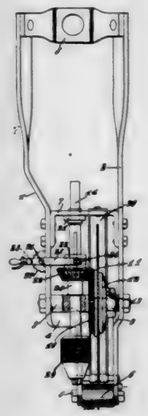
1,559,719. RACE-MEETING PROGRAM. HERBERT LISTER, Montreal, Quebec, Canada, assignor of one-half to Elmer Ferguson, Montreal West, Canada. Filed May 21, 1923. Serial No. 640,381. 1 Claim. (Cl. 283—1.)



In a race program and admittance ticket, a book comprising a cover having their ends formed into detachable tickets, and a plurality of sheet forms within said cover, each sheet comprising separate races and having therein individual histories of the contestants in said race.

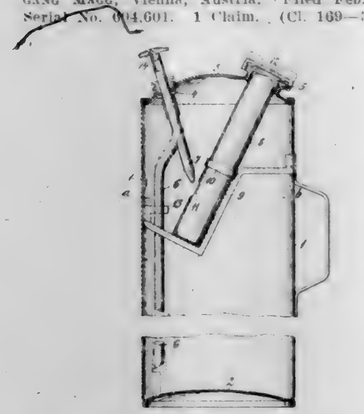
---

1,559,720. POWER TOOL. CHARLES A. MCCRAY, Waynesboro, and JOSEPH S. MCCRAY and JOSEPH E. THOMAS, Hot Springs, Va. Filed Apr. 11, 1924. Serial No. 705,898. 1 Claim. (Cl. 144—35.)



A power tool attachment for motors including a frame having a contracted offset portion at one end and an attaching yoke at its other end, a longitudinal shaft journaled in the frame and terminating adjacent one side of the offset end portion, a chuck carried by said shaft, a saw mounted for rotation within the frame on an axis extending transversely of the frame, means for transmitting motion from the shaft to the saw, said means including a shiftable gear, and an arcuate guard secured at its ends to the frame and housing a portion of the periphery of the saw.

1,559,721. PORTABLE FIRE EXTINGUISHER. WOLFGANG MAGG, Vienna, Austria. Filed Feb. 23, 1924. Serial No. 694,601. 1 Claim. (Cl. 169—32.)



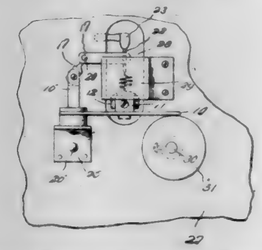
A portable fire extinguisher, comprising in combination an outer receptacle, a lid provided on said outer receptacle, an acid vessel the upper part of which passes through the said lid, a slidable delivery pipe supported on said lid, a striker provided on said delivery pipe for fracturing said acid vessel, the longitudinal axis of the striker and the longitudinal axis of the acid vessel forming an angle with each other, the prolongation of the axis of the striker intersecting the axis of the said vessel in the lower part of the latter, a perforated cage for the acid vessel, an angular supporting member for supporting said cage and for guiding said delivery pipe, and an inwardly extending projecting member connected to said supporting member, said projecting member being intended to co-operate with said supporting member for preventing the delivery pipe from turning.

1,559,722. DENTIFRICE. LEO MANDELSTAMM, New York, N. Y. Filed Oct. 28, 1924. Serial No. 746,417. 5 Claims. (Cl. 167—9.)

2. In a dentifrice, the combination of neutral cleansing and abrasive materials, and a vanadium salt.

5. In a dentifrice, the combination of glycerin, neutral cleansing and abrasive materials and small amounts of vanadium and radium salts.

1,559,723. CRYSTAL DETECTOR. FREDERICK E. MANN, Cherrydale, Va. Filed Dec. 10, 1923. Serial No. 679,692. 2 Claims. (Cl. 250—31.)

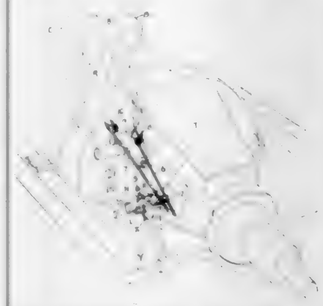


2. A crystal detector comprising a panel having an opening formed therein, a supporting bracket mounted on the rear side of the panel and at one side of said opening, a spring strip mounted at one end on said bracket and projecting across the lower end of said opening in the panel, means operable from the front plate of the panel and mounted thereon for engaging and maintaining said spring strip under tension, and operable for raising and lowering the free end thereof, a crystal element mounted on the central portion of said spring strip in the rear of the opening in said panel, and a contact spring movably mounted on said supporting bracket having means projecting beyond the front face of the panel so that the contact spring may be operated to engage the crystal element, said operating means being adapted to effect a movement of the crystal toward or away from the contact spring to vary the tension of the spring on said crystal.

1,559,724. TRIMMING TOOL. GEORGE W. MEADER, HORACE P. MEADER, and HERMAN T. MEADER, Oakland, Calif. Filed Jan. 22, 1924. Serial No. 687,692. 4 Claims. (Cl. 164—73.)

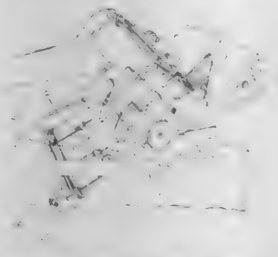
1. A paper hangers' trimming knife adapted to be simultaneously cleaned and sharpened when in action, including a supporting member having mounted thereon a circular knife, an abrasive member and a scraper; and said knife adapted to revolve between said abrasive member and scraper.

1,559,725. TRANSMISSION-CONTROL ATTACHMENT. HERMAN T. MEADER, Oakland, Calif. Filed Feb. 7, 1925. Serial No. 7,653. 2 Claims. (Cl. 74—39.)



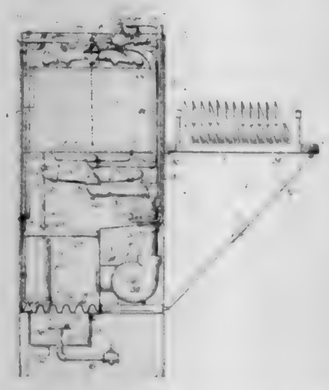
1. In a transmission-control attachment adapted for automobiles of the Ford type, (1) a clip adapted to be slipped over and loosely connected with the brake pedal or the reverse pedal, and said clip provided with terminal holes; (2) a rod for the clip having a bent end for entering the holes in the clip; (3) means for preventing the bent end of the rod from slipping out of the clip; (4) a stiff plate having at one end a hole adapted to receive therein the clutch lever's adjusting screw for rigid attachment of the plate to the clutch lever, the said plate provided with two bends opposite each other and in planes virtually parallel with the clutch lever shaft when the plate is attached, the first plate bend being near the hole for the adjusting screw, and the second bend being near the other end of the plate, there being in the plate between the second bend and the said other end a hole adapted to receive slidably therein the said rod; and (5) stop-and-lock means adjustably secured on the unbent end of the said rod, the arrangement being such that, with the stop-and-lock means properly adjusted on said rod, the depression of the pedal to which the said clip is attached will throw the clutch pedal into neutral position and thereby release the clutch from service.

1,559,726. MICROMETER FEED GUIDE FOR PLATEN PRESSES. FRANK MERRYMAN, Corvallis, Oreg., assignor of one-third to James H. Newman, Corvallis, Oreg. Filed Oct. 16, 1924. Serial No. 743,992. 4 Claims. (Cl. 101—414.)



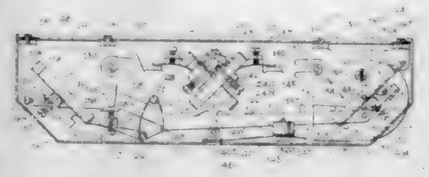
1. In combination with a platen having a bar pivotally mounted thereon, a micrometer feed guide comprising a bracket mounted upon the bar, a screw journaled at one end in the bracket, a block having screw thread engagement with the screw, and a guide carried by the block.

1,559,727. DISHWASHING MACHINE. HERBERT E. MERSELES, Jersey City, N. J., and FRANK W. BEMM, Wilmette, Ill.; said Bemm assignor to said Merseles. Filed Oct. 9, 1919. Serial No. 329,533. 6 Claims. (Cl. 141—9.)



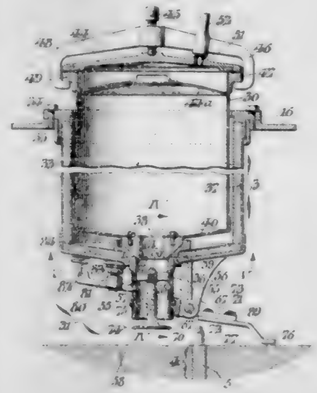
2. In a washing machine, the combination of a casing having openings in two of its vertical walls, continuous tracks fixed in the casing and extending across it from one opening to the other, a supply conduit extending vertically upward outside said tracks, branch conduits located respectively above and below said tracks and extending from said supply conduit to points on a vertical line midway between said tracks, and distributors rotatably mounted on the ends of said branch conduits respectively so as to rotate about said vertical line.

1,559,728. RANGE-FINDING DEVICE. NICHOLAS MILLER, Hartford, Conn. Filed Nov. 21, 1921. Serial No. 516,755. 15 Claims. (Cl. 88—2.7.)



1. In combination with a range finder, a base, two pairs of cooperating reflectors, disposed in such a way, that the median lines of the reflectors of either pair are at an uneven level with respect to the plane of the base; means for tilting the cooperating reflectors of each pair at the same angle of inclination with respect to said plane, and means for rocking one of the reflectors about a fixed axis.

1,559,729. FORMING APPARATUS. FRANK E. MORRIS, Philadelphia, Pa., assignor of one-half to John C. Bergner, Lansdowne, Pa. Filed Mar. 10, 1922. Serial No. 542,629. 10 Claims. (Cl. 107—14.)

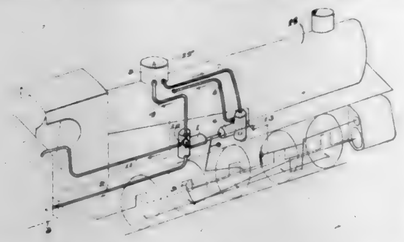


3. Forming apparatus of the character described comprising, in combination, a container with an annular die outlet; means for periodically shearing the material extruded from said outlet; a compressed air system for applying pressure to the material in said container, including an air pump; means for actuating said pump and said severing means from a common drive; and bleed means for regulating the application of pressure to the material to control the size of the extrusions periodically severed as aforesaid.

1,559,730. BOILER FEED-WATER APPARATUS. JOSEF MICHKA, Vienna, Austria, assignor to the Firm Société d'Exploitation des Pompes Dabeq, Paris, France. Filed Oct. 24, 1922. Serial No. 596,661. 7 Claims. (Cl. 60—107.)

1. The combination with a steam-engine operating with a variable cut-off, an engine boiler, and a valve gear

for the engine, of apparatus for supplying feed water to the engine-boiler, comprising a feed-water forcing device and means, controlled by the valve gear of the engine,



for varying the quantity of water delivered by the feed-water forcing device to the boiler in accordance with the cut-off of the engine.

---

1,559,731. PLASTIC COMPOSITION. GEORGE J. MULLER, Baltimore, Md. Filed Feb. 9, 1922. Serial No. 535,361. 7 Claims. (Cl. 106—31.)

1. A composition consisting of a bituminous hydrocarbon and Peach Bottom slate in finely subdivided form.

2. A composition consisting of a bituminous hydrocarbon and a finely subdivided slate containing carbon in graphitic form.

---

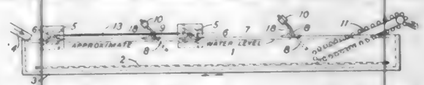
1,559,732. WRINKLE-REMOVING APPLIANCE. JULIETTE P. ARNOLD, Apponaug, R. I., assignor to Wonder Beauty Co. Inc., Apponaug, R. I., a Corporation of Rhode Island. Filed Nov. 21, 1923. Serial No. 675,994. 1 Claim. (Cl. 128—76.)

A wrinkle removing appliance comprising an adhesive plaster, one end of said plaster being bent upon itself so as to provide a comparatively rigid marginal portion, an eyelet passing through said marginal portion of the plaster, a fabric covering placed over the exposed adhesive surface of the plaster having an end projecting beyond the marginal portion so as to provide a tab for removing the same from the plaster, and a tension member secured to said plaster by passing through said eyelet.

---

1,559,733. APPARATUS FOR THE TREATMENT OF FRUIT WITH ANTISEPTICS FOR THE PREVENTION OF DECAY. WILLIAM R. BARGER, WILLIAM V. HUKILL, and LON A. HAWKINS, Washington, D. C., dedicated, by mesne assignments, to the Citizens of the United States. Filed Feb. 21, 1925. Serial No. 10,971. 1 Claim. (Cl. 99—2.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

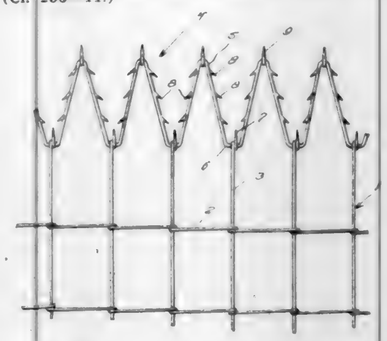
An apparatus intended for use in treating fruit with antiseptics, comprising a tank, containing an antiseptic solution, a chute for feeding the fruit to be treated into said tank, a steam coil in said tank for heating the antiseptic solution, paddle wheels in said tank for submerging the fruit in the solution, and, adjacent to said paddle wheels, baffles adapted to control the speed



of the movement of the fruit throughout the length of the tank, and an elevator at the opposite end of the tank from the aforesaid chute adapted for the removal of the fruit from the tank.

---

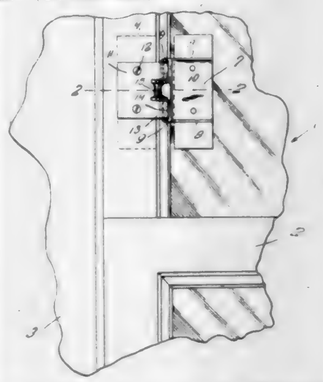
1,559,734. FENCE. JOHN T. BARTON, San Angelo, Tex. Filed May 15, 1925. Serial No. 30,487. 1 Claim. (Cl. 256—11.)



In combination, a fence made up of a plurality of horizontal and vertical interconnected wires, a guard for the top of said fence, said guard being made from a length of wire bent at longitudinal intervals into V-shaped portions and intervening correspondingly shaped pockets, the portions joining the V-shaped portions being substantially straight, the upper ends of the vertical wires of said fence being wrapped around said straight portions and terminating in points, and antiescape means carried by the V-shaped portions of said guard.

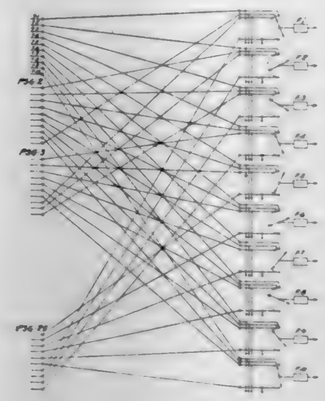
---

1,559,735. SASH FASTENER. NATHAN BAUML, Foxboro, Mass. Filed Feb. 19, 1925. Serial No. 10,258. 3 Claims. (Cl. 292—202.)



1. A sash fastener of the class described comprising a block, one surface of which is rounded to provide a wedging cam for a lower sliding sash, an attaching plate adapted to be fastened to an upper coacting sash, and resilient snap retaining means between the plate and the block.

1,559,736. SECONDARY TRUNKING SYSTEM. JOHN I. BELLAMY, Chicago, Ill., and JOHN E. GARDNER, Wilkinsburg, Pa., assignors to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1923. Serial No. 639,518. 26 Claims. (Cl. 179—18.)



1. In a telephone system, primary trunks, secondary trunks, a finder switch associated with each secondary trunk, primary switches having access to said primary trunks, means for causing part of said finder switches to select primary trunks ahead of calls, and means for rendering selectable to said primary switches only such primary trunks as have been selected by said finders.

---

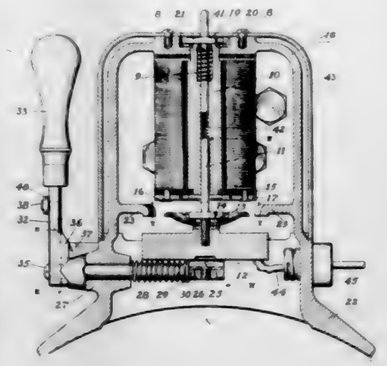
1,559,737. CATHETER. MARTIN BOCK, Philadelphia, Pa. Filed June 28, 1922. Serial No. 571,582. 2 Claims. (Cl. 128—345.)

1. A device of the character described consisting of a pair of semi-cylindrical members curved at one end and spreader members hingedly connecting said first members, and a lever member at the other end of said members pivotally connected to each of said members at spaced apart points.

---

1,559,738. AUTOMATIC SWITCH. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed June 21, 1919. Serial No. 305,924. 11 Claims. (Cl. 200—111.)

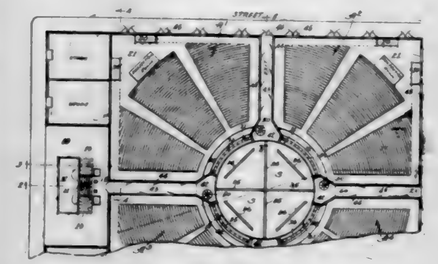
1. In combination, an electro-magnet having a vertical core and a magnetic shell engaging said core at the top and extending down along the sides of the magnet, an armature normally supported below said magnet, an electric circuit including a coil of said electro-magnet, a contact at the bottom of said magnet, a contact at the top of said armature, one of said contacts being resilient, and



a source of electric current, said armature having parts adapted to engage the bottom of said core and said shell after said electric contacts complete said circuit.

---

1,559,739. THEATER. LLOYD BROWN, Sherman, Calif., assignor, by mesne assignments, to C. B. Hurtt, W. F. Peterson, George Bayne Stephens, and Catherine Bayne Stephens, all of Los Angeles, Calif., and G. A. Stephens, Moline, Ill., trustees. Filed July 25, 1922. Serial No. 577,475. 12 Claims. (Cl. 20—1.123.)



1. A theater structure that involves a central vertically movable stage, auditoriums surrounding said central stage at one lever, and working rooms surrounding the central stage at another level, a foyer at a level below the auditorium level and extending around the work rooms, an entrance to the foyer, and communications between the foyer and the auditoriums.

---

1,559,740. NURSING-BOTTLE HOLDER. PHILIP CARDARELLA, Kansas City, Mo. Filed Feb. 6, 1922. Serial No. 534,325. 1 Claim. (Cl. 248—65.)

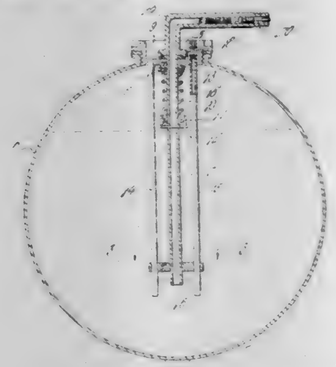
In a bottle holder of the kind described, a supporting member having means adapted to be attached to the sides of a crib or similar article, and a bottle container comprising an elastic belt adapted to embrace the body of a bottle, an elastic band attached at one end to one side of said belt and adapted to embrace the lower end of

the bottle and having at its other end a loop through which said supporting member extends and is slidable, a hook attached to said loop, elastic means attached to

the other side of said belt having means adapted for releasable engagement with the neck of the bottle, and a link on said elastic means adapted for releasable engagement with said hook, substantially as set forth.

---

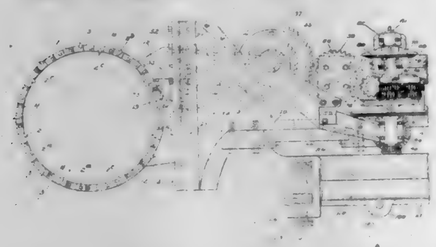
1,559,741. PRESSURE SYSTEM. RAY L. CROSS, Long Island, Va. Filed Dec. 13, 1924. Serial No. 755,782. 2 Claims. (Cl. 158—50.1.)



1. A pressure system for fuel tanks comprising a threaded cap for the tank, an air inlet pipe passing through the cap and said cap being mounted thereon for rotary movement, spring held air tight connecting means between the pipe and cap, a pair of rods depending from the cap, one of said rods being provided with a bore and a vent opening therefor, a spacing means for the lower end of said rods and pipe, and an air pump connected to said pipe as and for the purpose specified.

---

1,559,742. MINING MACHINE. KENNETH DAVIS, St. Benedict, Pa., assignor to Rembrandt Peale, New York, N. Y. Filed Sept. 11, 1917. Serial No. 190,731. 59 Claims. (Cl. 262—19.)



1. In mining machine including in combination a rotating tubular cutter, power operated means for advancing the rotating cutter to cut the mineral from the vein, and power operated means for reversing the advancing means to return the cutter for a new bite on the vein.

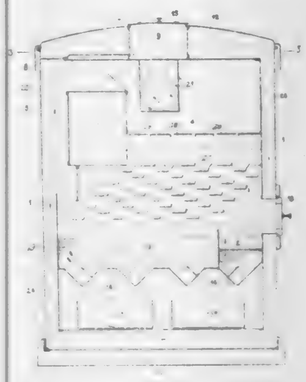
---

1,559,743. RADIO RECEIVING SYSTEM. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Paris, France. Filed Aug. 29, 1921. Serial No. 496,533. 10 Claims. (Cl. 250—8.)

1. In a system for eliminating disturbances in receiving radio signals, the combination of an aperiodic antenna, indicating means, a tuned and detuned receiver associated with the aperiodic antenna, said receivers being differentially associated with the indicating means.

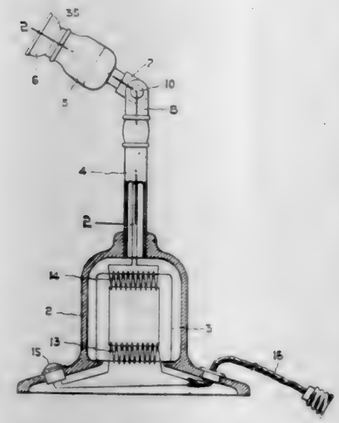
---

1,559,744. FURNACE FOR GRANULAR FUEL SUCH AS BROWN COAL COKE. CLEMENS DELLMANN, Liebertwolkwitz, near Leipzig, Germany, assignor to Deutsche Patent Grudeofen-Fabrik Walter Rieschel & Co., m. b. H., Liebertwolkwitz, near Leipzig, Germany, a Corporation of Germany. Filed Feb. 16, 1924. Serial No. 693,347. 1 Claim. (Cl. 126—74.)



A furnace for brown coal coke, comprising the walls of the furnace, a main fire place, a subsidiary fire place at one side of the furnace adapted to supply gases of combustion to the main fire place, an air passage running from an air inlet along one of the walls of the furnace and to the subsidiary fire place, a flue connected with the main fire place and having two branches one leading upwardly along the wall of the furnace and to the chimney pipe, and the other one downwardly, along the wall and the bottom of the furnace and upwardly again to the chimney pipe, and means for closing the upwardly directed branch of the flue directly connecting the fire place and the chimney pipe.

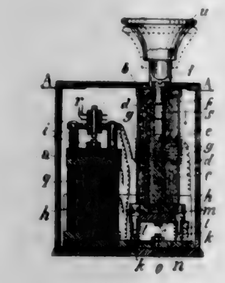
1,559,745. LIGHTER FOR CIGARS, PIPES, AND THE LIKE. FRANCIS B. FARNSWORTH, Granby, Canada. Filed Sept. 27, 1923. Serial No. 665,214. 5 Claims. (Cl. 219—82.)



2. In an electric lighter, an igniting element consisting of a plug having an end of refractory material, spaced lugs projecting outwardly from said end, and a resistance mounted upon said end between the lugs.

---

1,559,746. APPARATUS FOR PRODUCING HIGH-VOLTAGE CURRENTS FOR MEDICAL TREATMENT. ERICH GEISSLER, Munich-Laim, Germany, assignor to the Firm of: Fabrik Chem. Gravüren, Luppe & Heilbronner, Gesellschaft mit beschränkter Haftung, Munich, Germany. Filed Nov. 11, 1924. Serial No. 749,322. 2 Claims. (Cl. 174—177.)

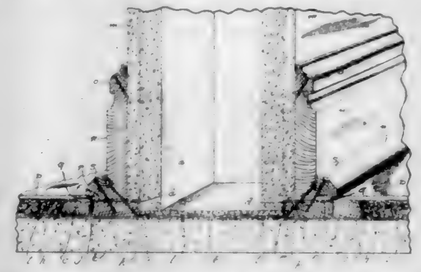


1. In an apparatus for producing high-voltage currents for medical treatment, the combination with an electrode consisting of glass and forming a contact button, of means for closing the circuit by pressing said contact button on part of the human body.

---

1,559,747. FLOOR AND WALL CONSTRUCTION. ERIC E. HALL, Chicago, Ill. Filed Apr. 28, 1922. Serial No. 557,099. Renewed Apr. 20, 1925. 4 Claims. (Cl. 72—101.)

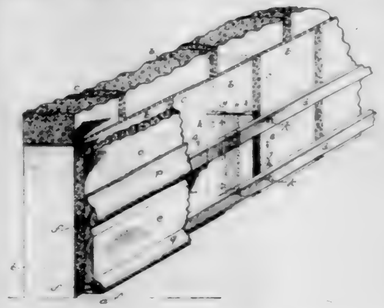
1. In a building construction, the combination with a hard plastic floor portion, of a wall rising therefrom, an edge strip secured on the floor adjacent the wall, said edge strip being constructed of fibrous material sur-



rounded by a metallic sheath on all sides, for the purpose described.

---

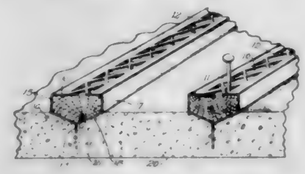
1,559,748. WALL AND PARTITION. ERIC E. HALL, Chicago, Ill. Filed Apr. 28, 1922. Serial No. 557,100. 10 Claims. (Cl. 72—105.)



6. As a new and useful article of manufacture, a nailing block composed of a fibrous bar surrounded on all its sides by a connected thin metal sheathing and provided on one side with anchoring means extending from the central portion of said side a substantial distance so that it can co-operate with the anchoring means of another nailing block opposed thereto.

---

1,559,749. FASTENING STRIP. ERIC E. HALL, Chicago, Ill. Filed Apr. 28, 1922. Serial No. 557,101. 8 Claims. (Cl. 72—101.)



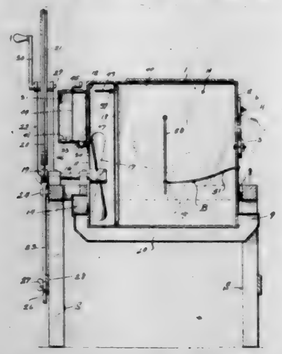
1. As a new and useful article of manufacture, a strip of fibrous material enclosed on all sides thereof by a metallic sheathing, said sheathing being provided with means for anchoring it in place.

---

1,559,750. POULTRY-POWDERING MACHINE. PAUL P. HEMM and WILLIS E. BERNSTEIN, Davenport, N. Dak. Filed June 5, 1924. Serial No. 718,083. 6 Claims. (Cl. 119—159.)

5. A machine of the class described comprising a housing adapted to receive a fowl, a fan within the housing to create an air blast upon the fowl within the housing,

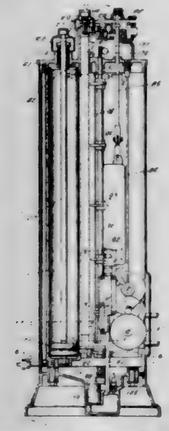
said housing being provided with an opening, a pan adapted to contain a supply of insecticide, means for supporting said pan for movement relative to the opening, a rock arm for controlling such movement of the



pan, a rod disposed through the housing and to which the rock arm is secured, and a blade carried by the rock arm, the air blast created by the pan coacting with the blade to impart swinging movement to the rock arm toward and away from the opening.

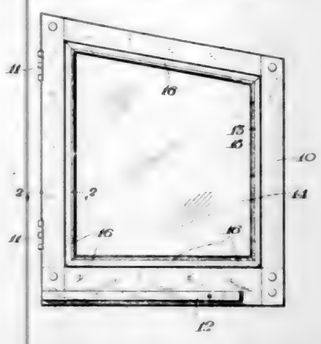
---

1,559,751. FLUID-PRESSURE MOTOR. SHERWOOD HINDS, Fort Wayne, Ind., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind., a Corporation of Indiana. Filed May 17, 1920. Serial No. 381,868. 16 Claims. (Cl. 121—38.)



6. A motor comprising a cylinder, a piston in said cylinder, a valve for controlling the admission of fluid under pressure to said cylinder to move said piston, a second valve for controlling said fluid to reverse the direction of motion of said piston in said cylinder, a support having stops thereon for limiting the movement of said piston to predetermined measured amounts, a single device for operating said first-mentioned valve and for shifting said support to bring certain of said stops into and out of operative position, and mechanism controlled by certain of said stops when said support is in one position for operating said second-mentioned valve to automatically reverse the direction of movement of said piston at the ends of the stroke thereof, said mechanism being operable by a different one of said stops to cut off the supply of fluid from said cylinder when said support is moved to bring said last-mentioned stop into operative position.

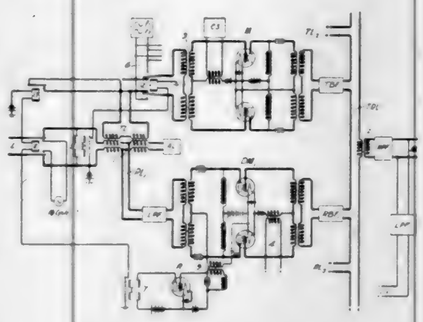
1,559,752. GLASS WINDOW FOR AUTOMOBILES. GUSTAV E. HOLMES, JOHN M. BOSTROM, and AXEL G. BOSTROM, Milwaukee, Wis. Filed Nov. 16, 1918. Serial No. 262,876. 6 Claims. (Cl. 296—44.)



1. A glazed hinged window attachment for automobile doors to fit an irregular jamb of an automobile enclosure and subjected to a warping or twisting action, comprising a hinged frame, a sash loosely mounted within the frame around its entire perimeter, yielding means connecting the sash with the frame to permit lateral displacement thereof, and cushioning means between the sash and the frame.

---

1,559,753. SIGNALING SYSTEM. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 610,976. 12 Claims. (Cl. 179—4.)



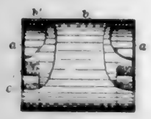
1. In a signaling system, means for transmitting a carrier wave modulated by oscillations of a plurality of different frequencies, a balanced demodulator having output circuits provided with a common branch, means for impressing said modulated wave upon said demodulator, means for impressing an unmodulated carrier wave upon said demodulator, whereby the demodulator produces in the common branch currents whose frequency is a combination of the modulating frequencies, and a signal controlled by the currents in said common branch.

---

1,559,754. RIBBON BLOCK. CHARLES A. ISLEIB, Maywood, N. J. Filed Oct. 10, 1924. Serial No. 742,752. 3 Claims. (Cl. 206—50.)

1. A ribbon block comprising two cylindrical walls each formed of stiff paper material and forming the body

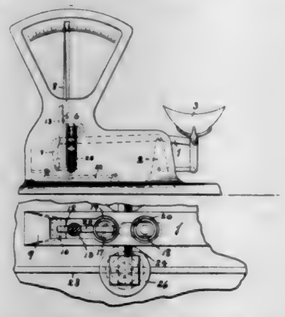
of the block and arranged one within and concentric with and spaced from the other and two caps each formed of



stiff paper material and forming the ends of the block and each having its flange lying and held between the two corresponding end portions of the cylindrical walls.

---

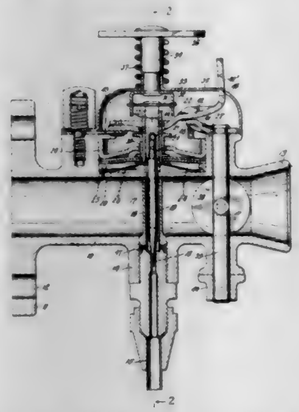
1,559,755. SCALE. LOUIS JAENICHEN, Detroit, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 18, 1922. Serial No. 537,442. 5 Claims. (Cl. 265—69.)



1. In a scale, the combination of a load carrying beam, a spring connected thereto to resist the load, a compensating lever pivoted to the beam substantially parallel to the load resisting spring, a spring mounted on the beam to swing the lever according to changes in temperature, and a weight indicator connected to said lever and actuated thereby.

---

1,559,756. CARBURETOR. WILLIAM E. KEMP, New York, N. Y. Filed July 1, 1922. Serial No. 572,235. 3 Claims. (Cl. 261—69.)



1. A carburetor comprising a carbureting chamber, a supply nozzle therein, a valve controlling said nozzle freely movable in relation thereto, a throttle in said carbureting chamber, means connected with said valve for automatically adjusting said nozzle in proportion to the vacuum produced in said carbureting chamber during a predetermined portion of the stroke of said throttle, and means controlled by said throttle for mechanically actuating said valve during the remainder of the stroke of said throttle.

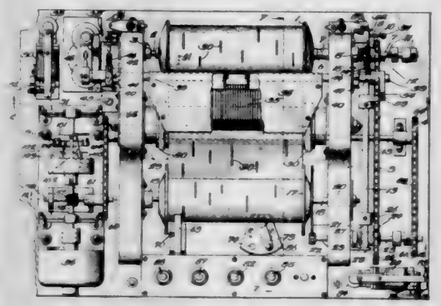
---

1,559,757. BIRD CAGE. LEWICKI J. LEON, Chicago, Ill. Filed June 23, 1924. Serial No. 721,678. 4 Claims. (Cl. 119—17.)

4. A bird cage, comprising a cage body and base, both circular in shape, said base having a marginal wall and a separable bottom wall, said marginal wall having beads at its upper and lower edges forming inwardly opening channels, a ring around the lower edge of the cage body retained in said upper channel, said bottom wall having a plurality of spaced projections to enter the lower channel for releasably holding said bottom wall in the base, said lower channel having spaced notches in its lower flange, said projections being brought into register with said notches on turning said bottom wall with respect to the marginal wall for the removal of the bottom wall from said base.

---

1,559,758. CONTROLLING MECHANISM. FREDERICK B. LITTLE, Chicago, Ill., assignor to J. C. Deagan, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Apr. 28, 1924. Serial No. 709,707. 42 Claims. (Cl. 84—147.)

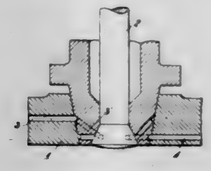


31. Controlling mechanism including a control sheet; a supply roll carrying said sheet; a take up roll upon which the sheet may be wound from the supply roll; a controlling member mounted to be movable in opposite directions; an electro-magnet for moving said controlling member in one direction; a switch in controlling relation to this magnet; a detent in holding relation with the controlling member when the holding member has been moved by this magnet; a second electro-magnet serving to place the detent in one of its alternative positions; a relay whose armature switch is in controlling relation to this magnet; a switch in controlling relation to the relay and governed by the control sheet, one of said rolls having a formation cooperating with a member of the latter switch to place this switch in one of its adjustments, said control sheet hav-

ing a portion cooperating with a member of this switch to place this switch in an alternative adjustment; two roll driving devices, each roll having such a device individual thereto; and mechanism governed by said controlling member that renders one roll driving device operative and the other ineffective when the controlling member is moved in one direction, and renders the latter roll driving device operative and the first ineffective when the controlling member is moved in the reverse direction.

---

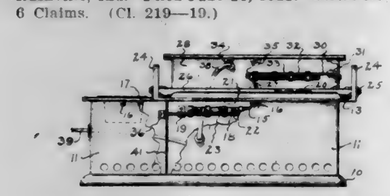
1,559,759. FUEL-INJECTION VALVE FOR INTERNAL-COMBUSTION ENGINES. FRIEDRICH MÜLLER, Vienna, Austria. Filed Aug. 13, 1921. Serial No. 492,196. 2 Claims. (Cl. 123—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an internal combustion engine, the combination with a working cylinder comprising separate passages for fuel and compressed air, an injection valve for the injection of the fuel and air when the said valve is opened, and a valve seat for the said valve comprising a plurality of groups of outlets each group adapted to communicate with one of said passages and to deliver the fuel and air in divided volumes at alternate points around the valve seat.

---

1,559,760. SANDWICH TOASTER. MORTON MURPHY, Rushville, Ind. Filed June 16, 1925. Serial No. 37,452. 6 Claims. (Cl. 219—19.)

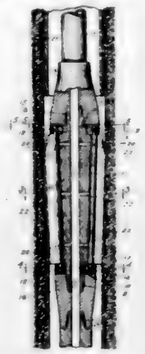


1. In a toaster, a lower plate having a smooth upper surface and a pitted under surface, a heating element below the lower plate, an upper plate having a smooth under surface and a pitted upper surface, a heating element above the upper plate, standards having slotted guides, and hinge pins extending from the upper plate and engaging in the guides of the standards.

---

1,559,761. UNDERREAMER FOR HYDRAULIC ROTARY WELL DRILLING. LORAN E. NEBERGALL, Denver, Colo. Filed Nov. 3, 1923. Serial No. 672,601. 3 Claims. (Cl. 255—76.)

1. A hydraulic rotary under-reamer, comprising a tapering tubular stem having longitudinal grooves in the outer portion thereof, said grooves being substantially parallel with the adjacent tapering surfaces of the stem, cutting blades mounted in said grooves and swingable inwardly and outwardly between folded positions wholly within said grooves and extended positions at which the longitudinal edges of the blades project laterally from the stem, said blades having inclined edges at the upper portions thereof adapted for engagement with the well-casing to swing the blades to their folded positions and the longitudinal cutting edges of the blades being parallel with the adjacent tapering surfaces of the stem, there being lateral passages extending from the central longitudinal passage of the tubular stem to discharge fluid



therefrom into the longitudinal grooves, and means at the ends of said tubular stem for connecting the same with other tools of a series.

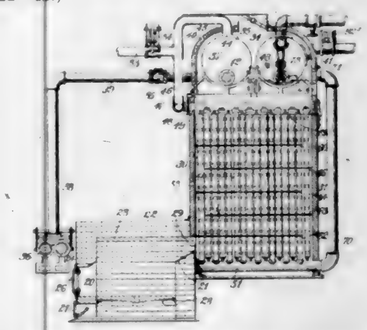
---

1,559,762. PERMANENT TRANSFER BINDER. GEORGE W. NEWMAN, Chicago, Ill., assignor, by mesne assignments, to Kalamazoo Loose Leaf Binder Company, a Corporation of Michigan. Filed Oct. 27, 1921. Serial No. 510,871. 15 Claims. (Cl. 281—25.)

6. The combination in a binder for sheets perforated to receive binding posts, binding bars, post members arranged on said binding bars in coacting pairs for slidable engagement within the sheet body, and a clamping means adapted to be disposed between sheets of the sheet body and actuated by the pressure of the sheets thereon to clamp the post members together.

---

1,559,763. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed May 10, 1919. Serial No. 296,086. 8 Claims. (Cl. 122—41.)



1. A steam boiler system comprising a furnace, a grid of downwardly extending tubes therein, a pump for forcing water into the upper entrance of said grid, a steam

drum above the grid of tubes into which the tubes deliver, said drum having a steam outlet and normally having communication with the grid of tubes only at their ends furthest from the pump whereby the same water can pass only once through the tubes, and said communication means comprising means for reducing the pressure of the fluid as it passes from the grid into the drum.

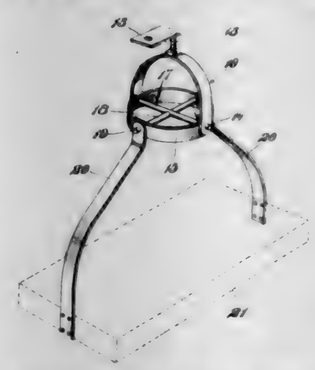
---

1,559,764. WAISTBAND. WILLIAM J. NOVY, Chicago, Ill. Filed Dec. 1, 1923. Serial No. 677,953. 3 Claims. (Cl. 2—236.)

1. In trouser manufacture, a waistband comprising a turned over section forming a belt tunnel and having a turned in portion extending into said tunnel, a lining strip secured to said turned in portion and extending upwardly between the outer and inner portions of the trouser material to provide one side of said belt tunnel, and lining material for such trouser comprising a strip of material folded upon itself and with its free edges extending into said tunnel, said trouser material, belt lining strip, and trouser lining being secured one to another by a single row of stitches.

---

1,559,765. BERTH MOUNTING. EMIL NYBACK and EMIL NYMAN, Hoquiam, Wash. Filed Apr. 2, 1925. Serial No. 20,253. 3 Claims. (Cl. 114—192.)

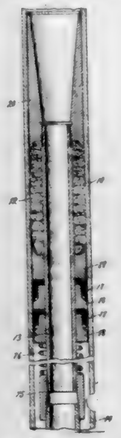


1. In a support for ships' berths, a support adapted to be engaged with a ceiling and embodying spaced arms, a second support having spaced arms secured to the berth and projecting upwardly therefrom, and a gimbal ring structure for connecting said supports comprising a ring, bars extending at right angles and diametrically of said ring and having notched engagement one with the other, the ends of said bars projecting to provide pivots for engagement with the respective supports.

---

1,559,766. PUMP PACKING. WALTER A. O'BANNON, Tulsa, Okla. Filed Sept. 22, 1924. Serial No. 739,052. 4 Claims. (Cl. 103—180.)

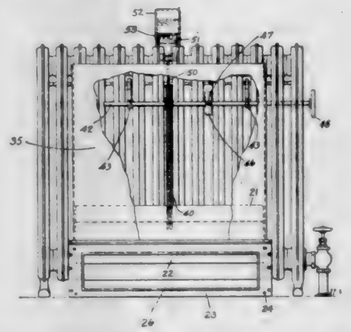
1. In a device of the class described, a movable reciprocating barrel, a stationary plunger, and means adapted to form a fluid-tight joint between the barrel and plunger, comprising an element fixedly mounted on the plunger, expansible packing below said element, a plurality of collars slidably mounted on the plunger below said packing and having inverted cups between said collars fitting the inner periphery of the barrel, said collars



and cups being in direct contact adjacent the plunger, and a compression spring suitably mounted to engage the lower of said collars whereby said packing is compressed by the spring and the hydraulic pressure from the cups.

---

1,559,767. DIRECT-INDIRECT HEATING AND VENTILATING APPARATUS. THOMAS F. O'HERRON, Terre Haute, Ind. Filed July 29, 1922. Serial No. 578,308. 3 Claims. (Cl. 257—135.)



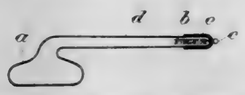
2. Direct-indirect heating and ventilating apparatus including, in combination with a radiator and a louver at the lower end of the radiator, a casing surrounding the radiator with the top open and with an opening at the lower end communicating with the louver and another opening at the side opposite the louver, a damper for controlling each of said openings, a hand-operated rod extending into the radiator, removable hook bars carried by the radiator for supporting said rod, a sprocket wheel between two sections of the radiator through which said rod is insertable and arranged to be turned by said rod, a disk located between two adjacent sections of the radiator through which said rod is insertable, a set screw for holding the disk on the rod in order to prevent longitudinal displacement of the rod and a chain operated by said sprocket wheel and connected with said dampers so that it will simultaneously open one damper and permit the other damper to close.

1,559,768. SHEET-METAL AND SCREW CONNECTING MEANS. THOMAS OLINGER, Holland, Mich., assignor, by mesne assignments, to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Sept. 28, 1922. Serial No. 591,196. 4 Claims. (Cl. 254—195.)

1. In a construction of the class described, a housing having two sides formed at their upper ends with ears located side by side and in contact with each other, said ears each having an embossing pressed therein of circular form, a shank threaded at its outer end and formed with a circular eye at its inner end, said eye being located between the ears and received in said embossings, and a sheet metal clip located against and wholly covering the outer side of one of said ears and having flanges extending over the meeting edges of the ears and clinched against the other ear to permanently secure the ears, clip and eye together.

---

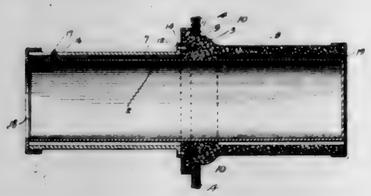
1,559,769. ELECTRODE FOR UNIPOLAR HIGH-FREQUENCY THERAPEUTIC TREATMENT. WERNER OTTO, Berlin, Germany. Filed May 17, 1923. Serial No. 639,644. 4 Claims. (Cl. 174—89.)



1. An electro therapeutic high frequency electrode, comprising a vacuum tube, and a relatively long wire passed into the same and bent into a body of reduced length, forming the discharge electrode of said vacuum tube and extending over a small portion only of the length of the tube.

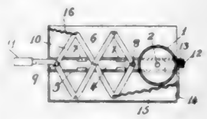
---

1,559,770. TRANSMITTING MEANS FOR ULTRA-VIOLET RAYS. ROBERT G. PADDOCK, San Francisco, Calif., assignor of one-half to H. L. MacNeill, San Francisco, Calif. Filed Sept. 17, 1921. Serial No. 501,235. 6 Claims. (Cl. 174—177.)



3. Means for transmitting ultra-violet rays of short wave length through a distance, comprising two short-wave transmitting windows, means for holding the same in spaced relation formed to air-tightly enclose a space between the same and a gaseous short-wave transmitting medium confined in the enclosure.

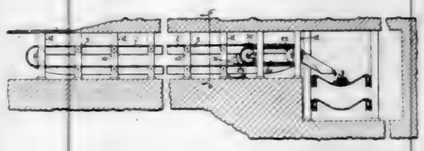
1,559,771. TYPEWRITER. RUBY EVA PADMAN, Launceston, Tasmania, Australia. Filed Mar. 8, 1924. Serial No. 697,807. Renewed Sept. 24, 1925. 2 Claims. (Cl. 197—180.)



1. In a typewriter, the combination therewith of a date stamp, means for causing said stamp to travel forward without revolving, first against a hinged inking pad which it causes to fall, and secondly, against a letter, invoice, circular, or the like, in the typewriter, in order to impress the necessary date thereon, and springs for returning both said date stamp and hinged inking pad to their normal positions.

---

1,559,772. CONVEYER. RICHARD PEALE, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Jan. 12, 1920. Serial No. 350,731. 25 Claims. (Cl. 198—182.)



1. An endless conveyer mechanism including in combination two parallel rows of sheaves, two other parallel rows of sheaves in alinement thereover, endless cables which may be varied in length running in one direction on one pair of rows of sheaves and in the other direction on the other pair of rows of sheaves, an endless conveyer body which may be varied in length and means for attaching the conveyer body to the endless cables.

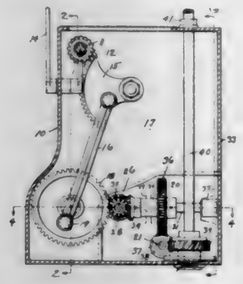
4. An endless conveyer mechanism including in combination two parallel rows of sheaves, two other parallel rows of sheaves thereover, endless cables running in one direction on one pair of rows of sheaves and in the other direction on the other pair of rows of sheaves, an endless conveyer body and means regularly spaced apart along the cables and conveyer body for attaching the conveyer body to the endless cables and two endless sprocket chains, one at either side of the conveyer at one end of its path, the cables resting on said chains and means on the chains engaging said attaching means to drive the conveyer.

9. A conveyer mechanism disposed about a horizontal curve, and including in combination a conveyer body, two cables, one at each side of the conveyer body, means for suspending the conveyer body from said cables, and means for taking up the length of the inside cable in the curve.

---

1,559,773. OPERATING MECHANISM FOR WASHING MACHINES. WILLIAM E. PINCKNEY, Portland, Oreg., assignor to Columbia Washing Machine Manufacturing Company, Portland, Oreg. Filed Sept. 24, 1924. Serial No. 739,604. 1 Claim. (Cl. 74—14.)

An operating mechanism for washing machines, having in combination a flat vertical gear box; a horizontal drive shaft passing transversely through the back of said box; a worm on said drive shaft; a horizontal longitudinal shaft over said worm at right angles to said drive shaft; a worm wheel on said longitudinal shaft meshing with said worm; a transverse counter shaft in the same plane as is said longitudinal shaft; miter gears connecting said counter shaft and longitudinal shaft; a spiral pinion on said drive shaft; a vertical wringer drive shaft; a spiral gear on said wringer drive shaft meshing with said spiral pinion; a spur pinion on said counter shaft; a spur crank gear mounted in said



gear case and meshing with said spur gear; a segment gear in said case rocked by said crank and a cylinder actuating shaft projecting through said gear case having a pinion thereon, meshing with said segment gear.

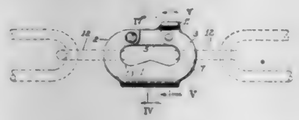
---

1,559,774. RAZOR-STROPPING DEVICE. ARTHUR JAMES POSTANS, Leamington Spa, England, assignor to W. J. Myatt & Company Limited, Birmingham, England. Filed Oct. 27, 1924. Serial No. 746,158. 1 Claim. (Cl. 51—153.)

In razor stropping devices, the combination comprising a strop, an oscillatory blade holder, a roller in frictional engagement with the strop, and eccentric pinions for transmitting motion from the roller to the blade holder for causing greater pressure to be exerted between blade and strop in one stroke than in the next.

---

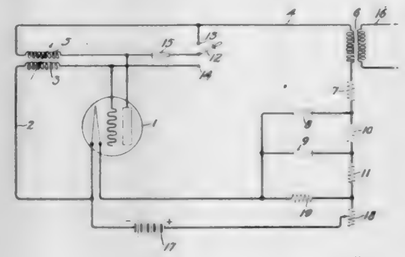
1,559,775. DETACHABLE LINK. ALEXANDER PURDIE, Wyandotte, Mich. Filed May 4, 1923. Serial No. 636,538. 3 Claims. (Cl. 24—242.)



1. A detachable connecting link comprising a main member having end arms arranged in pairs at each end of said member with the arms of each pair spaced apart laterally of said member and with a space between the ends of the pairs of arms, and a closure member pivoted between the ends of one pair of arms to swing within the space between the arms of each pair and extend across the space between the ends of the pairs of arms, said pivoted member being formed with an arm at each end to lie within and fill the space between the arms of each pair, said arms of the pivoted member extending across the ends of the link within said spaces between the pairs of arms for engaging a member extending through the link at each end thereof and held thereby.

---

1,559,776. THERMIONIC REPEATER OR OSCILLATOR CIRCUITS. HARRY S. READ, New Haven, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 9, 1919. Serial No. 343,538. 4 Claims. (Cl. 250—36.)



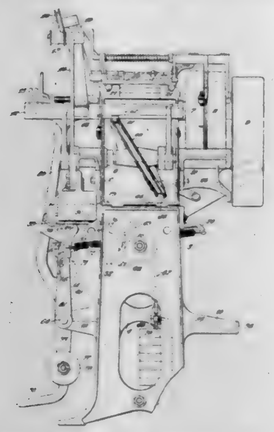
1. A thermionic repeater having a space current circuit, a cathode heating circuit, and appropriate auxiliary circuits for the generation of oscillations, in combination with energizing means for said space current and cathode heating circuits, and a single variable element for simultaneously establishing and maintaining the energization of one of said two first mentioned circuits at a given value when the energization of the other thereof is established at a given value, independently of the voltage of said means.

---

1,559,777. LOUD SPEAKER. EDWIN J. REICH, Brooklyn, and GEORGE J. ELTZ, Jr., New York, N. Y., assignors to Manhattan Electrical Supply Company, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Nov. 26, 1923. Serial No. 676,918. 4 Claims. (Cl. 179—119.)

1. In a telephone loud speaker, a casing, a diaphragm, means for clamping the edge of said diaphragm against the upper end of said casing, a disc screw-threaded around its periphery and cooperating with the internally screw-threaded lower end of said casing, a magnet structure carried by said disc, an internal projection on said casing near its lower end, and a spring placed under tension between said projection and said disc.

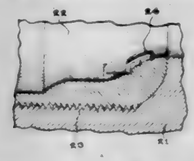
1,559,778. WINDING MACHINE. CHARLES D. REYNOLDS, Cranston, R. I., assignor, by mesne assignments, to the New England Trust Company, trustee, a Corporation of Massachusetts. Filed July 10, 1922. Serial No. 573,799. 17 Claims. (Cl. 242—18.)



1. In a device of the type specified, the combination of a supply-holder for supporting a supply-spool to adapt it to deliver its material, means to actuate the supply-holder to doff an exhausted spool therefrom, and means operated thereby to feed a fresh spool to position on the supply-holder.

---

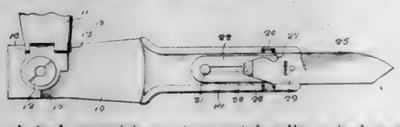
1,559,779. DEVICE FOR CASTING INDICIA ON PIPES. JOHN RICE, Burlington, N. J. Filed Oct. 23, 1923. Serial No. 670,331. 9 Claims. (Cl. 22—65.)



1. The combination with a centrifugal casting machine having a tubular mould body with a bell end, a liner detachably fitted in said bell end and having an inner wall conforming to the contour of the removed inner wall of the bell end, said liner having character grooves formed in its inner wall at its contracting inner end, said grooves having their inner walls flaring outwardly at an angle sufficient to liberate characters formed on the cast article as the latter is withdrawn through said bell end.

---

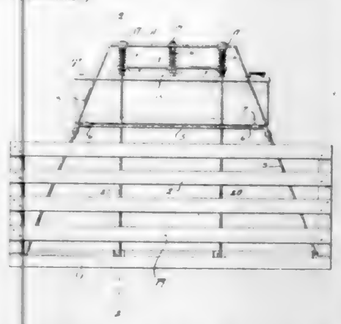
1,559,780. COMBINATION TOOL. CHARLES H. RICH, Woolrich, Pa. Filed Nov. 15, 1920. Serial No. 424,207. 4 Claims. (Cl. 145—2.)



1. A tool comprising a two-part handle, a tool proper pivoted between said parts adjacent one end of the handle and adapted to be normally arranged parallel with the latter, one part of said handle being hinged and pivotally mounted with respect to the other part, means for projecting said tool from between the respective parts of the handle, when said movable part is swung upon its pivot in one direction, and means for holding said parts of the handle parallel.

---

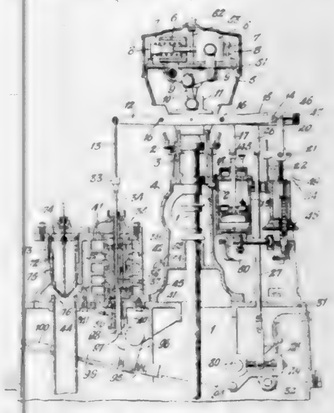
1,559,781. HOG OILER. JOHN ROBERTS, Wisner, Nebr. Filed July 15, 1924. Serial No. 726,193. 1 Claim. (Cl. 119—159.)



A hog oiler comprising a runway, a depressible floor for said runway, a tank positioned above the floor of the runway and provided in its bottom with a plurality of longitudinally spaced discharge openings, rods freely disposed through said openings and extending above the tank, valves carried by the lower portions of the rods for closing the discharge openings, and means whereby the longitudinally spaced valves are successively opened upon depression of said floor in a rocking movement, said means comprising upstanding members carried by the floor and extending above the tank at opposite sides thereof, cross members operatively engaged with said upstanding members, means for connecting the upper portions of the rods to said cross members, and longitudinally spaced retractile hangers for the upstanding members normally maintaining the floor in raised position and the valves normally in closed position with respect to the discharge openings in the bottom of the tank.

---

1,559,782. GOVERNOR. FRANK H. ROGERS, Philadelphia, Pa., assignor to William Cramp & Sons Ship and Engine Building Company, a Corporation of Pennsylvania. Filed Feb. 21, 1922. Serial No. 538,390. 33 Claims. (Cl. 137—158.)

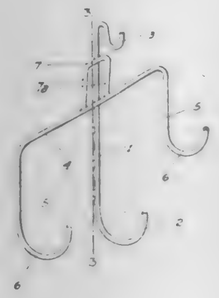


1. In a governor mechanism for hydraulic turbines the combination with a supporting base separate from the turbine and spaced therefrom, of a governor pedestal on said base comprising a governor head, and additional pedestals for hand control mechanism and auxiliary equipment separately supported on said base.

16. In a governor mechanism for a turbine a plurality of governing means each having restoring mechanism and means for shifting from one to the other of said governing means.

---

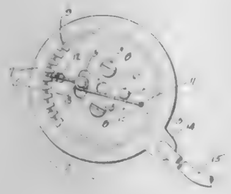
1,559,783. CLUSTER HOOK. SAMUEL S. ROSE and SUSAN L. SWOPE, San Jose, Calif. Filed Nov. 10, 1924. Serial No. 748,945. 1 Claim. (Cl. 248—22.)



An article of manufacture a hook cluster including a plurality of hooks spaced apart, a common connecting wire rigidly connected to one end of all the hooks, an inverted U-shaped wire arranged centrally of the connecting wire and rigidly attached thereto, and a center wire rigidly attached to the cross wire and the opposite side of the U-shaped wire to form with the U-shaped wire a friction loop for the reception of a strap.

---

1,559,784. FUEL-SAVING DEVICE FOR AUTOMOBILES. ALVIN V. ROWE, Galesburg, Ill., assignor to G. E. Colby, Maywood, Ill. Filed July 2, 1920. Serial No. 393,710. 6 Claims. (Cl. 123—99.)



1. In a fuel saving device for automobiles, in combination, an attachment comprising a plurality of rotatable members, means for connecting said attachment to the fuel control valve of the carbureter, means for imparting rotational movement to one of said members independent of the other members, and means releasably connecting the members together for operating said attachment as an entity by and simultaneously with the spark lever.

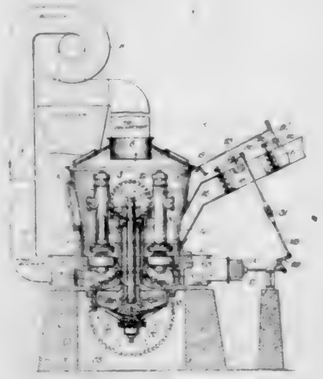
---

1,559,785. COUCH-ROLL JACKET. OSCAR L. RUSSELL, Albany, N. Y., assignor to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed Dec. 4, 1924. Serial No. 753,832. 2 Claims. (Cl. 92—47.)

1. An interwoven multiple ply felted jacket for couch or similar rolls of paper making machines comprising one or more inner plies of comparatively coarse fibre wool and one or more outer plies of comparatively fine fibre wool.

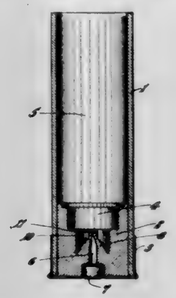
---

1,559,786. FEED CONTROL FOR PULVERIZING MILLS. OTTO A. SAUER, San Antonio, Tex., assignor of three-fourths to Eugene D. Nims, St. Louis, Mo. Filed Aug. 16, 1923. Serial No. 657,796. 3 Claims. (Cl. 83—44.)



1. In a pulverizing machine, grinding means, a feed control, comprising a chute, a pair of gates arranged to control the flow of material along said chute, mechanism connected to be actuated by the means for constantly reciprocating one of said gates for intermittently checking and releasing the flow of material along said chute, a motor device connected with the machine and adapted to be actuated by changes created therein by variations in the volume of the finished product, and a mechanical connection between said motor device and the other gate, whereby said other gate is shifted by said motor device for regulating the quantity of material delivered to the machine.

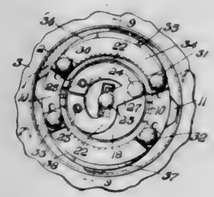
1,559,787. CARTRIDGE OR SHELL. GEORGE W. SCHAUERTE, Alton, and ALBERT J. HINDRICHS, East Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed May 31, 1924. Serial No. 717,002. 13 Claims. (Cl. 102—17.)



13. The method of making base wads for cartridges or shells, comprising, forming the wad with a flash duct terminating in a converging tip, and compressing said tip to close said duct.

---

1,559,788. ELECTRIC SWITCH. WILLIAM SCHMIDT, Coldwater, Mich. Filed Mar. 25, 1924. Serial No. 701,872. 5 Claims. (Cl. 200—14.)



4. An electric switch including two switch spring arms formed of sheet metal and having adjacent ends and carrying contacts at their other ends; a positioner for said spring arms and engaging the adjacent ends of said arms; an electrical connection between said contacts; a contact carrier, the spring arms and contact carrier being relatively movable; and two contacts upon said carrier and respectively complemental to the aforesaid contacts.

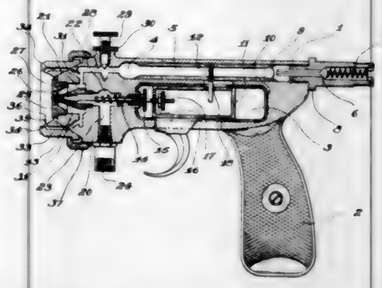
---

1,559,789. TOY GUN. WILLIAM F. SCHMIDT, Wyandotte, Mich., assignor to All Metal Products Company, Wyandotte, Mich., a Corporation of Delaware. Filed Feb. 16, 1924. Serial No. 693,196. 8 Claims. (Cl. 124—10.)

1. The combination of a barrel, a thimble fixed in said barrel so that its end shall form a stationary abutment, said thimble having one end closed with an aperture in said closure having its walls extended to form a tubular extension therefrom for the purpose described.

7. In an apparatus of the kind described, a thimble formed of a circular sheet having the slot $dx^4$ in one edge, and the cut-away portion $dx^5$ in the other edge, the same being shaped to form the L slot and rolled into a cylindrical form.

1,559,790. PNEUMATIC PAINTBRUSH. FREDERICK W. SCHNEIDER, Baltimore, Md., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 5, 1923. Serial No. 678,591. 6 Claims. (Cl. 91—45.)



2. In combination in an air brush, a body provided with a head having at its center concentric air and paint discharge passages and a pair of supplemental air passages on opposite sides of said passages, a cap mounted for rotary adjustment on the head and provided with a pair of oppositely disposed passages directed transversely of the passages at the center of the head and adapted to register at their inner ends with said supplemental air passages, and a removable perforated disc screw threaded into the head and constituting the orifice of said air passage at the center of the head.

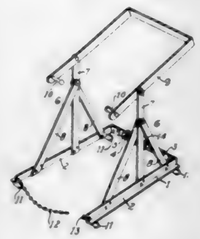
---

1,559,791. PROCESS FOR MAKING CELLULOSE-COMPOSITION-MATERIAL SPECTACLE AND EYEGLASS FRAMES. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 19, 1924. Serial No. 693,922. 12 Claims. (Cl. 18—51.)

4. The process of making spectacle and eyeglass frames and the like from cellulose composition material consisting in blanking out the frames from unseasoned stock, returning the cuttings from the unseasoned stock to the base stock to be re-used as the process continues, and seasoning the blanked out frames.

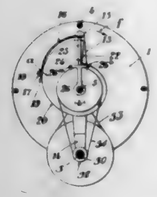
---

1,559,792. CARBOY-SUPPORTING DEVICE. WALTER G. SEABOLD, Alton, Ill., assignor to Illinois Glass Company, Alton, Ill., a Corporation of Illinois. Filed Dec. 22, 1922. Serial No. 608,447. 2 Claims. (Cl. 248—58.)



1. A device for supporting a carboy contained within a case, comprising a U-shaped base including a pair of members capable of sliding movement relative to each other whereby the width of said base may be increased or decreased, a flexible connecting member attached to the ends of said U-shaped base, and a member pivotally supported by said base, said member being adapted to pivotally engage said carboy case whereby said carboy case may be moved to an elevated position.

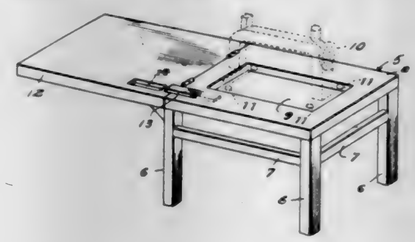
1,559,793. APPARATUS FOR THE MEASUREMENT OF SPEEDS. AUGUSTIN SEGUIN, Paris, France. Filed Dec. 1, 1921. Serial No. 519,071. 8 Claims. (Cl. 264—1.)



8. An apparatus for the measurement of speed embodying a stationary involute cam, a comparison member adapted to be driven about said cam and to traverse the surface thereof at a speed proportional to the speed to be measured, means for normally resiliently maintaining said member in engagement with the surface of said cam, said member being adapted to jump from the high point of the cam to a lower point thereof, an indicating pointer, an intermediate member, means for normally moving the intermediate member in one direction and into the path of the trajectory of the comparison member which serves to impel the setting member in the opposite direction, and a loose connection between the indicating pointer and the setting member to permit a relative determined angular movement between the same.

---

1,559,794. SEWING-MACHINE TABLE. JOHN L. SHERROD, New Orleans, La. Filed Oct. 6, 1922. Serial No. 592,724. 1 Claim. (Cl. 45—138.)

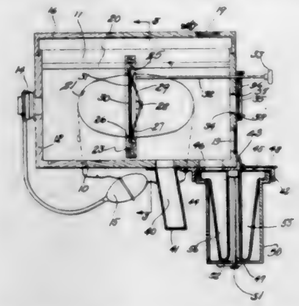


A table having a central cutout portion provided in the top face thereof and adapted to detachably receive and supporting the base of a sewing machine therein, a leaf hingedly secured to one end of said table, a latch pivotally mounted on one end of the top face of said table and adapted to have its free end engage the hinged end of the said leaf when the latter is extended, said leaf being provided with a cutout portion for the purpose of receiving the latch when the same is disengaged from the leaf and the latter is folded upon the table whereby the leaf is adapted to fit flush on the top face of said table and cover the opening provided therein.

---

1,559,795. CAMERA. SAMUEL SHLAPROCK, New York, N. Y. Filed Dec. 5, 1923. Serial No. 678,568. 3 Claims. (Cl. 95—13.)

1. In a camera, a housing having a hinged cover thereon, a shutter and lens mechanism in one wall of the housing, the housing having an aperture on the wall opposite to the shutter mechanism and aligned therewith, a gate slidable vertically, said aperture being closable by said gate, a carrier frame slidably mounted in said housing, a rod fixed to said frame and adapted to project from said housing, a knob on the end of said rod, said rod being adapted to slide the carrier frame, the carrier frame having a rectangular opening, a sunken portion adjacent to and larger than the opening in the frame, and a glass plate mounted in said sunken portion, said glass plate being adapted to retain a sensitized card in place in the opening of the frame.



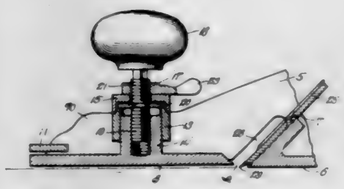
---

1,559,796. BRAKE. RAY L. SHUEY, Kansas City, Mo., and ARTHUR C. MCGEE, Olathe, Kans. Filed Oct. 10, 1923. Serial No. 667,633. 5 Claims. (Cl. 188—167.)

1. In combination with a wheeled truck, a bracket, a pivoted lever on the bracket, a rock shaft, brake levers on the rock shaft having brake shoes for engagement with the wheels of the truck, an arm on the rock shaft, a spring connected to a rigid part on the truck and to the arm normally urging the brakes into braking position and a connecting rod between the arm and the first named lever, the connecting rod having an off set portion pivoted to the first named lever, the pivot being adapted to be swung below a horizontal plane passing through the pivotal connection between the first named lever and the bracket when in one position to oppose the spring and adapted to be swung above a horizontal plane passing through the pivotal connection between the first named lever and the bracket to permit the spring to function.

---

1,559,797. CARPENTER'S PLANE. JOSEPH SLOMER, Waukegan, Ill. Filed Sept. 27, 1924. Serial No. 740,242. 2 Claims. (Cl. 145—15.)



2. A plane, comprising a stock, an integral rear sole plate section thereon, a forward sole plate section having a hollow internally threaded hub centrally disposed on its upper face, a transverse bridge wall fixed to said stock and formed with a socket adapted to receive and guide said hollow hub, a pressure knob having a screw-

threaded stem adapted to engage said internally threaded hub, means preventing endwise movement of said stem with respect to said bridge wall, and a check nut for said stem.

---

1,559,798. SPRING HANGER AND METHOD OF CONNECTING THE SAME TO SIDE BARS OF AUTOMOBILE FRAMES. CHARLES S. SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 1, 1923. Serial No. 665,996. 8 Claims. (Cl. 267—54.)

1. In an automobile frame, a channel side bar, and a spring hanger secured in the channel of the side bar, the spring hanger being permanently united to the side bar by means of integral portions of the hanger engaging the side bar.

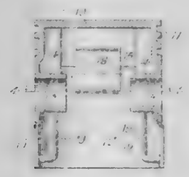
---

1,559,799. MANUFACTURE OF TUNGSTEN. COLIN JAMES SMITHELLS, Oxhey, England, assignor to The General Electric Company Limited, London, England. Filed June 5, 1922. Serial No. 566,135. 3 Claims. (Cl. 176—132.)

1. A process for the manufacture of tungsten metal suitable for the filaments of incandescent electric lamps according to which there is added to the tungsten compound before reduction to metal a combination of additives consisting of (1) not more than 1% of a substance which will introduce into the resulting metal a non-volatile oxide irreducible by hydrogen, and (2) not more than .5% of a compound of an alkali metal which is decomposed in the subsequent treatment of the mixture in hydrogen.

---

1,559,800. ENGINE PISTON. ALBERT SPILLMAN, North Tonawanda, N. Y. Filed July 12, 1921. Serial No. 484,124. 5 Claims. (Cl. 74—108.)



1. A piston comprising a head, a skirt including resilient sections separated from said head by a slit extending continuously around the piston, and webs connecting said sections with said head, said webs being spaced from the inner side of the head and the skirt sections and having their upper and lower ends joined thereto adjacent to said slit.

---

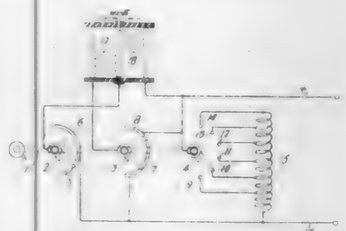
1,559,801. CYLINDRICAL END GAUGE. ADOLF STEINLE, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921. Serial No. 492,126. 4 Claims. (Cl. 33—164.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In combination a plurality of rod shaped end gauges, a holder for each gauge respectively, each holder slidably enclosing and being of substantially the same length as its gauge, and means carried by each end of each holder

whereby two or more holders may be secured together with their gauges in axial alignment and with their adjacent ends in contact.

---

1,559,802. ELECTRICAL SWITCHING CIRCUITS. GEORGE H. STEVENSON, Rye, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1921. Serial No. 469,827. 4 Claims. (Cl. 250—40.)

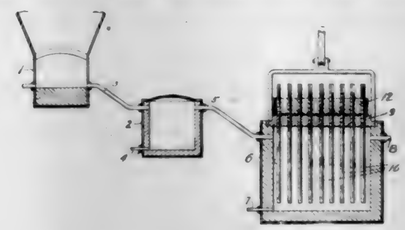


1. In combination, a line, an inductance and a pair of condensers arranged for connection across said line, and a multi-point switch for simultaneously varying the amounts of capacity and inductance included across said line, said switch being arranged in one position to include across said line a relatively small amount of inductance and in parallel therewith said pair of condensers in series with each other, and in another position a larger amount of inductance across said line and in parallel therewith one only of said condensers, and in a third position a still larger amount of inductance across said line and in parallel therewith both of said condensers in parallel.

---

1,559,803. TREATMENT OF METALLURGICAL SLAG. HARRY HOWARD STOUT, Douglas, Ariz. Filed Nov. 25, 1921. Serial No. 517,449. 1 Claim. (Cl. 75—17.)

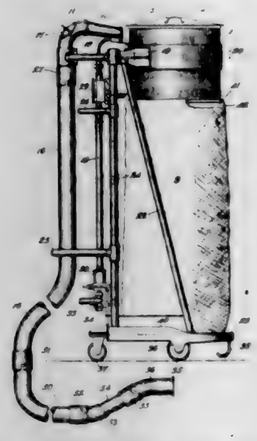
The process of removing metal values from molten metallurgical slag, which comprises bringing the whole body of a charge of molten slag into contact with a non-molten material which reacts with ingredients of the molten slag to precipitate said metallic values therefrom and the uncombined residuum of which is persistently non molten throughout the precipitating reaction, the slag-charge temperature remaining unincreased during its contact with the said non-molten material, and the initial quantity of the non-molten material being greater



than what is necessary to accomplish the desired precipitation, and positively moving the non-molten material within and relatively to the body of slag.

---

1,559,804. AIR-INDUCTION-CLEANING APPARATUS. ROBERT P. SWEENY, Union, S. C. Filed June 16, 1922. Serial No. 568,830. 21 Claims. (Cl. 183—36.)



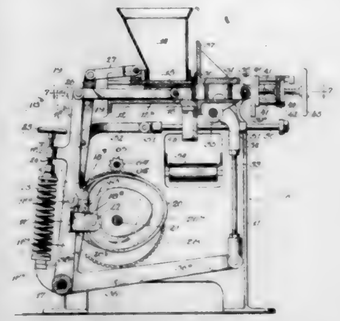
1. An air cleaning apparatus comprising a truck, a braced frame structure including upright rods and inclined brace-rods, a waste collecting chamber, a band surrounding the chamber leaving the lower end of the chamber accessible to receive the open end of a bag thereover, brackets on the band supported by the frame structure, a compressed air pipe and suction pipe communicating with the upper part of the chamber and both pipes supported by the framework, and a waste bag detachably attached to the lower end of the waste collecting chamber and supportable by the truck.

---

1,559,805. DOUGH DIVIDER. FRANK STREICH, Joliet, Ill., assignor to Union Machinery Company, Joliet, Ill., a Corporation of Illinois. Filed Sept. 4, 1923. Serial No. 660,758. 3 Claims. (Cl. 107—15.)

1. In a divider, a receiving chamber having a discharge end, a reciprocatory charging plunger therein, a reciprocatory carrier movable transversely of said receiving chamber, and having a measuring pocket of the same cross section as the receiving chamber capable of registering with the discharge end thereof, means for reciprocating said charging plunger and carrier in timed relation to each other, a stationarily supported dough

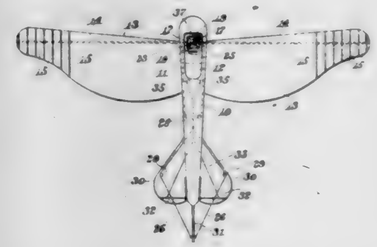
dividing member external of the chamber and pocket, and located in front of the discharge end of the pocket when the latter is in the position occupied when its contents



are being ejected, an ejecting plunger in said pocket, and means for actuating said plunger to eject the contents of the pocket and force it across said dough dividing member.

---

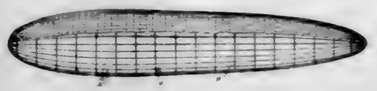
1,559,806. GLIDER. CHARLES R. SWIFT, Middleboro, Mass. Filed Aug. 18, 1924. Serial No. 732,695. 2 Claims. (Cl. 244—12.)



1. The combination of a car provided with a seat for the operator; an oscillating yoke on said car; a rudder on said car; main wings extending laterally from the front end of the car in opposite directions; shafts extending lengthwise of said wings; cross arms secured to the outer ends of said shafts; a shaft revolubly mounted in said yoke; intermediate gears thereon meshing with said wing-shaft gears; a drum on said yoke shaft; and flexible connections between said drum and said rudder.

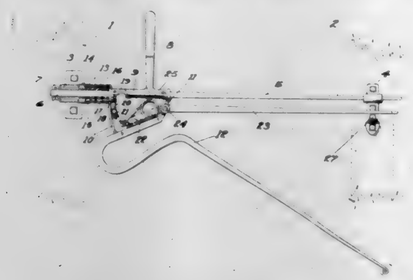
---

1,559,807. METHOD OF ERECTING AIRSHIPS. HERBERT V. THADEN, Detroit, Mich. Filed Jan. 16, 1925. Serial No. 2,784. 6 Claims. (Cl. 244—3.)



1. The method of erecting air-ships which consists in dividing the entire ship into units by imaginary horizontal planes, completing the uppermost unit, raising said completed unit vertically and adding successively succeeding units.

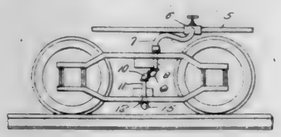
1,559,808. MAIL-POUCH COLLECTOR. RILEY M. THOMPSON, Sacramento, Calif., assignor of one-half to Hugh A. Woodward, Sacramento, Calif. Filed Aug. 8, 1924. Serial No. 730,883. 9 Claims. (Cl. 258—22.)



1. In a mail pouch collecting mechanism, the combination with a rigid collecting arm, of a secondary and longitudinally movable arm normally spaced from the collecting arm, spring means tending to cause the secondary arm to move toward the collecting arm, means enabling said arms to be turned and moved longitudinally as a unit, means releasable with the longitudinal movement of the arms for normally preventing the spring means from acting, and means whereby said last named means can only be released when the arms are turned to a pouch engaging position.

---

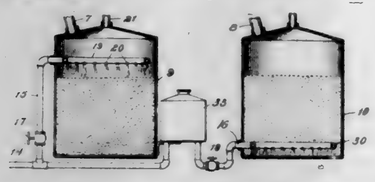
1,559,809. AUTOMATIC TRAIN STOP. HARRY L. TONKINSON, Texarkana, Tex. Filed July 1, 1925. Serial No. 40,858. 1 Claim. (Cl. 246—171.)



A device of the class described including a breakable cap having a groove in the end thereof, a bar having its intermediate portion seated in said groove, and a fastening element securing the bar in the groove and to the cap.

---

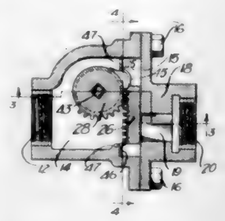
1,559,810. METHOD OF FEEDING DRY-PULVERIZED COAL. WALTER E. TRENT, Washington, D. C., assignor, by mesne assignments, to Trent Process Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 22, 1919. Serial No. 332,548. 1 Claim. (Cl. 302—53.)



A process for feeding pulverized coal in air suspension, consisting in providing a bulk supply of such coal in independent receivers, in introducing an air current to one of said receivers to impinge upon the upper surface of the coal therein, to progressively carry said coal from said surface through such receivers until the contents thereof have been removed, in then discontinuing the introduction of air to such receiver and introducing a stream of air to the second receiver under pressure discharging into the lower portion of the material therein to pass through said material toward its surfaces, and to carry particles thereof in suspension, and in removing the moisture from said air before it is introduced to said last-mentioned receiver.

---

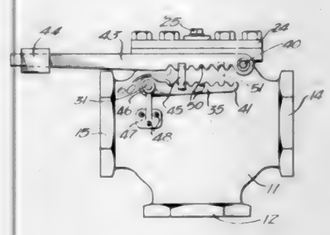
1,559,811. VALVE. MILON J. TRUMBLE, Alhambra, Calif., assignor to Brown Valve and Manufacturing Co., Alhambra, Calif., a Corporation of California. Filed Oct. 16, 1922. Serial No. 594,759. 1 Claim. (Cl. 251—54.)



In a sliding plate valve, the combination of: a valve body having an inlet and an outlet and being provided with a valve seat surrounding said outlet; a vertically slidable valve plate normally closing said outlet and having a rack formed on its inner surface; a gear engaging said rack; means for rotating the gear to translate said valve plate; and a pair of imperforate leaf springs maintaining the valve plate against its seat, the respective springs engaging said valve plate on opposite sides of and closely adjacent the rack to form a guide means preventing substantial transverse displacement of the valve plate, said springs exerting a pressure against the valve plate increasing as the valve plate moves to closed position, the interior surface of the valve body being formed for coengagement by the springs to maintain the springs against substantial displacement.

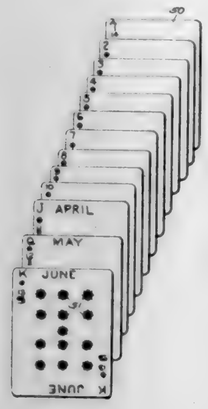
---

1,559,812. RELIEF VALVE. MILON J. TRUMBLE, Alhambra, Calif., assignor to Brown Valve and Manufacturing Co., Alhambra, Calif., a Corporation. Filed Nov. 21, 1922. Serial No. 602,350. 4 Claims. (Cl. 137—53.)



1. In a relief valve, the combination with a casing provided with a valve opening and a valve normally closing said opening, of pressure resisting means co-acting with said valve comprising a pivoted primary arm; means connecting said primary arm to said valve; a secondary arm pivoted adjacent the free end of said primary arm; means connecting said arms, the adjacent edges of said arms serrated to receive the edges of said connecting means; and a weight carried by and slidable on said secondary arm.

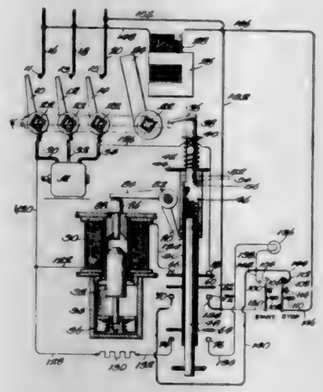
1,559,813. CARD GAME. THOMAS C. VAN BENTHUYSEN, Divide, Wyo. Filed Feb. 27, 1925. Serial No. 12,009. 5 Claims. (Cl. 178—152.)



1. A card game of the character described comprising a plurality of suits of cards, each suit having the same number of cards and the cards of the suit having different numerical values and an additional card having a plurality of predetermined elective values indicated thereon.

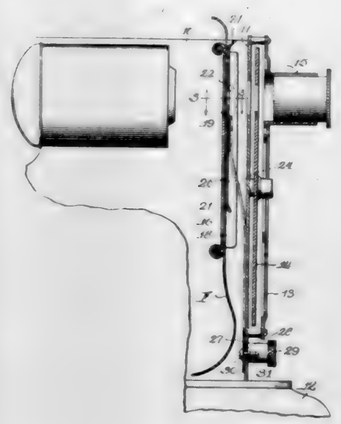
---

1,559,814. MOTOR CONTROLLER. HERMON L. VAN VALKENBURG, Milwaukee, Wis., assignor to Industrial Controller Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 27, 1925. Serial No. 39,946. 8 Claims. (Cl. 172—179.)



1. In combination, an electroresponsive device, a switch operable to cause said device to respond but tending when released to deenergize said device, and electroresponsive means for preventing said switch from deenergizing said device but necessitating manual retention of said switch for a temporary period after the response of said device, said electroresponsive means having a mechanical retarding device for regulating its operation.

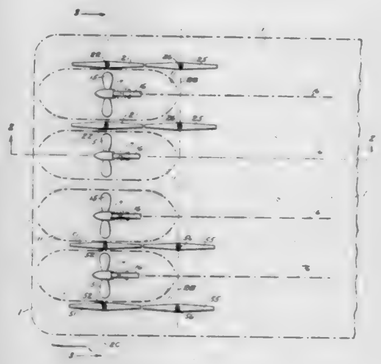
1,559,815. FILM TENSIONING AND FRAMING DEVICE. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed Dec. 10, 1923. Serial No. 679,802. 7 Claims. (Cl. 88—17.)



1. A framing and tensioning device for film comprising a guide plate, a presser coacting therewith and having apertures therein, means for supporting and yieldingly urging said presser plate towards the guide plate, and devices for moving said means longitudinally with respect to said guide plate whereby said aperture may be brought into registry with a picture upon the film.

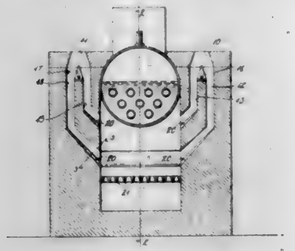
---

1,559,816. RUDDER CONTROL FOR TOWBOATS. CHARLES E. WARD, Charleston, W. Va., assignor to The Charles Ward Engineering Works, Charleston, W. Va., a Corporation of West Virginia. Filed Apr. 29, 1925. Serial No. 26,709. 18 Claims. (Cl. 114—163.)



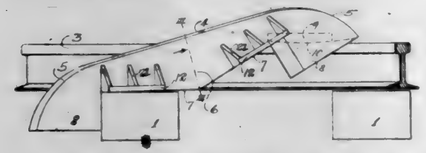
17. In a tow boat of the chambered type the combination of a propeller in each chamber; and rudders disposed in a plurality of transverse planes, one of said planes passing through said propellers.

1,559,817. FUEL SPREADER. WILBURT WARD, Ste. Genevieve, Mo. Filed Jan. 26, 1925. Serial No. 4,842. 3 Claims. (Cl. 110—118.)



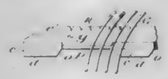
1. In a furnace, in combination, a furnace wall provided with a fuel admitting passage and diverging channels leading downwardly therefrom to deliver fuel upon the grate of the furnace, each of said channels being formed in one of the surfaces thereof at its outlet with diverging fuel deflecting grooves.

1,559,818. RERAILING FROG. HENRY R. WARFORD, Memphis, Tenn. Filed July 24, 1925. Serial No. 45,774. 4 Claims. (Cl. 104—268.)



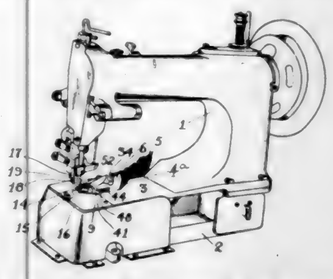
1. A rerailing frog, comprising a body portion substantially rectangular in cross section and symmetrical about its longitudinal center, having a substantially flat upper surface, downwardly curved to provide approaches thereto at each end, and its under surfaces each converging from the longitudinal center toward an end, said ends being continued and extending below, and substantially at right angles to, said body portion to form tie abutments for said frog; a member projecting laterally from the side of the body portion near each end, having an angularly disposed channel-way cut therethrough and through the said ends to provide a rail seat, said rail seat being convex; flanges, oppositely disposed from said members, extending laterally from said body portion, and having their under surfaces flush with the under surface of said body portion and forming a continuation thereof, to form, with the underside of said body portion, a tie seat for said frog; and a centrally disposed dog adapted to interlock with the underside of the ball of the rail.

1,559,819. REENFORCEMENT FOR CONCRETE AND THE LIKE. CHARLES WILLIAM WATSON, St. Kilda, Victoria, Australia. Filed June 20, 1923. Serial No. 646,725. 7 Claims. (Cl. 72—109.)



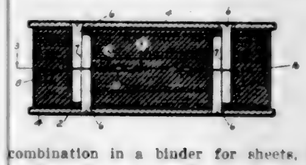
1. A reenforcement retainer for curvilinearly disposed reenforcing means for an agglomerate structure, said retainer comprising a basic metal bar element and a secondary agglomerate element molded thereto, said secondary agglomerate element having one of its radial faces substantially arcuate in cross-section to engage and seat upon the opposed face of the mold employed in forming the agglomerate structure.

1,559,820. BINDER OR FOLDER FOR SEWING MACHINES. ALBERT H. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Filed Mar. 29, 1922. Serial No. 547,666. 26 Claims. (Cl. 112—138.)



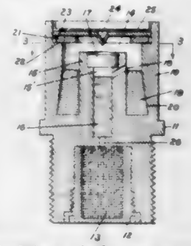
1. A binder adapted to receive a pile binding, and having means effective to deflect the pile of the binding away from the line of stitching during the attachment of an edge thereof to an article of apparel.

1,559,821. BINDER. GEORGE P. WIGGINGTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Apr. 17, 1922. Serial No. 553,805. 10 Claims. (Cl. 281—25.)



6. The combination in a binder for sheets, of a coacting pair of post members adapted for slidable engagement within the sheet body when introduced into the body of sheets from opposite sides thereof, a clutch plate adapted to be interposed between sheets of said sheet body and provided with a hole through which said post members project, and a spring clutch member mounted on said plate in diverging relation thereto and positioned so that when collapsed upon the plate said post members are clamped together.

1,559,822. TRACER FUSE. SAMUEL WILEY, Metuchen, N. J. Filed June 30, 1924. Serial No. 723,372. 8 Claims. (Cl. 102—36.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



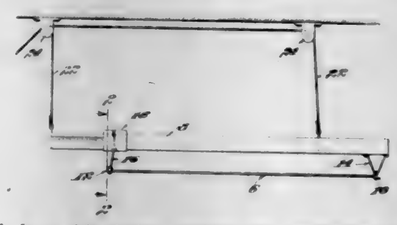
1. A fuse embodying a body, an annular flange formed on the body for defining a shell and cartridge case receiving portion, a cup carried in the shell receiving portion and adapted to enclose an explosive charge, a centrally disposed hollowed extension formed within the cartridge case receiving portion and spaced from its walls to form a chamber, said extension adapted to receive a time train element and to space a tracer element adapted to be carried in the chamber, a primer mounted

on the extension, means for firing the primer, and means formed in the body and the extension for communicating ignition to the cup and to the chamber.

1,559,823. NECKTIE HOLDER. ALBERT W. WILSON, San Francisco, Calif. Filed May 9, 1925. Serial No. 29,170. 1 Claim. (Cl. 24—57.)

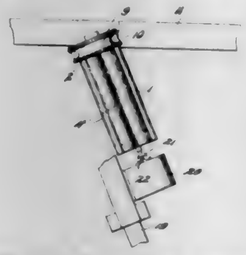
As a new article of manufacture, a necktie holder comprising a form including a vertical shank having relatively separable leads, a tape movable between the leads and provided with means to engage with a collar button and means sliding on the shank for gripping the leads against the tape.

1,559,824. MECHANISM FOR MEASURING THE WIDTH OF ENDLESS FELTS. EZEKIEL J. WILSON, East Greenbush, N. Y., assignor to F. C. Huyck & Sons, Rensselaer, N. Y., a Corporation of New York. Filed Feb. 25, 1922. Serial No. 539,184. 12 Claims. (Cl. 33—148.)



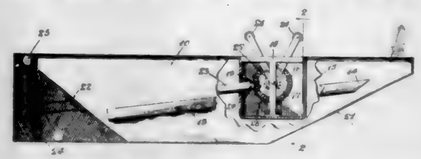
1. In a felt drying machine the combination with drying and stretching rolls, of two relatively movable edge engaging members, means for mounting them to ride against the opposite edges of the felt travelling over the rolls, and means associated with said members for recording variations in the width of the felt travelling between them.

1,559,825. REVOLVER-LOADING DEVICE. MARY F. F. WILSON, New Rochelle, N. Y. Filed Nov. 26, 1924. Serial No. 752,329. 4 Claims. (Cl. 42—89.)



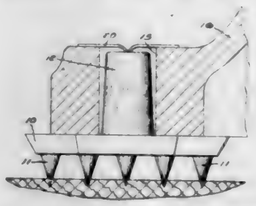
1. A loading pack for revolvers comprising a casing, means for supporting a clip of cartridges therein, and means for releasing the said clip by engagement with the cylinder of the revolver.

1,559,826. HAND-PROPELLED BOAT. GEORGE FRED WINTER. Honolulu, Territory of Hawaii. Filed Oct. 3, 1924. Serial No. 741,473. 5 Claims. (Cl. 115—24.)



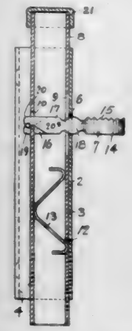
5. A boat having a closed hull forming an air chamber therein and a pair of keel hollow, elongated members outstanding from the sides thereof, the hull being adapted to be straddled by the operator and the keel members forming foot rests as described.

1,559,827. FREIGHT-ANTICREEPING DEVICE. JOHN WITTMAN, Hamilton, Ohio. Filed Mar. 1, 1924. Serial No. 696,305. 1 Claim. (Cl. 45—137.)



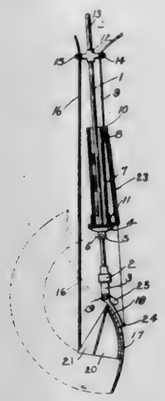
A freight anticreeping device comprising a metallic plate, a plurality of projecting teeth carried by said plate upon one face thereof, an upstanding lug carried by said plate upon the other face thereof adapted for positioning within a suitable opening in the freight with which the said anticreeping device is to be used, and a plurality of wires carried by said lug for holding the said anticreeping device in position with respect to the freight.

1,559,828. FOOT BOLT. HARRY E. WOEHNLE, Pittsburgh, Pa., assignor to McKinney Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1923. Serial No. 624,156. 2 Claims. (Cl. 292—143.)



1. A foot-bolt comprising a casing, a bolt proper therein, a foot-lever passing through registering openings in said casing and bolt and fulcrumed in said casing, said foot-lever having inwardly extending spring arms beyond said fulcrum point having oppositely arranged nibs at the ends thereof, and nonaligned openings formed in said bolt to receive the inner ends of said arms, whereby said nibs engage the outer walls of said bolt.

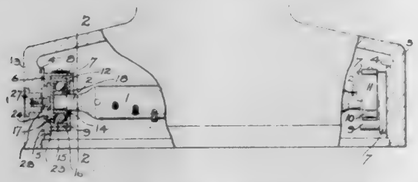
1,559,829. HAND-POWER DIGGER. HARRY M. WOLFE, Lake Burien, Wash. Filed Apr. 19, 1923. Serial No. 633,292. 5 Claims. (Cl. 55—71.)



2. An implement having a cutting tool attached to a handle; a flat disk forming a seat attached to the lower end of the handle; a sliding member on the handle above the seat; a spring for pulling the sliding member downward and for holding the tool backward; a cross member at the upper end of the handle; pulleys on the cross member; and cords passing over the pulley and connected to the sliding member and to the cutting tool.

4. An implement for excavating small holes having a handle; a sliding hammer on the handle; means for raising the hammer from a remote point; a means for pulling the hammer downward, and a means at the lower end of the handle for digging and raising material which may be adjusted from a remote point.

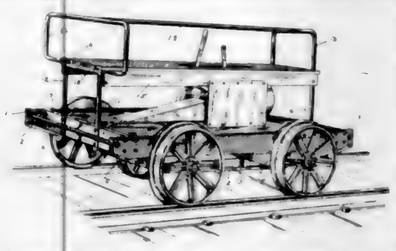
1,559,830. BEARING ARRANGEMENT. SAMUEL W. WOODALL, Detroit, Mich. Filed Aug. 28, 1924. Serial No. 734,682. 6 Claims. (Cl. 308—195.)



1. A bearing arrangement comprising a spindle having ends mounted in bearings positioned within a frame, housings attached to said frame having inwardly inclined segmental bearing surfaces adapted to receive bearing casings, and springs secured to the outer circumferences of said segmental bearing surfaces which are adapted to grip each of said bearing casings at two points on its circumference.

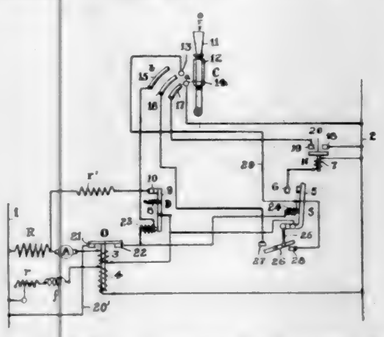
1,559,831. RAILWAY MOTOR CAR. HORACE E. WOOLERY, St. Paul, Minn. Filed July 24, 1922. Serial No. 577,216. Renewed Sept. 28, 1925. 3 Claims. (Cl. 105—162.)

1. In a railway motor car the combination with the running parts and car floor and inner and outer longitudinal sill members and front and rear cross frame timbers, of timber and tubular housing members with metal engine guards disposed downward and between



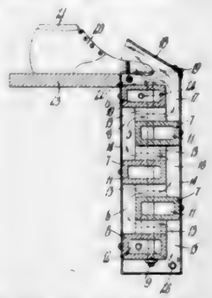
said timber housing and the inner longitudinal sill members, said tubular members bolted to the front and rear cross frame timbers.

1,559,832. ELECTRIC CONTROLLER. DAVID C. WRIGHT, Euclid, and PHILIP V. TIPPET, Cuyahoga Falls, Ohio. Filed Apr. 13, 1925. Serial No. 22,548. 4 Claims. (Cl. 172—179.)



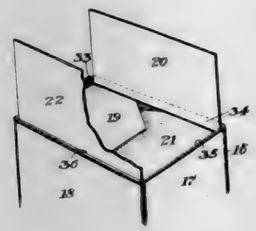
1. In a system for controlling direct current motors, an electric motor, a circuit therefor, an electromagnetic contactor for closing the circuit, an underload relay having its operating winding in the said circuit, and a master controller having in the running position contacts in the circuit of the contacts of the relay and in the circuit of the winding of the contactor, and having in starting position contacts short-circuiting the contacts of the relay and including the winding of the contactor.

1,559,833. APPARATUS FOR SOFTENING SHOES. ALFRED YOUNG Milford, Mass. Filed June 2, 1925. Serial No. 34,339. 5 Claims. (Cl. 12—1.)



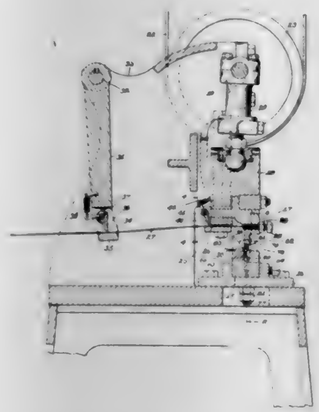
1. An apparatus for softening shoes comprising, in combination, a steam radiator embodying therein a plurality of communicating sections arranged in staggered relation to each other laterally, a casing enclosing said radiator and co-operating with the sections thereof to form chambers, the latter also being located in staggered relation to each other laterally, the lowermost section communicating with said casing at the bottom thereof, there being passageways between said sections connecting said chambers together, and means to support a shoe in a position to be exposed to steam passing from said casing.

1,559,834. CONTAINER. PHILIP ZALKIND, New York, N. Y. Filed July 30, 1921. Serial No. 488,574. 11 Claims. (Cl. 229—87.)



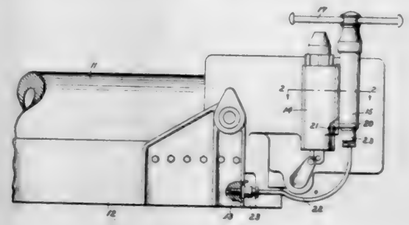
11. A container comprising a peripheral wall, an inturned panel which is continuous and is substantially coextensive circumferentially of the said peripheral wall, and members extending inwardly from portions of the said inturned panel to complete the end of the container, there being means provided for maintaining said inturned members in place relatively to each other and to the said portions of the inturned panel.

1,559,835. METAL-WORKING MACHINE. CORBAN H. ZILER, Detroit, Mich., assignor to L. A. Young Industries, Incorporated, Detroit, Mich. Filed Mar. 13, 1924. Serial No. 698,918. 21 Claims. (Cl. 153—1.)



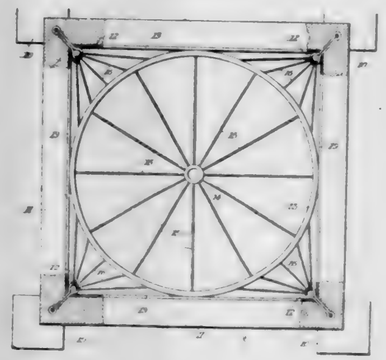
6. In a structure of the class described, the combination of means for feeding stock with a step by step movement, a female forming member provided with a forming recess, a shear block, a coacting reciprocatingly mounted male forming member, an adjustable stock stop on said male forming member, and a cutter mounted on said male forming member to coact with said shear block.

1,559,836. MOUNTING FOR PUMPS. HARRY C. ZIMMERMAN, Washington, D. C. Filed Sept. 11, 1924. Serial No. 737,176. 3 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



3. The combination with a gun having a groove therein, of a pump formed with a complementary tongue for removably mounting the pump on the gun.

1,559,837. REENFORCEMENT WORK FOR CONCRETE CONSTRUCTION. ORREN ALLEN, Denver, Colo. Filed June 30, 1924. Serial No. 723,246. 9 Claims. (Cl. 72—71.)

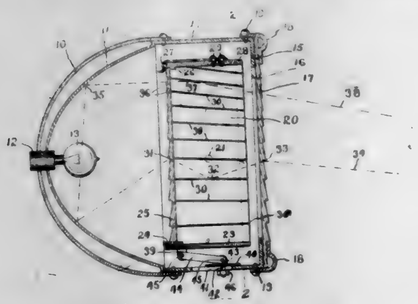


1. A structure for reenforcing concrete, comprising a rim portion corresponding substantially to the largest circle-like geometrical figure that can be inscribed within the area to be reenforced, a hub portion, spoke-like elements radiating from the hub portion and secured to the rim portion, and stress-rods attached in substantially uniformly spaced relation to the rim portion along the whole length thereof and converging in groups to a plurality of points adjacent the perimeter of the area to be reenforced.

1,559,838. HEADLIGHT. RILEY E. ANTHONY, Omaha, Nebr., assignor of one-half to Martin K. Neshiem, Los Angeles, Calif. Filed Nov. 14, 1924. Serial No. 749,873. 3 Claims. (Cl. 240—45.)

2. In a motor vehicle headlight, the combination of a casing, and an adjustable deflector pivotally mounted

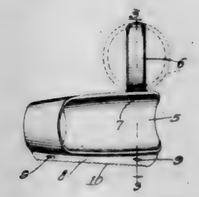
within said casing, said deflector comprising a frame, a lens detachably mounted at one side of said frame, deflector plates mounted within said frame and adapted to



control the projection of light beams, and adjustable means adapted to control the inclination of said deflector within said casing.

---

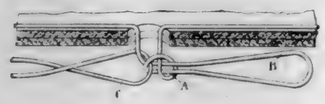
1,559,839. FRUIT CUTTER. WADE H. ASHER, Selma, Calif., assignor of one-half to Harrison Hampton, San Antonio, Tex. Filed July 26, 1924. Serial No. 728,400. 1 Claim. (Cl. 30—24.)



A fruit stem cutting device comprising a curved body portion, the body portion adapted to engage the under surface of the forefinger of the hand of the user throughout substantially the entire length of the finger, the upper portion of the body portion being cut away to provide a clearance for the knuckle of the fore-finger, a blade carried by the body portion, a ring member adapted to be positioned over a finger of the hand of the user, and means for pivotally connecting the ring member to the body portion.

---

1,559,840. SEWING. FREDERICK BAKER, Blackheath, London, England, assignor to Single Thread Lockstitch Machines Limited, London, England, a Company of Great Britain. Original application filed Jan. 17, 1923, Serial No. 613,223. Divided and this application filed Jan. 25, 1924. Serial No. 688,571. 7 Claims. (Cl. 112—262.)



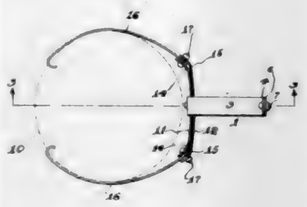
1. A method of forming a single thread locked stitch consisting in drawing a single loop through each needle penetration of the material being sewn, dividing each such loop drawn from the needle into two loops, a permanent loop and a temporary loop, twisting the temporary loop and passing it completely over the permanent loop in drawing up the said temporary loop to the material being sewn.

1,559,841. SYSTEM OF WATER CONSERVATION. FREDERICK BENZ, Haledon, N. J. Filed May 27, 1924. Serial No. 716,108. 4 Claims. (Cl. 61—1.)

3. Means to conserve the water of a stream substantially without change in the appearance of the stream as viewed from one shore thereof, said means obstructing the flow of the stream throughout a substantial part of the width thereof and from the bottom upward and having a generally flat top surface forming a part of the stream bed and arranged higher than the portion of the stream bed between said means and one shore and also higher than the part of the stream bed upstream-adjacent to said surface.

---

1,559,842. TEMPORARY POLE-STEP DEVICE. LEVI M. HOLLINGER, Bunker Hill, Kans. Filed Sept. 17, 1924. Serial No. 738,310. 2 Claims. (Cl. 228—47.)



1. In a pole step, a strip bent to provide a foot engaging portion and a shank extending downwardly from the inner end thereof, a diagonal brace, fasteners connecting the ends of said brace with the outer end of said foot engaging portion and lower end of said shank, the lower fastener being extended and having a pointed end forming a tooth for biting into a hole, cross strips extending in cross relation to the upper end portion of said shank and pivotally connected therewith, the end portions of said cross strips being bent outwardly, and strips pivotally mounted between the end portions of said cross strips and curved longitudinally to embrace a pole and having their free end portions bent inwardly and terminating in pole penetrating points.

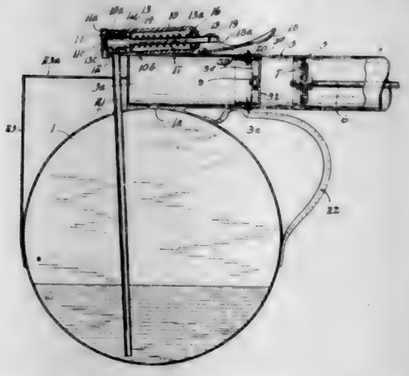
---

1,559,843. SPRAYER WITH AIR CHAMBER AND TRANSVERSE TANK. HENRY E. BRANDT, North St. Paul, Minn., assignor to Dobbins Manufacturing Company, North St. Paul, Minn., a Corporation of South Dakota. Filed July 17, 1924. Serial No. 726,498. 7 Claims. (Cl. 299—89.)

3. A liquid spraying device having in combination, a liquid containing tank, an air pump comprising a barrel secured to the top of said tank and extending substantially at right angles to the axis of said tank, said barrel having a forward portion forming a compressed air chamber, a spraying nozzle secured on top of and extending longitudinally of said barrel at the front end thereof, means for controlling the discharge of liquid through said nozzle, and a supporting foot extending substantially tangent to the front of said tank and connected to the end of said barrel.

6. A spraying device comprising a tank, a barrel member of relative small diameter rigidly secured to the top of said tank, said barrel having a front section interiorly threaded at its rear end, a cup-shaped sleeve

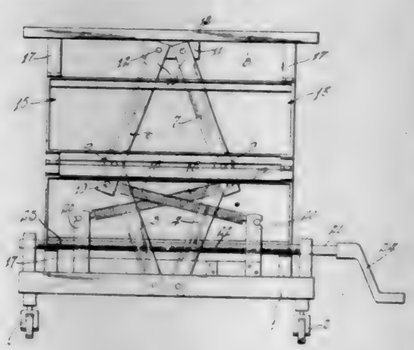
screwed therein forming a partition in said barrel and carrying a forwardly opening check valve, said sleeve being exteriorly threaded and projecting at the rear



end of said section, a rear section of said barrel screwed onto said sleeve and a gasket surrounding said sleeve and clamped between said sections.

---

1,559,844. LEDGER STAND. CLYDE EVERETT BROOKS, Mason City, Iowa. Filed Mar. 24, 1924. Serial No. 701,485. 2 Claims. (Cl. 45—60.)

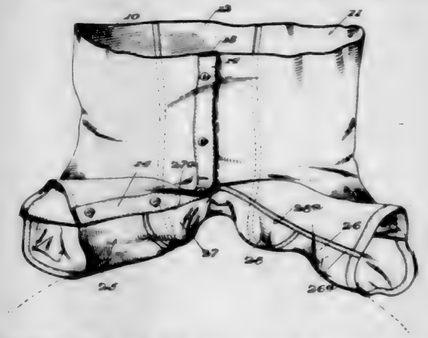


1. A ledger stand of the character described comprising a base member, a ledger supporting platform, a collapsible means comprising a pair of frames pivotally connected with one another and with said base member and said ledger supporting platform respectively, spring means associated with said collapsible means for yieldingly elevating said platform, and a pair of frames pivotally mounted to each other and to said platform and said base respectively, and having their axes disposed transverse to the axes of said collapsible means, whereby said base member and said platform are maintained substantially parallel at all times.

---

1,559,845. UNION SUIT. J. PAUL BROWN, Atlanta, Ga. Filed Oct. 28, 1922. Serial No. 597,589. 2 Claims. (Cl. 2—78.)

1. A union suit made up of three pieces and a pair of button strips, said three pieces including a back piece and two combined front and side pieces, the combined front and side pieces having vertical edges and extensions at their lower ends at the opposite side from said vertical edges, said back piece having a pair of extensions at its lower end and a button strip secured to the vertical edge of one of the combined front and side pieces from the neck opening to the apex of the crotch, said button strip being also secured to one of the extensions of the back piece beyond the apex of the crotch and being further secured to the extension of the other



combined front and side piece beyond the point where it is secured to the extension of the back piece, the other extension of the back piece being secured to the vertical edge of the first-mentioned front piece immediately below the apex of the crotch and the extension of said last mentioned front piece being secured to the lower portion of the vertical edge of said front piece.

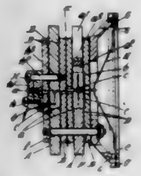
---

1,559,846. IMPREGNATED MATERIAL AND PROCESS OF PRODUCING SAME. KIRK BROWN, Montclair, N. J., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1923. Serial No. 633,015. 9 Claims. (Cl. 154—2.)

1. A process of producing impregnated material, comprising, impregnating the interior portion of a body of fibrous material with substances capable of reaction to produce a water-resistant phenolic condensation product, such substances comprising a phenolic substance and a hardening reagent therefor in proportion less than that required, in reaction with said phenolic substance, to produce maximum hardness and infusibility, impregnating the outer portion of the body with substances capable of reaction to produce a water-resistant phenolic condensation product, such substances comprising a phenolic substance and a hardening reagent therefor in greater proportion than the first mentioned hardening reagent, and applying heat to cause the reactions between said phenolic substances and hardening reagents therefor to ensue.

---

1,559,847. ELECTRICAL TRANSMISSION OR REPRODUCTION OF SOUND. SIDNEY GEORGE BROWN, North Acton, England. Filed May 29, 1922. Serial No. 564,386. 6 Claims. (Cl. 179—122.)

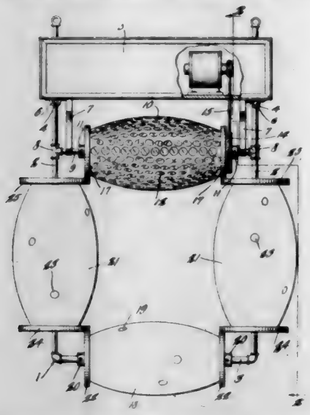


1. A microphone comprising in combination, a plurality of substantial metal plates secured face to face, insulating material between said plates separating them from each other, one of said plates intermediate between

the others having an aperture therein forming a microphone cell, a microphone plate supported in an insulated manner within said aperture, an external vibratory member, and means for connecting said vibratory member to said microphone plate, as set forth.

---

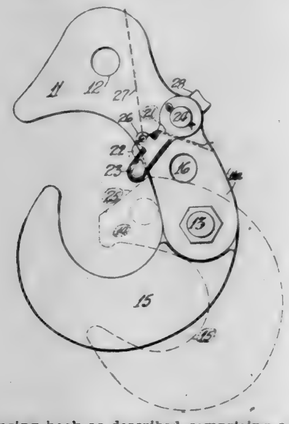
1,559,848. DISPLAY DEVICE. WILLARD C. BURGERT and RICHARD HEUER, Tampa, Fla. Filed May 10, 1923. Serial No. 638,054. 5 Claims. (Cl. 46—14.)



5. In a device of the class described, a frame, spaced display members journaled on the frame, a third display member disposed between the first-specified display members, all of said members having reflecting surfaces, the third display member being disposed substantially at right angles to the first-specified display members, interengaging elements on the third display member and on the other display members, means for driving one of the display members, means for mounting the frame in a fixed position, and artificial means for illuminating the display members from a fixed point external to the display members.

---

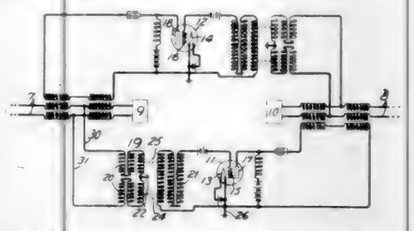
1,559,849. RELEASING HOOK. ALPHONSO G. CAMERON, New York, N. Y. Filed Feb. 11, 1925. Serial No. 8,324. 2 Claims. (Cl. 294—83.)



1. A releasing hook as described comprising a stem for attaching to a hoist and having a forked lower end, a hook member pivoted in said fork and having an extended end in said fork aligning with said fork in the operative position, a projection on said member extending beyond the plane of said fork and a U shaped latch pivoted to said stem and arranged to engage said extended end below said projection whereby said stem and hook are rigidly locked together.

---

1,559,850. TRANSMISSION SYSTEM. WILLIAM L. CASPER, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,596. 6 Claims. (Cl. 175—356.)



1. A transformer having a multi-layer winding, a second multi-layer winding superimposed on the first mentioned winding, a direct low impedance connection to ground for the outer layer of said first mentioned winding, and a direct connection of low impedance to ground for the inner layer of said second winding.

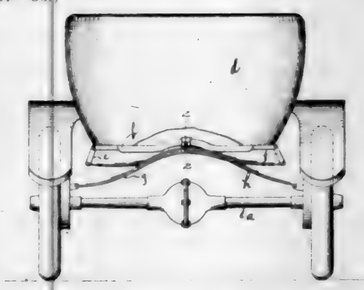
---

1,559,851. EYEGLASS CONSTRUCTION. STEPHEN J. CLULEE, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Oct. 21, 1921. Serial No. 509,238. 6 Claims. (Cl. 88—47.)

1. In eyeglass construction, in combination, a rim member and bridge joined thereto and both formed of nonmetallic material, and a metallic rim member mounted upon said first rim member and having a part interlocked therewith adjacent said bridge.

---

1,559,852. RESILIENT SUSPENSION OF VEHICLE BODIES. FRANK V. COOKE, Highland Park, Mich., assignor to Karl B. Goddard, Detroit, Mich. Filed Jan. 28, 1921. Serial No. 440,553. 6 Claims. (Cl. 267—36.)

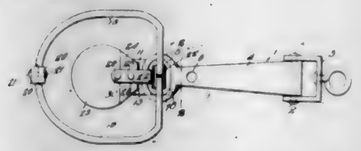


1. In a resilient suspension for a vehicle, in combination, a load-supporting member, an axle below said member and normally approximately parallel thereto, springs

pivotally connected to the ends of the axle and connected to the respectively opposite sides of the load-supporting member by toggle connections permitting movement of the ends of the springs relatively to the load-supporting member and in a direction longitudinally of the springs, whereby the springs cross below the load-supporting member, and a bearing for the upper surfaces of the crossing of the springs permitting movement of the springs relative to the bearing longitudinally and laterally of the springs, and providing a fulcrum for said crossing to co-operate with the toggle connections at the upper ends of the springs to bring about the necessary vertical flexion of the springs to secure resilient support of the load-supporting member as the vehicle passes over uneven surfaces.

---

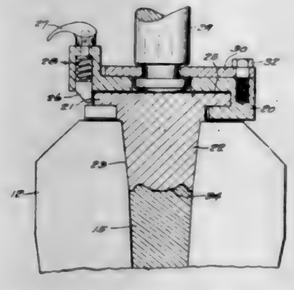
1,559,853. TRAP. FELIX H. CRAGO, Milltown, Mont. Filed May 11, 1923. Serial No. 638,309. 3 Claims. (Cl. 43—92.)



1. In a trap, a spring comprising upper and lower arms, a carrier mounted on the lower arm, arcuate jaws having their outer ends pivotally united, the inner ends of the jaws being pivotally connected to the carrier, the upper arm cooperating with the jaws to close them, a latch pivoted to the upper arm, and a trigger located within the jaws when the trap is set, the trigger being pivoted to the lower arm, the trigger being provided with means for engaging the latch to hold the trap set.

---

1,559,854. GLASS-MOLDING APPARATUS. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 16, 1920. Serial No. 431,070. 1 Claim. (Cl. 49—14.)

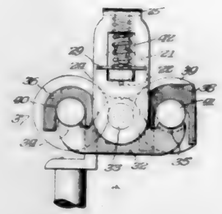


In a glass forming machine, the combination of a mold open at one end to receive its charge, a closure for the mold, a head carrying said closure, a detent by which said closure is locked to the head, and means to withdraw said detent, said closure being thereby released and free for instantaneous removal from the head.

---

1,559,855. VIBRATING ROLLER. ARTHUR J. DAANE, Chicago, Ill., assignor to The Acme Printing Appliance Co., Chicago, Ill. Filed July 31, 1922. Serial No. 578,546. 21 Claims. (Cl. 101—338.)

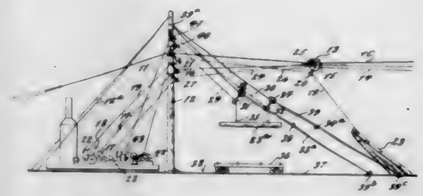
1. In a support for an ink distributing roller for printing presses, said press having an inking roller hook and saddle, said ink distributing roller being permitted to be arranged between inking rollers carried by the respective inking roller hook and saddle and means whereby said distributing roller is held in associated relation to said inking rollers carried by said inking roller hook and saddle, said means including a means



which extends parallel to and between the inking roller hook and saddle, said distributing roller being permitted to be associated with and removed from the hook and saddle while the hook and saddle are in associated relation with the inking rollers.

---

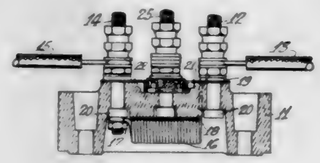
1,559,856. LOADING ENGINE. MERIAN H. DICKINSON, Seattle, Wash. Filed July 20, 1921. Serial No. 486,101. 3 Claims. (Cl. 212—7.)



1. In an engine, a winding drum, a motor for operating the same, a slip connection interposed between said motor and said drum, a manually operable member movable in different planes, means responsive to the movement of said member in one plane for controlling the energy supply to said motor, and means responsive to the movement of said member in a different plane for controlling said slip connection.

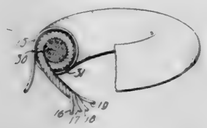
---

1,559,857. LIGHTNING ARRESTER. EDWARD A. EVERETT, Long Island City, N. Y. Filed Feb. 11, 1925. Serial No. 8,322. 6 Claims. (Cl. 175—30.)



1. A lightning arrester as described comprising an insulated base, a pair of wire terminals on said base, a grounded refractory member between said terminals, strips of insulation placed with their flat sides against said member and a pair of metallic strips having discharge points clamped by said terminals and bearing against said strips of insulation.

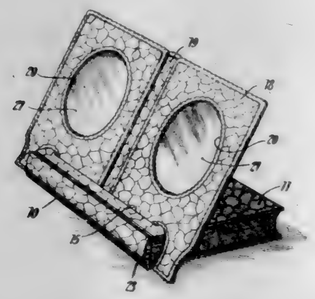
1,559,858. INDUCTANCE DEVICE. FRANK E. FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 25, 1923. Serial No. 653,633. 5 Claims. (Cl. 175—356.)



1. A transformer comprising a core, a winding mounted on said core in the form of a spiral quad, a second winding inductively associated with said quad, and a shield between said quad and said second winding.

---

1,559,859. DISPLAY EASEL. ERNEST FISCHER, New York, N. Y. Filed Mar. 26, 1925. Serial No. 18,345. 1 Claim. (Cl. 40—146.)



An easel having a chambered base containing an elongated slot contiguous to one of its longer side edges, a lid hinged at the opposite edge, a flap hinged in said base to normally cover the mentioned slot, a support plate composed of two sections flexibly united and foldable to enter the chamber in said base, said plate having a notched lower edge, the portion between the notches being disposable in the mentioned slot to rest upon the bottom wall of said chamber when erected on the base to be firmly held thereon, and transparently covered openings in said plate receptive of articles to be displayed.

---

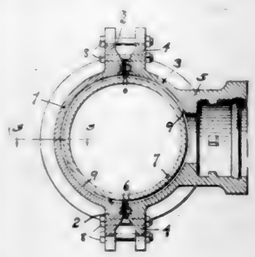
1,559,860. FLATIRON AND PROCESS OF MAKING THE SAME. WILLIAM H. J. FITZGERALD, Braintree, Mass. Filed July 13, 1921. Serial No. 484,368. 5 Claims. (Cl. 76—106.)

1. The process of manufacturing flat-irons comprising a base member having a hollow hood member superimposed thereon, which consists in grinding the contacting surfaces of said members to provide a perfect fit therebetween, then rigidly securing said members together in assembled position, and grinding the exterior of said members while thus assembled to final form.

5. A flat-iron comprising a base and hollow hood member having tightly fitting flat ground contacting surfaces and presenting continuous exterior side and end surfaces ground and electroplated after said members have been assembled, whereby the continuity of each of said surfaces is insured.

---

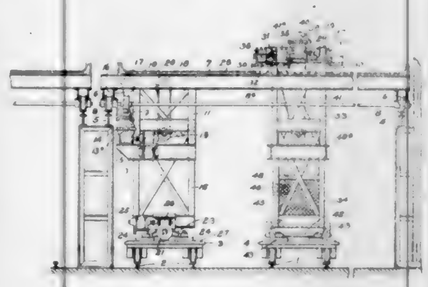
1,559,861. PIPE CONNECTION. JOHN W. FLOWER, Detroit, Mich., assignor, by mesne assignments, to Michigan Valve Foundry and Engineering Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 5, 1921. Serial No. 435,120. 1 Claim. (Cl. 285—105.)



An article of manufacture adapted to be attached to a main pipe and comprising a plurality of parts joining along radial planes extending longitudinally of the pipe, each of the parts being formed to retain a strip of malleable metal along its longitudinal edges, strips of malleable metal mounted in each of said edges before the connection is assembled, and bolts to secure said parts together, said parts being so formed as to expose the edges of said strips so they may be reached with caulking tools throughout their length.

---

1,559,862. PROCESS AND APPARATUS FOR SURFACING SHEET GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Oct. 29, 1923. Serial No. 671,400. 5 Claims. (Cl. 214—87.)



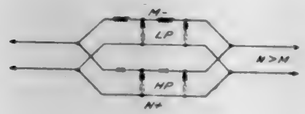
1. In combination in apparatus for transferring glass sheets from one carrier or car to another carrier or car lying to the side thereof and turning it over, which comprises a vacuum frame mounted for vertical movement above the first carrier, a pivotal support for the frame whereby it may be inverted to bring the glass sheet carried thereby up, a second vacuum frame mounted for lateral movement from a position over the first carrier and vacuum frame to a position over the other carrier, and means whereby the second frame may be moved up and down.

1,559,863. METHOD OF MAKING SHOES. WILLIAM H. FRANK, Peoria, Ill. Filed Feb. 15, 1924. Serial No. 692,992. 1 Claim. (Cl. 12—142.)

The method of making shoes, consisting in simultaneously securing an upper and a thin flexible welt to the insole, placing a separate relatively heavy reinforcing welt upon the upper face of the flexible welt free from the insole and then uniting the welts and outsole by a row of stitches.

---

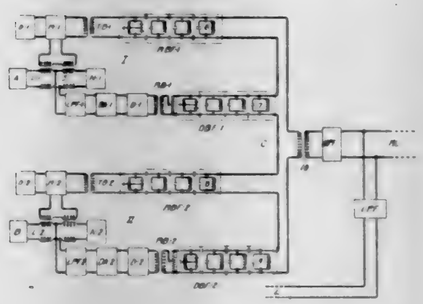
1,559,864. FILTERING CIRCUIT. THORNTON C. FRY, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1919. Serial No. 326,987. 11 Claims. (Cl. 178—44.)



1. Means for transmitting a band of frequencies comprising a low-pass suppression filter and a high-pass suppression filter in series, the frequencies of said band being common to the transmission ranges of both of said filters.

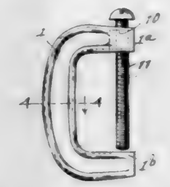
---

1,559,865. SELECTIVE SIGNALING CIRCUITS. MAURICE R. GOWING, Mountain Lakes, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 9, 1921. Serial No. 483,432. 6 Claims. (Cl. 179—15.)



1. In a carrier signaling system, a terminal station, a transmitting branch at said station, a receiving branch also at said station, a band filter in each of said branches, each of said filters having a shunt impedance element, a common transmission medium, and means to connect a shunt impedance element of a filter in said transmitting branch and a shunt impedance element of a filter in said receiving branch in series with each other and with the common transmission medium.

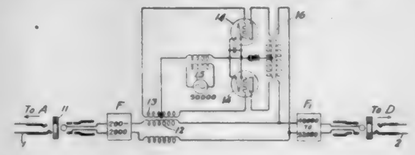
1,559,866. C CLAMP. WILLIAM F. GREATHEAD and MILTON J. TAMBLYN, Cleveland, Ohio, assignors, by direct and mesne assignments, of one-half to William F. Greathead and one-half to James C. De Garmo, both of Cleveland, Ohio. Filed Aug. 25, 1923. Serial No. 659,405. 7 Claims. (Cl. 144—304.)



1. A clamp having a C-shaped body portion which is formed of two C-shaped parts one fitting within the other, the outer part enclosing the inner and holding the same against movement with respect to the outer part, a threaded member associated with one end of the body portion, and a threaded rod extending through the threaded member.

---

1,559,867. WAVE-TRANSMISSION SYSTEM. ELMER V. GRIGGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,553. 21 Claims. (Cl. 179—15.)

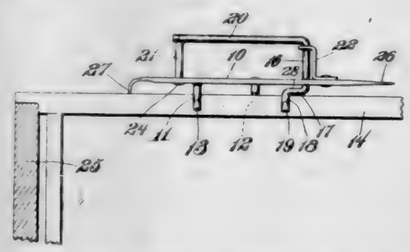


1. The method of duplex carrier wave telephony which comprises producing speech currents at each end of a system, passing incoming and outgoing speech conveying waves through identical conductive paths but in opposite directions throughout the entire system, and changing the frequency of transmitted waves during transmission.

18. A cord circuit for connecting two transmission circuits, said cord circuit containing two filters for excluding different ranges of frequencies, and a thermionic device included in said circuit between said filters.

---

1,559,868. TOOL FOR APIARISTS. DEAN S. HALL, Marshfield, Vt.; Bertha E. Hall, executrix of said Dean S. Hall, deceased, assignor of one-half to Horatio William Scott, Barre, Vt. Filed Nov. 1, 1924. Serial No. 747,209. 11 Claims. (Cl. 6—12.)

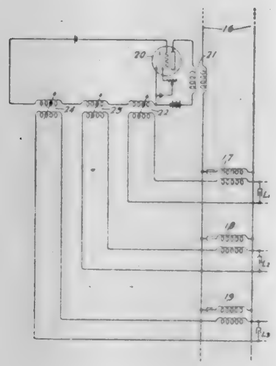


1. Means for removing and manipulating the frames of beehives, the frame having a top bar, said means comprising a base, a pair of gripping elements carried by said

base at points spaced longitudinally of the base, said gripping elements being spaced transversely of the bar a distance less than the width of the top bar, and means carried by the base engaging the side of a top bar disposed between the gripping elements for shifting the base upon the top bar to a position where it parallels said top bar.

---

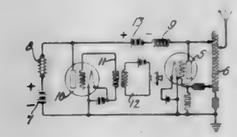
1,559,869. SELECTIVE-CURRENT PRODUCTION AND AMPLIFICATION. RALPH V. L. HARTLEY, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 23, 1919. Serial No. 325,730. 23 Claims. (Cl. 250—36.)



18. A harmonic generator and regenerator comprising a discharge device for producing harmonics, selective circuits for selecting said harmonics and means individual to said selective circuits for reapplying the harmonics to said discharge device.

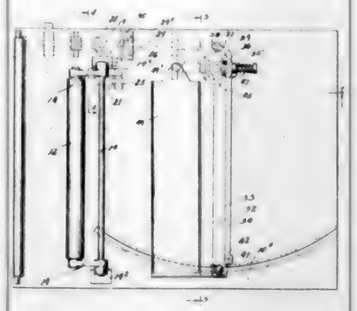
---

1,559,870. GENERATING AND MODULATING SYSTEM. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1920. Serial No. 361,864. 15 Claims. (Cl. 179—171.)



1. A modulating system comprising a plurality of discharge devices in parallel with respect to a common source of energy supply therefor, appropriate circuits whereby one of said devices generates oscillations, means for varying the impedance of the other device at a relatively low frequency rate, and an energy consuming device in circuit with the oscillating device for causing the potential difference thereacross to be less than across the variable impedance device.

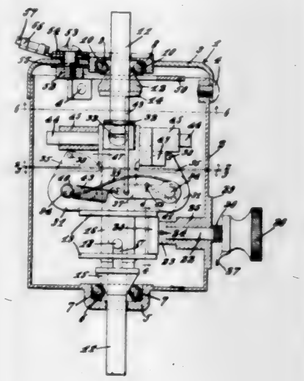
1,559,871. FABRIC-CUTTING MACHINE. JOHN HEYMAN, New York, N. Y. Filed Mar. 29, 1924. Serial No. 702,760. 11 Claims. (Cl. 164—42.)



9. In a fabric cutting machine, a feeding mechanism comprising a continuously driven means and a periodically operating means adapted to cooperate with the latter to feed the fabric, adjustable cam operated means for varying the feeding periods, a circularly adjustable cutting mechanism having an oscillating jaw and means for synchronizing the operation of said jaw with the feed of the fabric.

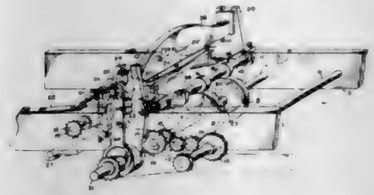
---

1,559,872. EXCESS-SPEED ALARM. FRED M. HILLS and JENNINGS G. AMBROSE, San Diego, Calif.; said Hills assignor to said Ambrose. Filed Mar. 14, 1922. Serial No. 543,738. 8 Claims. (Cl. 264—17.)



2. In a device of the class described, a support; a main shaft journaled in the support; cooperating elements comprising a track, and a carrier connected to the shaft to rotate therewith, one of said cooperating elements being adjustable longitudinally of the shaft, and being provided with flanges; a second shaft journaled in the support and under the control of an operator, the second shaft having an eccentric operating between the flanges; a centrifugal governor mechanism mounted on the carrier; and a signal actuator connected to the governor mechanism and cooperating with the track.

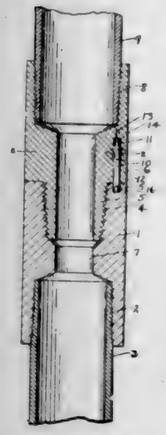
1,559,873. PAPER-CUTTING MECHANISM. ADIN W. HILSINGER, Orange, N. J., assignor to Henry Brady, Inc., a Corporation of New Jersey. Filed June 30, 1922. Serial No. 572,094. 2 Claims. (Cl. 164—49.)



1. In a discharge mechanism of the class described, discharge rolls normally separated by a spring and means for bringing them together upon a blank to be discharged at predetermined intervals.

---

1,559,874. TOOL JOINT. SAMUEL E. HOLLAND, Corsicana, Tex. Filed Aug. 29, 1924. Serial No. 734,862. 3 Claims. (Cl. 285—146.)



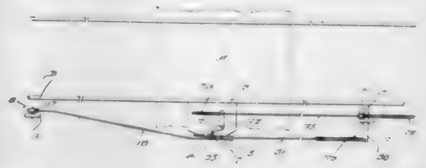
3. In a tool joint including a pin member and a box member below said pin member, a bolt slidable in said pin member, and adapted to engage within a recess in said box member when the tool joint is screwed up, a rack formed on one side of said bolt, a gear member fitting within a radial recess in said pin member and engaging with the teeth on said rack, an outer slotted end to receive a screw driver whereby said gear may be rotated to move said bolt in either direction and a threaded block in said pin member forming a removable bearing for said gear member.

---

1,559,875. ELECTRODE FOR ARC WELDING. CLAUDE J. HOLSLAG, South Orange, N. J., assignor to Electric Arc Cutting & Welding Company, Newark, N. J. Filed Dec. 13, 1919. Serial No. 344,646. 20 Claims. (Cl. 219—8.)

1. An electrode for welding and repairing comprising a metal rod having a coating consisting of a silicate and carbon in the form of lamp black.

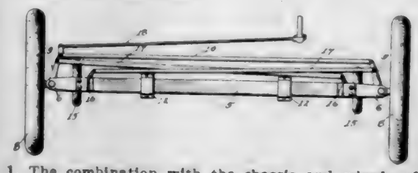
1,559,876. RAILWAY-CROSSING SIGNAL. GEORGE R. HUDSON, Superior, Nebr. Filed May 26, 1925. Serial No. 32,979. 6 Claims. (Cl. 246—293.)



3. An automatic railway signal for grade crossings comprising in combination, a pivoted signal member supported adjacent the grade crossing, said pivot being eccentrically associated with the signal member, a pair of trip members supported on opposite sides of the grade crossing, one of said trip members being connected to said signal member for moving the same to an operative position when the trip member is actuated by a train approaching the grade crossing, a latch for holding the signal member in an operative position, a connection between said latch and the other trip member, said latch adapted to be disengaged from the signal member when the last mentioned trip member is actuated by the train, and means for effecting the return of the signal member and the first mentioned trip member to their normal positions.

---

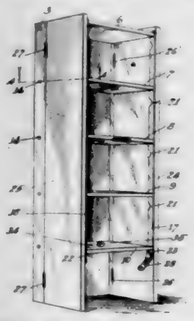
1,559,877. SAFETY WHEEL ATTACHMENT FOR VEHICLES. KENNETH L. HUGGINS, South Hartford, N. Y. Filed Apr. 1, 1925. Serial No. 20,014. 2 Claims. (Cl. 280—150.)



1. The combination with the chassis and wheels of a vehicle, of auxiliary axles depending from the axles of the vehicle wheels, auxiliary wheels mounted on said auxiliary axles in spaced parallel relation to the wheels of the vehicle, steering knuckles for said auxiliary wheels, and means connecting said steering knuckles to the steering knuckles of the vehicle wheels whereby the same will move in unison.

---

1,559,878. COLLAPSIBLE CAMP CUPBOARD. VICTOR B. HUMPHREYS, Los Angeles, Calif. Filed June 9, 1924. Serial No. 718,805. 3 Claims. (Cl. 211—27.)

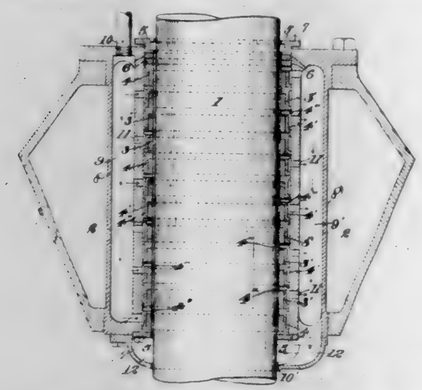


1. A collapsible cupboard comprising a back, abutments extending from the edges of the back, a series of shelves pivotally mounted between the abutments.

bars pivotally connecting the forward parts of the shelves together independent of side boards, side boards hinged to the abutments and adapted to unfold so the shelves will swing upwardly between the side boards, and means for latching the shelves to the side boards to hold the shelves in unfolded positions and to hold the side boards from swinging outwardly.

---

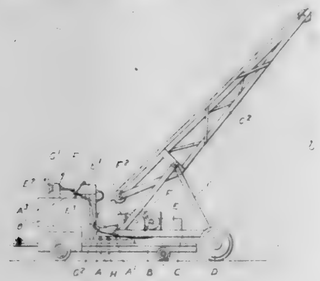
1,559,879. BEARING CONSTRUCTION. ELY C. HUTCHINSON, San Francisco, Calif., assignor to The Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Sept. 5, 1924. Serial No. 735,982. 6 Claims. (Cl. 308—121.)



1. A shaft bearing comprising a plurality of compressible bearing rings embracing the shaft; a series of slidable non-compressible rings separating and surrounding a portion of the width of said bearing rings; means applied to the end of the series of slidable rings for exerting pressure thereon to adjust the compressible bearing rings to the shaft and means for supplying a lubricant under pressure to the face of the bearing rings consisting of a supply chamber in one side of said bearing connected with a source of lubricant, a discharge chamber on the opposite side of said bearing for discharging the lubricant and suitable channels from said chambers communicating with the face of the bearing rings.

---

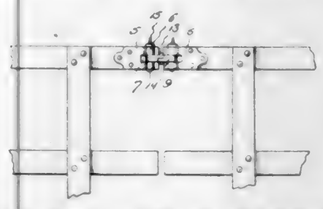
1,559,880. CRANE. PHILIP DENIS IONIDES, London, England, assignor of one-half to Ransomes & Rapier Limited, Ipswich, Suffolk, England, a Company of Great Britain. Filed Jan. 2, 1923. Serial No. 610,355. 2 Claims. (Cl. 212—38.)



1. A detachable crane unit adapted for use with a self-propelled vehicle, comprising in combination, a frame, two wheels supporting one end of said frame, a jib mounted on the frame, hoisting and luffing mechanism carried by the frame, a bed plate for the frame, a universal pivotal connection between the bed plate and the end of the frame remote from the wheels, and readily detachable means for connecting the bed plate to the vehicle.

---

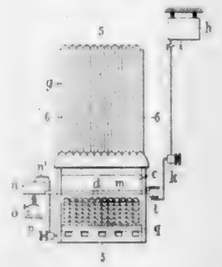
1,559,881. FASTENER FOR STAKE GATES. BEN B. JOHNSTON, Fort Smith, Ark., assignor to Fort Smith Body Company, Fort Smith, Ark. Filed Mar. 13, 1925. Serial No. 15,414. 2 Claims. (Cl. 296—1.)



1. A fastener of the class described including a pair of plates having their adjacent edges provided with sleeves, each sleeve being formed in a pair of alined sections separated by a slot, a pair of pivoted links having their ends apertured, and hinge pins adapted to pass through the sleeves and the apertures of the links.

---

1,559,882. GAS HEATING STOVE. HANS KÄMPFER, Berlin, Germany. Filed Aug. 29, 1921. Serial No. 496,520. 2 Claims. (Cl. 126—92.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

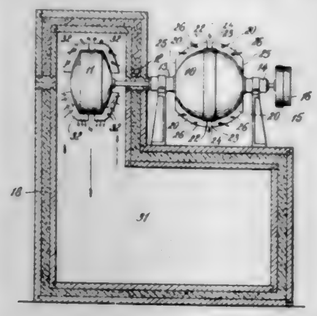


1. A gas heating stove comprising in combination, a main body open in front, a plurality of incandescent elements arranged within and occupying nearly the whole breadth of said main body, a refractory plate arranged behind said incandescent elements but at a distance from the closed back wall of said body, a combustion chamber therein above said incandescent elements, and a radiator arranged above and over the whole breadth of said main body for preventing the room air from ascending around the said refractory plate and the said incandescent elements to the outside of the said radiator, substantially as described.

---

1,559,883. AIR-COOLED REFRIGERATING MACHINE. ALFRED D. KARR, Newark, N. J., and KARL D. PERKINS, New York, N. Y. Filed Mar. 7, 1923. Serial No. 623,333. 7 Claims. (Cl. 62—115.)

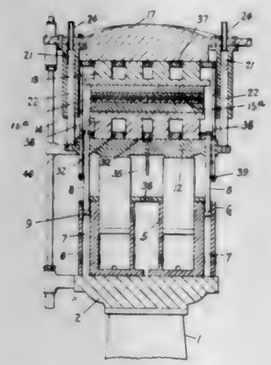
1. In a refrigerating apparatus, the combination with a compressor and an evaporator of a condenser comprising, a drum adapted to rotate with its entire surface in freely exposed relation to a body of cooling air, and vanes on said drum extending longitudinally of the axis of rotation of the drum and forming open channels between them, said vanes being so mounted that the distance of their peripheral edges from the axis of rotation increases from one end of the vanes to the other, the peripheral edges thereof from one end to the other being also unconfined and in freely exposed relation to the body of cooling air, whereby the rotation of said drum causes original currents of air to enter the channels at



the ends of the vanes which are near the axis of rotation, and additional air to be drawn in past the peripheral edges into the open channels to supplement said original currents, the entire volume of air thus caused to flow through said channels being thrown away from the drum at the ends of the vanes which are remote from the axis of rotation.

---

1,559,884. MOLDING PRESS. HENRY J. KASCH, Dayton, Ohio, assignor to The Kurz-Kasch Company, Dayton, Ohio, a Corporation of Ohio. Filed May 1, 1922. Serial No. 557,537. 4 Claims. (Cl. 18—17.)

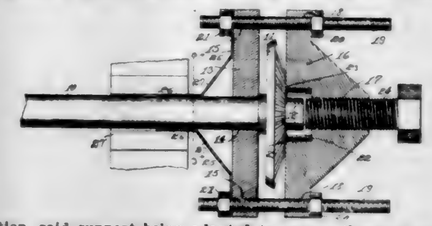


1. In a device of the type described, the combination with a base, of a platen movably supported thereon, a lower mold part carried by said platen, an upper mold part supported above the lower one, elevating means for raising said platen to bring the lower mold part into engagement with the upper one, a knock-out pin plate adapted to be carried upwardly by said platen, and automatic means for pulling said knock-out pin plate downwardly when the platen starts its descent after the molding operation is completed.

---

1,559,885. GEAR REMOVER AND REPLACER. WALTER E. KELLEY, Millbridge, Me. Filed Apr. 11, 1924. Serial No. 705,856. 3 Claims. (Cl. 29—85.)

1. A gear removing device including means for supporting a shaft, means for maintaining the shaft from movement relative to the supporting means, means for moving a gear longitudinally of the shaft in one direction, said support being adapted to engage the gear, and means on the third-named means for moving engagement with the shaft.



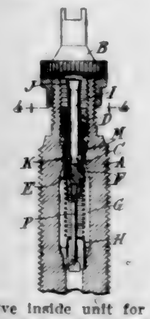
---

1,559,886. CLOTHESPIN. OTTO J. KOPKE, Hutchinson, Kans. Filed Apr. 3, 1925. Serial No. 20,470. 1 Claim. (Cl. 24—139.)

A clothes pin of the class described, formed from a single strand of resilient wire bent over upon itself intermediate its ends to provide a pair of segments, the intermediate portion being in the form of a coil, one segment being bent over upon itself, so as to provide two abutting sides, the other segment being bent over upon itself to provide a U-shaped member including two sides, one side of the U-shaped member having its terminal coiled about the other side of the U-shaped member, and the terminal of the first segment being coiled about the second segment, and the intermediate portions of the sides of the segments being bent outwardly for receiving a clothes line, and the lower portions thereof being bent outwardly so that the clothes pin may be engaged evenly with a clothes line.

---

1,559,887. TIRE VALVE. HENRY P. KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A. Darr executors of the will of said Henry P. Kraft, deceased. Filed July 22, 1921, Serial No. 486,812. Renewed Jan. 5, 1924. 1 Claim. (Cl. 152—12.)

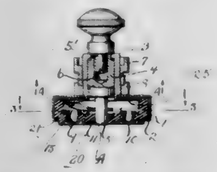


A top-repair valve inside unit for tire valves or the like, comprising a seat member, a screw-threaded plug, and a valve check, the seat member and plug having

passages therethrough in alinement, the valve check having a tubular valve pin passing through said passages, and the top of said tubular pin being flared outwardly to a diameter larger than that of the passage through the plug.

---

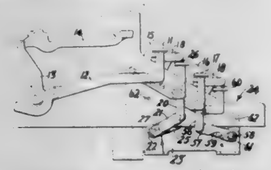
1,559,888. CANOPY SWITCH. EUGENE RAYMOND KULKA, Brooklyn, N. Y., assignor to C. D. Wood Electric Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,365. 1 Claim. (Cl. 200—153.)



A switch comprising a metal casing having an end portion, an insulating base connected to said casing opposite said end portion, the inner face of said base having a plurality of tapered projections, spaced stationary contact blades mounted on some of said projections, a revoluble spindle mounted in the end portion of the casing, an insulating cover for said insulating base located at the inner side of said end portion, the said spindle projecting through said cover and having at its end adjacent said stationary contact blades, and a movable resilient contact blade mounted on the end of said spindle, said movable contact blade being turnable with said spindle, and being also slidable thereon, the ends of said movable contact blade being inclined away from said base and the said contact blade being adapted to contact with said insulating cover when said inclined ends thereof are forced away from said tapered projections so that the resilience of said contact blade then urges it towards said base.

---

1,559,889. TYPEWRITING MACHINE. ADOLPH G. KUPETZ, New Rochelle, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1922. Serial No. 592,682. 10 Claims. (Cl. 235—102.)

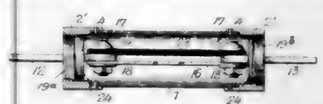


9. In a typewriting machine, a number-key, a register comprising number-wheels for counting the operations of the number-key on the up-stroke thereof, normally maintained in a locked condition when the number-key is in normal position, connections between the number-key and the register for unlocking the register when the key is depressed, register-clearing mechanism for turning the number-wheels when the key is depressed, and means for positively arresting the operation of the register-clearing mechanism with the number-wheels standing at "9," so that they will be restored to "0" upon the release of the key and its restoration to normal position.

---

1,559,890. RENEWABLE ELECTRIC FUSE. FRANK C. LA MAR, Pittsburgh, Pa. Filed Apr. 30, 1921. Serial No. 465,819. 9 Claims. (Cl. 200—132.)

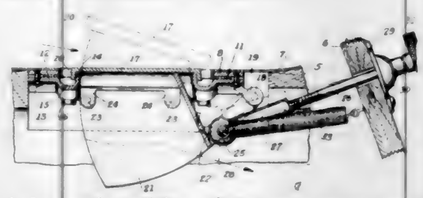
1. A renewable cartridge fuse, comprising a tubular casing of insulating material, metallic ferrules permanently fixed on the ends of said casing, and a fuse-strip carrier adapted to be slipped endwise into said casing and secured in said casing by screw-threaded engagement



between the ferrules and said fuse-strip carrier upon relative rotation between the casing and its attached ferrules and the fuse-strip carrier.

---

1,559,891. COWL VENTILATOR. PETER N. LANDINE, Milford, Conn. Filed Sept. 9, 1922. Serial No. 587,190. 10 Claims. (Cl. 268—17.)



1. In a cowl ventilator, a frame, cover means pivotally mounted on said frame, a bar extending transversely of said cover means, and operating means slidably mounted on said bar whereby the cover means may be operated from any position on said bar.

---

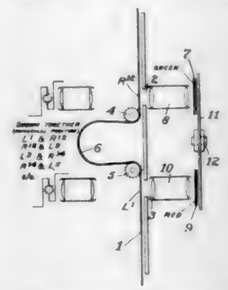
1,559,892. PROCESS OF FUMIGATING. WALTER S. LANDIS, Whitestone Landing, N. Y., and GUY H. BUCHANAN, Westfield, N. Y., assignors to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed July 8, 1921. Serial No. 483,262. 12 Claims. (Cl. 167—6.)

6. The process of fumigating with highly poisonous fumigants which consists in introducing hydrocyanic acid gas into the space to be fumigated; and also introducing into said space a volatile aldehyde, adapted to react with said gas to destroy the same, and an accelerating agent, substantially as described.

12. The process of fumigating with highly poisonous fumigants which consists in introducing hydrocyanic acid gas into the space to be fumigated; and subsequently introducing into said space ammonia and aldehyde in the proportions of substantially more than one molecular weight of ammonia to one and one quarter molecular weights of aldehyde, substantially as described.

---

1,559,893. STEREOSCOPIC FILM AND METHOD OF PROJECTING SAME. GEORGE LANE and JOHN E. PATTERSON, Poughkeepsie, N. Y. Filed Aug. 3, 1923. Serial No. 655,500. 4 Claims. (Cl. 88—16.6.)

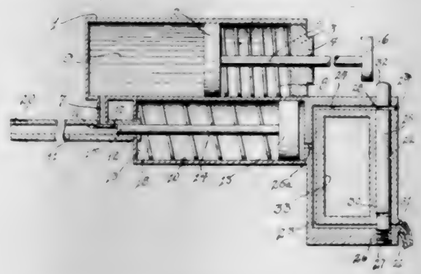


1. A method of producing a stereoscopic effect in moving pictures which includes the step of projecting through color screens each individual picture of a series of pairs

of successively photographed, horizontally differentiated stereoscopic pictures from a film strip simultaneously on the same screen area, first with its preceding photographically sequential neighbor and then with its succeeding photographically sequential neighbor, the individual pictures comprising a stereoscopic pair having other pictures therebetween, and viewing said pictures projected on the screen through color screens.

---

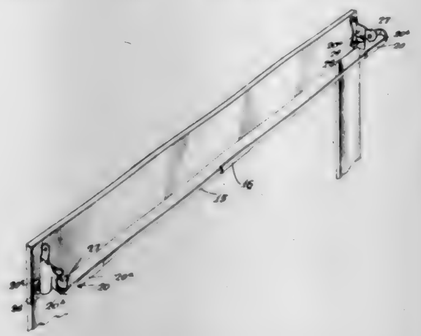
1,559,894. PORTABLE PNEUMATIC GREASE GUN. CHARLES BRIDGEN LANSING, Colorado Springs, Colo. Filed Dec. 26, 1924. Serial No. 758,211. 3 Claims. (Cl. 221—47.3.)



1. A pneumatic grease gun of the character described comprising a grease container, a passage member adapted for connection with a grease tube or the like communicating with said container at its remote end, an air cylinder, a piston in said air cylinder, a plunger carried by said piston and arranged for movement through said passage member, means for admitting compressed air to said cylinder for the actuation of said piston at will, and means associated with said plunger for stopping the flow of grease into said passage member when said piston is fully retracted and for permitting the movement of grease in said passageway when said piston is at a point near full retraction.

---

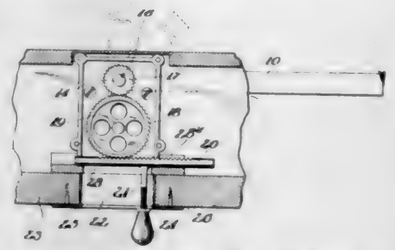
1,559,895. CURTAIN ATTACHMENT. MADS M. LARSEN, Colton, Calif. Filed Aug. 24, 1923. Serial No. 659,139. 5 Claims. (Cl. 156—24.)



1. A certain hanger comprising connecting rods extensibly connected to each other, terminal arms slidably receiving said connecting rods, each of said arms terminating in a unitary spring clip arranged at right angles to the connecting rods, said clip comprising a longer outer member and a shorter inner member parallel to each other and removably engaging shade brackets of standard construction, said shade brackets being adapted to support a shade roller without interfering with the curtain hanger.

---

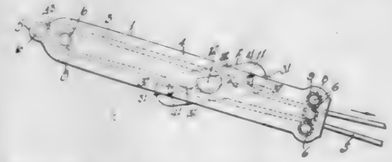
1,559,896. WINDOW ADJUSTER AND LOCK. MADS M. LARSEN, Colton, Calif. Filed Sept. 25, 1923. Serial No. 664,703. 8 Claims. (Cl. 268—14.)



1. A window adjuster and lock comprising means adapted to be mounted within a window casing and having a member forming a pivot for the sash to be adjusted and operative to swing the sash, a handle disposed for access at the window casing, and means connecting the handle and said member whereby the latter is adapted to be rotated to swing the sash, said handle forming a friction locking device for securing the sash in its several positions.

---

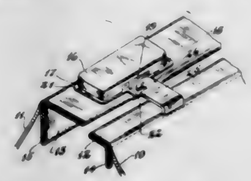
1,559,897. RAZOR-STROPPING DEVICE. FRED ARNOLD LEIGH, Chicago, Ill. Filed June 18, 1923. Serial No. 646,247. 1 Claim. (Cl. 51—63.)



A razor stropping device comprising a frame, a roller carried by said frame, a blade carrying frame rotatably carried by said first named frame, rods yieldingly carried by said second named frame, and being disposed adjacent to the cutting edges of the blade, a razor strop passed around said roller and over said rods, and means for holding said strop in engagement with said rods and with said roller, said strop being adapted to bear against the cutting edge of the blade.

---

1,559,898. LATCH FASTENER FOR BAGS. WILLIAM A. LOTZ, Newark, N. J., assignor to The T. & L. Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed July 1, 1924. Serial No. 723,433. 4 Claims. (Cl. 292—175.)



1. A latch fastener for traveling bags comprising a movable cap, a base-plate on said bag on which said cap slides, a keeper adapted to enter said cap laterally, a stationary frame in said cap secured to said bag for

guiding said cap and limiting its movements, studs on said cap, passing through said frame, a locking member within said frame secured to said studs to participate in the movements of said cap for engaging said keeper or being disengaged therefrom, and a means within said frame for preventing lateral displacement of said locking member within said frame.

---

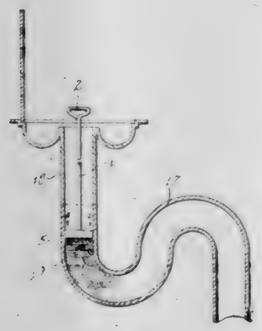
1,559,899. PROPHYLACTIC AND METHOD OF MAKING THE SAME. OTTO LOWY, Newark, N. J., assignor, by mesne assignments, to Technical Products Corporation, a Corporation of New Jersey. Filed Dec. 20, 1920. Serial No. 432,082. 12 Claims. (Cl. 167—7.)

1. A prophylactic comprising the precipitate resulting from adding mercuric chloride to the dihydrochloride of diamino-dihydroxy-arseno-benzol in a carrier of a firm, gelatinous consistency at ordinary temperatures but substantially fluid at body temperature.

2. A prophylactic comprising a "mercuriated" derivative of arseno-benzol in a carrier of a firm, gelatinous consistency at ordinary temperatures but substantially fluid at body temperature.

---

1,559,900. DEVICE FOR CLEANING FLOOR DRAINS. EDWARD VINCENT MCCARTHY, Chicago, Ill. Filed Mar. 14, 1925. Serial No. 15,698. 3 Claims. (Cl. 137—70.)



1. A device of the character described comprising a work engaging member having the form of a disc with a segmental portion thereof cutaway, teeth formed on said disc and extending into the cutaway portion of the disc, said disc having a marginal wall extending upwardly therefrom, a removable handle member for supporting said disc, said teeth being constructed so as to engage with and force substances upon the upper surface of said disc when said disc is rotated, and an upwardly extending boss on said disc at that portion opposite to the toothed portion, and an inclined surface merging with the top surface of said disc whereby substances on said disc may be moved up the inclined surface and out of engagement with the disc when the disc is rotated.

---

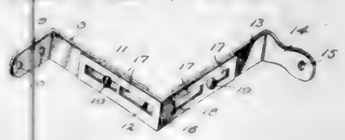
1,559,901. METHOD OF REPAIRING CRACKED OR BROKEN STRUCTURES BY ELECTRIC WELDING. ROYAL MATTICE, Bethlehem, Pa. Filed Oct. 3, 1924. Serial No. 741,494. Renewed Sept. 26, 1925. 5 Claims. (Cl. 219—8.)

1. The method of repairing double-walled metallic structures having a crack in the lower wall thereof, which comprises, removing a portion of the upper wall above the crack, removing a portion of the lower wall adjacent the crack, filling the opening thus formed in

the lower wall, and finally welding the portion which has been removed from the upper wall into position in said upper wall.

---

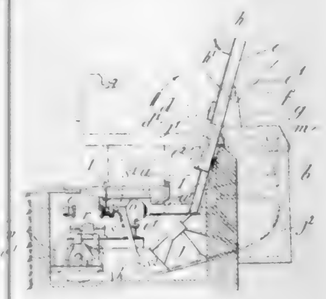
1,559,902. WINDOW-SHADE BRACKET. RICHARD B. MILLER, Wabash, Ind. Filed Dec. 27, 1922. Serial No. 609,236. 1 Claim. (Cl. 156—24.)



A shade bracket of the class described comprising a base portion, a reduced angular projection extending from one end of said base portion, an angular member including a pair of angularly disposed arms each having therein a pair of elongated slots in alinement with one another, said angular extension being slidable in one slot of one arm of said angular member, the movement thereof being restricted by the confines of the slot in which it is disposed, and means to hold said angular extension and base portion in an adjusted position in relation to the angular member, a shade roller engaging element having a reduced angular projection formed on one end of said element extending into the slot of the other arm of said angular member and means for holding said shade roller engaging element in an adjusted position in relation to said angular member.

---

1,559,903. APPARATUS FOR TIPPING AND DISCHARGING RAILWAY WAGONS. FREDERICK GILBERT MITCHELL, Hyde Park, London, England. Filed Feb. 20, 1925. Serial No. 10,548. 8 Claims. (Cl. 214—52.)

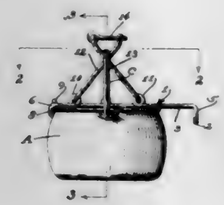


1. Apparatus for tipping and discharging railway wagons comprising a wagon support, upwardly extending carrying means for said support, a lateral wagon support connected to the carrying means above the wagon support, stationary bearings, upwardly extending levers pivoted to said bearings and to the lower arms of which the combined carrying means and lateral support are pivoted, a longitudinal wagon sustaining beam connected to the upper arms of said levers and turning

means mounted independently of said wagon support and its carrying means and adapted to act upon and tilt these parts about their pivotal connections with the levers and the levers with their associated parts about the pivots of said levers.

---

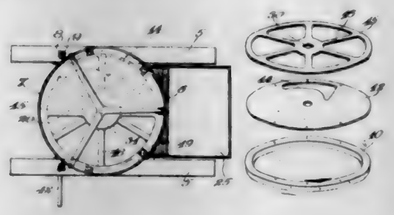
1,559,904. POT DRAINER. ALBERT E. MOORE, Hansboro, N. Dak. Filed Jan. 3, 1925. Serial No. 336. 1 Claim. (Cl. 53—8.)



In a device of the class described, the combination with a receptacle including the bail thereof and a removable cover for said receptacle; of means for facilitating the tilting of said receptacle comprising a frame formed from a single strand of wire looped and bent intermediate of its ends to provide a pair of parallel arms and a looped portion at one end forming a handle, the opposite ends of the arms being bent downwardly to form engaging ends, the arms being looped intermediate of their ends to form pairs of aligning eyes, a pair of inverted U-shaped handle members having their lower ends bent inwardly and engaged with the pairs of aforesaid eyes, said handle members being crossed beneath said bail and having their upper portions extended above and on opposite sides of the crown of said bail, and link members connecting the upper end portions of said U-shaped handles above said bail, as and for the purposes described.

---

1,559,905. DISPENSING DEVICE. HAMILTON C. MOORMAN, Chicago, Ill. Filed Nov. 15, 1924. Serial No. 750,204. 1 Claim. (Cl. 221—108.)



A dispensing device comprising a cylinder adapted for containing material to be dispensed, an upper disk rigidly secured within the lower portion of the cylinder and having an opening, an intermediate flat disk rotatably mounted beneath said upper disk and having a plurality of openings adapted to successively register with the opening in the upper disk, a lower disk rigidly fixed beneath said intermediate disk and having a substantially crescent shaped discharge opening gradually increased in width in the direction of rotation of the intermediate disk, and with its widest portion disposed radially of the disk to prevent clogging, a drive shaft extending through all of said disks and having driving connection with the intermediate disk, a pair of supporting beams supporting said cylinder, and a ring mounted on said beams and supporting said lower disk.

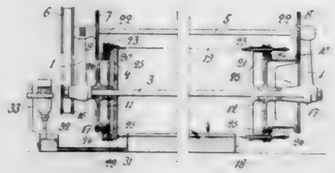
---

1,559,906. METHOD OF PREPARING POULTRY FOR PACKING OR DISPLAY. EUGENE J. NAGY, New Brunswick, N. J. Filed Mar. 14, 1925. Serial No. 15,634. 5 Claims. (Cl. 17—54.)

1. The method of preparing a fowl for packing or display which consists in removing the intestines through the anus of the fowl without any cutting operation other than the severance of the withdrawn intestines.

---

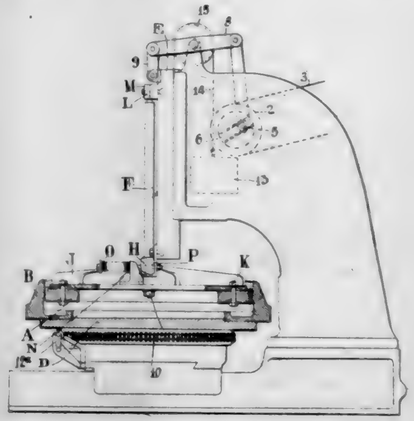
1,559,907. MACHINE FOR VARNISHING ARTIFICIAL PEARLS BY THE DIPPING PROCESS. JEAN PAISSEAU, Paris, France. Filed July 25, 1922. Serial No. 577,379. 5 Claims. (Cl. 91—46.)



1. A machine for varnishing artificial pearls comprising a varnish containing tank, a revoluble barrel upon a horizontal axis, wires stretched upon the said barrel parallel to the axis and adapted to support the pearls, and means for raising and lowering said barrel in order to immerse the pearls in the varnish.

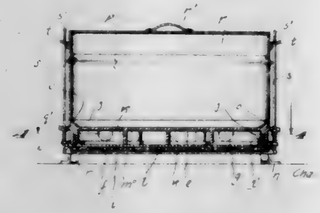
---

1,559,908. MANUFACTURE OF GEAR WHEELS. CHARLES ALGERNON PARSONS, STANLEY SMITH COOK, and JOHN FORD, Newcastle-on-Tyne, England; said Cook and Ford assignors to said Parsons. Filed Oct. 23, 1924. Serial No. 745,518. 2 Claims. (Cl. 51—278.)



1. A method of finishing gear wheels according to which an internal gear wheel is disposed completely to encircle an external gear wheel, the teeth of said gear wheels being equal in number and complementary in shape, and said gear wheels by relative axial reciprocating motion are then subjected to a series of mutual grinding actions with intermediate circumferential adjustments to engage successively different teeth of said gear wheels, as set forth.

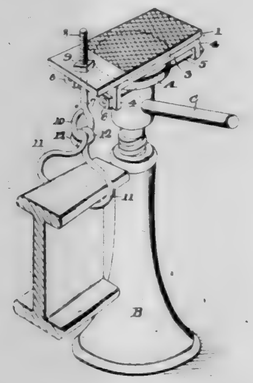
1,559,909. STOVE ATTACHMENT FOR AUTOMOBILES. CHARLES AUGUSTA PAUL, Portland, Oreg., assignor of one-third to Johnston Wilson, Portland, Oreg. Filed July 18, 1923. Serial No. 652,322. 3 Claims. (Cl. 126—20.)



1. A stove to be heated by the exhaust gases of an engine, comprising an integral casting including a top plate having a depending edge wall, and baffles extending from the top plate for the full height of the edge wall and alternately projecting from and terminating short of opposing portions of such edge wall, a bottom plate having an edge channel to snugly receive the edge wall of the top plate, and means to secure the bottom plate to said edge wall, said bottom plate when in place directly contacting with the lower edges of the baffles to thereby define a tortuous passage in the space between the top and bottom plates, said passage having an inlet and outlet at the respective ends thereof.

---

1,559,910. ATTACHMENT FOR JACKS. OSCAR PETERSON, Williston, N. Dak. Filed Jan. 9, 1925. Serial No. 1,390. 4 Claims. (Cl. 254—133.)

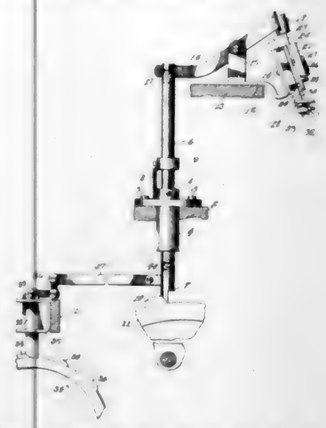


3. An attachment for jacks comprising a plate having a pair of downturned ears at each end, bolts passing through said ears and with said plate forming means for engaging the upper and lower sides of a jack head, a bolt supported freely in one end of said plate and terminating in an eye and a pair of lifting hooks freely suspended from said eye.

---

1,559,911. DOUBLE-SOLE CLIPPER. TATE B. POWELL, French Broad, Tenn. Filed June 4, 1923. Serial No. 643,380. 4 Claims. (Cl. 66—12.)

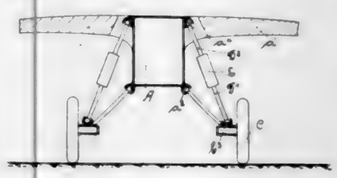
1. The combination with the cam drum and double sole thread of a knitting machine, of a guide mounted on the machine, a clamp and a cutter slidably supported on the guide in position to receive the thread, means for reciprocating the clamp and cutter including a tappet



rod, means carried by the tappet rod for actuation by the said cam drum, and means for moving the first means into and out of position to be actuated by said cam.

---

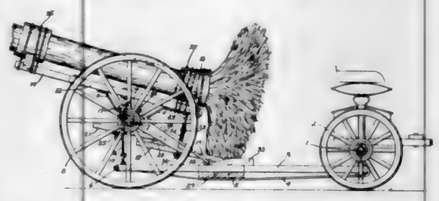
1,559,912. LANDING CHASSIS FOR AIRCRAFT. ADOLF ROHRBACH, Berlin-Charlottenburg, Germany. Filed Sept. 3, 1921. Serial No. 498,303. 8 Claims. (Cl. 244—2.)



1. A flying machine comprising a hull, two wheels, one on each side of the hull, mounted independently of one another, a substantially triangular support for each wheel carrying the wheel at one corner and hinged to the lower part of the hull in two axially aligned points and means for resiliently counteracting a rocking of said support about said points.

---

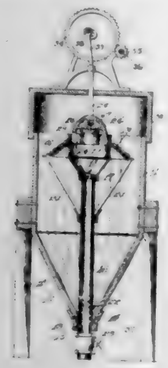
1,559,913. TREE WAGON. JOHN H. ROOF and GEORGE V. ROOF, Dayton, Ohio. Filed Nov. 6, 1924. Serial No. 748,090. 2 Claims. (Cl. 214—3.)



1. A tree wagon comprising a front axle and a rear axle, a beam secured to the rear axle for movement thereby to a vertical position against a tree, a bottom platform attachable to said axles, a second platform adapted to be placed behind said rear axle to engage the roots of a tree when said beam is in a vertical position against the latter, the second platform being formed with bolt holes, and bolts pivotally secured to said rear axle and beam for passage through the holes in the second platform to removably secure the latter to them for the purpose specified.

---

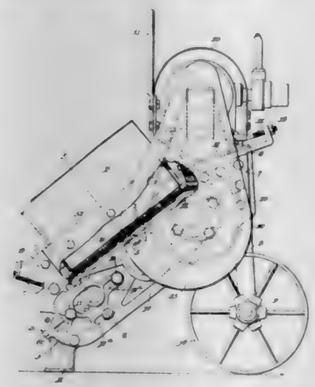
1,559,914. CYANIDE TANK. GEORGE E. C. ROUSSEAU, Sacramento, Calif. Filed Nov. 20, 1923. Serial No. 675,885. Renewed Jan. 12, 1925. 3 Claims. (Cl. 259—98.)



1. A cyaniding device comprising a closed tank having a tapered bottom, a vertical pipe disposed through the tapered bottom and extending to a point adjacent the upper end of the tank, the pipe being perforated immediately above the bottom, a pump cylinder mounted on the upper end of the pipe, a valve in the upper end of the pipe, and a short stroke piston reciprocable in the cylinder and having a central opening and an upper cage portion, the opening having a valve seat, a valve guided in the cage portion toward and away from the valve seat, and means for reciprocating the piston within the cylinder.

---

1,559,915. METHOD OF AND APPARATUS FOR SEPARATING AND BLENDING MOLDERS' SAND. GEORGE F. ROYER, Wilkes-Barre, Pa., assignor to Royer Foundry & Machine Co., Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed July 7, 1922. Serial No. 573,408. 23 Claims. (Cl. 259—144.)



1. The method of separating used molders' sand from undesired foreign matter and for purifying—the separated sand which consists in depositing the mixed material upon a high speed inclined separating device and causing said foreign matter to move downwardly upon said device while desirable particles of sand are by action of the separating device carried upward and centrifugally thrown through the air from the upper end of said device to purify them.

---

1,559,916. SEPARATOR FOR GRANULAR MATERIAL. GEORGE F. ROYER, Wilkes-Barre, Pa., assignor to Royer Foundry & Machine Co., Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1924. Serial No. 692,789. 12 Claims. (Cl. 259—144.)

1. A separator comprising a driven endless belt provided with outwardly projecting sheet metal sprigs arranged in rows extending transversely of the belt, the sprigs being arranged in groups and all the members of each group formed integral with a base flange that overlies and is attached to the belt, and means for laterally confining a body of material to be treated in the path of travel of the free ends of the sprigs.

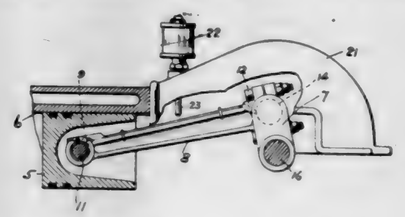
---

1,559,917. SANITARY DETACHABLE SWEATBAND. WILLIAM HENRY SCHNEBEL, Forest Hill Garden, N. Y. Filed Oct. 21, 1921. Serial No. 509,397. 3 Claims. (Cl. 2—181.)

1. The combination with a hat, of a series of guides disposed within the crown of a hat comprising loop portions provided with U-shaped ends for spacing the loop portions away from the crown of the hat, said guides having means for attaching the same to the crown and a sweat band loosely mounted within said guides.

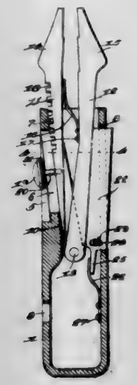
---

1,559,918. SELF-LUBRICATING CONNECTING ROD. HENRY N. SCHRAMM, West Chester, Pa. Filed July 10, 1923. Serial No. 650,579. 6 Claims. (Cl. 74—17.)



5. The combination of a connecting rod, bearings at the opposite ends thereof, a shallow groove longitudinally of the rod, oil holes at the opposite ends of the groove penetrating the bearings, a wick embedded in the groove, and means holding the wick down the groove.

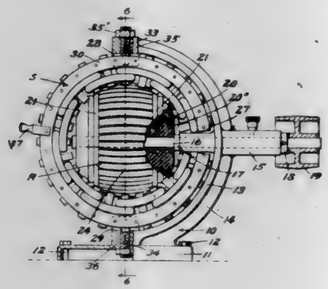
1,559,919. COMBINED EXTENSIBLE WRENCH AND PLIERS. LEROY O. STEINKE, Spokane, Wash. Filed Apr. 7, 1925. Serial No. 21,433. 4 Claims. (Cl. 81—112.)



1. In a combined extension wrench and pliers, a casing, a pair of pivotally connected jar arms extensible in said casing whereby different adjustments of said arms can be obtained by extending or retracting said arms with respect to said casing, means normally acting to spread said jaws against said casing, and means mounted on said casing for forcing one of said arms into different degrees of closed relation with respect to the remaining arm irrespective of the extensible adjustment of said arms with respect to said casing.

---

1,559,920. VARIABLE-SPEED INDUCTION MOTOR. RALPH E. STEWART, Los Angeles, Calif., assignor to Nancy J. Stewart, Los Angeles, Calif. Filed Oct. 14, 1920. Serial No. 416,812. 10 Claims. (Cl. 172—120.)



1. An induction motor comprising a rotor, a stator having a rotating field of constant flux density, and means for varying the position of the stator to vary the angle at which the flux traverses the rotor whereby the rotational speed of the rotor is varied.

---

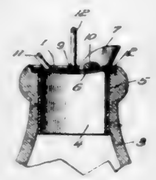
1,559,921. TESTING DEVICE. LEONHARD TREUHEIT, Elberfeld, Germany. Filed June 23, 1924. Serial No. 721,782. 6 Claims. (Cl. 73—51.)

1. Testing device for ascertaining the compression strength of granular substances comprising a tubular handle, a slide adapted to reciprocate in said tubular handle and provided at one end with a contact surface for engaging a test piece and means on the other end

of said handle for indicating the travel of said slide and an operative connection between said slide and said indicating means.

---

1,559,922. COMBINED MILK-BOTTLE STOPPER AND POURING SPOUT. RICHARD A. WALSH, Dayton, Ohio. Filed Sept. 25, 1924. Serial No. 739,845. 1 Claim. (Cl. 215—63.)



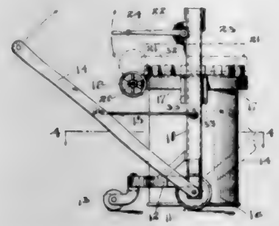
A combined bottle stopper and pouring spout comprising a disk of a diameter to permit it to rest upon the usual stopper ledge of a common milk bottle neck, said disk being provided with a discharge opening and with an upstanding flange partially surrounding said opening and functioning as a discharge spout, a weighted gravity closed closure pivotally mounted upon the top of said disc and serving to close said discharge opening, a handle carried by said disc, a tubular member depending from the under side of said disc and adapted to telescope into the bottle neck, said tubular member being spaced inwardly from the peripheral edge of said disc, and a sleeve of packing material surrounding said tubular member.

---

1,559,923. TRUCK. CHARLES W. WEST, Tigard, Oreg. Filed May 5, 1923. Serial No. 636,951. 1 Claim. (Cl. 254—8.)

In a truck for handling drums: drum grasping mechanism; and cam to operate said mechanism, each of said cams consisting of a pair of hubs, a rim, and sides

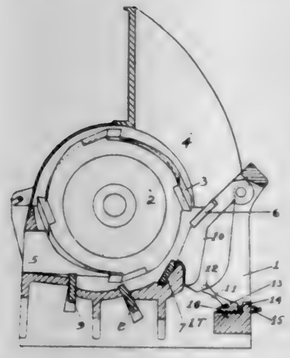
spaced apart one from the other and connecting said rim with said hubs, and an anchor pin mounted in said



sides and spanning said space; and flexible members secured to said pin and to said grasping mechanism; and means to operate said cams.

---

1,559,924. SAFETY DEVICE FOR DISINTEGRATING MACHINES. GEORGE B. WILLCOX, Saginaw, Mich., assignor to Mitts & Merrill, Saginaw, Mich., a Corporation of Michigan. Filed Apr. 2, 1924. Serial No. 703,621. 1 Claim. (Cl. 83—11.)



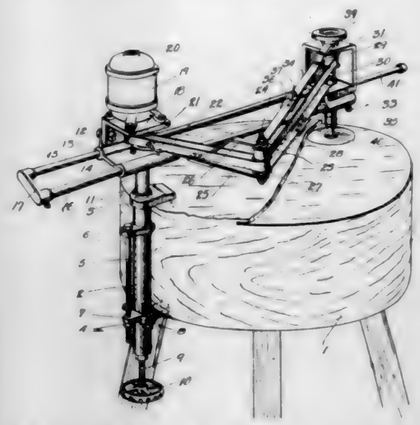
In a machine of the class described having an inlet throat, the bottom of said throat slightly inclined and having an end section hinged, a cutter bar fixed to the end of said hinged section and forming a continuation of said flat throat bottom for the passage of material thereon, a downwardly extending angularly disposed wall on the inner end of said hinged section and integral therewith, a socket on the back of said wall at its lower end, a stationary support, a second socket adjustably mounted on said support, a breakable strut interposed between said sockets, said strut having its cross section proportioned to withstand certain predetermined endwise stresses and to fail under greater stresses, and means for adjusting said second socket to prevent end play of said strut, for the purposes set forth.

---

1,559,925. COMPOSITION OF MATTER AND METHOD OF PREPARING THE SAME. HERBERT A. WINKELMANN, Akron, and HARLAN L. TRUMBULL, Hudson, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,924. 24 Claims. (Cl. 18—53.)

1. The method of producing a composition of matter which comprises mixing rubber or similar material with a vulcanizing agent and the condensation product of an aldehyde with a substituted thiourea and vulcanizing the mix.

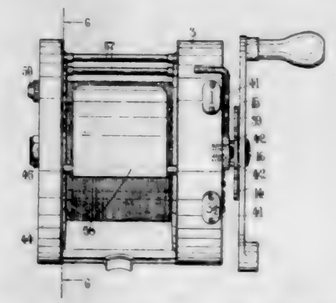
1,559,926. RESURFACING MACHINE. CHARLES T. ADAIR, Kansas City, Mo., assignor of one-half to L. S. WALTER, Kansas City, Mo. Filed Jan. 28, 1924. Serial No. 688,914. 1 Claim. (Cl. 144—2.)



In a device of the class described, in combination with a vertically adjustable swivel and means for supporting the swivel on the work, a head pivotally mounted on the swivel, a horizontal frame slidably mounted on said head, a second head fixed on said frame, a vertical shaft revolubly mounted in said second head, a cutting tool on the lower end of said shaft, a motor on the swivel head, having a depending shaft, a bar pivotally mounted on the motor shaft, adjustable bars pivotally mounted on the tool shaft, a shaft pivotally connecting ends of the motor shaft bar and the tool shaft bars to form a hinge joint therebetween, separate pulleys on the hinge shaft, a pulley on the motor shaft, a pulley on the tool shaft, a belt connecting the pulley on the motor with one of the pulleys on the hinge shaft and a belt connecting the pulley on the tool shaft with the other pulley on the hinge shaft.

---

1,559,927. FISHING REEL. CHARLES ALMA BAKER, Batu Gajah Kinta, Perak, Federated Malay States. Filed Nov. 28, 1924. Serial No. 752,572. 7 Claims. (Cl. 242—84.7.)

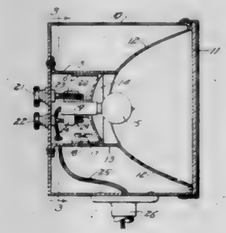


1. A fish line reel comprising a reel, a reel shaft, a plurality of gear members on said shaft, a driving spindle, means for rotating the spindle, a plurality of gear members on said spindle adapted to co-operate with the gear members on the shaft and means for moving the gear members on the shaft into engagement with the gear members on the spindle whereby said shaft can be driven at a plurality of speeds.

1,559,928. FORM OF PLATES AND ROLLERS TO ORNAMENT MATERIALS. JAY OTIS BALL, Bogota, N. J. Original application filed Aug. 14, 1924, Serial No. 731,940. Divided and this application filed Apr. 27, 1925. Serial No. 25,978. 3 Claims. (Cl. 101—395.)

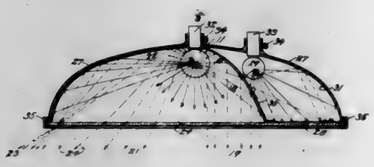
1. The method of making a printing device for ornamenting material comprising the transferring of a design to be printed to the printing surface, the routing out of an inner area of the design leaving a peripheral holding edge of the printing surface around said routed-out area, and inserting an absorbent material in the routed-out portion.

1,559,929. DOUBLE-FOCUSING REFLECTOR. LOUIS A. BEAN, Denver, Colo. Filed May 5, 1924. Serial No. 711,188. 3 Claims. (Cl. 240—44.)



1. A light projecting mechanism comprising a housing; a reflector opening to one side of said housing and having a tubular extension on its rear opening to said reflector; a second reflector slidably mounted in said extension; a lamp holding socket slidably mounted in said second reflector; an adjusting screw carried in said housing; a threaded lug on said second reflector engaged by said adjusting screw; a second adjusting screw carried in said housing and a threaded lug on said socket engaged by said second adjusting screw.

1,559,930. AUTOMOBILE HEADLIGHT. LOUIS A. BEAN, Denver, Colo. Filed May 19, 1924. Serial No. 714,353. 3 Claims. (Cl. 240—41.)

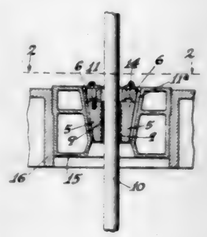


1. In a light projecting apparatus, the combination in a reflector having a horizontally placed oblong opening, the vertex of said reflector being to one side of the vertical and on the horizontal center line thereof, upper, lower, and side portions all radiating from the vertex of said reflector, one of the side portions presenting substantially a parabola in horizontal cross section the other side portion presenting substantially a portion of an ellipse in horizontal cross section, the upper and lower portions each comprising substantially triangular surfaces presenting an arc of a parabola in an axial section and a straight line in a horizontal section said upper, lower, and parabolic sections arranged to reflect rays axially, said elliptical section arranged to reflect rays horizontally to one side of said axially reflected rays.

1,559,931. FLUID-PRESSURE GENERATOR. HARVEY W. BELL, Yonkers, N. Y., assignor to The Beloyt Corporation, Dover, Del., a Corporation of Delaware. Filed Oct. 31, 1919. Serial No. 334,771. 9 Claims. (Cl. 123—25.)

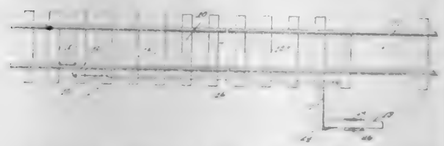
1. A four cycle internal combustion engine comprising a cylinder provided with ports, a shaft, a reciprocatory sleeve in the cylinder closed at one end connected to be actuated by the shaft and provided with ports, a reciprocatory piston within the sleeve and connected with the shaft, said sleeve and piston being arranged to open and close the ports and arranged to leave a combustion space between the top of the piston and the closed end of the sleeve at the end of the compression stroke of the piston, to bring the top of the piston into close proximity with the closed end of the sleeve at the end of the exhaust stroke of the piston to effect complete scavenging, and means for injecting water into the sleeve during the working stroke of the engine and after ignition of the charge therein.

1,559,932. ROTARY SLIP FOR DRILLING OIL WELLS. CHARLES J. BOGEN, Huntington Beach, Calif. Filed May 14, 1924. Serial No. 713,213. 7 Claims. (Cl. 24—263.)



1. A slip for wells composed of upper and lower sections, horizontal teeth formed upon the inside surface of the lower section, and vertical teeth formed upon the inside and outside surfaces of the upper section.

1,559,933. AUTOMATIC RAILWAY SIGNAL. GABRIEL F. BORN and RUSSELL D. BORN, New Philadelphia, Ohio. Filed Feb. 14, 1925. Serial No. 9,250. 3 Claims. (Cl. 246—294.)

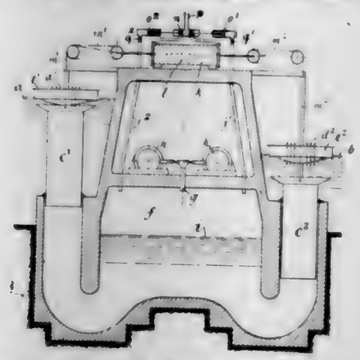


1. A railway signaling device including a bell having a striker, a normally lighted lamp, means on the striker normally concealing the lamp, means carried by the concealing means for exposing the lamp, and means operable by a train for actuating the striker into contact with the bell whereby said concealing means will be moved to expose the lamp.

1,559,934. METHOD FOR REDUCING THE PERCENTAGE OF WATER OF PEATERIES. ABRAHAM TEN BOSCH, The Hague, Netherlands. Filed Apr. 28, 1924. Serial No. 709,530. 7 Claims. (Cl. 262—3.)

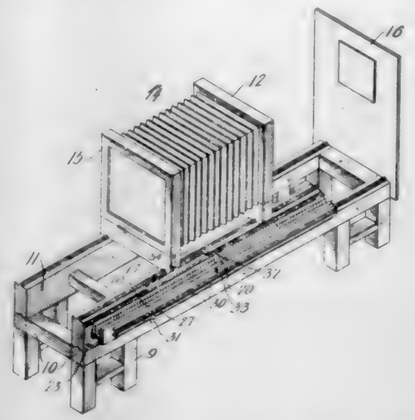
1. A method of reducing the water-content of peat in peat banks, which consists in injecting internally of the bank at a point above at least one of the usual substantially impenetrable crusts a medium which will dissolve such crust and attack the colloidal condition of the peat.

1,559,935. MEANS FOR UTILIZING TIDAL ENERGY. JENS ORTEN BOVING, London, England. Filed Feb. 25, 1925. Serial No. 11,398. 5 Claims. (Cl. 230—15.)



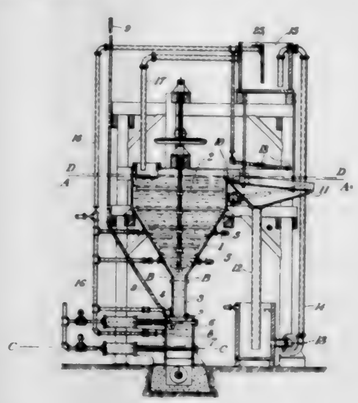
1. In a tidal energy utilization plant, a downcast shaft, a rising and falling inlet to said downcast shaft, means entraining air by water flowing down said inlet, an air-trapping chamber leading from said downcast shaft, an upcast shaft leading from said air-trapping chamber, and means responsive to changes in the air pressure in said air-trapping chamber maintaining approximately constant the difference between the water level in said air-trapping chamber and the water level above said upcast shaft.

1,559,936. PHOTOGRAPHIC APPARATUS. WILLIAM C. BUTEHORN, New Brighton, N. Y. Filed July 21, 1921, Serial No. 486,643. Renewed Apr. 2, 1925. 6 Claims. (Cl. 88—24.)



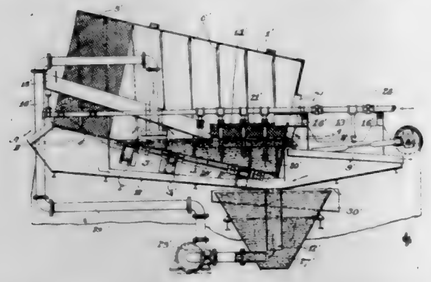
2. In combination, a camera-carrier, and a camera having a stationary lens portion and a movable plate-carrying portion, a series of graduated stops supported on the carrier, and an indicator on plate-carrier adapted to point out different ones of said stops as the plate-carrier is moved.

1,559,937. METHOD AND APPARATUS FOR SEPARATING MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Philadelphia, Pa. Filed Jan. 24, 1921. Serial No. 439,498. 6 Claims. (Cl. 83—85.)



1. A method for separating materials of different specific gravities which consists in immersing said materials in a fluid mass consisting of an agitated mixture of liquid and comminuted solids heavier than said liquid and substantially insoluble therein, the specific gravity of said fluid mass being greater than that of the lighter and less than that of the heavier of said materials, in causing the heavier of said materials to sink through said fluid mass into and through an upwardly rising body of liquid subjacent to said fluid mass and in unobstructed communication therewith.

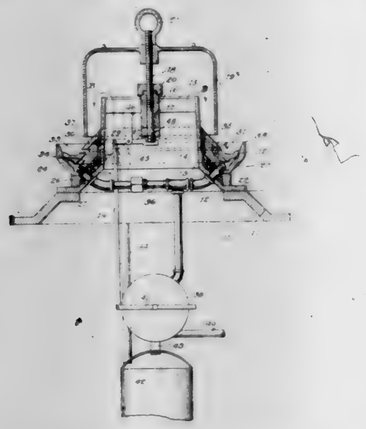
**1,559,938.** APPARATUS FOR SEPARATING MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Philadelphia, Pa. Filed July 7, 1922. Serial No. 573,471. 2 Claims. (Cl. 83—85.)



1. An apparatus for the separation of materials of different specific gravity comprising in combination a rotatable receptacle adapted to contain a fluid mass consisting of an agitated mixture of liquid and comminuted solids insoluble in said liquid; a fluid mass of said type in said receptacle; means for maintaining, by rotation of said receptacle and by the introduction of liquid under pressure, the fluidic properties of said fluid mass said means comprising conduits extending into said receptacle and into said fluid mass, said conduits being connected to a source of supply of liquid under pressure, a partition extending into said fluid mass adapted to confine the movement of materials floating in the upper part of said fluid mass to a direction toward the region of discharge for said floating materials; means for introducing into said fluid mass the materials to be separated and means for removing said materials, after separation has been effected, from said fluid mass.

---

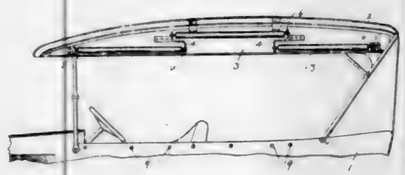
**1,559,939.** OIL BURNER. GEORGE B. DAHL, Woodhaven, N. Y. Filed July 9, 1924. Serial No. 725,084. 8 Claims. (Cl. 158—53.)



7. An oil burner comprising an open-ended air supply member, an oil receiving trough associated therewith, a vaporizing ring associated with said oil trough and spaced above the bottom wall thereof and terminating short of the inner side wall of said oil trough, an air deflector associated with said oil trough and forming with said vaporizing ring a restricted opening for the passage of the gaseous fuel therefrom, an air dome associated with said air supply member and adapted to direct the incoming air down and across the said restricted opening, means for raising and lowering said air dome to regulate the quantity of air passing through said burner, and means connected to said air dome adapted to regulate the quantity of fuel supply to said burner proportional to the quantity of air passing through the said burner.

---

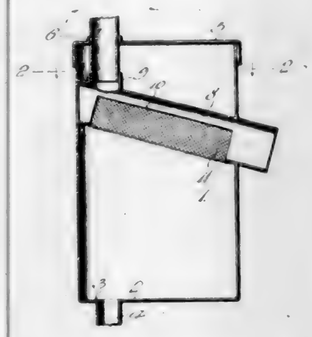
**1,559,940.** AUTOMOBILE CURTAIN. HOWARD L. DE BAUGH, RALPH R. MEEKS, and JACOB ELMER STRAYER, Baltimore, Md., assignors to The Superior Manufacturing Company, a Corporation of Maryland. Filed Sept. 5, 1924. Serial No. 735,991. 1 Claim. (Cl. 296—143.)



The combination with an automobile, of a wooden strip extending along the top of the automobile on each side thereof, a number of spring rollers mounted on said strip, a rod extending along the top of the automobile on the inside thereof adjacent the lower edge of the said wooden strip, curtains mounted on said rollers and operative between said rod and said wooden strip, stops on the bottom of said curtains, and a piece of material having one edge secured to said rod and its other edge removably secured to top of the automobile.

---

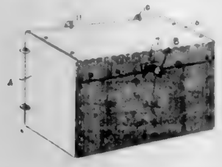
**1,559,941.** FILTER FOR CISTERNS. CLARENCE B. DEMAREE, Eminence, Ky. Filed Sept. 5, 1924. Serial No. 736,115. 1 Claim. (Cl. 137—9.)



A filter comprising a cylindrical casing closed at its lower end and having in said end a discharge opening, a cover on the upper end of said casing, said cover having therein an inlet, a tubular pipe section disposed at an incline in said casing and having one end integrally connected with the wall of one side of said casing and the other end extending through the opposite side of the casing, said pipe section having in its lower side an elongated water passage and in its upper side a water inlet disposed in operative relation to the inlet in the cover for receiving a supply pipe extending into the casing through said inlet in the cover, a screen covering said water passage in said pipe section and an auxiliary tubular pipe section adapted to be inserted into and entirely removed from said first mentioned pipe section, said auxiliary pipe section being closed at its inner end and having in one side adjacent said closed end a water inlet adapted to register with the water inlet of the first mentioned pipe section.

---

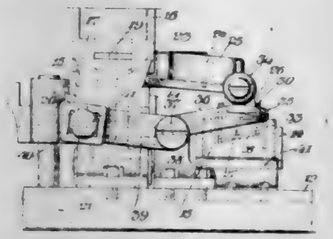
**1,559,942.** FOLDING TRAVELING BAG. MARY E. DEMPSEY, San Luis Obispo, Calif. Filed Oct. 9, 1922. Serial No. 593,402. 2 Claims. (Cl. 190—49.)



1. In a foldable traveling bag, a member comprising a pair of legs hinged together, each of said legs provided with a plurality of rings as and for the purpose set forth.

---

**1,559,943.** MACHINE FOR PACKING MATCHES. JOSEPH C. DONNELLY, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 27, 1923. Serial No. 682,894. 8 Claims. (Cl. 226—11.)



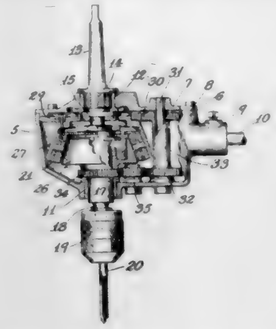
1. In a machine for packing matches, the combination of a longitudinally reciprocable supply trough having a discharge opening therein, a conveyer for feeding a succession of match receptacles in a path under and past said opening, a vertically movable arm pivotally connected with said trough, a match settling and straightening device carried by said arm so as to overhang the path of each receptacle when it has passed beyond the opening, said device comprising a head having a serrated inclined lower surface and upwardly beveled ends, and means for permitting said head to gravitate into and for raising it from the interior of the receptacle.

4. In a machine for packing matches in a succession of receptacles, match settling and straightening mechanism overhanging the path of said receptacles and comprising a vertically movable arm, means for pivotally supporting and longitudinally vibrating said arm, a head fast on said arm and having a serrated inclined lower surface and upwardly beveled ends, and means for permitting said head to gravitate into, and for raising it from the interior of an underlying receptacle.

---

**1,559,944.** CLUTCH CONSTRUCTION FOR TAPPING ATTACHMENTS AND THE LIKE. GEORGE W. EMRICK, Brooklyn, N. Y. Filed June 29, 1923. Serial No. 648,465. 2 Claims. (Cl. 192—51.)

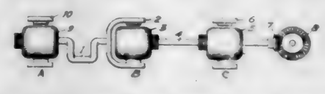
1. In a device of the class described provided with two rotatable conical members mounted one within the other, a conical clutch member mounted between said rotatable members and provided with clutch facing,



adapted to operate in connection with either of said members, and means for providing a full floating mounting for said clutch member.

---

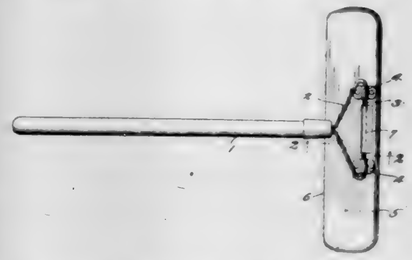
**1,559,945.** POWER-TRANSMISSION MECHANISM. JUSTUS B. ENTZ, New Rochelle, N. Y. Filed Apr. 21, 1923. Serial No. 633,613. 15 Claims. (Cl. 290—15.)



13. Means for transmitting power from a prime mover to a load comprising a prime mover, three dynamo electric machines and a controller having contacts and connections adapted to connect two of said machines in series to deliver power to the load at speeds greater than prime mover speed and to connect another two of the machines to drive the load in the reverse direction of rotation from that of the prime mover, one of the dynamo electric machines being at that time ineffective to deliver power, but adapted to drive the prime mover in a forward direction if the load moves in a forward direction.

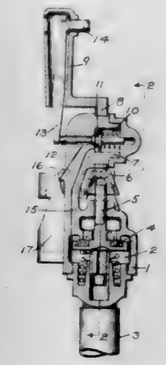
---

**1,559,946.** SCRAPER. OSCAR FANBERG, Hensley, W. Va. Filed May 5, 1925. Serial No. 28,183. 1 Claim. (Cl. 37—179.)



In a tool of the class described a handle, diverging arms at one end thereof, a rod connecting the arms, an elongated concavo-convex blade hingedly connected to the rod and movable under the arms to present its convex surface to a supporting surface on which the blade may be mounted, and a stop upon the rod for engagement by the blade to hold the blade in scraping position when moved in one direction.

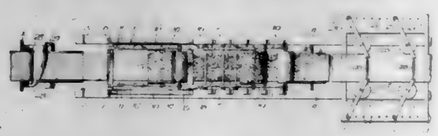
1,559,947. CONDUCTOR'S VALVE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,576. 3 Claims. (Cl. 303—51.)



1. A back-up hose attachment comprising a valve for venting fluid to effect an application of the brakes, a valve for operating a signal, a handle for operating one valve, and a lever associated with the handle for operating the other valve.

---

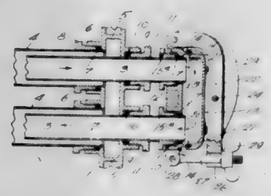
1,559,948. MEANS FOR AND METHOD OF MAKING ORNAMENTAL BRICK. PORTER C. FARRIS, Brazil, Ind., assignor to Hydraulic-Press Brick Company, St. Louis, Mo., a Corporation of Missouri. Filed July 27, 1923. Serial No. 654,120. 5 Claims. (Cl. 25—1.)



1. In a brick machine device, the combination of a die adapted continuously to form a clay slab with a smooth surface, means for removing the clay forming the smooth surface, and means for depressing portions of the newly formed surface of the slab.

---

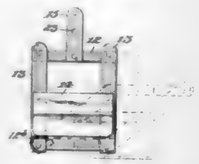
1,559,949. RETURN BEND HEADER FOR PIPES. HARVEY FELDMEIER, Little Falls, N. Y., assignor to D. H. Burrell & Co., Inc., Little Falls, N. Y. Filed Jan. 3, 1922. Serial No. 526,830. 4 Claims. (Cl. 285—20.)



1. A return header for connecting the ends of adjacent tubes, comprising a base having openings therethrough in which the ends of the tubes are adapted to be secured, a cover for said base and cooperating therewith when the cover is in closed position on the base to form a return bend passage establishing communication between the ends of said tubes, said cover being mounted on the base to move inwardly and outwardly toward and from the same substantially perpendicular to the plane of the cover-seat on the base for closing and opening said return bend passage, and means for releasably securing said cover in closed position.

---

1,559,950. TOOL RECEPTACLE OR CARRIER. LEWIS E. FORD, Salamanca, N. Y. Filed Nov. 5, 1924. Serial No. 747,974. 8 Claims. (Cl. 206—16.)



4. A receptacle for tools or the like comprising a plurality of trays, uprights at the sides of the receptacle at each end thereof and with which uprights said trays are pivotally connected, and rectangular supporting plates attached to said uprights at each end of the receptacle, the bottoms of said plates being considerably above the bottom of the lowermost tray when the parts are in normal position.

---

1,559,951. ROUTE BOOK. ELMER E. FOREMAN, Columbus, Ohio. Filed Feb. 19, 1923. Serial No. 619,918. 1 Claim. (Cl. 283—66.)

An account book comprising a series of wide leaves and a relatively narrow leaf inserted between each pair of said wide leaves, the adjacent face of said wide leaves and both faces of said narrow leaf being ruled with a plurality of vertical columns including a relatively wide name column at the free vertical edge of one of the wide leaves, a plurality of narrow date columns on both sides of the narrow leaf and also on both wide leaves, a balance column between said name column and the first one of said date columns, and a pay-time column at the free vertical edge of the opposite wide leaf, all of said columns being appropriately designated at the top edges of the pages which are also divided by horizontal lines to form individual account spaces extending continuously across the rear face of one of said wide leaves and across both faces of said narrow leaf and also across the front face of the next wide leaf, said individual account spaces being subdivided with contrasting lines to form equal size upper and equal size lower spaces throughout the length of the wide columns, and said narrow leaf being sufficiently wide only to extend to the inner end of the name column when folded back against the name column page, and also each side of the narrow leaf is arranged with only sufficient date columns to record an account of one week, so that a weekly debit account can be easily ascertained by glancing at one of the end date columns on the pages.

1,559,952. WATCH HOLDER FOR VEHICLE STEERING WHEELS. SANFORD W. FRENCH, Fort Bliss, Tex. Filed Jan. 26, 1924. Serial No. 688,742. 1 Claim. (Cl. 224—4.)

In combination with a watch case, provided at diametrically opposite sides with loops, a holder comprising a pair of metallic strips of the same configuration and dimension, each strip being provided at one end with a hook portion adapted to partially engage around the intermediate portion of one of the loops, each hook portion having an angularly disposed shank portion adapted to lie under the edge portion of the case, each shank portion merging with an arcuate portion to form a re-entrant angle therewith, and each arcuate portion merging into an outstanding ear formed at the opposite end of the strip from that end at which the hooked portion is located, and a draw bolt passing transversely through the ears and adapted to draw the arcuate portions of the strips and the side of the watch case toward the peripheral surface of a support.

---

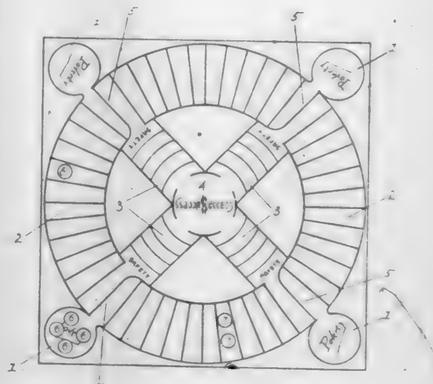
1,559,953. PADDLE BALL. THOMAS H. FURMAN, Los Angeles, Calif. Filed Apr. 10, 1924. Serial No. 705,585. 2 Claims. (Cl. 273—96.)

1. A toy comprising a wooden paddle having an aperture extending through opposite faces thereof, a depending pocket communicating with said aperture, means for securing said pocket to said paddle, said means comprising an annular ring having teeth adapted to be pressed into the paddle, an elongated slender elastic element secured at one end to the paddle, and a resilient ball secured to the other end of the elastic element.

---

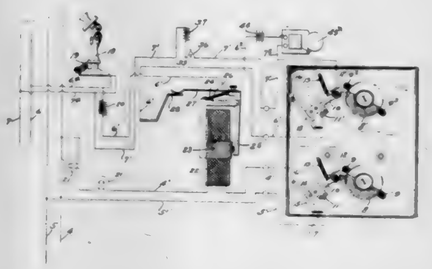
1,559,954. GAME. HARRY E. GIFFORD, Medford, Mass. Filed Oct. 27, 1922. Serial No. 597,398. 4 Claims. (Cl. 273—134.)

1. A game comprising a board having various areas over which discs called men are moved by 2, 3, or 4 players; one die having one side indicative of backward moves; one or more ordinary dice indicative of forward moves; and several men or discs of a distinctive color for each player, as described and for the purpose specified.



---

1,559,955. ELECTRIC BURGLAR DETECTOR. NEWTON L. GLOVER and JAMES A. HANSON, Windom, Minn. Filed Feb. 11, 1924. Serial No. 691,918. 11 Claims. (Cl. 179—5.)



1. The combination with an electric light circuit, of an electric light bulb forming a part of said circuit, a timed switch adapted to automatically open and close said circuit, a shunted telephone circuit, means cooperating with said light circuit for closing said telephone circuit.

---

1,559,956. COMBINED TOILET FLUSH AND INTAKE VALVE. CHARLES H. GUNN, Oakland, Calif. Filed July 29, 1924. Serial No. 728,860. 4 Claims. (Cl. 4—21.)

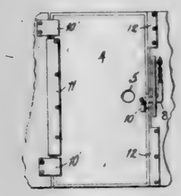
2. The combination with a toilet comprising a bowl, a seat hinged thereon and screws securing the hinge to the bowl; of a flush valve structure mounted in connection

with the bowl, a horizontal operating arm projecting from the structure, a lever having one end under the

seat and the other end under the outer end of the arm, and means for pivoting the lever onto the bowl in connection with the seat-hinge screws.

---

1,559,957. BURGLARPROOF TOOL HOUSE. JOSEPH F. HAGAN, Electra, Tex., assignor of one-half to W. C. Kiker, Electra, Tex. Filed Oct. 27, 1924. Serial No. 745,967. 2 Claims. (Cl. 20—16.)



1. In combination, a door, a door casing, hinges on the outside of the door connecting the door to the casing, locking means secured to the inside of the door and casing near the edges thereof which carry the hinges, said locking means comprising a relatively long metal plate having one edge secured to one of the marginal edges of the door, a pair of small metal plates each having one end secured to said casing and their outer free ends projecting over the door, said small plates being positioned at points opposite the hinges, said long plate extending between said small plates and having its free outer edge extending over said casing

---

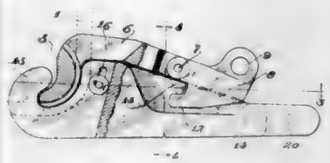
1,559,958. MECHANICAL WINDOW OPERATOR. FREDERICK HAUSER, San Francisco, Calif. Filed Jan. 2, 1924. Serial No. 683,872. 5 Claims. (Cl. 268—19.)

1. Means for operating sashes of a multi-sash window comprising a casing adapted to be mounted in a window frame, a shaft rotatable in the casing, a pinion on the shaft, rack bars slidable in the frame, said shaft being adjustable to bring the pinion into engagement with any

one of the several rack bars, means providing for connection between the sashes of a multi-sash window and said rack bars and means for rotating the shaft.

---

1,559,959. CABLE SLING, JAM AND TRIP HOOK. EDWARD A. HAYNES, Port Huron, Mich. Filed Dec. 30, 1924. Serial No. 758,854. 6 Claims. (Cl. 294—75.)



1. A clevis adapted for a jam and trip cable hook, comprising a jam member, a trip device, and a main body member, the jam member being adapted to be held firmly in hooked relation with one end of the main body member.

---

1,559,960. CLEANING COMPOUND. EUGENE M. HECKMAN, Avalon, Pa. Filed June 21, 1924. Serial No. 721,586. 2 Claims. (Cl. 87—5.)

2. A cleaning compound consisting of blast furnace slag, granulated by introducing it into water while hot, and soap.

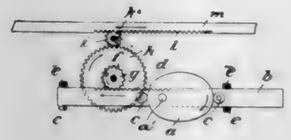
---

1,559,961. INSECTICIDE. GILBERT E. SEIL and OSCAR F. HECHENBURG, Pittsburgh, Pa., assignors to Frank O. Moburg, Toledo, Ohio, and The Roessler & Hasslacher Chemical Company, a Corporation of New York. Filed May 28, 1921. Serial No. 473,344. 3 Claims. (Cl. 167—6.)

1. An insecticide composition comprising a dilute solution of a cyanhydrin, of appropriate strength for use for insecticidal purposes.

3. An insecticide composition comprising a dilute aqueous solution of cyanhydrin of acetone in the proportion of one part cyanhydrin to one hundred or more parts of water.

1,559,962. MECHANICAL MOVEMENT FOR STRAIGHT HOSIERY FRAMES. WOLDEMAR HEINITZ, Chemnitz, Germany. Filed Mar. 5, 1924. Serial No. 697,138. 2 Claims. (Cl. 74—14.)



1. A mechanical movement for use in connection with straight hosiery frames and apt to serve as driving gear for the bar transmitting motion to the thread guide bar of the frame, comprising, in combination, an eccentric disk, means to rotate it; a shiftable bar, and means to transmit the revolutions thereof to said bar so as to reciprocate it; another shiftable bar arranged parallel to the first-mentioned one at some distance thereof; teeth at the opposite edges of said bars; a pinion meshing with the teeth of the first-mentioned bar, a cog-wheel firmly connected with said pinion, and another pinion meshing with said cog-wheel, as well as with the teeth of said other bar, for the purpose set forth.

---

1,559,963. TREATMENT OF COPPER ALLOYS. FRIEDRICH HEUSLER, Dillenburg, Germany, assignor to the Firm of Isabellenhuette Gesellschaft mit beschränkter Haftung, Dillenburg, Germany. Filed Aug. 29, 1921. Serial No. 496,600. 2 Claims. (Cl. 148—11.)

1. The method of increasing the hardness and elastic limit of alloys containing a predominant proportion of copper and relatively small proportions of manganese and aluminum which consists in subjecting the alloys after they have been cast, rolled or forged, to a prolonged heating treatment at a temperature of approximately 200° C. to 250° C.

---

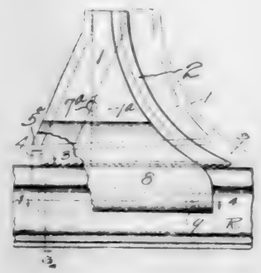
1,559,964. DISPLAY TRAY. ALBERT C. JACKSON, Dayton, Ohio. Filed July 3, 1922. Serial No. 572,592. 1 Claim. (Cl. 211—28.)

In a display unit, the combination with a tray having a rear wall which projects below the bottom of the tray to support the latter in an inclined position, of a second tray having a rear wall which projects below the bottom of the tray to support the latter in an inclined position, and downwardly turned spring pieces secured to the rear wall of the first tray near the bottom of the latter, to hook over the front wall of the second tray for the purpose specified.

---

1,559,965. AUTOMATIC SAFETY BUMPER. PERRY JASPER JESSIP, Atchison, Kans. Filed July 28, 1925. Serial No. 46,614. 3 Claims. (Cl. 104—258.)

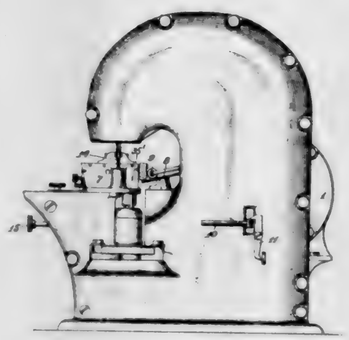
1. A chock device for railroad rails comprising a primary intermediate wedge plate and a pair of side plates each having engaging wedge shoulders whereby relative movement of the primary wedge plate with reference to



the side plates causes the entire device to rigidly grip the head and web of the rail.

---

1,559,966. PIN-TICKET MACHINE. EARL L. KINCH, Waterbury, Conn., assignor to Waterbury Buckle Company, Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 20, 1923. Serial No. 675,872. 5 Claims. (Cl. 93—88.)



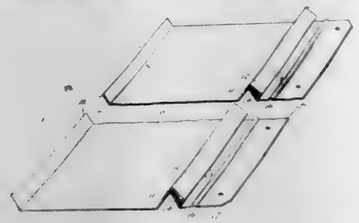
1. Clinching means for pin ticket machines comprising a guide, a tubular plunger therein provided with upwardly extending opposed posts, a second plunger in the first plunger, yielding means between the two plungers for normally maintaining the second plunger in outward position with respect to the first, said second plunger being provided with grooves engaging the posts on the first plunger, a knife-like projection on the end face of the second plunger, said face being recessed on either side of the projection and means for reciprocating and partially rotating the compound plunger.

---

1,559,967. SHEET-METAL ROOFING. GEORGE B. KING, South Boston, Va. Filed Feb. 17, 1923. Serial No. 619,687. 2 Claims. (Cl. 108—17.)

1. A sheet metal roofing plate having inclined sealing flanges adjacent its opposite edges with a plane surface extending from one flange to the other, and a raised por-

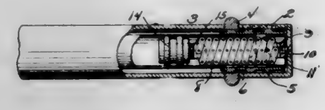
tion between one of said flanges and the adjacent edge, said raised portion making a line contact with a juxtaposed plate, the latter overlapping the first plate and



resting on said raised portion, said raised portion serving as a fulcrum on which the juxtaposed sheet pivots to wedge the cooperating flanges of the two plates together.

---

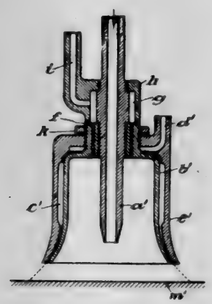
1,559,968. PEN. JOHN J. KLESCHKA, Waterbury, Conn. Filed July 25, 1924. Serial No. 728,216. 3 Claims. (Cl. 120—47.)



1. A fountain pen having a plunger therein, expansible means connected with the plunger and revoluble means for expanding or contracting said expansible means.

---

1,559,969. TREATMENT OF SURFACES UNDER WATER. ARTHUR MAUTERER, Dortmund, Germany. Filed Nov. 11, 1924. Serial No. 749,354. 4 Claims. (Cl. 61—63.)

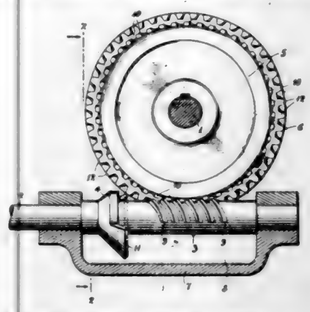


1. The method of retaining under water surfaces free from water during the treatment thereof with a spray, which consists in encircling the spray with an annular shield or curtain of gas under pressure movable laterally with the spray and impinging the surface around the impingement of the spray.

---

1,559,970. MECHANICAL MOVEMENT. PHILIP JACOB MEAHL, Summit, N. J. Filed June 29, 1923. Serial No. 648,533. 7 Claims. (Cl. 74—36.)

2. A mechanical movement comprising, in combination, a worm having an interrupted thread, a cooperative worm wheel, a radially-toothed locking member located at one side of and rotatable in unison with the worm wheel, and



an interrupted locking member cooperative with the radial teeth of the toothed locking member and rotatable in unison with the worm.

---

1,559,971. TEMPORARY BINDER. HENRY C. MEYER, Belleville, N. J. Filed June 16, 1922. Serial No. 568,883. 2 Claims. (Cl. 129—40.)

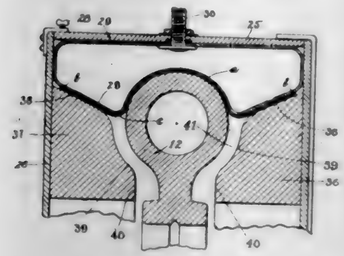
2. A binder comprising a stiff back adapted to lie in engagement with the binder part of a magazine, a gripping member at one end of said back having a comb part arranged to enter between the leaves of the magazine, a second gripping member at the opposite end of the back comprising a plate of resilient sheet metal disposed flat upon said back having a portion bent upwardly therefrom provided with comb teeth extending over the plate adapted to enter between the leaves of the magazine, a retaining member fixed to the back and projecting through a longitudinally extending slot of the plate and having a head thereon to retain the plate against lifting from the back while permitting limited longitudinal sliding movement of the plate, and snap acting means interengaging between the back and the plate utilizing the resiliency of the plate resisted by the head of the retaining member to hold the plate in gripping position.

---

1,559,972. METHOD AND APPARATUS FOR BUILDING TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 28, 1920. Serial No. 354,622. 11 Claims. (Cl. 154—10.)

11. A device for conforming tire-buiding material to a core comprising an inflatable annular bag, a housing

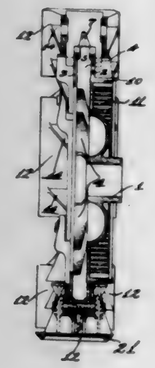
enclosing the bag forming with the core a chamber for controlling the expansion of the bag and causing the



latter to press the tire-building material against the core, and means for exerting a dragging action on the material.

---

1,559,973. TRACKLAYING TREAD DRIVE WHEEL. ROYAL R. MILLER, Chicago, Ill., assignor to Miller Traction Tread Company, a Corporation of Delaware. Filed Feb. 11, 1921. Serial No. 444,115. 5 Claims. (Cl. 305—6.)

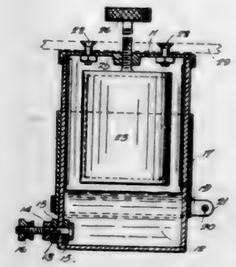


1. In a track laying tread drive, a pair of annular plates integrally united by integral ribs projecting beyond said plates, a track laying tread comprising pivotally connected members having parallel guide plates trained over said ribs, said guide plates having shoulders cooperating with said annular plates.

---

1,559,974. VARIABLE ELECTRIC CONDENSER. GERALD J. MULLIGAN, Columbus, Ohio. Filed Mar. 8, 1924. Serial No. 697,839. 3 Claims. (Cl. 250—41.)

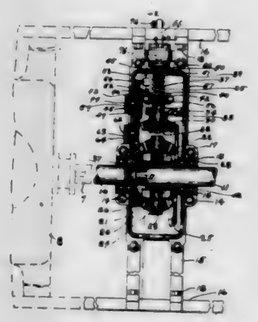
1. A variable condenser including a receptacle in the form of a fluid container, constituting a dielectric and having an external coating fixed thereto and constituting an external stationary electrode, a clamp surrounding the receptacle in contact with the coating and around the lower edge thereof and having a binding post, a binding post fixed through the wall of the receptacle below and apart from the coating thereof, a fluid conducting material within the receptacle whose normal level is adjacent to the lower edge of the external stationary electrode, a cap closing the upper end of the receptacle and having a central bearing, and a core or plunger within the receptacle, formed of insulating material for movement downwardly into the fluid and operating solely to



raise the level of the latter with respect to the outer electrode, having an upright stem threaded through the bearing of the cap and provided with an external knob or handle for the purpose described.

---

1,559,975. AUTOMATIC SPEED-CHANGING POWER-TRANSMISSION DEVICE. HOWARD J. MURRAY, Brooklyn, N. Y. Filed June 21, 1920. Serial No. 390,540. 25 Claims. (Cl. 74—34.)



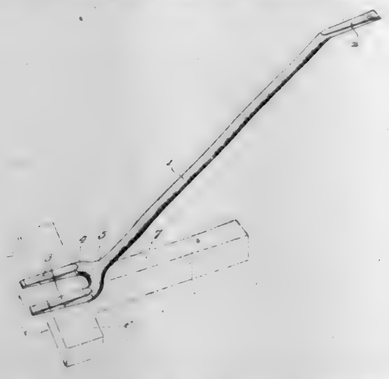
1. In a device of the class described, a differential set comprising a driving member, a resistant member mounted for rotary movement, an idler member operatively connected with both the driving member and the resistant member so as to be actuated by the difference in speed beween these members, means connected to said idler for taking energy from same, resilient variable speed means including a pneumatic frictional surface acting on the resistant member for affecting the relative speed between these members, frictional power means operatively connected to the said driving member and to the said pneumatic surface for actuating the resilient means thereby to vary its effect on the resistant member, and electromagnetically actuated control means acting on the resilient means to co-operatively affect the resistant member thereby.

---

1,559,976. WRECKING BAR. RALPH L. NESS, Clarkfield, Minn. Filed May 18, 1925. Serial No. 31,058. 1 Claim. (Cl. 254—25.)

A wrecking implement comprising a handle bar, and a U-shaped fork at one end of said handle disposed at an incline thereto, said fork having spaced parallel arms and a curved bridge connecting their upper ends, said

handle bar having a widened end portion jointed to said bridge intermediate the ends of the bridge and constituting a fulcrum, the under face of said fulcrum being



curved longitudinally and transversely and merging into the intermediate and end portions of said bridge, the said end portion of said bridge being circular in cross section.

---

**1,559,977. RAILROAD-CROSSING-GATE CONTROL.** ISAAC S. OHAVER, Indianapolis, Ind. Filed Oct. 30, 1924. Serial No. 746,786. 10 Claims. (Cl. 246—293.)

1. In railroad crossing gate controls, a conventional railroad crossing gate means pivoted adjacent a railroad and wagon road crossing, on one side of the wagon-road; a trigger means, pivoted on the same side of said wagon-road, having radially arranged prongs; another such gate means arranged on the other side of said wagon-road; another such trigger means also arranged on the other side of said wagon-road; a trip means extending from trains etc. passing along said railroad, and adapted to engage said prongs in rack tooth manner and oscillate same; a chain belt means adapted to transmit motion from said trigger means to said gate means, said belt means being oppositively wrapped on the respective gate means and trigger means, whereby a train approaching with said trip means in either direction, will close said gate means thru the first engaged trigger means and open same thru the last engaged trigger means; and guide means adapted to guide said belt means.

---

1,559,978. VETERINARY SYRINGE. REED H. PAGE, Slater, Mo. Filed Apr. 18, 1924. Serial No. 707,483. 5 Claims. (Cl. 128—235.)

1. In a device of the character described, a cylinder, a head at one end of said cylinder formed with inlet and discharge ports, a piston slidable longitudinally in said cylinder, a reservoir carrier including a strip extending longitudinally of said cylinder and having a portion secured to the cylinder and a portion extending in spaced relation to the rear end of the cylinder, a cover extending from said strip to engage the forward end of a reservoir and provided with an opening, a conduit passed through the opening and having its rear end

portion adapted to extend into the reservoir and its forward end in communication with the inlet port of said head, and means carried by the free portion of said strip and adjustable longitudinally thereof into position to engage the rear end of the reservoir and hold the reservoir in place.

---

1,559,979. BOARD-TONGUE CUTTER. WILLIAM A. PECK and JAMES M. MALONE, New Haven, Conn.; said Malone assignor to said Peck. Filed May 16, 1925. Serial No. 30,831. 4 Claims. (Cl. 145—1.)

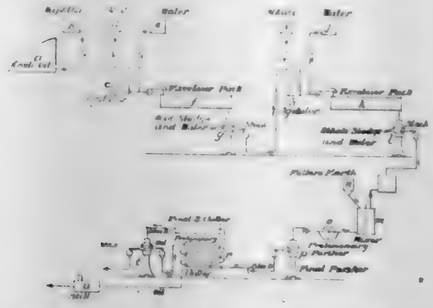
4. A tool of the character described comprising a shank formed to provide a horizontal portion, an upwardly turned portion and a horizontally extending handle, the shank beyond the first named horizontal portion being upwardly turned to constitute a fulcrum, the horizontal portion of the shank first described being longitudinally slitted from end to end, a blade disposed within said slit, and attaching members passing through the walls of the slit and through the blade and holding the blade in place.

---

1,559,980. PURIFICATION OF AIR CONTAINING AMMONIA. GEORGE ST. J. PERROTT and MAX YABLICK, U. S. Army; said Perrott assignor to said Yablick. Filed Jan. 10, 1919. Serial No. 270,606. Renewed July 24, 1925. 10 Claims. (Cl. 23—4.)

2. The process of purifying air vitiated with a high concentration of ammonia, to render the air suitable for breathing after purification and without intermediate cooling or other treatment, which consists in passing the air through a dry, solid, granular mass, containing crystals of hydrated copper sulfate.

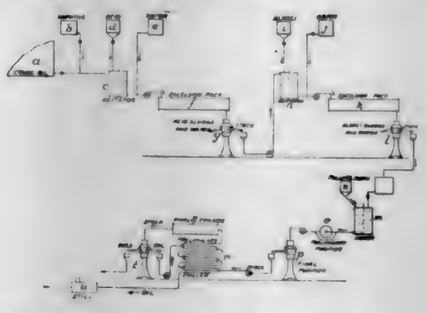
1,559,981. PROCESS OF EXTRACTING WAXES FROM CRUDE PETROLEUM. EARL PETTY, Winfield, Kans., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 15, 1921. Serial No. 500,755. 18 Claims. (Cl. 196—19.)



1. The process of treating paraffin base crude mineral oil to obtain therefrom wax mainly in amorphous form and wax mainly in crystalline form (paraffin), which comprises subjecting oil containing said waxes to refrigeration and centrifugal separation to separate wax from the oil, and subsequently distilling the wax to drive off a crystalline wax distillate, leaving as a residue wax mainly in the amorphous form.

---

1,559,982. PROCESS OF PRODUCING WAX-FREE PRODUCTS FROM CRUDE PETROLEUM. EARL PETTY, Winfield, Kans., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed July 11, 1923. Serial No. 650,782. 7 Claims. (Cl. 196—20.)

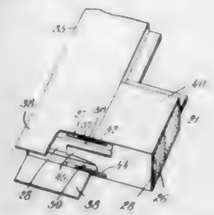


2. The process of treating paraffin base crude mineral oil to obtain therefrom a wax-free low pour bright stock, which comprises subjecting the oil, without distilling off wax distillate, to refrigeration and centrifugal separation to separate wax from the oil, distilling the wax-free oil to obtain therefrom distillates of different boiling points, diluting the residue with a low boiling point petroleum distillate, subjecting the thus formed blended stock to successive treatments with an acid and an alkali, and distilling off the diluting distillate.

---

1,559,983. FIREPROOF DOOR. CHARLES C. PFEIFFER, Westfield, N. J., assignor to Knoburn Products Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed May 23, 1924. Serial No. 715,270. 8 Claims. (Cl. 20—35.)

1. In a structure of the character described, a pair of body members joined together at an angle to each other, a metallic sheath encasing each body member, said sheaths having portions disposed in abutting relation and a connector joining the abutting portions and disposed within the sheaths, one of said sheaths overlapping the joint between said members.



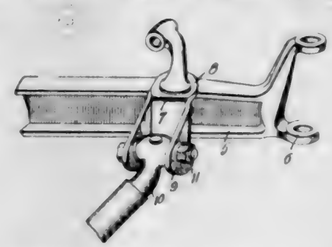
---

1,559,984. METHOD FOR MAKING SULPHUR PRODUCTS. WILLIAM C. PYNER, Hillside, N. J. Filed Jan. 28, 1925. Serial No. 5,402. 9 Claims. (Cl. 252—5.)

1. The method of producing a sulphur product, comprising a treatment of pulverized sulphur in the presence of an alkaline protein compound, causing a dispersion of the sulphur and producing a finely comminuted sulphur product.

---

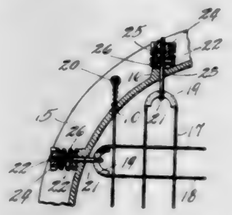
1,559,985. RADIUS ROD. ALBERT D. PURTLE and DELMAR C. FARRA, Marietta, Ohio. Filed Oct. 24, 1923. Serial No. 670,551. 1 Claim. (Cl. 267—66.)



In a device of the character described, a body portion, said body portion including forwardly extended spaced ears extending from the upper and lower edges thereof said body portion adapted to closely engage the side face of an axle, inwardly and downwardly extended spaced ears extending from the side edges of the body portion, the ears being formed with openings to receive securing bolts, and said last mentioned ears being relatively wide to provide supporting flanges to hold the forward end of a radius rod against twisting.

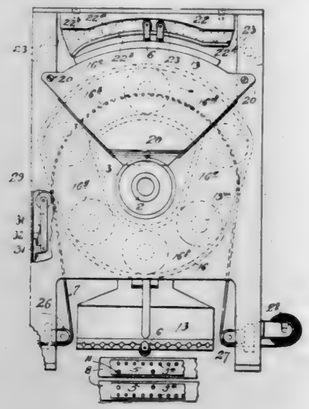
---

1,559,986. TENNIS RACKET. CHARLES F. QUICK, Dallas, Tex. Filed Jan. 17, 1925. Serial No. 3,184. 10 Claims. (Cl. 273—73.)



1. In a tennis racket, a frame, a plurality of resiliently sustained members movable through the frame, and strings carried by said members.

1,559,987. PERFORATING MACHINE. JAMES H. REINHARDT, East Orange, N. J., assignor of one-fifth to Theodore F. Bourne, Montclair, N. J. Filed Jan. 19, 1922. Serial No. 530,260. 29 Claims. (Cl. 164—90.)



1. A perforating machine comprising a rotative head, a member movably carried by said head, punches movably carried by said member arranged in an annular row circumferentially around said head and operative radially thereof, die means carried by said head and cooperative with said punches, means to operate said member to place the punches over the die means and to remove the punches to one side of the plane of a strip on the die after punching the strip during rotation of said head, and means to operate said punches.

---

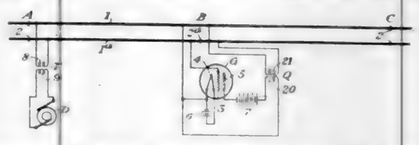
1,559,988. LAUNDRY CART. FLORENCE G. RYAN, Chicago, Ill. Filed Sept. 28, 1923. Serial No. 665,496. 2 Claims. (Cl. 280—36.)

1. A collapsible laundry cart comprising side frames, top bars extending longitudinally of the frames, a flexible support spanning the distance between the top bars and having its edges connected thereto, means pivotally connecting the side frames at their ends to permit folding movement toward each other, lock bars at the ends of the frames, each having one end connected to one side frame and the other end detachably connected to the opposite side frame and side bags removably supported along the sides of the top bars.

---

1,559,989. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HARRY M. RYDER, Forest Hills, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,550. 14 Claims. (Cl. 246—34.)

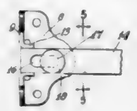
4. In combination, a block of railway track comprising two sections, a source of periodic voltage connected across the rails of one said section, an electron tube amplifier, means for supplying voltage from said one



section to the grid circuit of said amplifier, and a plate circuit for said amplifier for supplying current to the rails of the remaining section.

---

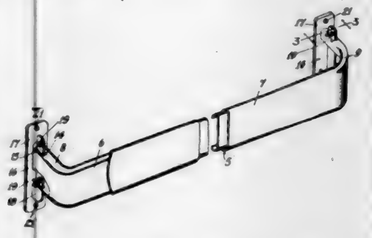
1,559,990. CURTAIN TAPESTRY HOLDBACK. DICKRAN M. SARKISIAN, Forest Hills, N. Y. Filed Mar. 3, 1923. Serial No. 622,486. 4 Claims. (Cl. 156—33.)



1. A device of the character described comprising a bracket having a pair of flanges, a curtain retaining element pivotally and slidably connected to said bracket, the pivotal end of said curtain retaining element being adapted to be swung about its pivotal connection with said bracket and thereafter moved transversely to the axis of its pivotal connection with said bracket into the space afforded between said flanges whereby the curtain retaining element is locked in curtain-retaining position.

---

1,559,991. CURTAIN ROD AND BRACKET THEREFOR. DICKRAN M. SARKISIAN, Forest Hills, N. Y. Filed Nov. 19, 1924. Serial No. 750,744. 17 Claims. (Cl. 156—22.)

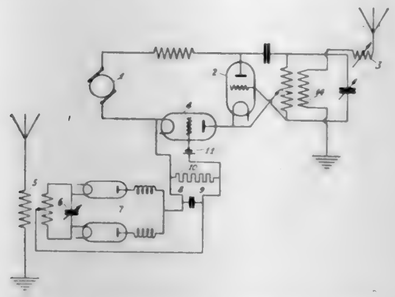


1. The combination with a sheet metal curtain rod having a flange provided with an opening so shaped as to provide a resilient wing projecting into the opening, of a bracket including a finger adapted to enter said opening and a rigid locking device carried by said finger and adapted to cooperate with said wing to retain the rod in position.

---

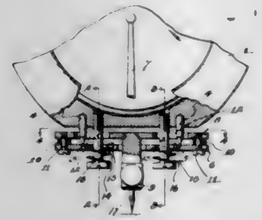
1,559,992. ARRANGEMENT FOR FREQUENCY TRANSFORMATION PARTICULARLY FOR OPERATING RELAY STATIONS. WALTER SCHAFFER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Aug. 18, 1922. Serial No. 582,612. 4 Claims. (Cl. 250—15.)

1. An arrangement for frequency transformation adapted for use in operating relay stations comprising a cathode tube having a grid, a tube sender controlled by said cathode tube, a receiving circuit connected to the grid, a rectifier in the receiving circuit for causing direct current potential in proportion to the received energy to be impressed on the grid, and means for applying an auxiliary potential to the grid to prevent the generation of oscillations in the tube sender when no energy is being received.



---

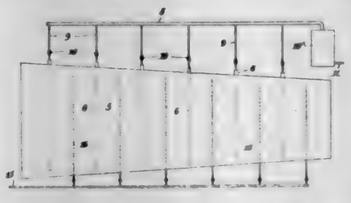
1,559,993. STYLUS-BAR MOUNTING. CARL SCRABIC, Urbana, Ohio. Filed Nov. 15, 1923. Serial No. 674,830. 2 Claims. (Cl. 274—35.)



2. In combination with a sound box casing, a stylus bar connected therewith for oscillatory movement, a plate rigidly connected with the bar, said plate having sockets formed therein which have their bases inclined in opposite directions, a resilient means engaged in said sockets for exerting pressure upon the plate in opposed directions, as and for the purpose set forth.

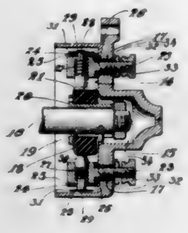
---

1,559,994. DESTRUCTIVE DISTILLATION OF WOOD. DUNCAN P. SHAW, Fayetteville, N. C. Filed Dec. 21, 1922. Serial No. 608,384. 4 Claims. (Cl. 203—6.)



1. The process of destructive distillation of wood, consisting in progressively burning a mass of such wood from one end to the other of a kiln in a substantially horizontal direction, and in withdrawing the distilled vapors from a zone in advance of said progressively burning portion, and substantially avoiding the intermixing with the distilled vapors of any gases of combustion which contain no tar vapors.

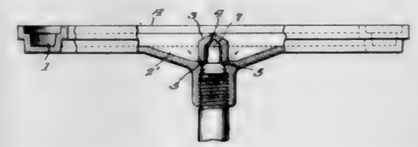
1,559,995. IGNITION TIMER FOR INTERNAL-COMBUSTION ENGINES. VANCE SHEARER, New York, N. Y. Filed June 21, 1924. Serial No. 721,392. 5 Claims. (Cl. 200—27.)



1. An ignition timer, comprising a casing, a plurality of plungers within the same, blocks for supporting the plungers and provided with terminals extending through the front of the casing, lock nuts secured to said terminals exterior of the casing, a rotary shaft extending into the casing, and a cam of insulating material keyed to said shaft and coacting with the plungers to make and break the electric circuit.

---

1,559,996. BURNER. HENRY M. SHEER, Quincy, Ill. Filed Feb. 9, 1924. Serial No. 691,636. 4 Claims. (Cl. 158—86.)



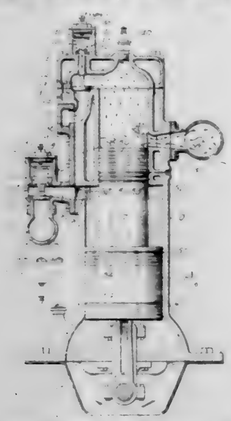
1. A burner having an oil groove extending circumferentially thereof, an arcuate elongated deep oil well concentric with and extending downwardly from a point in the bottom of the oil groove, and being substantially coextensive with the width thereof, said well having substantially flat, sloping ends, and having an inlet adjacent the bottom thereof for receiving oil, and means for normally maintaining the oil level at a point between the top and bottom of the oil well providing a burning surface within the oil well, the vapor rising from the burning surface and passing substantially around the groove.

---

1,559,997. TWO-CYCLE MULTICYCLINDER INTERNAL-COMBUSTION ENGINE. FRANK D. SHEPHERD, Salt Lake City, Utah. Filed July 22, 1921. Serial No. 486,681. 1 Claim. (Cl. 123—59.)

An internal combustion engine having two sets of cylinders, each set comprising two cylinders and a piston for each cylinder, one piston being a power piston and the other a charging piston, the cylinder of the power piston having inlet and exhaust ports and the cylinder of the charging piston having inlet and outlet ports, an inlet to the charging piston cylinder, a check valve controlling flow through said inlet, conduits connecting the outlet port of each charging cylinder of one set with the inlet

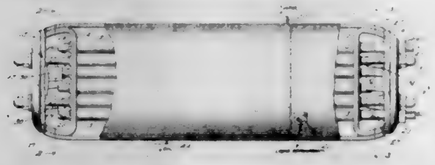
of each power cylinder of the other set, a plate separate from the cylinders containing one of said conduits, the



other conduit being formed by a channel in the cylinder wall and an adjacent side of said plate, and housings for said valves integral with said plate.

---

1,559,998. CONDENSER. THOMAS SHIPLEY, York, Pa. Filed May 20, 1924. Serial No. 714,709. 5 Claims. (Cl. 257—240.)



1. The combination with a condenser of the water tube type including a pair of spaced tube sheets, in which open-ended water tubes are fixed, and water boxes beyond the tube sheets; of removable tubular connectors mounted in the water boxes and having their ends frictionally retained in the open ends of the water tubes to connect certain of said tubes in series.

---

1,559,999. DANGER SIGNAL. EMANUEL F. SHIPMAN, Philadelphia, Pa. Filed June 20, 1925. Serial No. 38,396. 7 Claims. (Cl. 40—125.)

1. A portable danger sign, comprising two side frames hinged together at the top by separate hinge portions and provided with means for holding the lower portions of the frames in spaced relation, the upper hinged portions providing a space between the hinges, one of said frames provided with a tubular guide and the other of said frames provided with a handle in substantial alinement with the plane of the frame to which it is attached, said tubular guide and handle arranged in the space between the hinged portions.

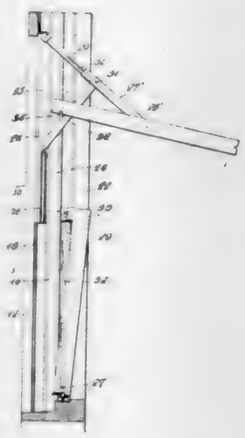
---

1,560,000. GARMENT BUTTON. MORRIS H. SIEGEL, New York, N. Y., assignor to Beatrice Sanville, New York, N. Y. Filed Aug. 15, 1924. Serial No. 732,194. 3 Claims. (Cl. 24—90.5.)

1. A garment button as characterized comprising a base, a head, connecting shank, and a retainer having members spaced apart from said base; and means for closing said members toward said base upon an intervening fabric adapted to clamp the fabric between said members and said base, said means embodying a ring slidably mounted on said shank for contracting the ends of said members upon said shank.

---

1,560,001. COMBINED SLIDABLE AND REVERSIBLE WINDOW SASHES. LEROY B. TAYLOR, Cleveland, Ohio. Filed May 12, 1924. Serial No. 712,586. 7 Claims. (Cl. 20—49.)



1. The combination of a window casing having opposed vertical ways, a slide member arranged in each way, a sash, and telescopic arm and link mechanism connecting the sash and slides whereby to permit vertical sliding and reversing of said sash.

---

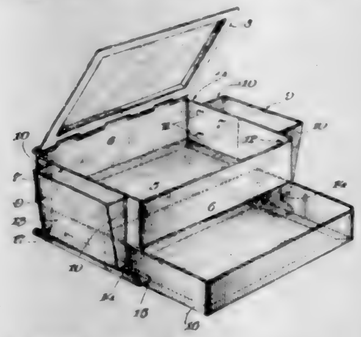
1,560,002. GLARESHIELD. CHRISTIAN THOMPSON, Salt Lake City, Utah. Filed May 17, 1924. Serial No. 713,971. 5 Claims. (Cl. 2—12.)

1. A device of the class described comprising a frame including resilient rearwardly extending side arms adapted to embrace the body portion of a hat or cap and grip the same for the support of the frame thereon and further including arms extending forwardly from

the hat embracing arms, a cross rod extending between the forwardly extending arms and supported thereby, and a light screen suspended from the said cross rod.

---

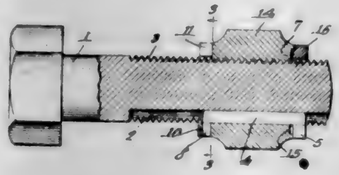
1,560,003. SMOKER'S OUTFIT. HENRY C. TRAUTE, Monmouth Beach, N. J., assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1924. Serial No. 738,353. 5 Claims. (Cl. 206—20.)



1. A smoker's outfit comprising a rectangular receptacle for cigarettes, exterior match-holding pockets affixed to the respective ends of said receptacle, and an ash-receiver movably supported beneath said receptacle, said pockets composed of sheet metal shaped to provide outwardly spaced wall portions and tapering ends depending below the body of the receptacle and affording guides and supports for the ash receiver.

---

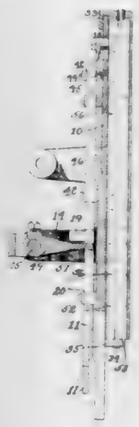
1,560,004. NUT LOCK. TOM R. WALKER, Alexandria, La. Filed Apr. 4, 1925. Serial No. 20,684. 1 Claim. (Cl. 151—9.)



In a nut lock, a key, and washers mounted on the ends of the key and disposed in approximately parallel planes about at right angles to the length of the key, one washer being of continuous annular form, and the other washer having its ends spaced apart. The space between the ends of the last-specified washer being so small that said washer is of substantially annular form, one washer having a pawl which projects toward the other washer, and a nut located between the washers and having a ratchet wherewith the pawl engages.

---

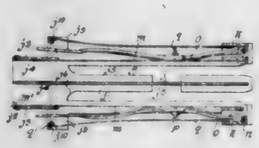
1,560,005. DEVICE TO PREVENT VIBRATION OF BOBBINS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 27, 1924. Serial No. 702,415. 9 Claims. (Cl. 139—245.)



1. In a weft replenishing mechanism for looms, a compartment for the bobbins, and means under control of the replenishing mechanism and normally restraining vibration of the bobbins to remove the restraint on the bobbins at indication of substantial weft exhaustion and to immediately thereafter move to bobbin restraining position on the same pick.

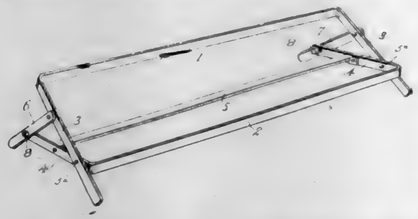
---

1,560,006. SHUTTLE-BOX MECHANISM. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 2, 1923. Serial No. 629,274. 7 Claims. (Cl. 139—184.)



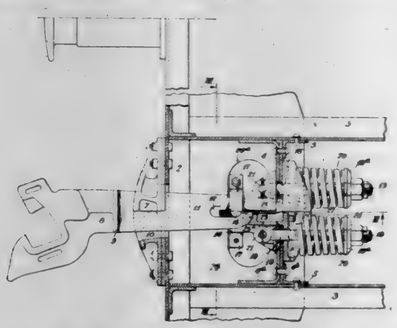
1. A shuttle-box having a wall against which the shuttle moves in wiping contact and opposite and substantially equidistant from said wall spaced supports arranged one at the mouth and the other at the other end portion of the box, a flexible strip bridging and held to said supports in contact with their inner surfaces, said strip forming another wall against which the shuttle moves in wiping contact, and means to exert inward yielding tensioning pressure on the strip between said supports, the strip as to the part thereof against which the shuttle thus moves being at all times nearly straight.

1,560,007. DISPLAY RACK. EDWARD B. WESTON, Dayton, Ohio. Filed Dec. 8, 1922. Serial No. 605,715. 2 Claims. (Cl. 211—14.)



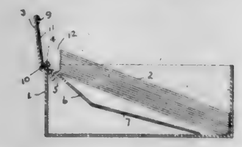
1. In a display rack, a pair of metal frames, open on one side, with rivets for pivoting the ends permanently together in opposed relation, and end supports, one for each end with rivets for pivoting the same permanently to the sides of the frame and outer removable bolts releasably securing the same to the ends of the inner frame to form an open rack adapted to be flattened out upon releasing the latter connection.

1,560,008. DRAFT AND BUFFING MECHANISM FOR RAILWAY CARS. JOHN WILLISON, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 18, 1923. Serial No. 639,767. 9 Claims. (Cl. 213—12.)



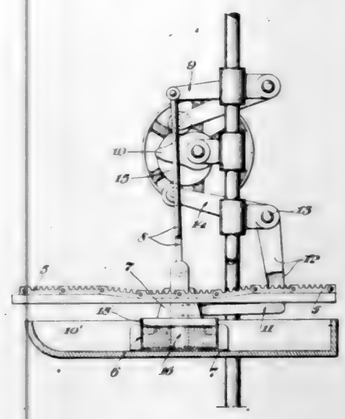
1. In draft and buffing mechanism, a draft equalizing member having a flexible connection with a coupler shank, a plurality of springs flexibly connected to said draft member, and a buffing member interposed between said springs and said coupler shank.

1,560,009. DISPLAY DEVICE. EDWARD H. WOBBER, San Francisco, Calif. Filed Jan. 19, 1925. Serial No. 3,297. 6 Claims. (Cl. 211—28.)



1. A display device comprising an upstanding portion having associated means constructed and adapted to receive a symbol card, a sloping lower portion on which merchandise is adapted to rest, and an edge engaging member between said portions, in combination with a container adapted to embrace merchandise and having an edge adapted to engage said member.

1,560,010. METHOD OF AND MEANS FOR TREATING MATCH SPLINTS. JACOB P. WRIGHT, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1924. Serial No. 749,596. 6 Claims. (Cl. 144—60.)

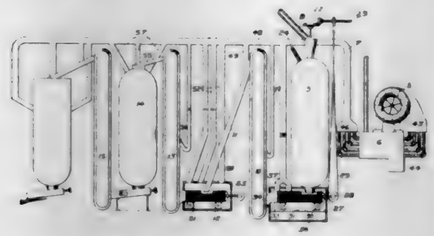


1. A process of making matches having wood splints, comprising wetting the splints and, while wet, pressing their projecting fine surface fibres against the bodies of the respective splints.

1,560,011. CASING SPEAR. JOHN A. YOUNG, Torrance, Calif., and PHILIP M. REA, West Chicago, Ill., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Oct. 13, 1923. Serial No. 668,293. 7 Claims. (Cl. 294—96.)

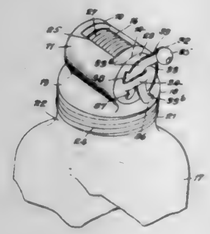
1. In a spear, the combination of a mandrel, a plurality of expansible slips carried thereby, holding means in the form of a latch disposed adjacent to the side of the mandrel, said mandrel having a plurality of recesses any one of which may be engaged by the said latch, said recesses cooperating with the latch to enable the slips to be held in a plurality of different set positions corresponding to the different recesses, said latch having an inclined face, and each recess having an inclined face to engage the inclined face of the latch and cooperating therewith to disengage the latch from the recess when the spear is jarred, said mandrel operating to expand the slips to engage the casing.

1,560,012. METHOD OF AND APPARATUS FOR CLEANING GRAIN. JOHN ANDREWS, Elizabeth, Pa. Filed Feb. 26, 1923. Serial No. 621,137. 8 Claims. (Cl. 83—28.)



1. The process of cleaning grain which consists in washing it in water, separating it from the bulk of the water by mechanical agitation while forcing air therethrough, and then passing it immediately through a successive series of drying devices, and continuously forcing currents of air therethrough in the agitator and in the drying devices.

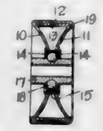
1,560,013. MEASURING STOPPER FOR CONTAINERS. JOSEPH M. ANGELETTI, New York, N. Y. Filed Aug. 14, 1923. Serial No. 657,412. 5 Claims. (Cl. 221—106.)



1. A measuring stopper for containers, comprising an outer chamber with an interiorly threaded cylindrical wall having an inlet and an outlet and having a wall closing one of its ends, an inner chamber of determined proportions having an end wall at the open end of the outer chamber and having an exteriorly threaded cylindrical wall screwed in the outer chamber, the cylindrical wall of the inner chamber having an opening registrable alternately with the inlet and outlet of the outer chamber when the inner chamber is partly rotated, a handle on the end wall of the inner chamber, provided with stops for limiting the rotary adjustments of the inner chamber when its opening registers with either the inlet or outlet of the outer chamber, and means on the outer chamber to allow of being removably fastened to a container so that its inlet registers with the mouth of the container.

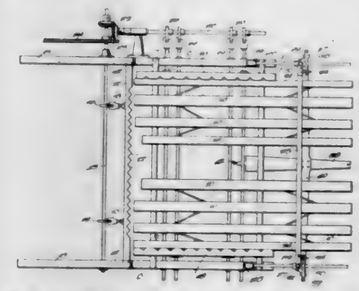
1,560,014. SKATE ROLLER. FRANK E. BILLINGS, Worcester, Mass., assignor to Worcester Stamped Metal Company, a Corporation of Massachusetts. Filed Sept. 25, 1922. Serial No. 590,310. 2 Claims. (Cl. 208—189.)

1. A skate roller comprising a pair of side members having overlapping peripheral flanges forming a double tread portion and having their side portions bent inwardly to form concave discs with axial openings, said discs each having the portion adjacent its axial opening forced axially outward to form a recess on the inner side of said disc, said recess having a straight side wall extending to and surrounded by an annular shoulder, and a straight cylindrical bearing ring of uniform radial



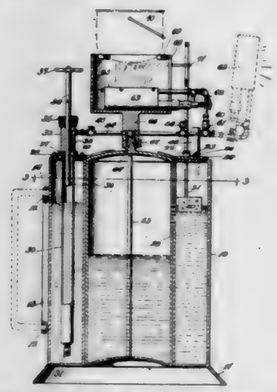
thickness throughout its length secured in said recesses betweeen said disc portions and radially positioned by said shoulders to form the peripheral bearing of a ball race.

1,560,015. LAY BOY. ALBERT BROADMEYER, Harrisburg, Pa., assignor to W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Jan. 12, 1923. Serial No. 612,322. 9 Claims. (Cl. 271—86.)



4. In a lay-boy, the combination with a support for a pile of sheets, of means for delivering sheets to the support, spaced slideways extending rearwardly from the support, heads slidable on the slideways and having upstanding guides, a tail-gate slidably mounted on the upstanding guides, means for elevating the tail-gate to permit the removal of the lower sheets of the pile, means for alining the sheets against the tail-gate.

1,560,016. COMBINED FIRE POT AND BRAZING TORCH. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor of one-half to Joseph Goodfellow, Fort Edward, N. Y. Filed May 15, 1923. Serial No. 639,173. 6 Claims. (Cl. 158—32.)

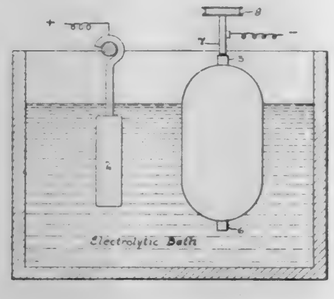


4. In a fire pot and torch, a fuel chamber, a pressure chamber, a displacement chamber extending into the fuel chamber and provided at the upper end of said dis-

placement chamber with an extension exteriorly of the fuel chamber, a burner, a discharge pipe connected with said extension and leading direct to the burner, a branch pipe connected with the discharge pipe and emptying into the pressure chamber, a piston reciprocable in the displacement chamber for displacing fuel upwardly through said extension and through the discharge pipe to the burner and through said branch pipe into the pressure chamber simultaneously, a valve in the discharge pipe between the branch pipe and burner for shutting off flow of fuel to the burner, and a valve in the branch pipe for shutting off flow of fuel through said branch pipe.

---

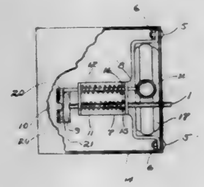
1,560,017. METHOD OF MAKING METALLIC FLOATS. CHESTER C. CLELAND, Cleveland Heights, and JOHN C. MULLINNIX, Cleveland, Ohio, assignors to The Reliance Gauge Column Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1924. Serial No. 749,841. 2 Claims. (Cl. 204—6.)



1. In a process for making an article of the character described, the steps which consist in partially immersing a suitable core, in an electrolytic bath, electro-depositing a metal coating on the immersed portion of such core, then reversing the position of the latter, electro-depositing another coating, and so on until an integral shell of varying thickness is built up, substantially as described.

---

1,560,018. SAVINGS BANK. MENEFEE R. CLEMENTS, South Bend, Ind. Filed Oct. 18, 1924. Serial No. 744,407. 1 Claim. (Cl. 194—69.)



In a device of the class described, the combination of an enclosing casing, a stem set, stem wound watch mounted therein, the winding stem of said watch having notches cut vertically therein, said watch being mounted in said enclosing casing by means of a combination support and carrier bracket, a locking bar passing through two points of said carrier and support bracket and engaging vertical slots of said winding stem, said locking bar being held in the locked position by means of a spring, said locking bar being a combination locking bar and coin bracket, said coin bracket being integral with locking bar, said coin bracket having a central vertical wall, the upper portion being composed of two separate and individual toes, said toes being bent backward at an angle off the central vertical portion, the lower portion of said coin bracket being bent forward at an angle of 90° off the central vertical portion, said portion forming a ledge, said ledge being horizontal to the central vertical portion, said ledge catching coin when dropped through said enclosing casing, said toes of the upper angular portion being bent at such an angle as to allow a coin pressed against said toes to drop free of said retaining ledge, a shaft passing through said carrier bracket and being held in an outward position, projecting on the outside of said enclosing casing, by means of a spring, said shaft when moved in an inward position passes between toes of said coin bracket, said coin bracket containing a coin obstructing space between said toes, causing said coin bracket to be moved backwards by said shaft engaging a coin in said coin bracket thereby releasing said locking bar from said slots of said winding stem, permitting winding of said watch movement.

---

1,560,019. TRIP REAMER. ROY E. COOPER, Shidler, Okla. Filed Apr. 15, 1925. Serial No. 23,320. 6 Claims. (Cl. 255—76.)

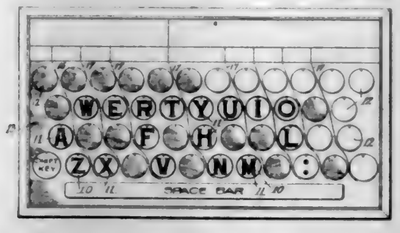
1. A reamer comprising a shank having its upper end adapted for connection with an operating element and its lower end portion provided with forks, and arms each including an elongated body having a flat inner face adapted to contact with the flat inner face of the other arm when the arms are swung towards each other and a head portion having a flat inner side face disposed at right angles to the flat inner face of the body said head portion extending beyond the flat inner face of the body to provide an overhanging shoulder and depending abutment face, said body having its upper end projecting from the flat inner side face of the head portion to provide an upper end face constituting an abutment shoulder for engaging the overhanging shoulder of the other arm and having a flat side edge face for engaging the depending abutment face of the other arm, the extreme upper ends of the heads being externally reduced to provide hinge ears fitting between said forks, and a pin passing through said forks and ears to pivotally mount the arms.

---

1,560,020. DEVICE FOR TEACHING THE TOUCH SYSTEM OF TYPEWRITING. FRANCIS X. CURLEY, Worcester, Mass. Filed Dec. 6, 1924. Serial No. 754,413. 3 Claims. (Cl. 35—16.)

1. In a device for teaching the touch system of typewriting, the combination with a bank of typewriter keys, of a device detachably mounted on each key and adapted

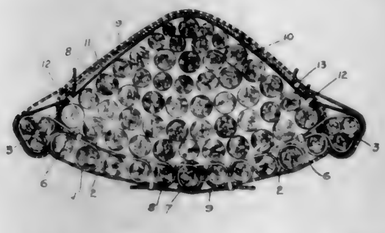
to be reversed and having on one side a character like the character represented by the key and having the other side blank, whereby any number of these devices



can be turned over on the blank side to conceal the characters and permit of the student's practicing on the particular ones concealed.

---

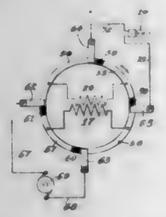
1,560,021. LOG RAFT. GILBERT G. DAVIS, Portland, Oreg. Filed Mar. 13, 1924. Serial No. 699,092. 3 Claims. (Cl. 9—15.)



1. A log raft comprising a raft floor, of longitudinally disposed logs and a superimposed load of logs bound upon the raft floor, the binding means of the superimposed load to the floor consisting of ropes fastened to one of the intermediate logs forming the floor and passed under the floor in opposite directions and up and over the load and fastened back upon themselves to the side logs of the raft.

---

1,560,022. TRANSFORMER-DIMMING METHOD AND APPARATUS. HARVEY CLINTON DEAN, Brooklyn, N. Y. Filed Jan. 6, 1922. Serial No. 527,506. 17 Claims. (Cl. 175—312.)



1. In combination, a lamp, a source of electrical energy, circuit connections for the lamp and source, a transformer having primary and secondary windings interposed in the circuit, with the secondary connected to the lamp and the primary to the source, means for moving said windings relative to each other thereby to vary the inductive coupling therebetween, and means controlled by the moving means to connect the lamp with the source directly at the end of said relative movement in one direction.

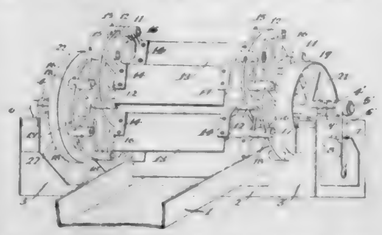
---

1,560,023. SHOE. HENRY DENNERT, Newport, Ky. Filed Nov. 22, 1924. Serial No. 751,453. 2 Claims. (Cl. 36—71.)

1. In a shoe, a strap interposed between the upper and lining of said shoe and adapted to extend upwardly around the arch from the shank, the end of said strap extending through openings in said lining and being provided with holes through which the shoe lace may be threaded.

---

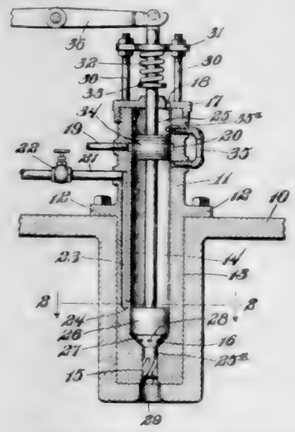
1,560,024. UNDERSHOT WATER WHEEL. CHESTER P. DENNHARDT, Los Angeles, Calif. Filed July 3, 1923. Serial No. 649,298. 3 Claims. (Cl. 170—151.)



1. In a water wheel, a pair of adjustably fixed end shafts provided with offset shafts supporting paddle-carrying wheels, a crank wheel on each end shaft, a paddle-carrying wheel on each offset shaft, and offset means connecting said offset shafts.

---

1,560,025. PUMPLESS INJECTION VALVE FOR DIESEL ENGINES. JACOB DE YOUNG, Providence, R. I. Filed Mar. 17, 1925. Serial No. 16,231. 8 Claims. (Cl. 123—33.)



1. In an injection nozzle for Diesel engines, a cylinder having a bore reduced at one end to form a valve seat, a fuel inlet for the cylinder in the major portion of the bore and in spaced relation to such valve seat, a piston valve fitting the cylinder and having one face

thereof adapted to coact with the valve seat, the piston valve having longitudinal bores opening through such face, said valve having a continuation fitting the reduced portion of the bore, the continuation at a point spaced from the piston valve a distance greater than the distance between the upper face of the piston valve and the remote side of the filling port being provided with grooves extending to the end thereof, means for holding said piston valve in engagement with said seat and means for shifting the piston valve out of engagement with said seat.

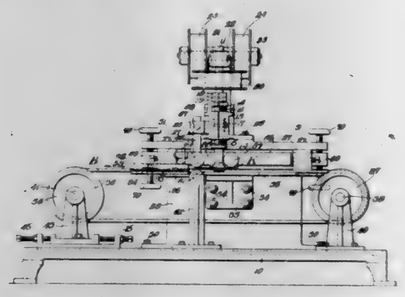
---

1,560,026. GAME. VINCENT C. DICKSON, Seattle, Wash. Filed Nov. 17, 1924. Serial No. 750,378. 1 Claim. (Cl. 273—96.)

A game comprising a panel having a handle formed at one end, the panel being provided with a series of openings, and such openings being arranged in V-shaped formation, and a plurality of numbered balls adapted to be bounced upon the ground to be caught in any one of the pockets, and the pockets being provided with numbers.

---

1,560,027. TAP-SPLITTING MACHINE. JOHN F. DONNELLY, Brockton, Mass., assignor to Panco Rubber Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Mar. 3, 1925. Serial No. 12,978. 5 Claims. (Cl. 69—16.)

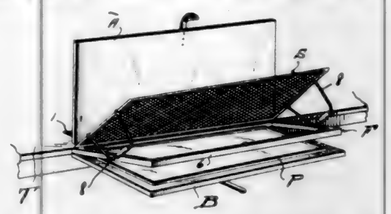


1. A tap splitting machine having a disk knife and means for rotating it, tap feeding means comprising a travelling belt, and a feed roll pressing the tap against the belt to carry the tap past the knife.

---

1,560,028. DOUGHNUT-TRANSFER DEVICE. JOHN B. DOYLE, Biddeford, Me. Filed Apr. 30, 1925. Serial No. 26,980. 2 Claims. (Cl. 214—1.1.)

1. A device for transferring doughnuts or the like to a dipping screen comprising, in combination, with a support, a board pivotally engaged with the support, a second board pivotally engaged with the support and adapted to be swung in a position overlying the first named board, a frame adapted to be applied between



the boards and to surround a pan mounted on one of the boards and a dipping screen to be supported over the pan by the frame.

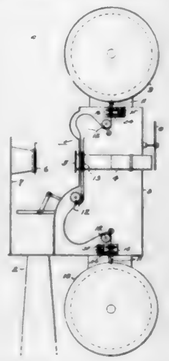
---

1,560,029. HANGER. CHARLES F. ERICKSON, New York, N. Y. Filed June 6, 1924. Serial No. 718,382. 1 Claim. (Cl. 40—145.1.)

A hanger comprising a body member having an annular flange, a yieldable disk seated within the annular flange and adhesively secured to the back of said body member, an adhesive surface formed on the exterior face of said disk, and a supporting hook stamped from said body member and extending from the front of the same.

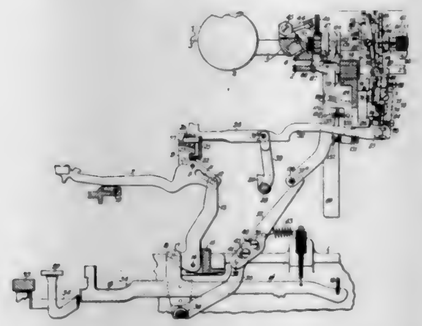
---

1,560,030. FIRE-EXTINGUISHING ATTACHMENT FOR MOTION-PICTURE MACHINES. GEORGE L. FARRAR, Columbus, Ohio. Filed Mar. 2, 1925. Serial No. 12,523. 4 Claims. (Cl. 88—17.)



1. A fire extinguishing attachment for motion picture machines comprising a frame, a block slidably mounted on said frame, a stationary roller mounted on said frame, a second roller cooperative with said first named roller and carried by said block, spring means acting on said block to maintain said rollers in mutual contact, and supplemental spring means cooperative with said rollers for permitting of slight relative separation independently of said first named spring means.

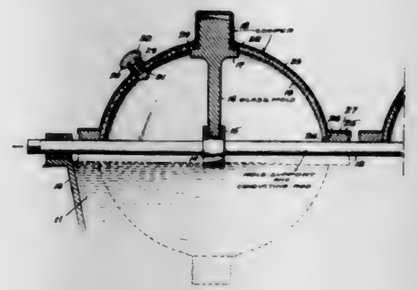
1,560,031. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 4, 1924. Serial No. 690,382. 40 Claims. (Cl. 197—82.)



1. In a typewriting machine, the combination of a power driven carriage, an escapement wheel, a key operated dog rocker, dogs mounted on said dog rocker and co-operative with said escapement wheel, and means separate from said dogs for operatively connecting said dog rocker with said carriage.

---

1,560,032. METHOD OF FORMING METAL REFLECTORS AND APPARATUS THEREFOR. BLASIUS BART, East Orange, N. J. Filed Sept. 23, 1921. Serial No. 502,679. 23 Claims. (Cl. 204—11.)

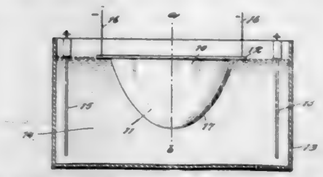


1. In the art of forming a metallic reflector with a threaded socket for receiving the light bulb, the method which consists in assembling a glass mold with an opening therethrough, inserting a threaded plug in said opening, screwing a preformed threaded socket onto the plug and forcing the plug into bearing engagement with the part of the mold outlining the opening, depositing a layer of silver on the mold, extending the layer up to the preformed socket and covering the silvered surface and the socket with a backing of copper electrolytically deposited to give strength to the reflector and to secure the performed socket in place.

---

1,560,033. METHOD OF GRINDING GLASS MOLDS. BLASIUS BART, East Orange, N. J. Filed Jan. 11, 1923. Serial No. 612,133. 3 Claims. (Cl. 51—278.)

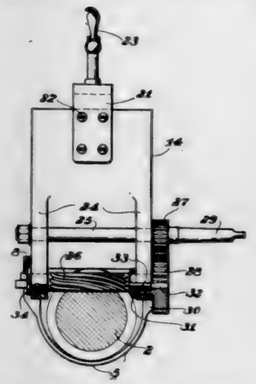
1. An improvement in the art of producing three-dimension facsimiles, accurate to molecular proportions, which consists in the formation of a succession of metal shells by molecular precipitation of each directly upon the same mold, and abrading an article having the general contour of said mold by the application of one after another



of said shells until a correspondence such as exists between the mold and shells is attained between the abraded article and an unabraded shell.

---

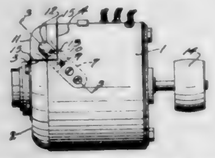
1,560,034. PORTABLE MILLING MACHINE. HUMPHRIES W. BREWER, Dubois, Pa. Filed Aug. 25, 1924. Serial No. 733,879. 1 Claim. (Cl. 90—12.)



In combination in a machine for milling transverse slots in crank pins, a bed plate having a longitudinal recess for fitting around the pin to be slotted and a guide member extending at right angles to said bed plate and rigid therewith, a tool carrier slidably mounted on said guide member for movement toward and from said pin, and provided at one end upon its front face with a pair of parallel ribs, a drive shaft and milling cutter shaft provided with a milling cutter mounted alongside each other in said ribs with the end of the milling cutter shaft of angular cross-section extending through one of the ribs, a spur gear on the outer side of said rib and having a hub fitting over said end of the shaft and extending through the rib, a nut threaded on the hub on the inner side of the rib, and a pinion on the drive shaft engaging said spur gear.

---

1,560,035. MOTOR-CASING CLOSURE. WILLARD C. BRINTON, New York, N. Y., assignor to Terminal Engineering Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 16, 1921. Serial No. 522,835. 2 Claims. (Cl. 172—36.)

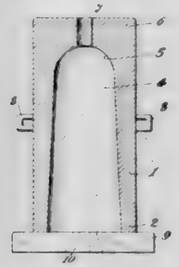


1. In a motor casing a cylindrical portion enclosing a motor body, an end portion affixed to said cylindrical portion and adapted to enclose the commutator end of

the motor, a removable section of said end portion bounded by planes perpendicular to the axis of the cylindrical portion and parallel thereto respectively, lugs within said casing by which the removable section is held and holding means for securing the section to the end portion substantially bisecting the angle between said planes.

---

1,560,036. METHOD AND APPARATUS FOR CASTING INGOTS. WILLIAM POWELL BROWN, Black Lick, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,649. 14 Claims. (Cl. 22—141.)



1. The method of casting steel ingots or the like which comprises forming a mass of molten steel into the shape of an ingot with the major axis thereof substantially vertical; chilling substantially the entire exterior of the ingot to form a frozen steel shell around the mass, and causing the chilling to progress downwardly and inwardly with the progress in the downward direction being at a higher rate than the progress in the inward direction.

---

1,560,037. FOUR-WHEEL BRAKE FOR AUTOMOBILES. JAY BUSHEY, New York, N. Y. Filed Aug. 25, 1923. Serial No. 659,365. 3 Claims. (Cl. 188—106.)

1. A four wheel brake for automobiles comprising a brake adapted to be applied to each wheel, a foot lever, a hand lever, a sub-lever pivoted intermediate its ends, operative connections between the opposite ends of said sub-lever and the front and rear wheel brakes respectively, means connecting the foot lever to the sub-lever, and a lost motion connection between the hand lever and the sub-lever, whereby power may be applied to the sub-lever through the foot lever alone for operating all four brakes or simultaneously through the foot lever and the hand lever.

---

1,560,038. BLASTING PROCESS AND MEANS THEREFOR. FRANK W. CAMP, San Francisco, Calif. Refile of application Serial No. 572,290, filed July 1, 1922. This application filed Feb. 2, 1925. Serial No. 6,497. 8 Claims. (Cl. 102—6.)

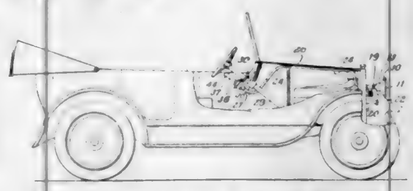
1. The method of blasting refractory formation which consists in dropping a weighted charge container into said formation, removing the weight, and exploding the charge.

3. The blasting process for breaking up refractory formations which consists of loading a charge of explosive into a casing adapted to be driven into the ground and then igniting a time fuse connected with exploding means

within said charge and then inserting the said casing in a weighted driving member and then dropping said member and said casing from a height whereby the casing is driven into the refractory material and then withdrawing the driving member before explosion of the charge.

---

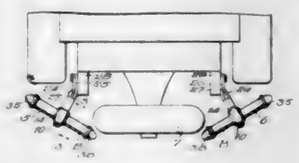
1,560,039. SPOTLIGHT. JOHN B. CASTINO, Chicago, Ill. Filed July 26, 1924. Serial No. 728,289. 11 Claims. (Cl. 240—61.)



1. In combination a lamp, a support therefor, a universal joint connection between the lamp and the said support, said joint having a passage therethrough an operating handle for imparting a universal movement to the lamp with respect to its support, said handle being detached from and remote from the lamp and support, and flexible elements operatively connecting the said handle with the lamp and extending through the said joint.

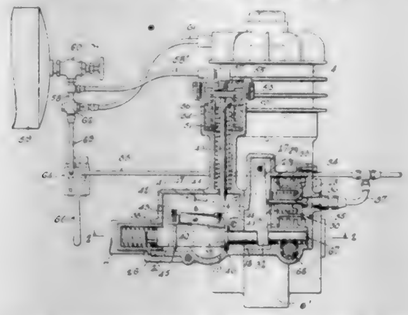
---

1,560,040. AUTOMOBILE BUMPER. FLOYD D. CERF, Chicago, Ill., assignor to Automobile Equipment Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1925. Serial No. 7,734. 7 Claims. (Cl. 293—55.)



6. In an automobile bumper, a tubular bumping member, an end cap therefor, the end of the bumping member entering said cap and the cap having a raised bead surrounding the end of the bumping member, and means passing through said bead for securing said cap and member together.

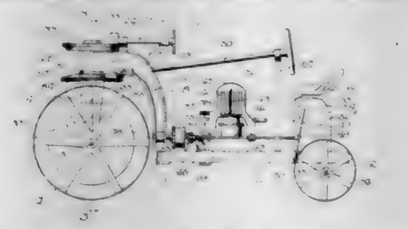
1,560,041. COMPRESSOR CONTROL. NIELS A. CHRISTENSEN, Milwaukee, Wis. Filed Apr. 9, 1924. Serial No. 705,364. 5 Claims. (Cl. 230—24.)



1. The combination with a pressure system, a compressed air reservoir supplying air to said system, a drive shaft and a compressor connected with said reservoir, of a clutch for operatively connecting or disconnecting the compressor with said shaft, clutch-shifting means, means tending to move said clutch-shifting means to shift the clutch out of engagement with said shaft, means operable by the pressure in said pressure system for moving said clutch-shifting means to shift the clutch into engagement with said shaft, a latch for holding the clutch in engagement, a latch for holding the clutch out of engagement, and means responsive to the pressure in the reservoir for controlling the operation of said latches.

---

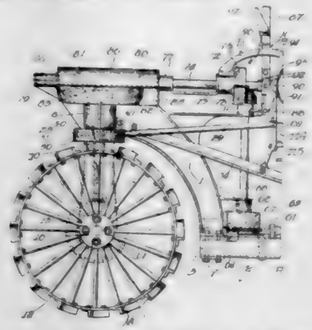
1,560,042. TRACTOR. GREGORY C. DAVISON, New London, Conn. Filed Nov. 24, 1919. Serial No. 340,229. Renewed Apr. 5, 1924. 6 Claims. (Cl. 180—26.)



1. In a machine of the class described, a relatively low main frame, an arched arm projecting forwardly and upwardly from the forward end of said relatively low main frame, a bearing head adjacent the forward end of said arched arm, a wheel carrying member revolvably journaled in said bearing head, a driving wheel carried by said member, a relatively large gear connected to drive said wheel, a shaft extending axially thru the wheel carrying member, said shaft having a relatively small pinion on its lower end in driving engagement with said relatively large gear, a relatively large gear on the upper end of said shaft, a second shaft arranged normal to said first shaft and having a relatively small pinion at its forward end in driving engagement with the relatively large gear on the upper end of said first shaft, a sprocket at the opposite end of said second shaft, a motor mounted on the main frame with its drive shaft extending longitudinally and journaled at its forward end in the arched arm projecting from the relatively low main frame, a clutch on said shaft, a sprocket on said clutch, a chain connecting said last named sprocket with the sprocket on said second shaft, a gear on the wheel-carrying member, and a shaft having a pinion at its forward end in mesh with said gear, said shaft extending back between runs of the chain connecting the motor shaft and the second shaft, and being adapted for manually turning the wheel-carrying member to steer the machine and reverse the direction of movement thereof.

---

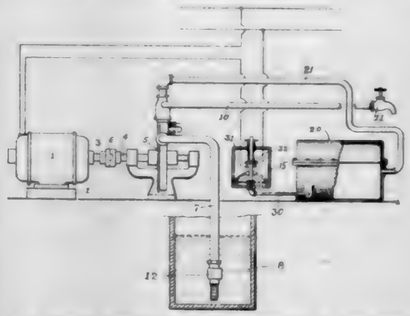
1,560,043. TRACTOR. GREGORY C. DAVISON, New London, Conn. Filed Apr. 17, 1920. Serial No. 374,544. 3 Claims. (Cl. 180—1.)



1. In a tractor the combination of a frame, a drive wheel, a shaft having driving connection with said drive wheel, a pair of driving members on said shaft, an axially shiftable driving shaft and a pair of driving members each mounted on said shaft for rotation and axial movement therewith, one of said last driving members meshing with one of said first driving members and providing high speed forward and high speed reverse of the drive wheel and the other of said last driving members meshing with the other of said first driving members and providing low speed forward and low speed reverse of the drive wheel, one of said last driving members being shifted out of mesh with its cooperating driving member and the other into mesh with its cooperating driving member upon axial shifting of the shaft in one direction and the first of said last driving members being shifted into mesh with its cooperating driving member and the other out of mesh with its cooperating member upon axial movement of the shaft in the opposite direction.

---

1,560,044. LIQUID SUPPLY SYSTEM. WILLIAM I. DERRICK, Moline, Ill., assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,541. 5 Claims. (Cl. 103—25.)



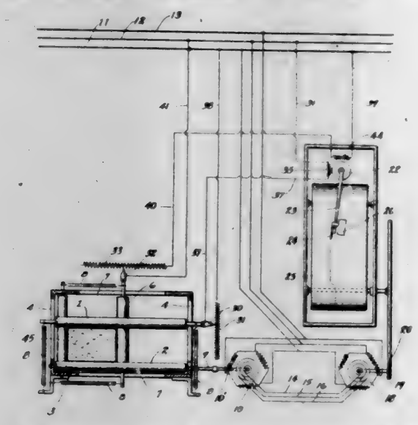
1. A liquid supply system comprising in combination a pump, a suction conduit extending from said pump to the source of supply, a discharge conduit leading from the pump, means for driving said pump, a pressure operating device for controlling said driving means, an accumulator interposed between said discharge conduit and said pressure operating device, said accumulator comprising a plurality of chambers, one of said cham-

bers containing a gas and being separated from the other chamber by a fluid tight medium, said medium being adapted to transmit pressure from one chamber to the other.

1,560,045. METHOD OF TREATING FLOUR. FREDERICK L. DUNLAP, Chicago, Ill., assignor to Industrial Appliance Company, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1923. Serial No. 653,819. 12 Claims. (Cl. 99—10.)

1. Treatment of wheat flour to produce a shortening effect which consists in increasing the intensity of acidity of the flour to a point above the optimum intensity for bread making.

1,560,046. METERING OR MEASURING DEVICE. IRA DYE, Seattle, Wash. Filed Nov. 12, 1924. Serial No. 749,474. 2 Claims. (Cl. 234—1.)



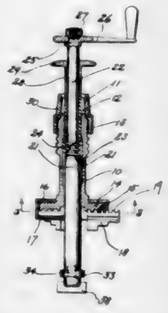
2. A metering device of the character described comprising, in combination, an electric circuit, a pair of horizontal rollers and a pair of vertical rollers between which pieces of material are advanced for measurement; one roller of each pair being movable from and toward the other in accordance with the width and thickness of pieces measured, an electrical contactor for each movable roller, a resistance element for each contactor and along which said contactors are adjustable to vary the resistance inversely as the distance between the paired rollers, a record strip, means operable by one of said rollers for advancing the record strip proportional to the length of pieces of material measured, and a watt meter having connections with the circuit through the two resistance elements having a recording element operable on the record strip and which is movable in accordance with the amount of resistance placed in the circuits.

1,560,047. IDENTIFICATION CERTIFICATE. JEFFERSON P. EDWARDS, Akron, Ohio. Filed Oct. 26, 1923. Serial No. 670,861. 1 Claim. (Cl. 283—7.)

In a card system of identification, in combination, a validating certificate provided with indicia designating the validating organization by which one or more of said certificates are issued to one or more depositaries thereof, and also bearing only a validator's signature and finger print to establish authentic orgin of the certificate and no identification of the bearer, the said finger print disposed in a panel occupying a portion of one end of the certificate, and an identification bearer's certificate provided with indicia corresponding with that of the validating certificate including the validator's signature and finger print for comparison with those on the validating certificate, and also having thereon the bearer's signature and finger print to be compared with those of the bearer to be submitted on demand, the validator's finger print of the identification certificate being located in a panel also occupying a portion of one

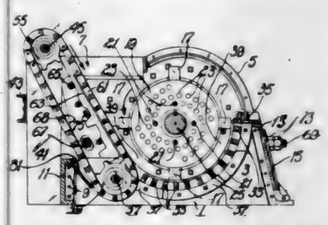
end of said certificate in a position corresponding to that of the validator's finger print upon the validating certificate so that when superposed upon the validating certificate the two aforesaid panels will be close together.

1,560,048. VALVE RESEATER. HERMAN H. FINGERLE, New York, N. Y. Filed Jan. 8, 1924. Serial No. 684,938. 3 Claims. (Cl. 90—12.5.)



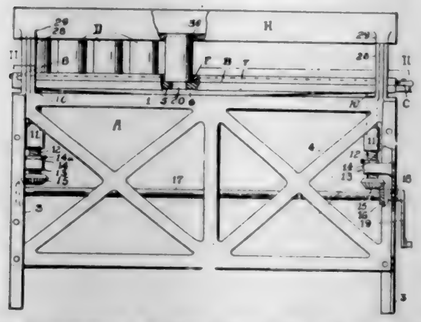
1. A valve reseater comprising a cylindrical body having a conical upper end, said conical end being slitted to give resiliency thereto, a sleeve insertable in said body, a threaded cap adapted to secure the sleeve in place, a spindle rotatable in said sleeve and body, a crank on said spindle, a spring on said spindle beneath the sleeve and adapted to urge said spindle downwardly, a hollow threaded base, the spindle passing thru said threaded base, diametrically opposed arcuate blades on said threaded base, and means engaging said blades for securing the thread base to the body.

1,560,049. CRUSHER. EDWARD H. FRICKEY, St. Louis, Mo. Filed Dec. 5, 1924. Serial No. 754,206. 7 Claims. (Cl. 83—11.)



1. In a crusher of the type described, the combination of rotary crushing elements, an endless chain of movable impact plates cooperating therewith and adapted to receive the impact of blows of said elements on material being crushed, and a platen backing said chain at the point of impact.

1,560,050. APPARATUS FOR FILLING CONTAINERS. RALPH W. GEARHART, Clearfield, Pa., assignor to Gearhart Sales Cabinet Co., Inc., Clearfield, Pa., a Corporation of Delaware. Filed Apr. 17, 1924. Serial No. 707,048. 10 Claims. (Cl. 226—93.)



3. In apparatus for filling containers with semi-solid and other substances, the combination of a table having a top surface upon which the empty containers are placed, a filling receptacle supported above said table and having its bottom provided with a plurality of apertures adapted to receive the upper ends of the containers mounted on said table, connections for causing relative movement between said table and receptacle whereby after the containers are mounted on said table their filling ends may be inserted into said apertures, a plurality of clamping plates mounted to slide parallel to the surface of the table and having their adjacent edges recessed to form means for engaging the containers laterally, a stationary member against which one end plate bears, a movable member bearing against the opposite end plate whereby said plates may be clamped in position to spot the containers relative to the apertures, means for adjusting the position of the stationary member, and a movable member bearing against the opposite end plate, and means for forcing the movable member toward the stationary member whereby the containers may be clamped in spotted relation to said apertures.

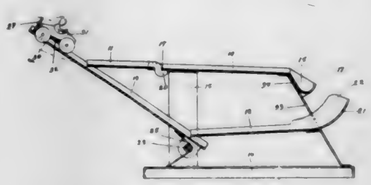
4. In apparatus for filling containers with semi-solid and other substances, the combination of a table upon which the empty containers are placed, a filling lid supported above the table and provided with orifices to receive the upper ends of the containers, connections for causing relative vertical movement between the table and the lid, members slidably mounted on said table and recessed to engage said containers to hold them in place, means for clamping said members in operative position, and means for adjusting the operative position of said members to properly spot the containers relative to the orifices in the lid.

5. In apparatus for filling containers with semi-solid and other substances, the combination of a filling table on which the empty containers are mounted, a filling lid mounted above said table, said lid being provided with apertures to receive the upper ends of the containers, connections whereby relative vertical movement may be caused between the table and the lid when the latter is horizontally disposed whereby the upper ends of the containers may be inserted in the apertures for the filling operation and may be withdrawn from the apertures after the containers are filled, and a filling hopper slidably mounted on said lid whereby the contents of said hopper is fed down through the apertures into said containers.

1,560,051. STRUT ROD. CHARLES GITZENDANNER, Brooklyn, N. Y. Filed Feb. 21, 1922. Serial No. 538,311. 5 Claims. (Cl. 267—66.)

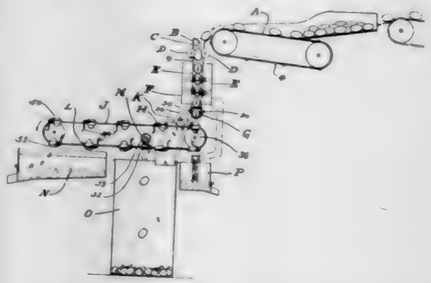
1. In an automobile, front axle and two longitudinal sills spring mounted thereon, two strut rods rigidly secured to the axle each having a rearwardly extending straight portion and an integral reversed curved rear spring portion, the rear end terminating in a flat horizontal portion lying against the surface of the underside of the sill and having an extended bearing thereon, and means to rigidly clamp said rear end to the under side of the sill.

1,560,052. MECHANICAL TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Feb. 6, 1925. Serial No. 7,247. 12 Claims. (Cl. 104—55.)



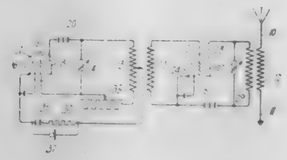
1. A toy comprising an upper track, lower track of greater length than upper track, means for elevating the end of one section of the lower track and to elevate object to travel on the track by gravity, the elevating of one end of the lower track serves to elevate the object from the lower track to the upper track from whence it rolls in one direction and then reverses and rolls in an opposite direction to return to position to be again elevated.

1,560,053. EGG MACHINERY AND PROCESS. HARRY E. HARKIN, Ridgefield Park, N. J., assignor to Egg Machinery Company, Inc., a Corporation of New Jersey. Filed Dec. 15, 1922. Serial No. 607,192. 46 Claims. (Cl. 146—2.)



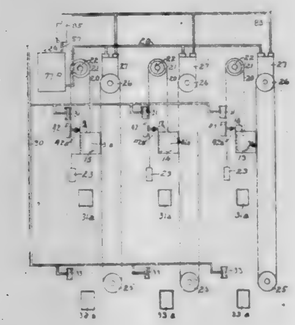
1. A method of separating the contents of eggs from the shell, comprising the positioning of an egg with its axis vertical, forming an aperture in the side of the egg, passing the egg into an upright receiver, spinning the egg and expelling the albumen, and automatically controlling the removal of the egg from the spinning container.

1,560,054. MODULATED-WAVE TRANSMISSION. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Sept. 21, 1915, Serial No. 51,761, Patent No. 1,343,562, dated June 15, 1920. Divided and this application filed June 4, 1920. Serial No. 386,451. 9 Claims. (Cl. 179—171.)



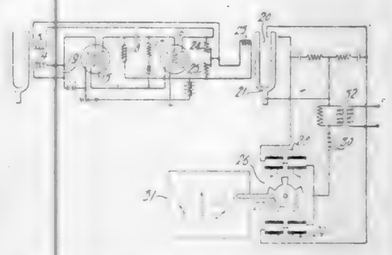
1. A modulating system comprising an electron discharge device, means including a tuned frequency-determining loop circuit associated therewith whereby said device generates high frequency oscillations of a definite frequency determined principally by the tuning of said circuit, means including a device for translating sound waves into electrical variations for causing the oscillations generated thereby to vary in accordance with said sound waves, and a resistance in the tuned frequency-determining circuit of such a value as to restrain to a comparatively small intensity the oscillations produced.

1,560,055. ELEVATOR TRANSMISSION SYSTEM. MYRON F. HILL, New York, N. Y. Filed Oct. 19, 1922. Serial No. 595,509. 47 Claims. (Cl. 187—52.)



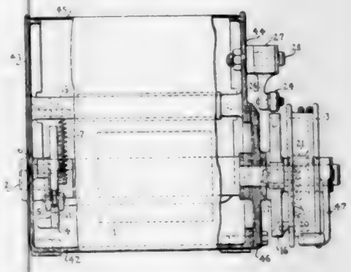
15. In an elevator system, an elevator shaft, a shaft door, a floor level thereat, an elevator car, a floor level therein, an air supply and conduits for the shaft, air operated devices for the car, conduits on the car leading to the air operated devices, and transfer devices between the shaft conduits and the car conduits to pass compressed air from one to the other, including a member on the shaft and a member on the car, located to interconnect to transfer air, a support for one of said devices having a limited lateral freedom of movement, a channel on the other member to receive it, valve means on the car transfer member within said range automatically opened, and a valve in the shaft member, said shaft valve located in the wall of the said channel, said car member supported against air pressure displacement by the channel wall opposite said valve wall.

1,560,056. SOURCE OF WAVES OF CONSTANT FREQUENCY. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1923. Serial No. 635,901. 25 Claims. (Cl. 250—1.)



1. The combination of an alternating current generator, a tuning fork relay having a fundamental frequency equal to the frequency of the generator and driven by current therefrom, and a work circuit coupled to the relay.

1,560,057. CIRCUIT CONTROLLER. RICHARD B. HUNTER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 6, 1922. Serial No. 534,467. 11 Claims. (Cl. 254—173.)

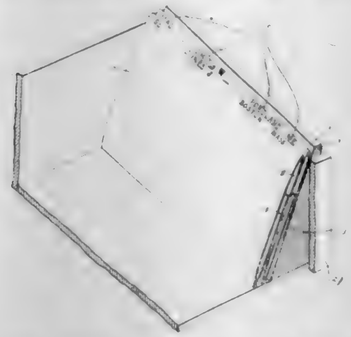


1. In a motor controller, the combination with a control element movable in opposite directions from an intermediate position to establish reverse power connections for the motor, an operating member for said element movable with respect thereto, a releasable connection between said member and said element including co-operating latching parts, one fixed to said element and the other movable with said operating member and a tripping member normally in an intermediate position and movable in opposite directions from such position to trip said second mentioned latching part.

1,560,058. CARD INDEX. JOHN JAMIESON, Portland, Me. Filed June 8, 1923. Serial No. 644,137. 2 Claims. (Cl. 129—16.5.)

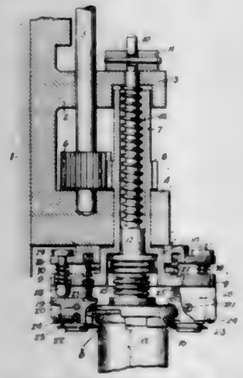
1. A filing card adapted to be placed edgewise with other like cards in a container, said card being composed of a flexible sheet folded on two parallel lines with the edge portions overlapping and with one edge portion extending upwardly inside the other edge portion and terminating an appreciable distance between the upper fold, the front surface of the card adjacent the upper fold bearing suitable indicia, the arrangement being such that in a series of said cards grouped in a container, the upper edge portion of each card is spaced from the corresponding portion of the next card, to

permit the reading of indicia on said upper edge portion, the said folds forming the upper and lower edges of the card, the member forming the front side of the body



being bulged outward below the upper fold, and including the said indicia-bearing portion, the card being provided with a reinforcing strip holding said indicia-bearing portion in an inclined position.

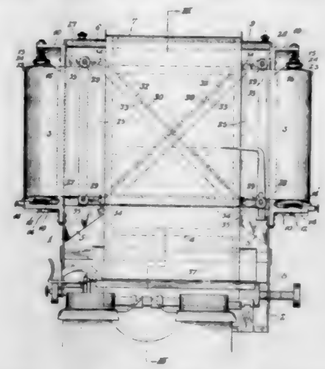
1,560,059. HEAD FOR SPINNING CLOSURES ON BOTTLES, JARS, AND THE LIKE. JOHN A. JOHNSON, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,497. 4 Claims. (Cl. 226—87.)



1. A head for spinning closures on containers comprising a slide block, a sleeve vertically slidable therein and terminating in its lower end in a frame, means for revolving said sleeve, a block swingingly mounted in the lower part of said frame, a spinning disk revolvably mounted on said block and adapted to contact with a closure, a ring on said frame between it and the block, yieldable means for normally separating the frame and ring, a button mounted on said ring and adapted to bear against the outer end of the swinging block, a plunger mounted on the slide block within the sleeve, the lower end of which is adapted to bear on a closure top, and means on said plunger for exerting a sealing pressure on a closure.

1,560,060. CARBON-PAPER FEEDING DEVICE FOR DUPLICATING TYPEWRITING MACHINES. EDWARD PHILIP KECK, Cleveland, Ohio, assignor to Arthur S. Gilman, Cleveland, Ohio. Filed July 19, 1923. Serial No. 652,509. 5 Claims. (Cl. 197—134.)

1. In a device of the class described, the combination of means for guiding a plurality of manifold forms and mounted upon the platen-carriage of a typewriting machine; a carbon-roll mounted upon said guiding means laterally thereof, and having its axis extending in the direction of feed of said forms, a carbon-sheet guide having one end secured to the form-guide frame; said carbon-sheet guide having a guiding surface extending

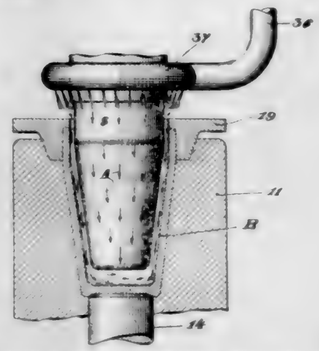


at an angle of forty-five degrees, with reference to the direction of travel of said forms, whereby the carbon-sheet from said roll may be fed in such direction of travel and means for transversely adjusting said carbon-sheet guide to accommodate manifold forms of various widths.

1,560,061. SELF-FILLING FOUNTAIN PEN. HERBERT W. KISH, Chicago, Ill. Filed Nov. 19, 1924. Serial No. 750,771. 6 Claims. (Cl. 120—46.)

1. A flexible writing fluid container adapted for use with fountain pens having reinforcing wires embedded and extending longitudinally thereof.

1,560,062. METHOD AND APPARATUS FOR COOLING GLASSWARE AND THE LIKE. PETER KUCERA, Pittsburgh, Pa., assignor to Capstan Glass Company, South Connellsville, Pa., a Corporation of Delaware. Filed Mar. 12, 1920. Serial No. 365,154. 24 Claims. (Cl. 49—40.)



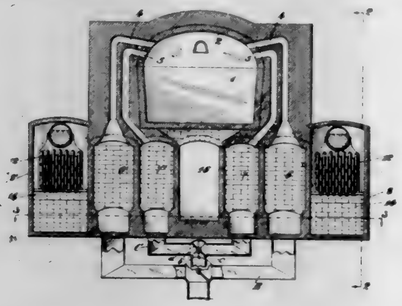
1. The method of cooling pressed glassware and the like which comprises forming an article by pressing a suitable charge between movable shaping members, with-

drawing certain of the shaping members from the finished article and maintaining a cooling medium under pressure between the articles and the withdrawn member during the entire time the member is leaving the article and with the space between the article and the withdrawn member open to atmosphere.

24. Glass shaping mechanism comprising a pair of cooperating mold members, means to bring said mold members together to mold a glass article, means to separate said mold members after the article has been formed, and means to circulate a cooling fluid into and out of the article while the mold members are being separated.

---

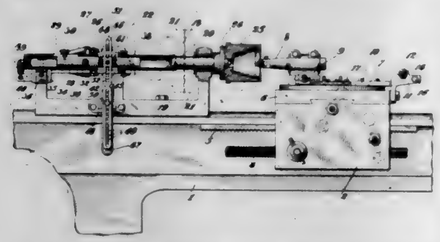
1,560,063. METHOD AND APPARATUS FOR CONSERVING HEAT FROM INDUSTRIAL FURNACES. PETER KUCERA, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed Aug. 14, 1920. Serial No. 403,558. 10 Claims. (Cl. 122—7.)



1. The method of operating an industrial furnace and a pair of boilers in conjunction which comprises storing a portion of the heat of the products of combustion of the furnace; during alternate intervals using a further portion of the heat of the products of combustion to heat the first boiler and utilizing fresh fuel to heat the second boiler; and during intermediate intervals utilizing a further portion of the heat of the products of combustion to heat the second boiler and utilizing fresh fuel to heat the first boiler.

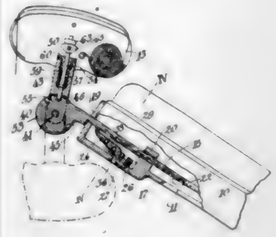
---

1,560,064. FORMING MACHINE. PETER KUCERA, South Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed Dec. 10, 1921. Serial No. 521,315. 22 Claims. (Cl. 82—14.)



2. A machine for forming shapes comprising a pattern, a tool guided by said pattern, a taper bar to cause said tool to vary laterally from the normal path of the tool as controlled by said pattern, means to adjust said taper bar, a travel control lever for controlling the effective length of the pattern, and means to adjust said lever to predetermine the effect thereof upon the final form.

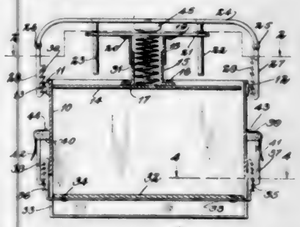
1,560,065. HEADREST FOR BARBER OR LIKE CHAIRS. GIUSEPPE CARMELO LARAIA, New York, N. Y. Filed June 9, 1921. Serial No. 476,173. 9 Claims. (Cl. 155—177.)



1. In combination, a barber or like chair head-rest, a pivotal connection for said head-rest, and means for locking said head-rest in different positions around said pivotal connection, said means comprising a locking pin, operating means mounted transversely of said locking pin and projecting at the side of said head-rest, said operating means comprising a rock shaft, and a part adapted to engage said locking pin for sliding said pin into and out of locking position.

---

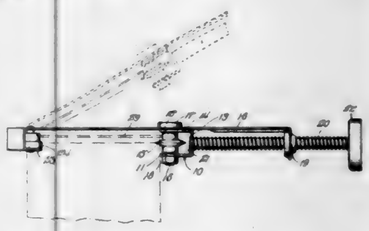
1,560,066. HAM BOILER. RICHARD LIPPERT, New York, N. Y. Filed May 18, 1925. Serial No. 31,083. 4 Claims. (Cl. 100—57.)



1. A ham boiler comprising a container, a movable top plate and a movable bottom plate in said container, means for exerting a pressure upon the top plate and a means for exerting a pressure upon the bottom plate for exerting a uniform pressure upon the ham in said container, hooks on said container, a means engaging said hooks for locking said bottom plate in its pressure exerting position.

---

1,560,067. CAN OPENER. PHILIP G. LUBER, Chicago, Ill. Filed May 24, 1924. Serial No. 715,582. 1 Claim. (Cl. 30—3.)



A can opener comprising a slotted frame, a pair of spaced rollers on one end of the frame, each roller having an annular shoulder to lie close under the head rim of a can, a U-shaped knife carrier slidable in said slot toward and from said rollers, a rotatable knife mounted between the arms of said carrier, and a screw to move said knife and carrier toward and from said rollers, the cutting edge of said knife, its screw and the face of the shoulders on said rollers being in a common plane.

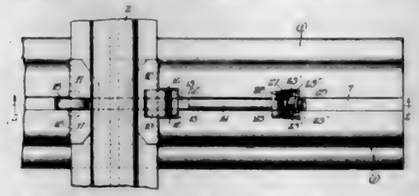
---

1,560,068. METHOD OF GENERATING GEARS. EARL E. MCCOLLUM, Downers Grove, Ill. Filed Sept. 2, 1921. Serial No. 497,999. 5 Claims. (Cl. 90—1.)

1. The herein described method of making cooperating gears which consists in producing an internal gear and an intermeshing pinion of standard pitch, then generating a second internal gear of equal pitch diameter but of a different number of teeth by means of a cutter which is a duplicate of said standard pinion.

---

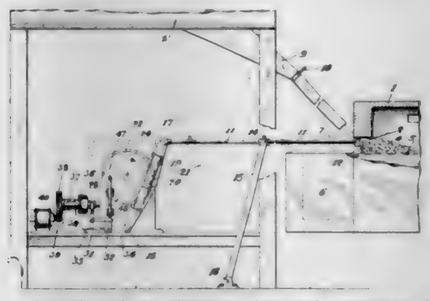
1,560,069. METAL CROSSTIE. FELIX L. MCMANUS, Philadelphia, Pa., and CHARLES P. KIMMEL, Gary, Ind. Continuation of application Serial No. 704,573, filed Apr. 7, 1924. This application filed Apr. 15, 1925. Serial No. 23,192. 19 Claims. (Cl. 238—77.)



1. A railway cross tie, comprising a hollow member slotted longitudinally, and a plate mounted upon said member, said plate being provided with portions adapted to embrace said hollow member and having a portion located in said slot, said portions being disposed in position to grip said hollow member after a predetermined distortion has occurred.

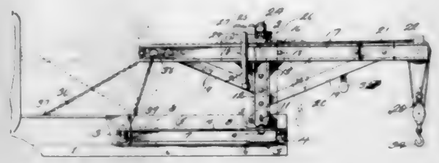
---

1,560,070. FURNACE FEED DEVICE. WILLIAM MCNAMARA, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a Corporation of Delaware. Filed Dec. 5, 1923. Serial No. 678,589. 11 Claims. (Cl. 214—23.)



1. A device of the character described comprising in combination a glass furnace or the like provided with a charging opening, a scraper mounted for longitudinal movement adjacent said opening, means for imparting to said scraper a reciprocating movement in a predetermined curved path to push material through said opening into said furnace and means to vary the path through which said scraper moves during its scraping movement.

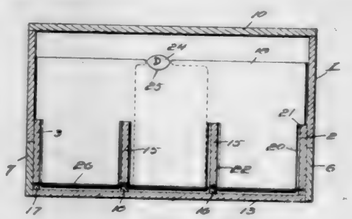
1,560,071. AUTOMOBILE HOIST. MYRON BAKER, Bridgeport, Conn. Filed Aug. 6, 1924. Serial No. 730,421. 2 Claims. (Cl. 212—65.)



1. A portable hoisting device comprising a horizontally disposed base, said base comprising spaced bars, brackets longitudinally adjustable on said spaced bars and extending upwardly, members carried by said brackets and extending downwardly and hooking under the spaced bars, vertically disposed standards pivotally connected to the upwardly extending brackets, horizontally disposed tiltable frame bars carried by the upwardly extending bars, said upwardly extending bars being rigidly secured to the tiltable frame bars at points spaced from their ends and brace members connecting the upwardly extending bars and the tiltable frame bars.

---

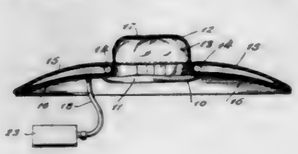
1,560,072. FILE. JULIUS R. BERNDT, Caldwell, Tex. Filed Nov. 25, 1924. Serial No. 752,198. 5 Claims. (Cl. 129—16.)



1. In a filing system, a cabinet, a plurality of files, means for dividing each of said files into indepenent compartments, said means comprising spaced partitions arranged in the cabinet, each of said files having slots formed therein for cooperation with the partitions, and means associated with the cabinet for facilitating the removal of the partitions with respect to the cabinet and the files.

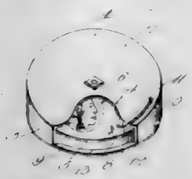
---

1,560,073. HAT PROTECTOR. MARIO BONTEMPI and JOSEPH DE LEO, Bronx, N. Y. Filed Jan. 26, 1924. Serial No. 688,656. 2 Claims. (Cl. 2—187.)



1. A head covering including an inflatable ring capable of encircling the crown of a hat adjacent the rim thereof, a plurality of ribs extending from said ring and having communication therewith, a flexible web connecting said ribs, and a crown covering forming an extension of said web and centrally disposed relative thereto so as to fit over and conform to the contour of said crown when said ring is disposed adjacent the rim of the hat.

1,560,074. COIN HOLDER. ALBERT H. FIELD, New York, N. Y. Filed June 21, 1923. Serial No. 646,902. 1 Claim. (Cl. 133—6.)



A coin holder including a casing having a side plate provided with a discharge opening, a rotatable coin delivery disk spanning said opening and having circumferentially spaced stops, and a spring arm stamped from said side plate and having a detent cooperable with said stops to hold the disk in any desired position.

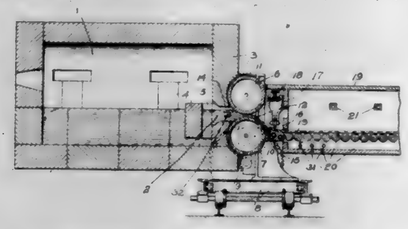
1,560,075. WATERPROOF PAINT. JOSEPH GALLIAN, San Francisco, Calif. Filed Dec. 13, 1924. Serial No. 755,719. 1 Claim. (Cl. 134—53.)

A composition of matter comprising a combination of white lead, turpentine, damar gum, beeswax, and saltpeter, substantially in the proportions specified.

1,560,076. METHOD AND APPARATUS FOR COMPLETE COMBUSTION. ELMER GATES, Washington, D. C.; Donald E. Gates administrator of said Elmer Gates, deceased. Filed Apr. 8, 1922. Serial No. 550,739. 6 Claims. (Cl. 110—28.)

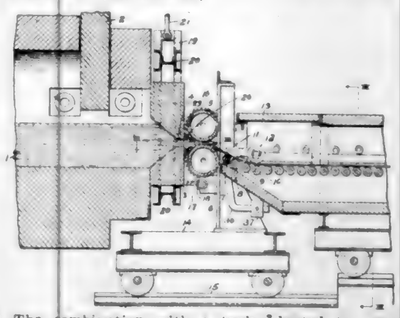
6. The method of obtaining a more complete combustion of finely divided fuel which consists in passing the burning fuel through a helical passageway bounded by incandescent walls, said passageway being composed of a number of turns.

1,560,077. APPARATUS FOR MAKING GLASS SHEETS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 23, 1922. Serial No. 531,054. 5 Claims. (Cl. 49—3.)



5. In combination in apparatus for forming sheet glass, a tank having an opening in its wall, a pair of cooled feed rolls spaced apart in opposition to the passage so that the space between the rolls constitutes the outlet for the feed passage, means for rotating the rolls, a leer adjacent the rolls, a platen between the rolls and leer, means for cooling the platen, and a cutting device above the platen, adapted to move transversely of the glass sheet and sever it.

1,560,078. APPARATUS FOR MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,126. 18 Claims. (Cl. 49—33.)

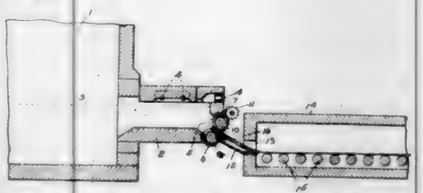


2. The combination with a tank adapted to carry a bath of molten glass, and rolling means at one side thereof for forming a ribbon or sheet of glass, of a clay outlet member constituting the wall of the tank intermediate the glass bath and the rolling means, a metal supporting framework for the outlet member, and means engaging such framework for removably supporting the slot member from above so that it may be removed or replaced by moving it edgewise.

1,560,079. METHOD AND APPARATUS FOR MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Aug. 8, 1923. Serial No. 656,441. 14 Claims. (Cl. 49—3.)

1. A method of manufacture of sheet glass which comprises melting and maintaining in a tank furnace a reservoir of molten glass, supplying the glass by the head pressure within the tank to a sheet forming pass between rolls arranged to control its rate of flow from the tank, and rotating the rolls and continuously forming a glass sheet having substantially uniform thickness throughout.

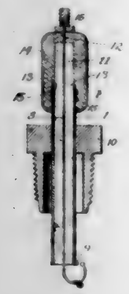
1,560,080. APPARATUS FOR MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Original application filed Aug. 8, 1923, Serial No. 656,441. Divided and this application filed May 1, 1925. Serial No. 27,172. 5 Claims. (Cl. 49—3.)



1. Means for continuously forming a glass sheet or ribbon from a body of molten glass, comprising a pair of parallel cooled rolls contacting with said molten body,

a table with a flat upper surface in advance of the rolls adapted to receive the glass from the rolls, means for cooling the table by a circulating fluid to promote the formation of a supporting skin upon the lower surface of the glass, and transfer means in advance of the table for receiving the glass and carrying it forward.

1,560,081. SPARK PLUG. HARRY GRAHAM GRIER, Brooklyn, N. Y. Filed Mar. 9, 1916. Serial No. 83,073. 3 Claims. (Cl. 123—169.)



1. A spark-plug, comprising a metallic tube; a conducting wire extending therethrough, the lower end of the wire forming one terminal of the spark-plug; a dielectric compacted or densified within the tube, surrounding the wire, insulating the same from the tube and forming the means for maintaining the wire in place; and a bushing secured to the outer face of the tube and effecting a gas-tight joint therewith.

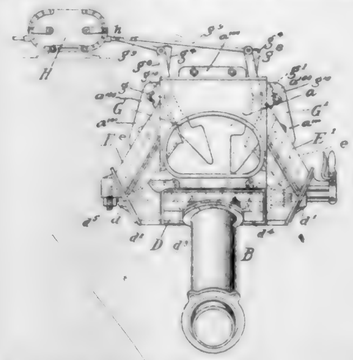
1,560,082. ATTACHMENT FOR VEHICLE SPRINGS. THOMAS S. HAMILTON, Los Angeles, Calif. Filed Mar. 26, 1924. Serial No. 702,093. Renewed Apr. 22, 1925. 9 Claims. (Cl. 267—49.)

1. An insert for leaf springs comprising a compressible member adapted to be inserted between the leaves of a spring and retained in position by compression, the edges of said member being provided with a coating of material adapted to form a seal to exclude moisture and oil.

1,560,083. MECHANICAL STOKER. WILLIAM T. HANNA, Cincinnati, Ohio. Filed July 5, 1919. Serial No. 308,851. 2 Claims. (Cl. 110—101.)

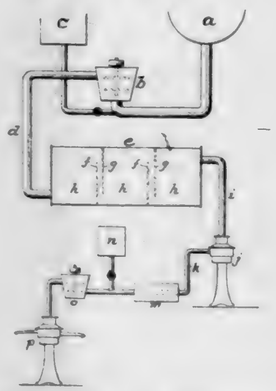
1. In a mechanical stoker for a furnace having a furnace door opening, the combination of a horizontal conveyer disposed below the furnace door opening adapted to move fuel towards its opposite ends, upwardly converging conveyers communicating with the ends of the first mentioned conveyer terminating adjacent the sides of the furnace door opening, and means directing the fuel from the second mentioned conveyers to the firing door opening.

2. The combination with a furnace having a firing opening in its wall, of a housing mounted upon the exterior of the wall embracing the opening, said housing having a wall spaced from the furnace, said wall having a firing opening in alignment and registering



with the firing opening of the furnace, and a distributer in the housing adapted to operate across the passage between the two firing openings, and to assume an inoperative position withdrawn from said passage.

1,560,084. PROCESS OF REFINING VEGETABLE OILS. CYRUS HOWARD HAPGOOD, Nutley, and GEORGE F. MAYNO, East Orange, N. J., assignors to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 6, 1924. Serial No. 690,904. 5 Claims. (Cl. 87—12.)

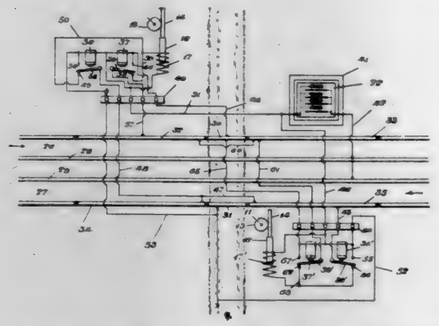


1. A continuous process for refining vegetable oils which comprises heating the oil and subjecting it to the action of a clarifying and bleaching agent, removing said agent together with the impurities carried off thereby, then mixing the decolorized oil, still containing its fatty acids but otherwise purified, with a saponifying agent in proportions adapted to effect a maximum saponification of fatty acids and a minimum saponification of oil, and separating the oil and soaps.

1,560,085. AUTOMATIC CROSSING GATE. ARO M. HARVEY, Kansas City, Mo. Filed Jan. 27, 1922. Serial No. 532,169. Renewed Sept. 5, 1925. 1 Claim. (Cl. 246—128.)

The combination of two railroad tracks, one rail of each track having an insulated rail section at the crossing and other insulated rail sections at both sides

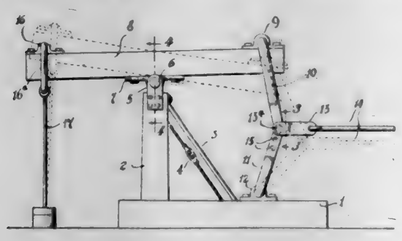
of the crossing, a source of electrical energy connected to the other rails of the track, crossing gates at opposite sides of the tracks, an electric motor for operating each gate, a pair of electro-magnets associated with each motor, the motors and electro-magnets each having one terminal connected to the source of electrical energy, electrical connections between the first named insulated rail section of each track and the other terminals of one electro-magnet of each pair, switches controlled by said electro-magnets, electrical connections between the other insulated rail sections



of each track and the switches of the corresponding magnets, said switches being normally connected with the other terminals of said motors and when attracted by the magnets opening said connections and making connections with the last named terminals of the corresponding magnets, whereby a train approaching the crossing in either direction on either track will operate both gates, and whereby both gates are also operated when a train approaches the crossing on one track with a train on the other track which has moved to or beyond the first named insulated rail section thereof at each crossing.

---

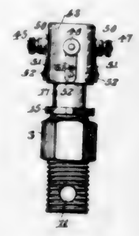
1,560,086. PUMP JACK. JULIOUS OWEN HEARN, Fentress, Tex. Filed Apr. 30, 1925. Serial No. 26,838. 1 Claim. (Cl. 74—3.)



A pump jack of the character described comprising a base, a supporting post on the base, rigid bracing means connected at its opposite ends to the upper end of the post and to a portion of said base, an adjustable bracing means connected at one end to an upper portion of the post and its opposite end to a portion of said base arranged in substantial parallelism to said rigid bracing means, a walking beam pivotally supported on the upper end of the post, a right angularly formed rod having a portion thereof mounted in bearings upon one end of said walking beam, the opposite end of such rod being flattened, a second right angularly formed rod having a portion thereof mounted for pivotal movement in bearings upon said base and having its remaining portion flattened and formed with a series of spaced openings, the flattened extremity of said first rod having openings formed therein, a link, and means adapted to be passed through the aligned openings in the flattened ends of said rods for pivotally and adjustably connecting said link thereto.

---

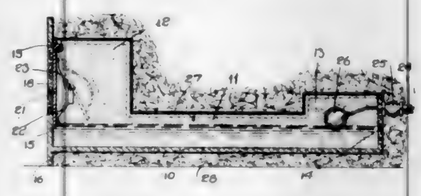
1,560,087. SPARK PLUG FOR INTERNAL-COMBUSTION MOTORS. CHARLES A. LAFFITEAU and WILLIAM C. HENDRIX, Savannah, Ga. Filed May 7, 1924. Serial No. 711,715. 3 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell, a core mounted therein and provided at its inner end with a plurality of pockets, a secondary electrode carried by the core and having its inner end arranged axially with respect to said pockets and its upper end projecting laterally from the core, a plurality of primary electrodes mounted in the core and having their inner ends extended in said pockets and spaced from the inner end of said secondary electrode, said secondary electrode common to said primary electrodes, and shiftable means carried by the core and adapted to selectively engage with said primary electrodes to cause the selected primary electrode to conct with the secondary electrode for ignition.

---

1,560,088. WATERING TROUGH. HENRY MARQUARDT, Norfolk, Nebr. Filed Mar. 14, 1924. Serial No. 699,262. 1 Claim. (Cl. 119—78.)



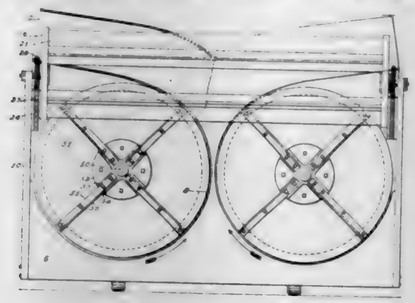
A watering trough consisting of an elongated body having water admission means at one end and an access opening at the other end, said access opening being vertically arranged, a flap closure hinged at its upper edge over said opening and covering the opening within said body, a resilient strip having its ends secured respectively to the upper and lower portions of said closure and having its central portion bowed rearwardly therefrom, and a closing weight secured to the central portion of said strip.

---

1,560,089. SNOW REMOVER FOR HIGHWAYS. JASPER MEIN and ALBERT MEIN, Osceola Township, Iowa. Filed Dec. 11, 1924. Serial No. 755,268. 3 Claims. (Cl. 37—43.)

1. In a snow remover, in combination, a transportable structure having a forwardly projecting inclined prow at its base, a pair of like wheels above the top of the rear of said prow rotatable reversely downwardly toward each other on longitudinal axes, a chute having a single

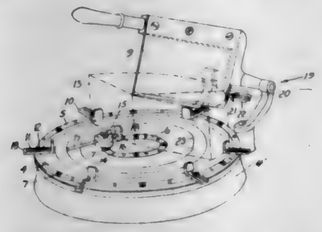
opening into which both disks deliver medially, and a rotatable device with transverse horizontal blades supported swingingly adjustably above the forward upper



parts of said disks to engage the tops of drifts and plane and propel thin layers thereof downwardly toward the disks.

---

1,560,090. CHEESE CUTTER. WALTER I. MILESTONE, Oakland, Calif., assignor of one-half to Alfred W. Green, Oakland, Calif. Filed Aug. 19, 1924. Serial No. 732,932. 3 Claims. (Cl. 31—28.)

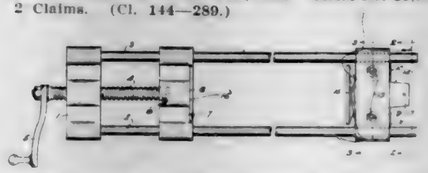


2. In combination with a cheese cutter, of a rotary table for the reception of a cheese having a ring at its outer margin recessed substantially flush with the table, and said ring supporting sliding brackets for holding the cheese in position on the table by contact therewith, and said table further provided near its center with a concentric similar ring supporting an adjustable clamp having a sliding bar to contact the exposed surface of the cheese when cut to prevent the cheese from shifting.

3. In a cheese cutter of the class described, a cutting blade having an extension and a sliding member thereon and supported thereby, and said member adapted to be set to contact the cheese to limit its backward movement in the cutting thereof.

---

1,560,091. CABINET CLAMP. LEANDER NYGREN, Birmingham, Ala. Filed June 22, 1925. Serial No. 38,031. 2 Claims. (Cl. 144—289.)



1. In a cabinet clamp of the character described, comprising a clamp frame having side rods and an upper screw actuated clamp member, a lower clamp member comprising a sleeve-like element embracing the clamp rods, a pair of wedge blocks loosely mounted in each end of the sleeve with their outer faces grooved and substantially coextensive in width with the sleeve and with their inner faces reversely tapered, and a work engaging element having a wedge shank loosely mounted in the sleeve and adapted to engage the taper faces of said blocks.

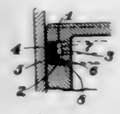
---

1,560,092. VARNISH-CAN LABEL. VICTOR ODQUIST, Yonkers, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 6, 1920. Serial No. 428,499. 1 Claim. (Cl. 40—11.)

A label holder in a sheet metal container handle, which consists of two curled or beaded edges of said handle to serve as side holding means and integral struck up parts of said handle material to serve as end holding means for a label positioned between said edges and said struck up parts.

---

1,560,093. PISTON RING. FREDERICK STRATTNER OBEM, Baltimore, Md. Filed Mar. 12, 1920. Serial No. 365,228. 1 Claim. (Cl. 74—109.)



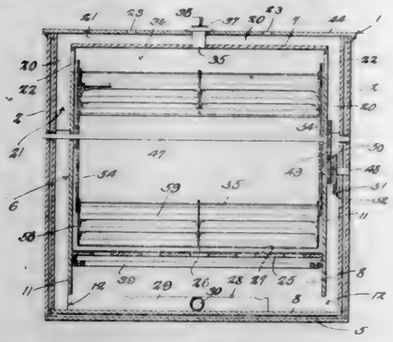
In combination, a piston for internal combustion engines having a single groove for receiving packing, said groove in cross section having one wall in a plane at right angles to the axis of the piston and having its opposite wall inclined to said axis and convergent with the wall first mentioned towards the mouth of the groove, both of the said walls together with the bottom wall being imperforate, and two rings located in said groove, each of which is a split spring ring, one of said rings being rectangular in cross section and fitting against the said right angular side of the groove, and the other of said rings being wedge shape, with one side conforming to and fitting against the ring first mentioned and its other side conforming to and fitting against the inclined side of said groove, both of said rings having comparatively broad outer faces to bear on the cylinder wall the wedge ring being of greater tension than the square ring, both of said spring rings occupying a space no wider than the groove of the piston, and with the lateral ring face nearest to the combustion chamber extending substantially in the plane of the upper wall of the groove clear to the cylinder wall substantially as described.

---

1,560,094. INCUBATOR. CHARLES F. OTT, Bucyrus, Ohio. Filed Feb. 1, 1924. Serial No. 689,959. 2 Claims. (Cl. 119—42.)

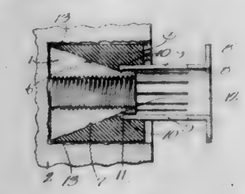
1. An incubator comprising a cabinet, a casing within the cabinet, and provided at its ends with upper and lower openings and an inverted U-shaped flue extended across the top of the casing and downwardly along the ends of the casing, the upper openings communicating with the space between the cabinet and the casing, independently of the flue, the top of the cabinet having an inlet opening communicating with the flue, and having an air outlet opening independent of the flue and communicating with the space between the top of the casing and

the top of the cabinet, an air outlet flue communicating with the interior of the casing, means for controlling the passage of air through the last specified flue thermostatically, means for heating the air within the casing, a rotary member journaled in the casing, egg carrying means on the rotary member, and means for operating the rotary member



---

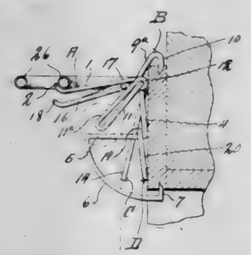
1,560,095. ANCHORING DEVICE. RALPH S. PEIRCE, Hinsdale, Ill. Filed Dec. 10, 1923. Serial No. 679,807. 16 Claims. (Cl. 72—105.)



1. An anchoring device including an expanding element; an expansible element soft relatively to the expanding element that is adapted to be within and is in expanding relation to the expansible element; and a second expanding element initially, permanently and directly assembled with said expansible element and in expanding relation thereto.

---

1,560,096. COMBINED CURTAIN AND SHADE HANGER. DOMINICK PELLETIER, Fall River, Mass. Filed Feb. 17, 1925. Serial No. 9,798. 3 Claims. (Cl. 156—24.)



1. A device of the class described comprising two members pivotally connected one to another, one of said members comprising a wire turned upon itself to provide an elongated loop, the side members of the loop having their outer end portions continued by downwardly and outwardly disposed arms terminating in upwardly directed penetrating members, said side members of the loop adjacent the arms being provided with eyes; the second member also comprising a wire formed to provide a bar insertible through the eyes of the first member, said bar adjacent its opposite ends being provided with angularly related arms terminating in inwardly disposed penetrating members, the wire at one end portion of the bar being forwardly directed to provide a loop, a retaining member coacting with the bar of the second named member, said retaining member being substantially V-shaped in form disposed over the bar of the first named member from the rear, one leg of said last named member being forwardly directed and returned to provide a loop, and a second leg extending downwardly from the bar and providing clamping means with the outwardly disposed arms of the first member.

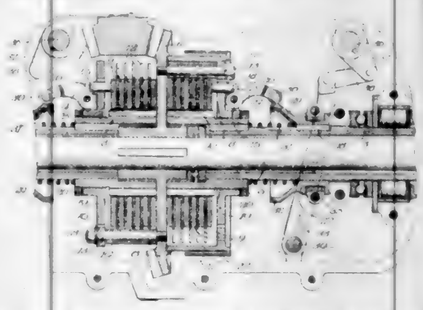
---

1,560,097. WEATHER STRIP. OTTO H. PETERSEN, Oakland, Calif. Filed June 20, 1925. Serial No. 38,570. 4 Claims. (Cl. 20—69.)

1. As an element of a weather strip, a strip of rubber substantially triangular in cross-section and provided with a solid head, said rubber strip being adapted to be attached to the bottom edge of a door and having each side thereof grooved longitudinally for flexing purposes.

---

1,560,098. COMBINED POWER-TRANSMITTING AND STEERING-GEAR MECHANISM. EDWARD O. POWERS, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Feb. 17, 1919. Serial No. 277,443. 2 Claims. (Cl. 180—17.)



1. In a self-propelled vehicle, a combined driving and steering mechanism, comprising a shaft, sleeves on said shaft, a rotary member fixed on said shaft between said sleeves, a pair of clutches to connect said sleeves with said member, devices to control said clutches independently of each other so that said shaft is rotatable in either sleeve while rotating with the other sleeve when the vehicle steered to the right or left, bearings to support said shaft and sleeves, and means to transmit power from said sleeves for driving and steering purposes, said devices comprising a pair of levers connected to operate said clutches, a shaft, cranks to operate said levers, and gearing to connect said shaft with said cranks, said clutches being normally closed, part of said gearing being operable to open one clutch alone when said shaft is turned to the right and othe other part of the gearing being operable to open the other clutch alone when said shaft is turned to the left.

---

1,560,099. HEAT-RESISTING ALLOY STEEL AND ARTICLES MADE THEREFROM. GEORGE R. RICH, Battle Creek, Mich. Filed Apr. 27, 1925. Serial No. 26,296. 2 Claims. (Cl. 75—1.)

1. An alloy steel having high resistance to hot oxidation, having a composition substantially as follows: chromium 7.00 to 8.00%; nickel 1.25 to 2.25%; phosphorus and sulphur together, under .03%; manganese .45 to .65%; silicon .50 to 1.00%; carbon .35 to .45% and the principal part of the remainder iron.

---

1,560,100. COVER FOR CANS. WALTER H. RICHMAN, Philadelphia, Pa. Original application filed Nov. 20, 1919, Serial No. 339,436. Divided and this application filed Nov. 2, 1922. Serial No. 598,506. 1 Claim. (Cl. 220—42.)

In a cover for a can; the combination with a single piece of metal forming a plane central circular area; an annular toric zone of outwardly convexly curved configuration, adjoining said plane central circular area, and in coaxial relation therewith; a second annular toric zone of shorter transverse curvature than said first toric zone and in coaxial relation therewith; a cylindrical zone in coaxial relation with said other zones and merging into said last named toric zone; and an outwardly flared toric zone at the free end of said cylindrical zone; the metal of said cover being internally convexly curved at said free edge, to form a continuous annular bearing surface in a plane at right angles to the common axis of said zones, and within the free edge of said cover, which edge is flared outwardly to such a degree that it cannot bear upon the can for which said cover forms a closure and said outwardly flared edge constitutes a reinforcement for said inner annular bearing surface of said cover and preventing deformation thereof under the stresses to which such covers are normally subjected; and a handle for said cover including a sectoral cylindrical portion extending parallel with said plane central area, spacing members at opposite ends thereof, extending to said cover in such outwardly diverged relation as to afford resistance to the lateral stresses to which such handles are subjected, and flange pads on said handle in contact with said cover; said handle having projections pressed in the metal thereof toward said cover and spot welded to the latter.

---

1,560,101. SANITARY TOOTHBRUSH RACK. ADOLPH P. RITTER, Chicago, Ill. Filed Oct. 8, 1923. Serial No. 667,110. 2 Claims. (Cl. 211—14.)

1. A tooth brush rack comprising a sheet metal member having a body portion with a right angled lateral flange and right angled end flanges having attaching means, and concave brush supporting ledges secured to said body portion and lateral flange in spaced relation to each other, one side of said rack being open for access to the interior thereof.

---

1,560,102. VANITY BOX. ERNEST F. RUECKERT, Providence, R. I. Filed Sept. 6, 1924. Serial No. 736,334. 12 Claims. (Cl. 132—83.)

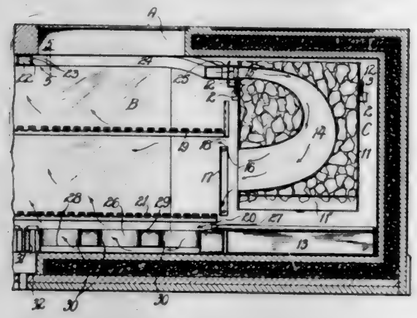
1. A device of the class described comprising a powder receptacle, a puff carried by said receptacle and normally contracted and projecting from the inner open end thereof and communicating therewith, a sleeve telescoping over said receptacle, said sleeve when in one position exposing the puff and in the other position enclosing the same, and a cap closing the outer end of the sleeve.

---

1,560,103. ELECTRIC DISCHARGE TUBE. MICHEL SCHMIERER, Friedenau, near Berlin, Germany. Filed Feb. 21, 1921. Serial No. 446,973. 3 Claims. (Cl. 176—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An electric discharge tube for the production of illuminated signs, designs and the like comprising an anode, a cathode cooperating therewith having extended front and back surfaces, said front surface being provided with means for outlining a sign or design and adapted to prevent the emanation of a negative luminous discharge from said surface other than that in the form of the said sign or design.

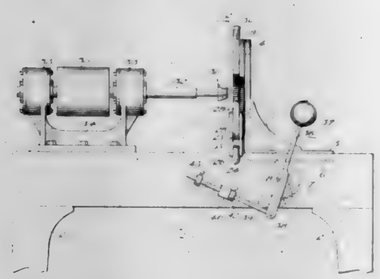
1,560,104. REFRIGERATOR. JOHN SCHULDE, St. Louis, Mo. Filed Apr. 11, 1924. Serial No. 705,904. 3 Claims. (Cl. 62—37.)



3. In a refrigerator comprising a case having a provision chamber and an ice chamber at one end thereof, an ice container in said chamber, an air cooling conduit within the ice container having an air inlet near the top thereof and an air outlet near the bottom, both inlet and outlet opening toward the provision chamber, a warm air collector extending across the provision chamber at the top thereof and at the end farthest from the ice container, said collector having an intake opening in one side, and air conduits leading from the ends of the collector to the inlet opening of the aforesaid cooling conduit, and a brine circulating tank in the bottom of the provision chamber, said tank having air circulating flues passing through it.

---

1,560,105. WOOD-CUTTING MACHINE. SILAS S. SEE, Roanoke, Va. Filed May 2, 1921. Serial No. 466,008. 3 Claims. (Cl. 144—136.)

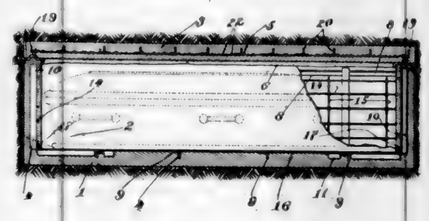


1. In a machine for cutting arcuate openings such as hand holes in stock, a rotary cutting tool mounted in relatively fixed position, a carriage movable toward and away from said tool axially thereof, a pivoted work holder on the carriage capable of oscillation in a plane at right angles to the axis of the tool, and means whereby the work holder may be moved for moving the work with respect to the tool.

---

1,560,106. ASPHALT VAULT. WILLIAM E. SHEENE, Baltimore, Md., assignor to The Asphalt Grave Vault Company, a Corporation of Maryland. Filed May 7, 1924. Serial No. 711,518. 8 Claims. (Cl. 72—7.)

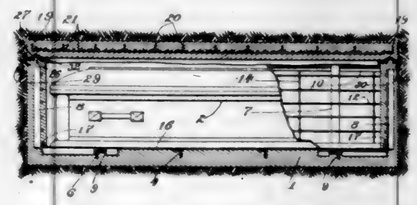
1. A moisture-proof burial vault to be buried in the ground to enclose and preserve a casket and the body therein, the vault structure having walls composed of bituminous mastic consisting of infusorial earth, grit and bitumen and a frame embedded in the mastic and



protected thereby, reinforcing the walls and forming a permanent structure at the temperatures and pressures to which it is subject under the conditions of burial.

---

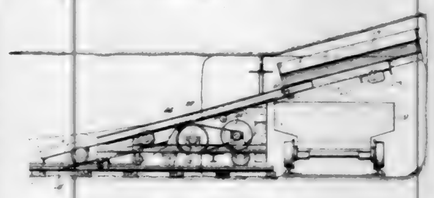
1,560,107. BURIAL VAULT. WILLIAM E. SHEENE, Baltimore, Md., assignor to The Asphalt Grave Vault Company, a Corporation of Maryland. Filed May 7, 1924. Serial No. 711,519. 15 Claims. (Cl. 72—7.)



1. A container for a casket to be buried in the ground, the same consisting of a vault and a cover member, an upright plate secured to the vault wall near but below the top and extending above the top of the vault wall forming a receptacle for fluid sealing material, the plate being so flexible as to be forced away from the wall when the cover is placed in position, placing the sealing material under pressure, the displacement of the plate permitting the sealing material to flow downward between the plate and the side of the vault and be forced up above the meeting edges of the wall and cover, providing a complete covering overlying the joint.

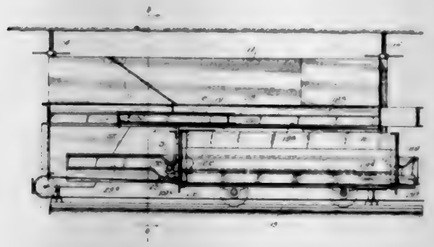
---

1,560,108. CAR AND UNLOADER. GEORGE N. SIMPSON, Chicago, Ill. Filed Mar. 6, 1925. Serial No. 13,490. 7 Claims. (Cl. 214—58.)



1. Apparatus of the character described comprising; a car having a platform with a bottomless body thereon; a slide having one end substantially on a level with the car platform and provided with a discharge opening; and means for drawing the car body off of the car platform onto said slide and over said discharge opening.

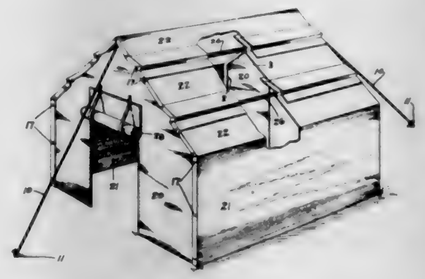
1,560,109. HOPPER AND CAR. GEORGE N. SIMPSON, Chicago, Ill. Filed Mar. 11, 1925. Serial No. 14,708. 14 Claims. (Cl. 214—41.)



1. A hopper adapted to receive a continuous supply of material; a car adapted to receive a load of material from the hopper; means for supporting the hopper a sufficient distance above the floor to permit the car to go under the same; a sliding bottom section at its forward end of said hopper; a part on said section at its forward edge; another part on said section substantially back of the forward edge; a movable part on the car; means whereby said movable part on the car will move to a position so that it will pass the part on the front edge of the movable section as the car goes under the hopper and engage the part back of the forward edge as the car moves further under the hopper whereby said sliding section is opened by such further movement of the car under the hopper; means whereby, upon movement of said car from a position under the hopper, said movable part will move to a position so that it will engage the part on the front edge of the movable section and close the same; and means whereby said movable part on the car will move to a position so that it will be disengaged from the part on the front edge of the movable section as the car leaves the hopper.

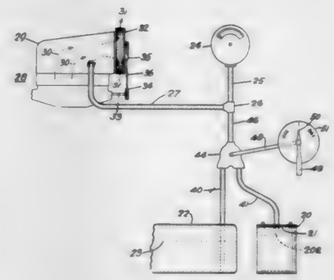
---

1,560,110. TENT. AUGUST W. SKOG, Minneapolis, Minn. Filed Apr. 3, 1922. Serial No. 549,312. 7 Claims. (Cl. 135—1.)



1. A tent comprising a frame having rafters and supporting posts, end and side wall panels mounted on said posts and rafters and roof panels having their ends connected to said rafters over the upper portions of said wall panels, a ridge pole connecting the rafters and means for pulling the rafters outwardly to tension the roof panels.

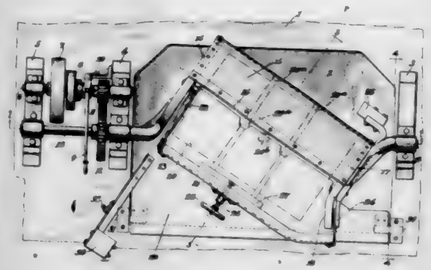
1,560,111. INDICATING DEVICE. WALTER W. RIEDEL, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 22, 1923. Serial No. 640,789. 3 Claims. (Cl. 116—118.)



3. Apparatus for determining inadequacy of liquid in vessels comprising, in combination, a plurality of vessels or containing liquids; of vacuum producing means, a device connected with said means for indicating partial vacuum; a plurality of ducts each for providing a vent to atmosphere and each extending to a certain level within a separate vessel for containing liquid; a valve body having ports connected respectively with said ducts and said indicating device; a valve operable to connect all the ports or to connect only one of the duct ports with the port connected with the indicating device; and means for indicating the vessel connected with the indicating device.

---

1,560,112. DRUM WASHER. CLANCY M. ROGERS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,777. 13 Claims. (Cl. 141—6.)



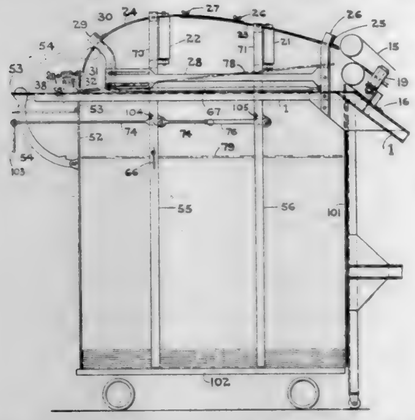
1. In a receptacle washing machine, the combination of a rotating mechanism, a receiving floor, and a rotatable cradle, for receiving a receptacle, so positioned that the cradle is not coaxial with the rotating mechanism, said cradle being horizontal and its lower portion on a level with the floor in one position in the rotation of the same.

---

1,560,113. AUTOMATIC SHEET-STACKING MACHINE. BEDROS K. SANDALJIAN, Groton, Conn. Filed Feb. 11, 1924. Serial No. 691,995. 4 Claims. (Cl. 214—6.)

1. In a machine of the class described, means for continuously receiving sheets, means for conveying said

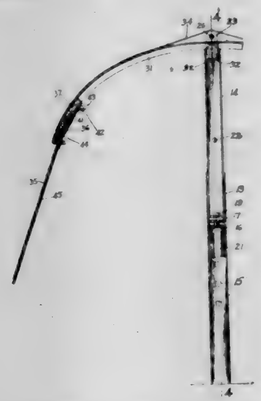
sheets, means for interrupting the passage of the sheets, a receptacle for the sheets, means for stacking the sheets



upon the receptacle and means for suspending the sheets when the receptacle is to be replaced.

---

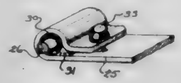
1,560,114. TENT. AUGUST W. SKOG, Minneapolis, Minn. Filed Sept. 22, 1923. Serial No. 664,260. 10 Claims. (Cl. 135—3.)



1. A tent comprising a ridge pole and supporting posts therefor, rafters extending outwardly and downwardly from said ridge pole, a flexible roof section fitting over said ridge pole and rafters, and means hinged on said rafters and adapted to swing to a position parallel substantially therewith and engaging said flexible roof section for drawing it taut over said ridge pole and rafters.

---

1,560,115. SPRING SUSPENSION. HINSDALE SMITH, Springfield, Mass. Filed July 17, 1923. Serial No. 652,019. 5 Claims. (Cl. 267—54.)



1. The combination of a shackle bolt, and a sleeve of anti-friction fabric surrounding the shank of the bolt, with a spring leaf bent through nearly a complete arc around said sleeve and then into spaced parallel relationship to the general plane of itself, and a wedge member in contact with only substantially that portion of the bushing which is coextensive with the remaining portion of the arc, and actuated by movement of said spring leaf.

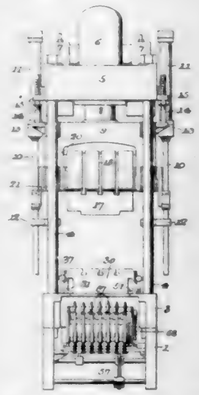
---

1,560,116. TREATMENT OF FINELY-DIVIDED COAL. WILLIAM WARWICK STENNING and WALTER HENRY BEASLEY, London, England, assignors to Minerals Separation North American Corporation, New York, N. Y. Filed Feb. 15, 1922. Serial No. 536,810. 16 Claims. (Cl. 44—1.)

1. A process for the treatment of finely divided coal wherein the coal is suspended in water, mixed with a binding medium and subjected to heat and to agitation without aeration to ensure the agglomeration of the coal particles.

---

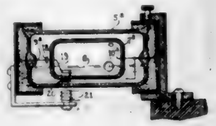
1,560,117. MOLDING PRESS. FRANCIS E. STEVENSON and THOMAS F. STACY, Mount Gilead, Ohio, assignors to The Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed Sept. 23, 1924. Serial No. 739,303. 16 Claims. (Cl. 18—16.)



1. A molding press comprising an upper press member including a platen, means for reciprocating said platen to and from pressing position, means for limiting the movement of the platen to a straight line, a mold carrying head carried by said platen, and means for tilting said head independent of the movement of the platen.

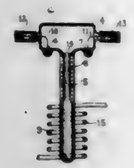
---

1,560,118. ELECTRIC SWITCH. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1921. Serial No. 500,016. 6 Claims. (Cl. 200—112.)



1. An electric switch comprising inner and outer containers, the outer container comprising a hermetically sealed insulating envelope, a conductive fluid included within said envelope to extend within said inner container, terminals within said containers, and means for effecting rotation of said inner container while maintaining said outer container in fixed position for interrupting and re-establishing conductivity between the portions of said fluid within the respective containers.

1,560,119. THERMALLY-OPERATED CIRCUIT CONTROLLER. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1921. Serial No. 500,017. 11 Claims. (Cl. 200—122.)



1. A circuit controller comprising a plurality of substantially stationary fluid contacts and a quantity of conductive fluid to be elevated for effecting physical union with said contacts jointly to thereby establish electrical conductivity therebetween.

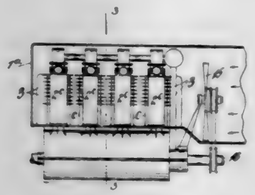
---

1,560,120. SPOOL CONSTRUCTION. EARL S. TEED, Akron, Ohio. Filed Jan. 12, 1923. Serial No. 612,200. 5 Claims. (Cl. 242—118.)

1. In spool construction, the combination of a tubular member formed of vulcanized compound, having a relatively thin wall, and being interiorly threaded at its ends, and end members of like material provided with hollow bosses threaded throughout a portion of their length to engage with said threaded tubular member ends, said bosses also being provided with an unthreaded smooth portion adapted to fit and bear against the unthreaded portion of said tubular member.

---

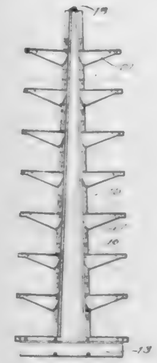
1,560,121. AIR-COOLING DEVICE FOR ENGINES. WILLIAM TREWHELLA, Trentham, Victoria, Australia. Filed June 5, 1922. Serial No. 565,871. 2 Claims. (Cl. 123—171.)



2. In a cooling device for engines, the combination with an engine comprising a plurality of cylinders mounted in parallel alinement having horizontal cooling fins thereon, of a casing enclosing the cylinders forming a main air chamber, a plurality of air flues on one side of the engine arranged centrally of the cylinders, and a plurality of separate air flues on the opposite side of the engine arranged centrally between the cylinders, each flue being open at the bottom and having an open side extending across the fins, said flues forming vertical air channels extending longitudinally of the cylinders, the channels on one side of the cylinders being opposite the flues on the opposite side of the cylinders, whereby the interior of the flues communicates with the longitudinal channels and passages between the fins and connects with the outside air through the opening in the bottom, and means for forcing air through the main air chamber and flues.

---

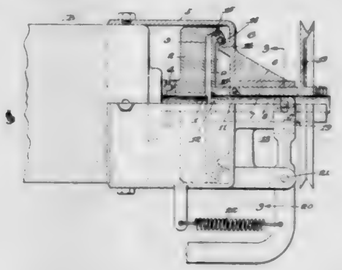
1,560,122. SHELF AND RACK CONSTRUCTION. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1920. Serial No. 360,979. 7 Claims. (Cl. 211—27.)



1. In a shelf or rack construction, the combination of a number of uprights, cantilever arms extending out therefrom and each consisting of a metal member returned upon itself and secured at its ends to an appropriate upright and shelf members resting at their ends upon halves of said arms.

---

1,560,123. TRANSMISSION APPARATUS. MAX T. VOIGT, Reading, Pa., assignor to American Safety Table Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 6, 1923. Serial No. 678,835. 13 Claims. (Cl. 192—18.)

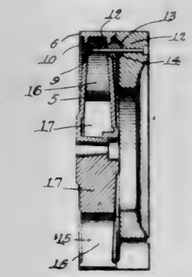


1. A device of the character described, comprising a motor having a rotating shaft, a stub shaft near each end of the motor shaft and in axial alinement therewith, and means for moving the stub shafts to clutch the same to the motor shaft.

1,560,124. OVERSHOE. KATHRYN F. VOLKEY, Seattle, Wash. Filed Dec. 22, 1922. Serial No. 608,886. 1 Claim. (Cl. 36—5.)

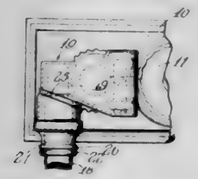
An overshoe, the upper heel portion of which is formed of extensible material with the edge of the opening adapted to fit frictionally around the shoe of the wearer, means whereby said heel portion may be distended when the overshoe is drawn on over the shoe, said means consisting of a finger loop on each side of the heel portion, one end of each of the loops being secured to the outside of the overshoe at some distance below the edge of the opening and the other end being secured to the inside of the overshoe.

1,560,125. WHEEL CENTER FOR FORD TRACTORS. WILLIAM A. WADLEIGH, Seattle, Wash. Filed Jan. 31, 1925. Serial No. 6,123. 1 Claim. (Cl. 301—41.)



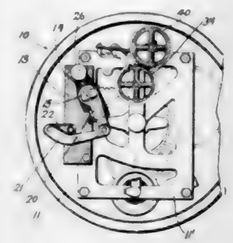
In a wheel construction, a hollow body portion, having tapered openings in its side walls, a rim and tire supported on the body portion, a ring member having tapered openings, the springs of the ring member adapted to aline with the openings of the body portion, tapered plugs fitted in tapered openings of the body portion, said tapered plugs having threaded openings, spacing members having tapered extremities fitted in tapered openings in the body portion and adjacent tapered openings of the ring member, and bolts extending through the openings and spacing members and having threaded ends fitted in the threaded openings of the plugs.

1,560,126. BATTERY-TERMINAL-CONNECTION COVER. REUBEN WEDEBERG, Chicago, Ill. Filed June 7, 1923. Serial No. 643,845. 3 Claims. (Cl. 136—29.)



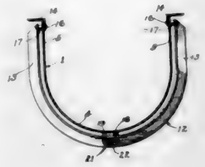
1. A protective cover for a battery-terminal connection of the character described having a clamping ring for a battery post and having a cable socket member and a cable therein and being adapted to fit upon the upstanding terminal post of a battery, said cover comprising a hollow body of thin and flexible battery-acid-resisting material having integral top, side and bottom walls and having an opening for the connection stem in the bottom wall, said walls being arranged whereby the cover conforms substantially to the shape of the terminal connection and whereby it is adapted to enclose and surround the body of said connection closely, said cover having a portion thereof divided whereby cover parts may be spread apart to apply the cover to the connection.

1,560,127. CIRCUIT-CONTROLLER ATTACHMENT FOR CLOCKS. JOSEPH S. WIGGINS, Haworth, N. J. Filed Mar. 10, 1924. Serial No. 697,993. 6 Claims. (Cl. 200—35.)



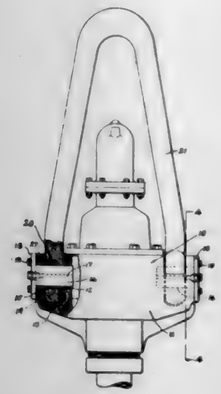
2. In a circuit controller attachment for a clock fitted with an operating mechanism, a circuit closer, an arm mounted on the winding stem of the mechanism and arranged to operate the circuit closer when the mechanism is released for actuation, a setting arm mounted to freely turn on the winding stem and arranged to engage the operating arm to move the shaft to set position, said setting arm being adapted to be left in position to hold the shaft in inoperative position or to be withdrawn to permit the shaft to operate when subsequently released said arms being located at the back of the clock.

1,560,128. RUST-RESISTING AND ADJUSTABLE SUPPORTING YOKE FOR FIRE-ESCAPE CHUTES. DAVID F. YOUNGBLOOD, San Antonio, Tex. Filed Apr. 21, 1925. Serial No. 24,806. 5 Claims. (Cl. 227—7.)



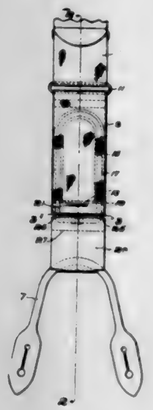
1. A stiffening and supporting yoke for chutes, comprising an angle iron bent to conform to the shape of the chute in cross section and slightly larger than the same, means including spacing elements for securing the ends of the yoke to the upper free edges of the chute to lie in spaced, transverse relation to the latter throughout the length of the yoke, and adjusting means for connecting the chute at the bottom to said spaced yoke to permit transverse adjustment of the chute.

1,560,129. BEARING SUPPORT FOR BAILS. PAUL F. YUNGLING, Los Angeles, Calif. Filed July 19, 1924. Serial No. 727,090. 6 Claims. (Cl. 255—26.)



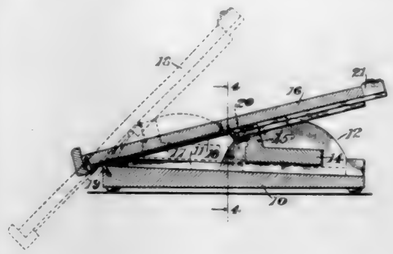
6 A device of the class described, comprising a body member having oppositely disposed lubricating chambers formed on its outer surface, and a bail pivoted to said body member and mounted to swing in said lubricant chambers.

1,560,130. GARMENT SUPPORTER. ALFRED M. ZIEGLER, Newton, Mass. Filed May 17, 1921. Serial No. 470,347. 6 Claims. (Cl. 241—19.)



1. A garment supporter comprising a garment engaging portion and a sustaining portion, one of said portions terminating in a fabric tube, a cross-bar at the free end of the tube, the face and back of the tube at that end being secured together for a part of their width to support the cross-bar while providing space to accommodate the draw-bar hereinafter mentioned, the whole providing a structure free of fullness or angular hems, a draw-bar projecting from the tube, resilient means in the tube cooperating with the cross-bar to sustain the draw-bar, the draw-bar being connected to the other of said portions of the supporter.

1,560,131. DESK. AARON M. ACHENBACH, Piedmont, Calif. Filed Feb. 12, 1923. Serial No. 618,565. 2 Claims. (Cl. 45—57.)

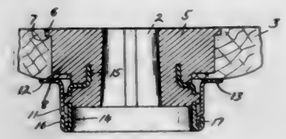


1. A device of the character described comprising a flat base, a desk top disposed above said base, parallel guide rails fixed to the upper surface of said base, members interposed between said desk top and said base, and slidably engaging said rails, hinge connections between the under side of said desk top and said members, said hinge connections occurring substantially at the center of said desk top, said members being normally disposed at the rear of the structure, and a sliding and pivotal connection between the support and said top at the front of said support, said connection comprising a slotted plate arranged beneath the desk top, and a member fixed to said support and extending through said slot and slidably engaging said plate, whereby the desk, when shifted relative to the support, will assume various angles of inclination.

1,560,132. PROCESS OF MAKING RUBBER COMPOSITIONS. GEORGE WILSON ACHESON, Newark, N. J. Filed June 23, 1922. Serial No. 570,496. 4 Claims. (Cl. 106—28.)

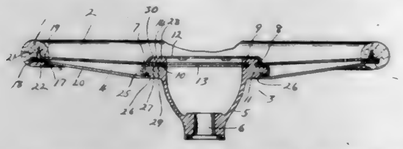
1. Process of making a rubber composition comprising subjecting an inorganic solid to a deflocculating operation and recovering the initially-deflocculated product in substantially dry condition; mixing therewith a rubber solution; precipitating the rubber in presence of the initially-deflocculated solid by means of an organic liquid having an action essentially similar to that of acetone: and separating the rubber mixture from the liquid components.

1,560,133. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to The Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 21, 1924. Serial No. 708,057. 11 Claims. (Cl. 74—33.)



1. In a steering wheel, a spider having an opening and a plurality of spaced recesses, a hub piece in the opening having lugs provided with tapered sides engaging the walls of said recesses, a flange on the hub piece engaging one face of the spider, and a collar secured to the hub piece having a flange engaging the opposite face of said spider, said flanges cooperating with said lugs to secure said hub piece rigidly to said spider.

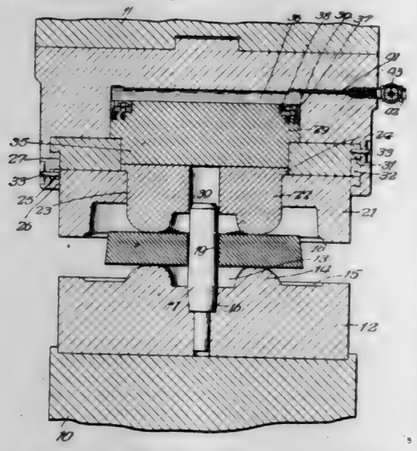
1,560,134. STEERING WHEEL. CHARLES W. BECK, Detroit, Mich., assignor to The Beck-Frost Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1924. Serial No. 748,141. 12 Claims. (Cl. 74—33.)



1. In a steering wheel, a spider having a die cast hub, a plurality of hollow radially extending arms, and a ring having portions extending into the hollow arms and having portions embedded in the hub.

---

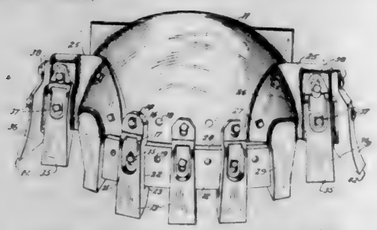
1,560,135. FORGING DIE. FRANK B. BELL, Pittsburgh, Pa., assignor to Edgewater Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1919. Serial No. 281,298. 10 Claims. (Cl. 78—80.)



1. A multi-part die for a forging press, comprising a plurality of active die parts and means for varying the relative pressure of said parts upon the work and a single plunger operating said die parts.

---

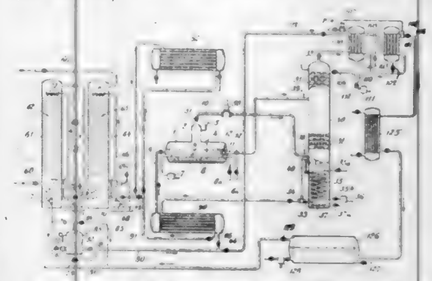
1,560,136. EXCAVATOR BUCKET. HANS J. BENTSON, Muskegon, Mich., assignor to Austin Machinery Corporation, Toledo, Ohio, a Corporation of Virginia. Filed July 28, 1924. Serial No. 728,539. 5 Claims. (Cl. 37—141.)



1. A digging bucket for excavators and the like, comprising, a main body having digging elements at the forward edge thereof, and an extension member secured to said body and having a forward projection engaging over said front edge of the body, the extended portion of said extension member being provided with additional digging elements.

---

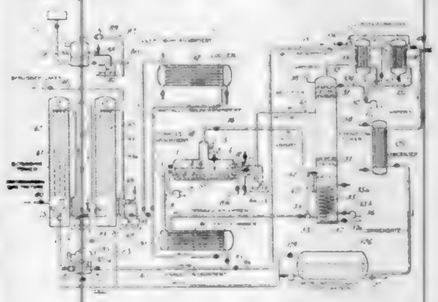
1,560,137. RECOVERY OF GASOLINE, ETC. HAROLD B. BERNARD, Tulsa, Okla., assignor to Sinclair Oil and Gas Company, Tulsa, Okla., a Corporation of Maine. Filed May 8, 1924. Serial No. 711,779. 11 Claims. (Cl. 196—8.)



1. A process of separating absorbed gasoline from liquid absorbing mediums, which comprises subjecting the gasoline charged medium to a distillation treatment by the application of heat and passing the heated liquid residuum from the distillation treatment in countercurrent flow and in indirect contact with the distilled vapors and gases under a pressure lower than that prevailing in the distillation treatment.

---

1,560,138. GASOLINE RECOVERY. HAROLD B. BERNARD, Tulsa, Okla., assignor to Sinclair Oil and Gas Company, Tulsa, Okla., a Corporation of Maine. Filed May 27, 1924. Serial No. 716,129. 7 Claims. (Cl. 196—8.)



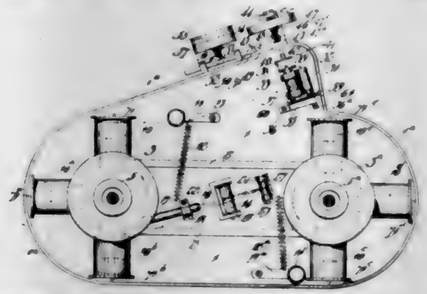
1. A process of recovering gasoline from natural gas, casinghead gas, and the like, which comprises subjecting the gas to an absorption treatment with a liquid absorbing medium, subjecting the charged medium from the absorption treatment to a preliminary distillation treatment by the application of heat, and passing the liquid from the distillation treatment while hot in counter current flow and indirect contact with the distilled vapors and gases from the distillation treatment.

---

1,560,139. APPARATUS FOR WINDING LONG AND ENDLESS CINEMATOGRAPH FILMS. JOHN ROBERT BOW, Melbourne, Victoria, Australia. Filed Jan. 4, 1922. Serial No. 526,982. 2 Claims. (Cl. 88—18.7.)

1. Apparatus for the purpose specified, comprising, a supporting base, a front and a rear drum, a flexible roller on the base, top middle and lower rollers disposed in a vertical line and parallel with the flexible roller, the base being slotted with two slots, and two coacting rollers on the base, one of which is rubber

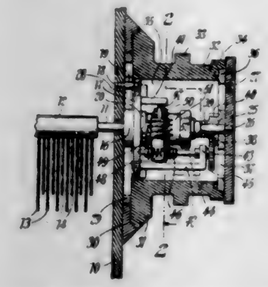
covered, and a film disposed on the flat on the drums, the film being directed from the surface of the rear drum, to the top roller, between the top and middle roller to the flexible roller, back to the lower roller,



through one slot, to a projecting apparatus, back through the other slot, and between the two coacting rollers, and back from the outer layer on the rear drum, thus being disposed in an endless manner.

---

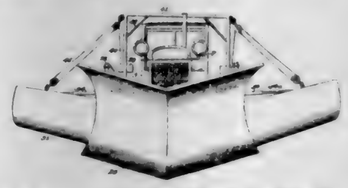
1,560,140. VERNIER DIAL. HARRY CHARMS, New York, N. Y. Filed Dec. 11, 1924. Serial No. 755,128. 3 Claims. (Cl. 74—7.)



1. In a vernier dial, the combination with a spindle, means for actuating the spindle, and a primary dial operated by said spindle, of a secondary dial recessed into the primary dial, a hollow cylindrical extension on the secondary dial, a stationary disc on which the cylinder rotates, means for anchoring said disc to a support, brackets extending from said disc into the chamber in said cylinder, worm gear trains mounted in the brackets, said trains being driven by the rotation of the cylinder, a friction sleeve actuated by the worm gear trains, and means for transmitting motion to said spindle from said friction sleeve.

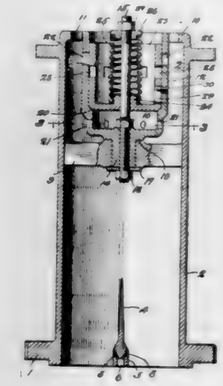
---

1,560,141. SNOWPLOW. ROY E. CHOATE, Cedar Rapids, Iowa. Filed Dec. 24, 1923. Serial No. 682,578. 10 Claims. (Cl. 37—44.)



1. In a snow-plow, a main frame adapted to enclose a tractor, a tilting auxiliary frame carrying a centrally disposed plow, and hoisting apparatus adapted to raise and lower the tilting frame.

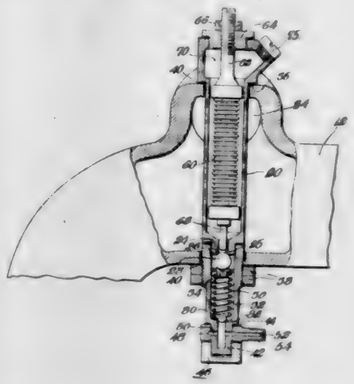
1,560,142. EXHAUST-NOZZLE STAND. THOMAS HENRY CLAPHAM, Pittsburg, Kans. Filed July 6, 1925. Serial No. 41,904. 6 Claims. (Cl. 162—8.)



4. In a device of the class described, a stand having an outlet, a cage in the stand, a valve slidable in the cage, the valve and the cage having discharge ports which cooperate to relieve pressure in the stand when the valve is advanced by pressure, the cage being so constructed as to admit pressure on the valve, a securing device connecting the cage with the stand, and spring means for operating the valve to dispose said ports out of registration, the spring means being retained by the securing device.

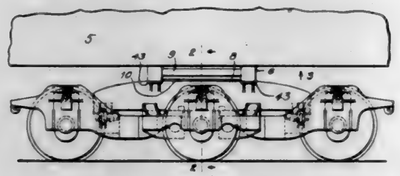
---

1,560,143. INTERNAL-COMBUSTION MOTOR. WALTER B. CLIFFORD, Framingham, Mass. Filed July 2, 1925. Serial No. 41,075. 15 Claims. (Cl. 123—196.)



1. An internal combustion motor comprising an exhaust manifold having a passage, a tubular member extending across the passage in the manifold and subjected to the direct action of exhaust gases passing therethrough, means for delivering oil to the member, means governed by the temperature of the oil within the member for regulating the admission of oil to the member, and means for discharging heated oil and vapor from the member.

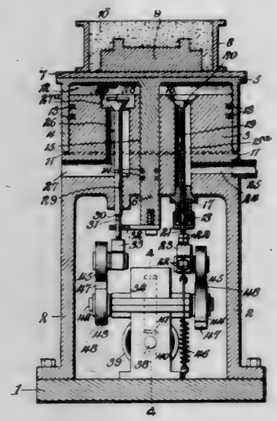
1,560,144. BOLSTER FOR RAILWAY-CAR BODIES. PAUL W. DAY, Baltimore, Md., assignor, by mesne assignments, to Herbert M. Brune, Charles E. Scarlett, and Janon Fisher, trustees, all of Baltimore, Md. Filed Oct. 20, 1923. Serial No. 669,728. 5 Claims. (Cl. 105—196.)



1. The combination with a car body, of a bolster secured thereto and comprising a plurality of side bearings on each side thereof.

---

1,560,145. MOLDING MACHINE. HENRY L. DEMMLER, Kewanee, Ill. Filed Aug. 7, 1920. Serial No. 401,924. 5 Claims. (Cl. 121—14.)

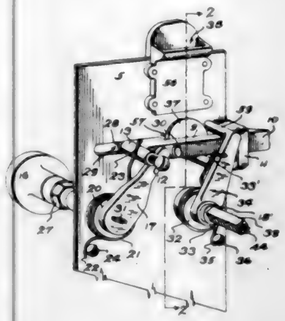


1. In a molding machine, the combination of a body member having ports with valve seats, valves for said ports, a sleeve slidably engaging the body member and raised by fluid pressure introduced through one of said ports, an anvil for arresting the sleeve in its descent, levers for operating said valves and having rollers thereon, and means driven independently of the sleeve and coacting with the rollers for operating the levers.

---

1,560,146. COIN-OPERATED LOCK. EDWIN E. DOUGHERTY, Los Angeles, Calif. Filed Aug. 7, 1922, Serial No. 580,142. Renewed July 13, 1925. 2 Claims. (Cl. 194—74.)

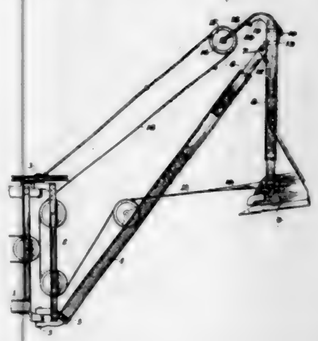
1. In a device of the character described, a coin chute provided with a discharge aperture having opposed side margins spaced apart a distance greater than the diameter of a coin, a retractile bolt below said coin chute provided with a slot through which the coin may fall substantially without interference; the slot having a rear end margin, means for limiting the forward movement of said bolt, yieldable means holding said bolt in forward position as limited by said stop; a finger normally disposed at right angle to the bolt and extended under the slot forwardly of the vertical median line of said discharge aperture, another finger paralleling said first named finger extended above the bolt and slot disposed forwardly of the first named finger, said rear end margin and said fingers forming a support for a coin and arranged to coact when the bolt is in advanced position, to intercept and support a coin gravitating



from said chute, an outside knob, and means whereby said knob on being turned moves both fingers simultaneously rearward in the general direction of the retrograde movement of the lock to react the bolt through the agency of a supported coin.

---

1,560,147. EXCAVATING MACHINE. ROBERT REX DOWNIE, Beaver Falls, Pa., assignor to Keystone Driller Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Jan. 28, 1925. Serial No. 5,249. 6 Claims. (Cl. 214—138.)

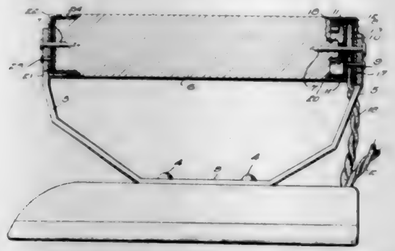


1. In an excavating machine, the combination of a boom pivotally mounted for up and down movement, a ditcher stick pivoted to the outer end of the boom and depending therefrom, a hoisting line, a flexible member connecting the hoisting line to the stick above the pivotal connection of the latter with the boom, the upper end of the stick having a portion engageable with said flexible member to displace the inner portion thereof as the lower end of the stick moves toward the boom, thereby increasing the distance between the ditcher stick pivot and the point at which the hoisting line stress is delivered to the upper end of the stick.

---

1,560,148. SWITCH FOR ELECTRIC SADIRONS. GEORGE J. EASTER, Niagara Falls, N. Y. Filed Apr. 12, 1922. Serial No. 551,980. 7 Claims. (Cl. 200—157.)

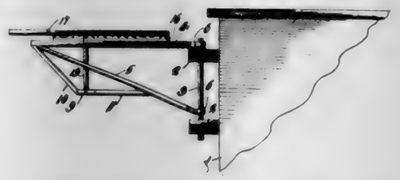
1. In an electric sad iron, a supporting member, a handle rotatably mounted in said supporting member, a contact member carried by said handle, and spaced contacts arranged adjacent said handle, said contact member being adapted to engage one of said spaced contacts at



all times to prevent accidental rotation of the handle and being further adapted to engage another contact when in one position to complete an electric circuit.

---

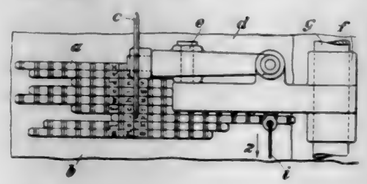
1,560,149. SWINGING STAND FOR DESKS. BENJAMIN H. EBY, Craig, Nebr. Filed Sept. 20, 1923. Serial No. 663,897. 3 Claims. (Cl. 45—90.)



1. In combination with a desk, a stand including an upper triangularly shaped frame, means for pivoting the apex of the frame to the desk, said frame inclining upwardly from the pivoted apex, a second frame depending from the outer end of the first frame and slanting toward the desk, and a member attached to the first frame adjacent its apex and to the lower end of the second frame, and a platform mounted on the first frame.

---

1,560,150. ALIGNING MEANS FOR LINE-BY-LINE COMPOSING MACHINES. ARNOLD AUGUST EGLI, Klein Guemmenen, Switzerland, assignor to the Firm Polygraphische Gesellschaft, Laupen-Bern, Switzerland. Filed Oct. 6, 1924. Serial No. 741,856. 12 Claims. (Cl. 101—93.)

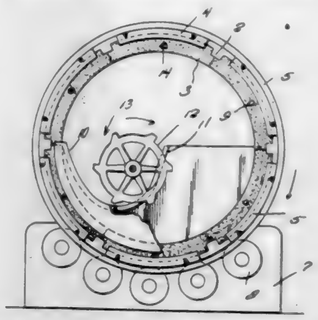


1. In a machine for composing lines of type, movable typecarriers, notches in the typecarriers, and means adapted to align the said typecarriers and to travel past the said notches.

---

1,560,151. PULP GRINDER. DONALD W. EIPPER, Turners Falls, Mass. Filed Feb. 28, 1925. Serial No. 12,265. 3 Claims. (Cl. 83—75.)

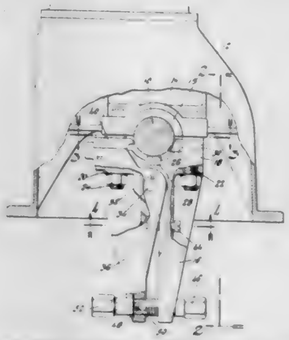
1. In a pulp grinder of the class described, a supporting structure including opposed arcuate rows of anti-friction and bearing rollers, a rotary grinding element supported at its bottom upon said rollers, said grinding element embodying an inner periphery of abrasive material, a relatively stationary hopper open on its bottom side, the abrasive material extending into the hopper through



said open bottom, said hopper being adapted to receive the material to be ground, and means for feeding the material against said abrasive surface and toward the discharge end of said hopper.

---

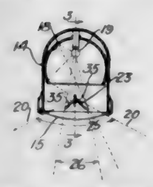
1,560,152. CRANK-SHAFT-TURNING DEVICE. FOREST T. ELLIS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 12, 1923. Serial No. 674,330. 9 Claims. (Cl. 82—4.)



1. A crankshaft treating device comprising, in combination, a member having opposite perforated lugs to receive clamping bolts passing into one part of a separable crankshaft bearing, a crankshaft engaging and supporting part mounted on said member between the lugs, and an arm movably mounted on said member and having a crankshaft treating tool arranged to engage and operate on the crankshaft.

---

1,560,153. HEADLIGHT FOR AUTOMOBILES. FREDERICK J. ENGEL, Anaheim, Calif. Filed Aug. 24, 1922. Serial No. 584,004. 3 Claims. (Cl. 240—41.)

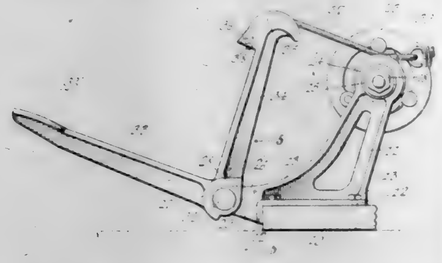


1. In a headlight of the class described, the combination of: a shell; a reflector situated in said shell; a substantially central obscuring deflector; means whereby

the effective width of said deflector may be varied; and means for so supporting said deflector that it is adjustable between a rearward and a forward position.

---

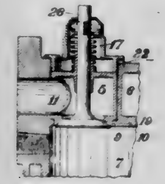
1,560,154. ENGINE STARTER. HERBERT O. EWING, Middleport, Ohio. Filed June 8, 1922. Serial No. 566,870. 3 Claims. (Cl. 74—55.)



1. An engine starter including a bell-crank, a rotatable drum having a helical groove formed in the periphery thereof, a ratchet member carried by the drum, a flexible element secured to the bell-crank and extending around the drum in the helical groove, yielding means for holding the flexible element taut upon the drum, pawls operably supported by the engine shaft and operably associated with the ratchet to thereby impart rotary motion to the engine shaft when the drum is rotated by the movement of the bell-crank.

---

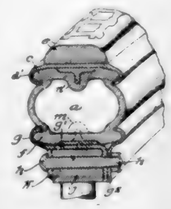
1,560,155. DETACHABLE VALVE MOUNTING. THOMAS MILTON FINLEY and ALLEN W. BROWN, St. Louis, Mo. Original application filed Jan. 14, 1920, Serial No. 351,349. Divided and this application filed Jan. 14, 1920. Serial No. 351,351. 1 Claim. (Cl. 123—189.)



In a device of the class described, the combination of a cylinder provided at the upper end with an opening and having an annular rib thereat forming a horizontal shoulder at the inner end of the opening, a sleeve arranged within the opening and provided at its inner end with a valve seat and with an exterior annular recess receiving the said rib and seated upon the shoulder thereof, said sleeve having a flat end wall at its outer end provided centrally thereof with a tubular extension projecting interiorly and exteriorly of the said end wall, a cap having a cylindrical portion threaded into the opening of the cylinder and engaging the sleeve at the flat outer end wall thereof and provided with a horizontally projecting flange extending beyond the opening of the cylinder and seat upon the exterior of the latter, said cap being also provided with a reduced extension of a materially less diameter than the sleeve and projecting exteriorly of the cylinder and having a substantially cylindrical inner surface, said tubular extension being provided in its outer end with an opening alined with the tubular extension of the end wall of the said sleeve, a valve cooperating with the said seat and having a stem extending through the tubular extension of the cap, a washer mounted on the valve stem and operating in the said extension of the cap and a spring housed within the cap and bearing against the washer and the sleeve for urging the valve outwardly to hold the valve on its seat.

---

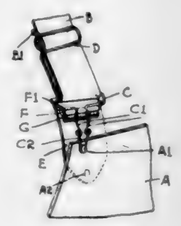
1,560,156. VEHICLE WHEEL. JAMES GAIR and WATKIN SALISBURY WILLIAMS, London, and EDWIN JONES, Liverpool, England. Filed June 16, 1923. Serial No. 645,888. 2 Claims. (Cl. 152—33.)



1. A vehicle wheel including a felloe rim having clencher edges, a tread rim having clencher edges, and tire sections, each having two sets of beads, one set for engagement with the clencher edges of the felloe rim and the other set for engagement with the clencher edges of the tread rim, said tire sections being disposed end to end and constituting a single circumferential means of connecting said felloe rim and tread rim.

---

1,560,157. SUSPENDERS. BOB LANSDON GALBRAITH, Oliver Springs, Tenn. Filed Aug. 13, 1924. Serial No. 731,830. 5 Claims. (Cl. 2—230.)



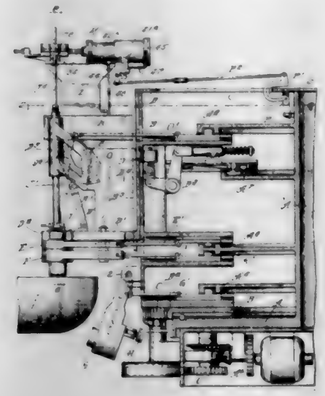
1. The combination with the body of a suspender and the front upper part of an overall and a buckle structure for joining the suspender to said part of the overall, of a shield placed behind the buckle structure and overlapping and free from the lower part of the suspender body and extending behind the upper part of said part of the overall, means securing the shield to the upper part of the buckle structure, and means for securing the lower part of the shield to said part of the overall, substantially as described.

---

1,560,158. MECHANISM FOR MAKING GLASS CONTAINERS. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1923. Serial No. 670,042. 9 Claims. (Cl. 49—5.)

3. In combination with a dipping head, a neck mold associated with said dipping head and a gathering mold associated with said neck mold, a mandrel-head adapted to be brought into cooperative relation with said dipping head, a nut carried by said mandrel-head, a mandrel having a thread-equipped tip and having a threaded shank

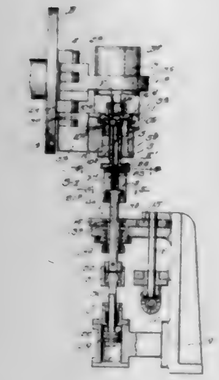
working in said nut, a tubular rack carrying said mandrel-head, a shaft extending through said tubular rack and serving to turn the mandrel, and mechanism for



rotating said shaft in either direction, the connections between said shaft and its rotating mechanism permitting longitudinal movement of said shaft.

---

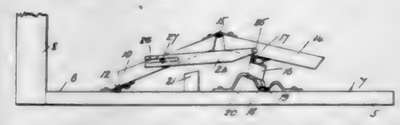
1,560,159. MACHINE FOR MAKING BOTTLES, ETC. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 2, 1924. Serial No. 729,738. 11 Claims. (Cl. 49—36.)



1. In a machine of the character set forth, the combination of a mold-carrier adapted to carry molds in an orbital path, a series of molds mounted on said carrier, a nut mounted below and in alinement with each mold, a mandrel for each mold provided with a thread-equipped tip adapted to extend into the mold cavity and having a threaded shank engaging the corresponding nut and having also a clutch-member at its lower end, a vertical shaft disposed beneath the path of the mandrel and equipped with a clutch-member adapted to engage said first-named clutch-member, means for elevating said shaft, a continuously rotating gear through which said shaft extends, and a friction clutch-member encompassed by said gear and driven thereby and having spline connection with said shaft.

---

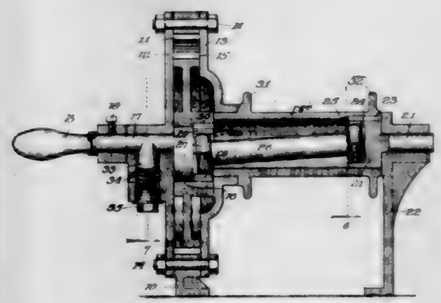
1,560,160. STALL FLOOR. ARSENE HEBERT, Derry, N. H. Filed Apr. 25, 1925. Serial No. 25,787. 6 Claims. (Cl. 119—28.)



1. A stall floor, a front flap having its front end pivoted to the stall floor, a rear flap pivoted to the front flap and normally arranged at an angle to it, and means which support the flaps from the stall floor and automatically force the rear flap upwardly when the pivoted joint portions of the flaps are depressed.

---

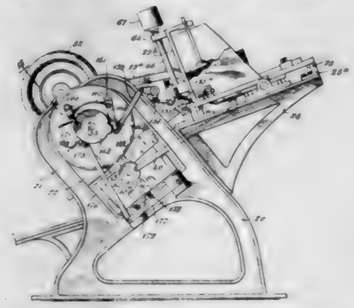
1,560,161. GEAR REDUCTION. ARTHUR C. HOPKINS, Niles, Mich. Filed Nov. 8, 1923. Serial No. 673,495. 5 Claims. (Cl. 74—34.)



1. In a gear reduction, a driving shaft, a driven shaft, a stationary housing having an internal gear fixed thereto, a movable gear meshing with said fixed gear and eccentric thereto, guides at the sides of said movable gear, a cam on said driving shaft journaled concentrically in said movable gear, and a flexible driving means connecting said movable gear and driven shaft.

---

1,560,162. MACHINE FOR MAKING PAPER-BOX BLANKS. JOSEPH HEEN, Kingston, N. Y., and CARL EISENLOHR, Newark, N. J. Filed July 7, 1923. Serial No. 650,024. 19 Claims. (Cl. 93—55.)

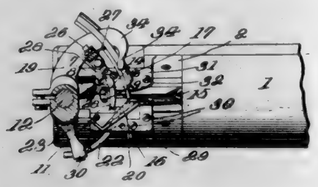


1. In a machine for making paper box blanks, a plurality of sheet holding magazines inclined to the horizontal, a pressing mechanism arranged at a greater inclination to the horizontal than said magazines and means to feed the sheets from said magazines to said

pressing mechanism, said inclination of said pressing mechanism being sufficient to cause the sheets to slide thereover by gravity after they are withdrawn from said magazines; and stops projecting into the path of movement of said sheets to stop the sliding movement thereof when said sheets reach the proper position to be operated on by said pressing mechanism.

---

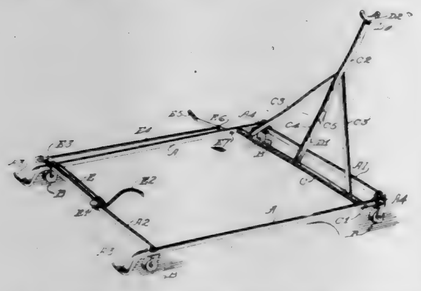
1,560,163. FLAT-SEAM SEWING MACHINE. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1920. Serial No. 393,681. 13 Claims. (Cl. 112—123.)



6. The combination with stitching mechanism, a presser foot having a V-shaped guiding recess adapted to receive the upturned edge portions of fabric sections, trimming devices operating to trim the upturned edge portions passing into said guiding recess, a V-shaped device for positively turning the edge portions from the plane of the fabric sections into vertical position and directing the same into said guiding recess, and devices movable independent of the presser foot operating upon the trimmed edge portions between the trimming devices and the stitching mechanism for turning down said trimmed edge portions prior to the stitching of the same, said trimming devices being disposed so that said edge portions when returned to the plane of the fabric sections for stitching will overlap within the limits of the stitching mechanism.

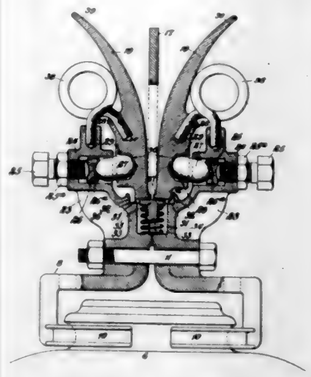
---

1,560,164. TRUCK. WILLIAM F. JARNAGIN, Rutledge, Tenn. Filed Mar. 7, 1924. Serial No. 697,619. 6 Claims. (Cl. 280—61.)



1. In a truck, a horizontal frame, wheels supporting said frame, hooks located on the forward end of the frame and forward of the forward wheels and adapted to reach under the forward axle of an automobile chassis structure placed in an inclined position the forward end resting on a floor and the rear end being elevated, an adjustable support located at the rear of said frame and adapted to reach upward for engaging and supporting the rear end of the chassis structure, and operator-controlled means for raising the forward end of the truck including the forward wheels from the floor, substantially as described.

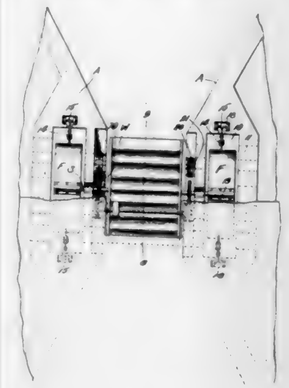
1,560,165. HIGH-TENSION SWITCH. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Nov. 17, 1923. Serial No. 675,367. 23 Claims. (Cl. 200—170.)



1. A switch comprising a pair of spaced jaws with opposed plane faces, and a switch blade movable into contact with said plane faces to close the switch, said jaws being movable in the same direction with the blade as the latter approaches its closed position.

---

1,560,166. WATER MOTOR. JOHN D. JONES, Highland Park, Ill. Filed Dec. 16, 1924. Serial No. 756,276. 9 Claims. (Cl. 170—107.)

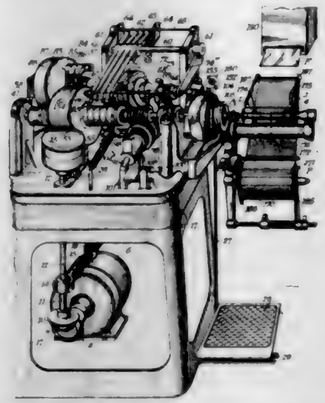


1. A water motor of the class described including a water wheel, a shaft for the water wheel, floats upon which the ends of the shaft are journaled, abutments at opposite sides of the water wheel and having wells for the floats, guideways in the abutments, and the guide means associated with the floats and movable in said guideways.

---

1,560,167. SEMIAUTOMATIC FILM-SPOOLING LATHE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 18, 1921. Serial No. 516,229. 56 Claims. (Cl. 242—57.)

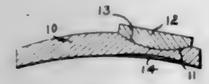
11. In a film spooling machine, the combination with a spindle for rotating a spool, of a motor driven means for revolving the spindle a predetermined number of revolutions, means for manually turning the spindle when the motor driven means is not rotating the spindle, and a latch, operable when the spindle is moved through either of the turning means adapted to position the spindle relative to the motor driven means for revolving



the spindle a predetermined number of revolutions to insure the proper relative position between the spindle and the means for revolving the spindle through a predetermined number of revolutions at the start of the winding operation.

---

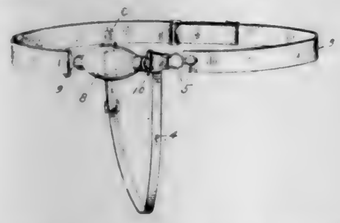
1,560,168. PROCESS FOR PRODUCING LENSES AND THE PRODUCT. MAX A. LAABS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 27, 1925. Serial No. 26,159. 11 Claims. (Cl. 49—82.1.)



1. A process for producing multifocal lens blanks consisting in forming a major portion with a recess in one of its surfaces, securing a button of a different refractive index in the recess, countersinking the opposite surface of the major portion behind the button, and bending the major portion and button to change the surfaces of the recess and button.

---

1,560,169. RUPTURE APPLIANCE. ANTOINE J. LA DUKE, Minneapolis, Minn. Filed Nov. 26, 1923. Serial No. 677,176. 3 Claims. (Cl. 128—100.)



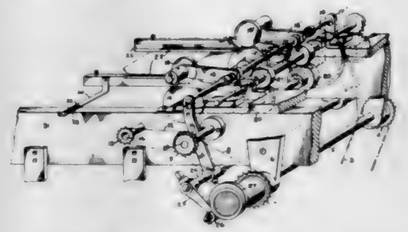
3. A device of the character described consisting of a resilient bulb having oppositely arranged perforations, a member extending through the perforations and having enlargements at its ends to prevent longitudinal expansion of the bulb.

1,560,170. CONCENTRATION OF ORES. CARL PIERCE LEWIS, Burlingame, Calif., assignor to Minerals Separation North American Corporation, New York, N. Y., a Corporation of Maryland. Filed Mar. 31, 1924. Serial No. 703,260. 4 Claims. (Cl. 83—85.)

1. The process of concentrating ores which consists in agitating a suitable acid pulp of an ore with a mineral frothing agent and a sulphur derivative of carbonic acid yielding anions and cations in solution to produce by the action of both a mineral-bearing froth containing a large proportion of a mineral of the ore, and separating the froth.

---

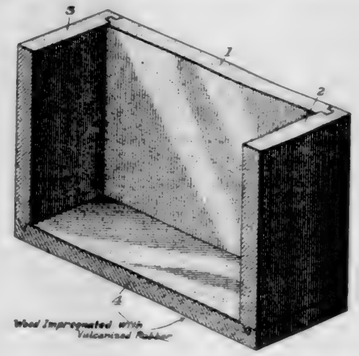
1,560,171. PAPER-BLANK-FEEDING MECHANISM. HENRY BRADY, Bloomfield, and ADIN W. HILSINGER, Orange, N. J., assignors to Henry Brady, Inc., a Corporation of New Jersey. Filed June 30, 1922. Serial No. 572,050. 5 Claims. (Cl. 271—53.)



1. In a blank feeding device of the class described, pairs of contacting rolls for passing the blanks successively beneath a forming mechanism, and in combination therewith a stop for controlling the feed of said blanks, and means for withdrawing part of said feeding rolls from the path of movement of said forming mechanism.

---

1,560,172. BATTERY CONTAINER. RUFUS N. CHAMBERLAIN, Chicago, Ill., assignor to Gould Storage Battery Company, Inc., a Corporation of New York. Filed Sept. 15, 1921. Serial No. 500,913. 6 Claims. (Cl. 136—166.)



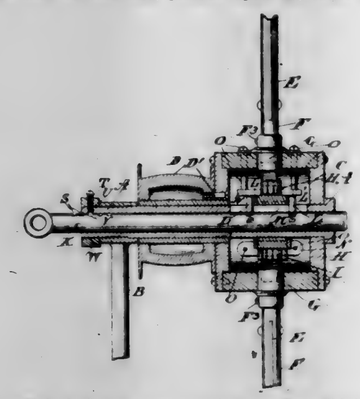
4. A storage battery container composed of wood and having its pores completely filled and its fibers encased in a rubber compound, substantially as described.

---

1,560,173. ADJUSTABLE RADIATOR FAN. CARL F. EHINGER, Cleveland, Ohio. Filed Nov. 14, 1924. Serial No. 749,983. 15 Claims. (Cl. 170—163.)

1. In combination with a hollow stationary fan shaft and rigid support therefor, of a hollow fan hub, and a

pulley secured thereto and revolvable on said hollow shaft, fan blades and radial shafts therefor revolvable in the wall of said hub, pinions upon the inner ends of



said radial shafts, a rack carrying member slidable upon said fan shaft, and a rod longitudinally movable in said fan shaft, and means for engaging said rod with said rack carrying member.

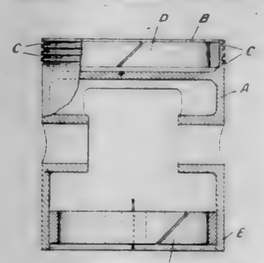
---

1,560,174. RUBBER-FACED PAVING AND LIKE BLOCK. LUCIEN GAISMAN, Hooleyhill, near Manchester, England. Filed Mar. 7, 1923. Serial No. 623,389. 9 Claims. (Cl. 94—15.)

1. A paving block having in its top edges and at each corner segmental undercut recesses, the recesses opening on to the side and end faces of the block and those in the edges approximately semi-circular in plan and those at the corners being rather more than a quarter of a circle and less than a semi-circle in plan, in combination with a rubber slab of like proportions in plan to the top face of the block and having on its underface and along its lower edges and bottom corners, segmental projections corresponding in shape and size with the recesses in the block, and on the slab being applied to the block completely filling same and preventing end or sideways movement of the slab in all directions, as set forth.

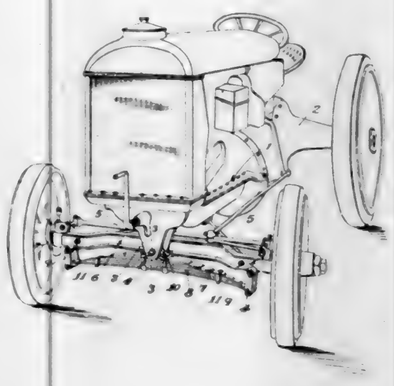
---

1,560,175. PISTON. GLEN HANSON and HENRY G. HANSON, Minneapolis, Minn. Filed Dec. 20, 1924. Serial No. 757,293. 2 Claims. (Cl. 74—108.)



1. A piston having an annular flange extending from its upper end, and a compression ring arranged within the flange, said flange having a series of oil grooves in its outer periphery.

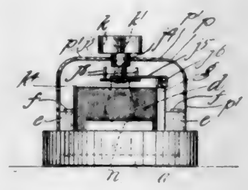
1,560,176. TRACTOR FRAME SPRING SUPPORT. ROY C. HAWKINS and ERNEST S. HIXSON, Long Beach, Calif. Filed Mar. 10, 1923. Serial No. 624,086. 1 Claim. (Cl. 280—112.)



1. A tractor frame spring support comprising in combination a front axle having a vertical web, flanges on said web, swiveling shackles comprising bolts extending through the axle and having swivel links with a bolt in the lower end of the links, said shackles being suspended from the axle adjacent the ends thereof, an offset section of the axle rearwardly in the center portion and on the same horizontal level with the ends, a leaf spring having its ends secured to the bottom bolts of the shackles, a bearing block attached to the top of the spring at its central position, a pin extending horizontally in front to rear direction through the bearing block, said pin being on substantially the level of the axle, and a pair of bearing plates attached to a tractor forming part of a tractor frame extending downwardly on both sides of the bearing block and secured to the pin therethrough, said bearing block being in a straight line with the ends of the axles.

---

1,560,177. ELECTRICAL SWITCH. ALEXANDER LIBARD, Middle Brighton, near Melbourne, Victoria, Australia. Filed Jan. 18, 1923. Serial No. 613,485. 3 Claims. (Cl. 201—55.)



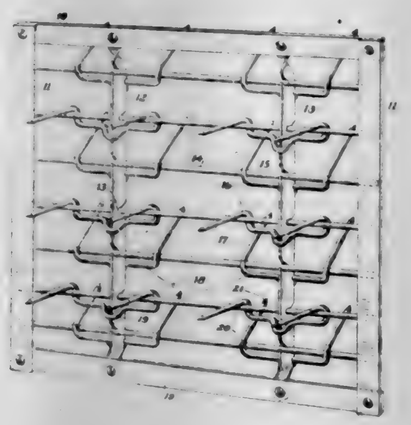
1. A device of the character described, comprising, a base, a perforated block on the base, a resistance winding on the block, a U-shaped conductor arm fixed to the base and leading to a point above the winding, a contact arm pivoted to the conductor arm, and a roller on the contact arm in contact with the upper surface of the windings.

1,560,178. INDUCTANCE COIL. DIMMITT ROSS LOVEJOY, New York, N. Y., assignor to Lovejoy Development Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 732,021. 11 Claims. (Cl. 175—359.)

1. An inductance coil in the form of a self-supported multi-turn helix of uniform diameter, in which the adjacent sections of successive turns are radially staggered and parallel with respect to each other.

---

1,560,179. DRYING RACK FOR SEED CORN AND THE LIKE. THEODORE LUBBEN, Clarinda, Iowa. Filed Dec. 9, 1924. Serial No. 754,803. 7 Claims. (Cl. 34—26.)

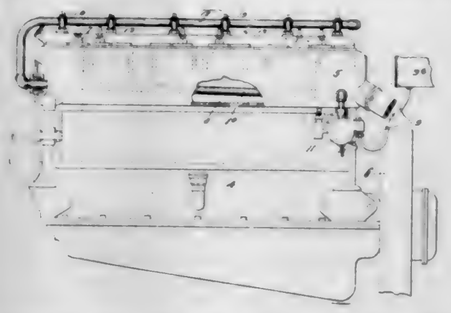


1. A drying rack comprising a frame with bars extending across the same, rods supported transversely of the bars, and yokes supported at the intersections of the bars and rods each yoke having a loop for receiving the bar, and prongs with their outer ends bent so as to embrace the rod and to extend laterally therefrom, whereby the weight of the ears supported by said prongs holds the loop in engagement with the bar.

---

1,560,180. SUPERHEATED-STEAM EQUIPMENT FOR INTERNAL-COMBUSTION ENGINES. RAYMOND L. LUNT and FRANK M. HENRY, Minneapolis, Minn., assignors to The Hi-Power Company, Minneapolis, Minn., a Corporation of South Dakota. Filed Oct. 8, 1920. Serial No. 415,571. 5 Claims. (Cl. 123—25.)

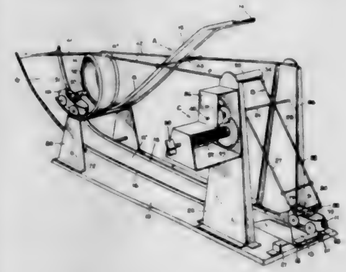
1. The combination with an internal combustion engine, of a flashing plate of less diameter than the engine cylinder located entirely within the explosion end of the engine cylinder, means outside of the engine cylinder for



generating steam, and means for delivering steam thus generated against said flashing plate while the latter is hot.

---

1,560,181. MECHANICAL TOY. LOUIS MARX, Brooklyn, N. Y. Filed June 17, 1925. Serial No. 37,683. 6 Claims. (Cl. 104—55.)



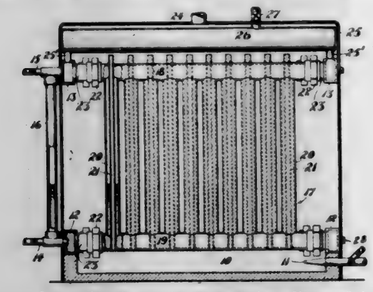
1. A mechanical toy comprising track means on which a carriage is adapted to travel gravitationally from an elevated start position to a lower stop position, the said track means including a loop section providing a loop path for part of the travel of the carriage, and a rotary elevating means operative for engaging the carriage when the same is at the lower stop position, for elevating the same and depositing the same on the track means at the elevated start position, and a motor mechanism for operating the elevating means.

---

1,560,182. AUTOMOBILE BOILER. JAMES A. MEADS, Sacramento, Calif. Filed Mar. 23, 1921. Serial No. 454,604. 1 Claim. (Cl. 122—271.)

In a steam generator for vehicles, a plurality of vertically disposed tube units arranged at spaced distances apart and in alignment with each other, each of said units comprising horizontal upper and lower tubes and a plurality of vertically disposed tubes connected therewith and interposed therebetween to establish communication between said horizontal tubes, horizontal headers arranged at right angles to the tube units and disposed along opposite ends of the upper and lower horizontal tubes to establish communication therebetween, detachable connections between the ends of the horizontal tubes of each unit and the headers whereby the units may be individually removed without disturbing the other units, a flue pipe disposed concentrically within each vertical tube, said flue pipes extending through and across the horizontal tubes, a water inlet connection for the lower headers, a steam dome,

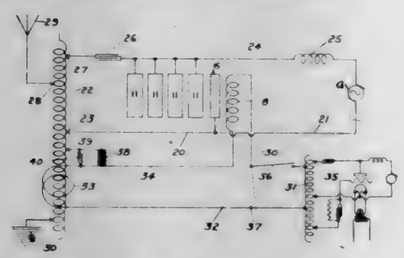
connections between the steam dome and the upper headers, and removable plugs in the sides of one upper



and one lower header, said plugs being disposed in alignment with the horizontal tubes of the tube units to permit cleaning thereof.

---

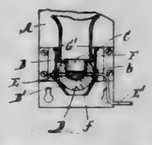
1,560,183. VACUUM TUBE. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed Dec. 11, 1922. Serial No. 606,345. 14 Claims. (Cl. 179—171.)



8. In a thermionic tube having an anode and a cathode, a grid in the tube for controlling the space current comprising a coil through which oscillating currents may be passed to inductively heat the cathode and means for supplying oscillating currents to said grid.

---

1,560,184. TEA MEASURING AND DELIVERING APPLIANCE. NORMAN WILLIAM MCLEAN and WILLIAM ALEXANDER KYLE, Palmerston North, New Zealand. Filed May 21, 1923. Serial No. 640,541. 2 Claims. (Cl. 221—106.)

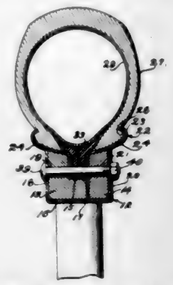


1. A measuring and delivering appliance comprising a frame, a tubular neck secured to extend vertically on the front of said frame, a ball fitted to rotate on a horizontal axis within said tubular neck and having a cavity formed in its peripheral surface in the line of its rotation, a holder for the material to be measured having a mouth adapted to enter the top of said neck and be supported on the ball to form a closure for the holder, and means for connecting the upper end of said holder with the frame.

---

1,560,185. MOTOR-VEHICLE WHEEL. JAQUELIN M. MEREDITH, Norfolk, Va. Filed Mar. 24, 1925. Serial No. 17,980. 6 Claims. (Cl. 152—20.)

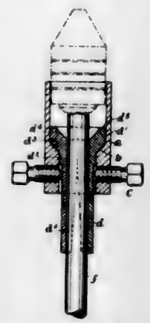
2. In combination, a wheel felly, a rim split longitudinally to provide a pair of sections, each section having parallel inwardly extending radial flanges, a tire flap having portions adapted to be arranged between a tire and inner tube carried by said rim, said flap having an inwardly extending circumferential flange arranged between



the flanges of said rim sections, and means carried by said felly for clamping the flanges of said rim sections against the flange of said flap and to said felly.

---

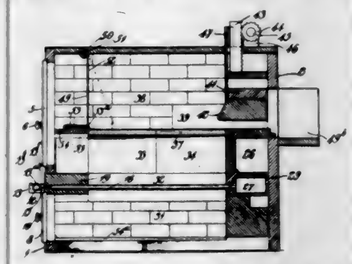
1,560,186. PIPE-FLANGING TOOL. THOMAS H. MUTH, Paterson, N. J. Filed Sept. 26, 1924. Serial No. 740,006. 7 Claims. (Cl. 153—79.)



1. In a swaging implement, a passaged holder having means to grip substantially positively the piece to be swaged upon the latter being placed in the passage of said holder with one end projecting, said holder having an anvil surface arranged to support said end of the piece in the swaging and also a gaging abutment adapted to limit the gaging thrust of a gaging device to press against said end and force the piece into the holder before said means is made to positively grip the piece, in combination with such gaging device guided in said holder and movable against the gaging abutment.

---

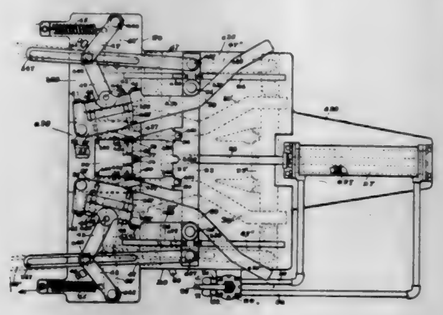
1,560,187. SMOKE CONSUMER AND FUEL ECONOMIZER. JOSHUA GOODALL NAYLOR, Hawthorn, near Melbourne, Victoria, Australia. Filed Oct. 11, 1922. Serial No. 593,816. 3 Claims. (Cl. 110—163.)



1. An apparatus for generating power, comprising, a fire box, a flame tunnel leading from the fire box to a boiler, and means for adjusting the flow section of the tunnel, said means including a vertically adjustable bridge block, the bottom of the block forming the entire top contact portion of said flame channel.

---

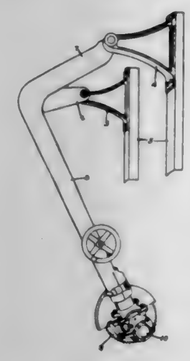
1,560,188. LINK-MAKING PRESS. NELS R. OLSON, Bellingham, Wash. Filed Sept. 20, 1924. Serial No. 738,771. 4 Claims. (Cl. 59—1.)



1. In a machine of the character described in combination, a shape block, a pair of press shoes one pivoted for oscillation on each side of said shape block, a pair of reciprocable press fingers one adapted to enter each triangular space producible between each of said oscillatable press shoes and the sides of said shape block, and a reciprocable prime mover adapted to separately reciprocate said press fingers and oscillate said press shoes whereby a link bar set against one end of said shape block is looped by said press fingers in said tringular spaces and then folded against said shape block sides by said press shoes.

---

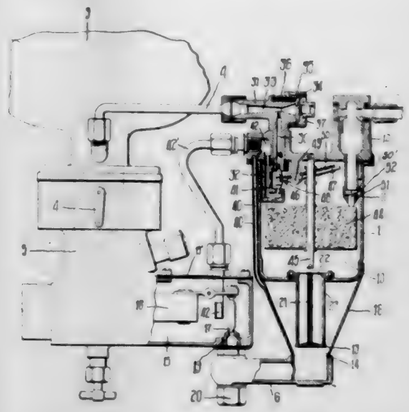
1,560,189. SWING-SAW MOUNTING. WILLIAM F. PFAU, Cincinnati, Ohio, assignor to Elizabeth Towsley, Cincinnati, Ohio. Filed Sept. 27, 1923. Serial No. 665,084. 1 Claim. (Cl. 143—46.)



In a swing saw, the combination with a swing arm, means for supporting same at its upper end, a rotating cutting element mounted in the lower end, said arm having one bend only therein, said bend disposed near the upper end and projecting away from the vertical plane of the support to throw the lower end carrying the saw away from the operator, said cutting element having its center of rotation aligned with the arm portion extending below said bend.

---

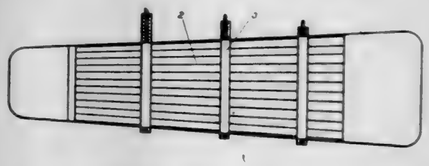
1,560,190. VACUUM-PUMP SYSTEM. EUGENE C. RICHARD, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 17, 1919. Serial No. 331,465. 4 Claims. (Cl. 158—36.)



1. A fuel supplying system for internal combustion engines including a chamber to which fuel is elevated by suction, means for applying suction to said chamber, means including a Venturi tube flaring outwardly in opposite directions from an intermediate throat portion of lesser diameter, means for applying engine suction to one of said flaring portions, said other end portion terminating in a valve seat, a passage connecting said chamber to said throat portion, and a valve arranged to close against said seat under conditions of high engine suction.

---

1,560,191. SKIRT PLAIT HOLDER. CARRIE M. ALLEN, Lompoc, Calif. Filed Nov. 26, 1924. Serial No. 752,485. 1 Claim. (Cl. 68—10.)



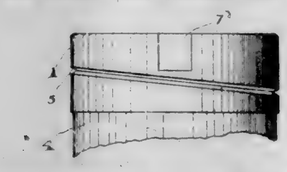
A work holder for ironing boards comprising a holding member adapted to lie upon the surface of the board, and angularly bent at one end, a clip carried by the other end of said holding member and extending angularly therefrom in the same direction as the angularly bent portion and adapted to engage the edge of said board, a rod reciprocably mounted within the angularly bent portion of the holding member, a second clip carried by the end of said rod, a spring coiled about the rod and bearing on the second clip and angularly bent portion of the rod, said clips converging downwardly toward each other.

---

1,560,192. CORE TIP. EWEN M. ALLAN, Sault Ste. Marie, Ontario, Canada. Filed May 12, 1925. Serial No. 29,849. 2 Claims. (Cl. 242—68.)

1. An integrally formed core tip of drawn and rolled sheet metal comprising an annular member provided with a flange at its inner edge and a flange at its outer

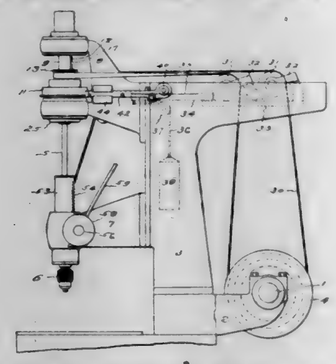
edge, said flanges forming between them a channel in which the end of the core is adapted to be received, one of said flanges being provided with a spiral rib



roller thereon commencing at a point adjacent the edge of its channel side whereby, by rotating the tip relative to the core, the tip may be worked on or off the core.

---

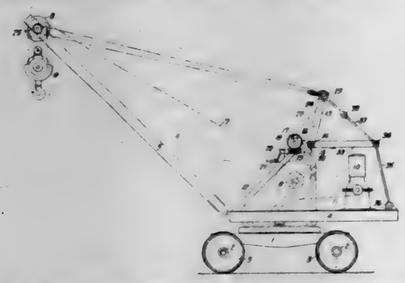
1,560,193. DRILLING MACHINE. WILLIAM G. ALLEN, West Hartford, Conn., assignor to The Henry & Wright Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 19, 1922. Serial No. 582,894. 4 Claims. (Cl. 64—5.)



2. A driving mechanism for drill presses comprising a driving pulley, a spindle pulley, idler pulleys, a belt passing around the driving and spindle pulley and over the idler pulleys, said idler pulleys being adjustable for tensioning the belt, a weight adjustably connected with the idler pulleys whereby the tension of the belt may be determined by the position of the weight, and means for giving more tension to the belt than that imparted by the weight.

---

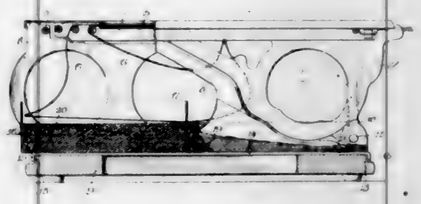
1,560,194. CRANE OR THE LIKE. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 4, 1923. Serial No. 660,774. 1 Claim. (Cl. 212—59.)



In a crane or the like, the combination of a platform; a drum on the platform; posts on which the drum is mounted; a hinged strut mounted on the posts comprising members at each side of the drum; a boom hinged on the platform; supports running from the strut members to the boom; thrust bars extending rearwardly from the strut members; collapsible connection between the thrust bars and the strut members; and links between the thrust bars and the platform.

---

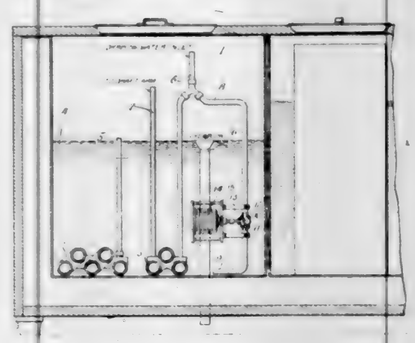
1,560,195. AUTOGRAPHIC REGISTER. ENGLAND J. BARKER, Chicago, Ill., assignor to United Autographic Register Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1924. Serial No. 686,780. 5 Claims. (Cl. 282—15.)



1. An autographic register comprising a base, the ends of which are shouldered, side walls extending upwardly from the longitudinal sides of said base, a platen suitably mounted in the upper portion of said register, a tray removably disposed upon said base and adapted to receive a package of folded paper, the ends of said tray being provided with downturned elements to engage the shoulders at the ends of said base whereby accidental displacement and longitudinal movement of the tray is prevented.

---

1,560,196. SAFETY TEMPERATURE CONTROL. CHARLES L. BASTIAN, Chicago, Ill., assignor to The Bastian Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1925. Serial No. 7,002. 11 Claims. (Cl. 236—18.)



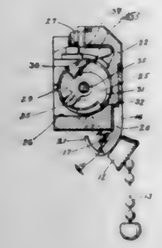
1. In a device of the class described, a compartment, a container in said compartment, a cooling medium surrounding said container, and means to supply heat to said medium, said means being operated when said medium reaches a predetermined temperature.

---

1,560,197. PULL SWITCH. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1922. Serial No. 561,861. 5 Claims. (Cl. 240—123.)

1. A pull switch mechanism comprising an insulating base, a pull switch mechanism mounted thereon, a pull

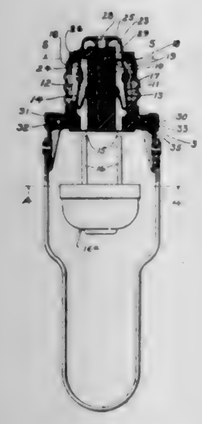
member, a curved slotted bracket, a tubular guide for the pull member having a shank portion extending into



said slot whereby relative adjustment between said curved slotted bracket and tubular guide may be effected, and a nut into which said shank is threaded.

---

1,560,198. ATTACHMENT PLUG. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1922. Serial No. 561,863. 5 Claims. (Cl. 173—343.)

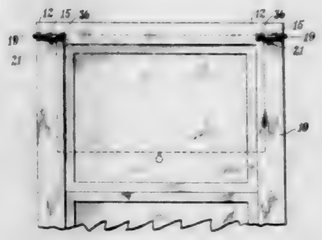


1. An attachment plug comprising, in combination, a base, a swivel shell contact surrounding said base and supported thereon, a center contact on said base, a blade engaging contact electrically connected with said center contact, a second blade engaging contact electrically connected with said swivel shell contact, said swivel shell contact having a flange thereon, a pair of insulating discs supported on said flange, a casing clamping said discs on said flange, and an extension handle secured to said casing.

---

1,560,199. ADJUSTABLE WINDOW-SHADE SUPPORT. GEORGE BERCZIK, Daisytown, Pa. Filed Feb. 25, 1925. Serial No. 11,422. 2 Claims. (Cl. 156—24.)

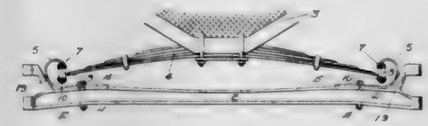
1. A window shade bracket comprising a base, a housing thereon, a screw shaft supported by and in said housing, a trunnion-receiving element supported by said shaft and having a circular groove through which said shaft passes freely, a semi-cylindrical nut member supported by the said trunnion-receiving element and normally operatively engaged with said shaft, resilient means urging said nut member to inoperative position, and a movable



channeled element in said housing extending substantially the full length thereof retaining the nut member operatively engaged with the shaft.

---

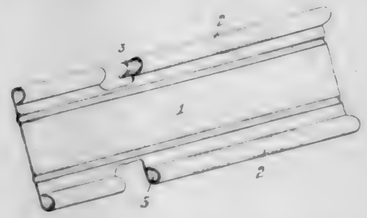
1,560,200. AUTOMOBILE SPRING CONSTRUCTION. JOSEPH F. BERNHARDT, Pittsburgh, Pa., assignor to Triangle Automobile Spring Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1924. Serial No. 743,941. 5 Claims. (Cl. 267—46.)



1. The combination with an axle having a steering knuckle bracket and a main body supporting spring, of an intervening C-shaped spring having a flattened shank portion resting on the axle, a washer plate having a lateral wing extending down over the edge of the shank portion and engaging the side face of the axle, and a securing bolt extending through the washer plate, spring shank, and axle respectively.

---

1,560,201. MANUFACTURE OF SHEET-METAL ARTICLES. JEREMIAH BINGHAM, Toledo, Ohio, assignor to The American-National Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 3, 1924. Serial No. 747,410. 2 Claims. (Cl. 153—63.)



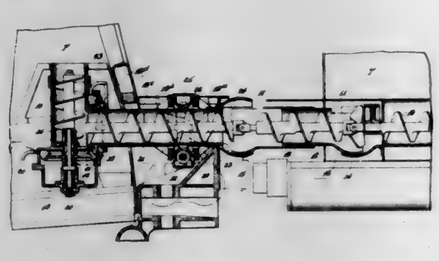
1. The method of bending a sheet metal blank which consists in providing a blank with an edge roll, inserting into the roll a core of metal softer than the metal of the blank, transversely bending the blank with the roll and core, and heating the roll to melt and thereby remove the core.

1,560,202. METHOD FOR THE PURIFICATION OF GASES. HERMAN A. BRASSERT, Chicago, Ill., assignor of one-half to Charles W. Andrews, Duluth, Minn. Filed Nov. 30, 1923. Serial No. 677,916. 3 Claims. (Cl. 183—119.)

1. The method of purifying metallurgical gases which comprises passing the gases through materials heated to a temperature higher than the fusion temperature of the impurities, whereby the impurities are sintered.

---

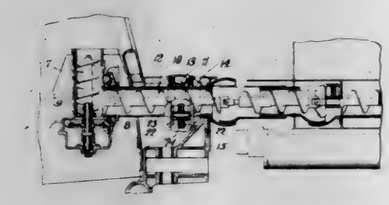
1,560,203. STOKER. JAMES A. CAREY, New York, N. Y., assignor to The Standard Stoker Co., Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1919. Serial No. 335,100. 32 Claims. (Cl. 198—15.)



1. The combination with a passaged structure, means to advance material therethrough comprising a rotary screw having its axis extending longitudinally of the axis of the structure, a driving gear coaxial with said screw and having the portion which connects the periphery and the axis portion thereof shaped to form a section of the screw, said section having an equal pitch with respect to the other convolutions of the screw whereby material is uniformly advanced through the passaged structure.

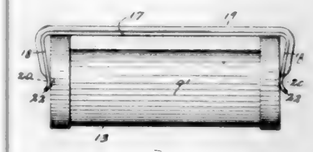
---

1,560,204. STOKER. JAMES A. CAREY, New York, N. Y., assignor to Standard Stoker Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed June 28, 1921. Serial No. 480,985. 6 Claims. (Cl. 198—15.)



1. In a conveyor for stokers, in combination, a conveyor screw, a passaged structure therefor, a support for said passaged structure, a spur gear mounted in a section of said passaged structure and connected to said conveyor screw for driving the same, a driving engine having a driving gear train mounted thereon and forming therewith a unitary driving element, said gear train including a gear on the engine crank shaft and a spur gear meshing in driving relation with said screw spur gear, a casing for said engine and gear train and a support for said unitary driving element carried by the support for said passaged structure, said unitary driving element being removable from its support and replaceable thereon as a unit from and to driving relation respectively with said screw spur gear.

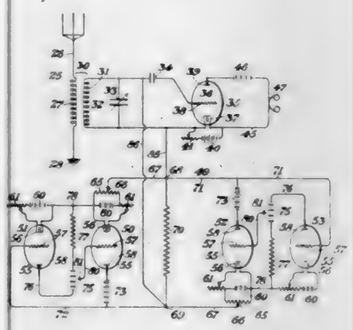
1,560,205. ICE-CREAM-CENTER MOLD. WILLIAM W. CASSELL, Vincennes, Ind. Filed Sept. 11, 1922. Serial No. 587,342. 1 Claim. (Cl. 107—19.)



A mold for ice-cream or the like comprising one or more longitudinal body-members open at their ends, caps to close the ends of the mold having flanges to receive and over-lap the end portions of the body members, and a straight bar of strap spring metal having end fingers in the same lateral direction, substantially parallel with each other, receiving the assembled mold between them with the fingers contacting the caps and locking the mold together, the bar having a longitudinal corrugation from finger to finger and toward the ends of the fingers, and uncorrugated finger ends which are bent outwardly, said caps having centrally located indents and the fingers having detents in their uncorrugated portions entering the indents to prevent accidental displacement of the fingers.

---

1,560,206. METHOD AND SYSTEM FOR THE TRANSMISSION OF RADIANT ENERGY. EMORY LEON CHAFFEE, Belmont, Mass., assignor to John Hays Hammond, Jr., Gloucester, Mass. Filed Apr. 25, 1918. Serial No. 230,722. 24 Claims. (Cl. 250—20.)



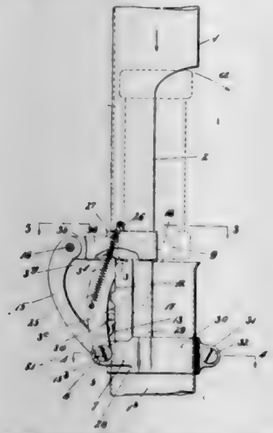
1. In a radio receiving system, the combination with an oscillation detector, of means to protect said detector from high potential effects of a given polarity, comprising a primary and a secondary thermionic valve connected in parallel to the detector circuit.

---

1,560,207. RESISTANT-SURFACE ALLOY OF IRON. GEORGE H. CHARLS, Canton, Ohio, assignor to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,567. 10 Claims. (Cl. 75—1.)

1. A resistant-surface alloy of iron containing as the principal elements, in combination with the iron, silicon from .50% to 6.0%, chromium from 3.0% to 30.0%, and molybdenum in an effective amount not exceeding .35%.

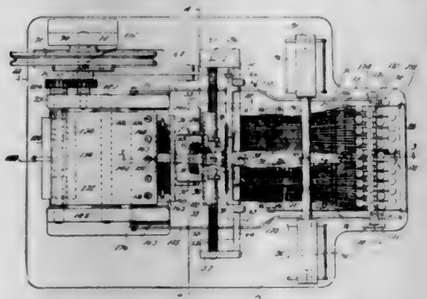
1,560,208. SELECTOR DEVICE. ROBERT C. CHILD, Brookline, Mass., assignor, by mesne assignments, to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1921. Serial No. 520,877. 29 Claims. (Cl. 243—16.)



21. Separator mechanism comprising a movable abutment member, a detector member movable in a different path, and means whereby movement of the detector member is positively transmitted to the abutment member.

---

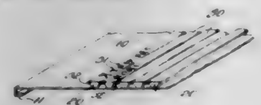
1,560,209. EMBOSSING MACHINE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 14, 1923. Serial No. 638,717. 45 Claims. (Cl. 197—6.)



1. In an embossing machine, the combination with embossing dies, of a shiftable carriage adapted to carry the material to be embossed, a keyboard having keys corresponding to different characters, and mechanism controlled by the keyboard for shifting the carriage to bring the material into coaction with a corresponding die.

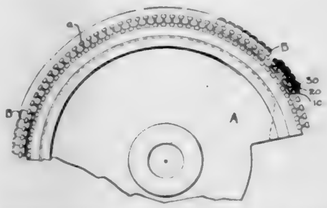
---

1,560,210. FLEXIBLE PRINTING FORM. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 6, 1923. Serial No. 678,888. 3 Claims. (Cl. 101—377.)



1. A flexible blanket comprising an uninterrupted flexible sheet of metal, and parallel bars with overhanging edges joined to the face of the sheet.

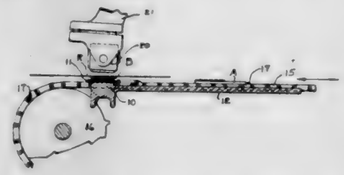
1,560,211. REMOVABLE INSERT FOR PRINTING FORMS. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 11, 1924. Serial No. 725,369. 14 Claims. (Cl. 101—377.)



1. The combination of a holder having a downwardly extending holding device whereby it may be mounted in a printing machine and an upwardly extending retaining device, a plate adapted to be mounted on the holder by means of said retaining device, and embossed printing strips mounted on said plate.

---

1,560,212. ADDRESSING MACHINE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 11, 1924. Serial No. 725,370. 16 Claims. (Cl. 101—47.)

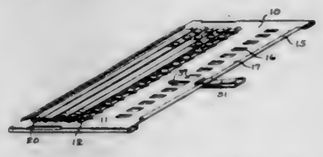


2. In an addressing machine, the combination, with address plates of different thickness, of a bed adapted without adjustment to support such plates at a constant elevation.

9. The combination with a relatively thin address plate and a relatively thicker address plate having a grooved bottom, of a machine having a supporting member for the plate, said supporting member having projections of a height corresponding to the difference in thickness between the two types of plates.

---

1,560,213. INDEX TAB FOR ADDRESS PLATES. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 6, 1925. Serial No. 28,374. 15 Claims. (Cl. 101—369.)



1. The combination, with an address plate having a series of openings, of an index tab and having a tongue portion adapted to extend through one of such openings onto the opposite side of the plate, and having a locking portion to bear on the plate in another region.

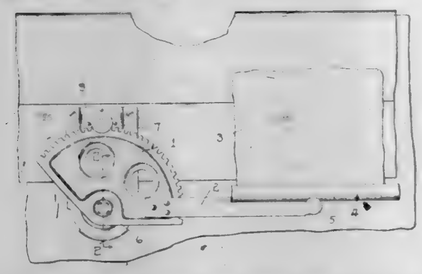
10. An index tab of the character described comprising a strip of metal intermediately doubled on itself to provide two legs, a shoulder on one leg and a tongue

portion formed on the other leg parallel with the body of the leg but offset therefrom toward the plane of the leg having the shoulder.

14. An address plate having means thereon for carrying an address and having a row of openings parallel with one edge of the plate, and a row of projections between the openings and edge and laterally aligned with the openings.

---

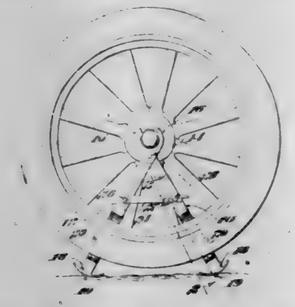
1,560,214. WINDOW-REGULATING MECHANISM. ANGELO ROBERT CLAS, Toledo, Ohio, assignor to The Toledo Automotive Products Company, a Corporation of Ohio. Filed Sept. 5, 1924. Serial No. 736,014. 10 Claims. (Cl. 268—4.)



2. In a window regulating mechanism, a sheet metal support, an inwardly extending annular flange on said support, a sheet metal toothed sector for actuating the window, an inwardly depressed annular portion on said sector protruding into said support and bearing against said flange, and a disc connected to the end of the protruding portion and engaging the support thereby pivotally to connect the sector thereto.

---

1,560,215. LIFTING DEVICE FOR VEHICLE WHEELS. WALTER B. CLIFFORD, Vivian, W. Va. Filed Nov. 18, 1921. Serial No. 516,088. 2 Claims. (Cl. 254—94.)

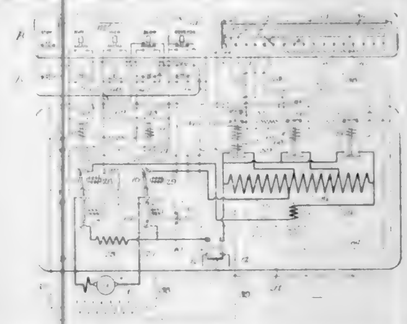


1. A lifting device for vehicle wheels comprising cooperating hub clamps and rigid supporting means for the hub clamps extending outwardly from the hub beyond the tread face of the wheel and having a supporting end positioned beyond the tread face of the wheel and located in substantial alinement with the hub clamps.

---

1,560,216. MOTOR CONTROLLER. ALLAN J. CLINE and THELMA I. DEKLE, Chicago, Ill., assignors to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1923. Serial No. 643,840. 28 Claims. (Cl. 172—179.)

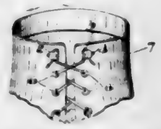
1. In combination in a motor controller, separate, electromagnetic starting, accelerating and torque switches, a speed regulating member adapted to be pre-set to determine the running speed of the motor, said torque switch being operable in any of the running positions of said regulating member to provide a predetermined high torque for starting, and means automatically controlled



by the acceleration of the motor to a predetermined speed for disabling said torque switch.

---

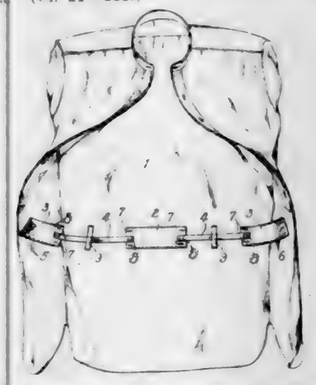
1,560,217. FASTENER FOR LACES, CORDS, AND THE LIKE. ARTHUR LEWIS COCHRANE, Toronto, Ontario, Canada. Filed July 23, 1924. Serial No. 727,658. 8 Claims. (Cl. 24—121.)



1. In a fastener for shoe laces and the like, the combination of a hook shaped member in which a lace is adapted to be received and frictionally engaged; and a projection extending transversely of the hook at one side thereof, said projection being positioned adjacent the throat of the hook whereby the lace which is engaged in the hook may be passed round the projection and then re-engaged in the hook.

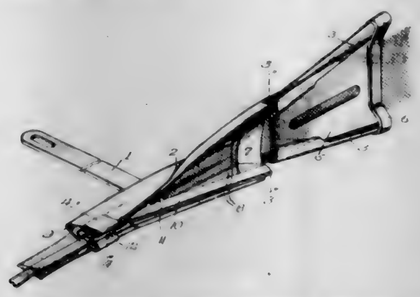
---

1,560,218. GARMENT. RUDOLPH COOPERSMITH, St. Louis, Mo. Filed May 3, 1924. Serial No. 710,713. 8 Claims. (Cl. 21—115.)



1. The combination of a garment of the kind described and a retaining device therefor, said device comprising a strip located entirely within and removably secured to said garment along its waist portion, said garment and said strip being provided with co-operating fastening devices adapted to permit vertical adjustment of said strip with relation to said garment, said fastening devices being adapted to prevent horizontal movement of said strip with relation to said garment.

1,560,219. SEWING-MACHINE ATTACHMENT FOR FOLDING AND GUIDING STRIPS OF FABRIC. KATHERINE E. CUNNINGHAM, Chicago, Ill., assignor to The H. W. Gossard Co., Chicago, Ill., a Corporation of Illinois. Filed June 28, 1922. Serial No. 571,469. 2 Claims. (Cl. 112—137.)



1. An attachment of the character described for two-needle sewing machines and comprising guide members arranged to initially form edge folds in a strip of fabric passing through the attachment, guide members arranged to receive the strip thus folded and further fold it along a central line to bring the edge folds into superposition, and a tape guide arranged to deliver a strand of relatively narrow tape between the sides of the doubled strip, said attachment being arranged to deliver the tape betwen said needles, whereby marginal sections of the strip outside the lines of stitching will be formed at opposite sides of the tape.

---

1,560,220. AUTOMATIC TOASTER. ALFREDO DE MATTEIS, New York, N. Y. Filed Nov. 17, 1924. Serial No. 750,299. 10 Claims. (Cl. 126—4.)

1. Apparatus of the type described which comprises, a conveyor mechanism adapted to carry slices of bread, a heating element pivoted on each side of said slices of bread carried on said conveyor and means for angularly adjusting each of said heating elements on its pivot towards or from said slices.

---

1,560,221. RAILWAY SPIKE. JAMES H. DOWNEY, Gainesville, Ga. Filed June 25, 1924. Serial No. 722,295. 3 Claims. (Cl. 85—31.)

1. A railway spike having a head provided with a rail engaging lip, a shank having straight edges but inclined slightly toward the side provided with the lip, and a body portion having smooth edges each forming an arc of a circle.

---

1,560,222. COMBINATION WHEEL AND PUNCTURE-PROOF TIRE. SAMUEL ELIOT, Manchester, Mass. Filed Apr. 7, 1921. Serial No. 459,314. 3 Claims. (Cl. 152—29.)

1. A vehicle wheel of the character described comprising a pair of substantially parallel annular plates, a transverse connection between said plates spaced inwardly from the peripheral edges thereof, a pneumatic tube encircling said connection and located between said plates, a resilient rim member positioned between the outer edges of said plates and encircling said tube, said rim member having a connection with said plates enabling it to have a limited radial movement relatively to the plates but held against circumferential movement relatively thereto, and a tread carried by said rim.

---

1,560,223. VANITY CASE OR THE LIKE. ADELBERT ENGLANDER, Brooklyn, N. Y. Filed Mar. 12, 1925. Serial No. 14,873. 5 Claims. (Cl. 150—28.)

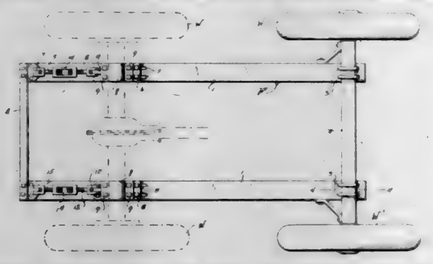
3. In combination, a vanity case and a display handkerchief, a portion of said handkerchief constituting an exterior casing for the vanity case.

---

1,560,224. TRACTION DEVICE. JAMES DOUGLASS FILLEUL, Manchester, N. H. Filed Feb. 26, 1924. Serial No. 695,352. 3 Claims. (Cl. 305—3.)

2. The combination with a traction vehicle including a rear housing and drive wheels associated therewith; of a frame, elongated side members, a cross member connecting the rear end portions of the side members, a transversely disposed axle connecting the forward end portions of said side members, upstanding bearings mounted upon the rear end portions of the side members, coacting means carried by said bearings and side members to permit the bearings to be adjusted lengthwise of the side members, bearing caps engageable with the bearings, said bearings and bearing caps pivotally connecting the rear portions of the side members with the

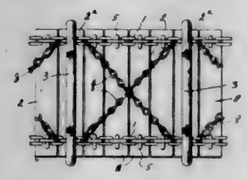
housing, means coacting with the bearing caps and the portions of the side members rearwardly of the bearings to adjust said bearings lengthwise of the side members,



wheels mounted upon the axle and aligning with the drive wheels, and endless tread members disposed around the drive wheels, and the wheels on the axle.

---

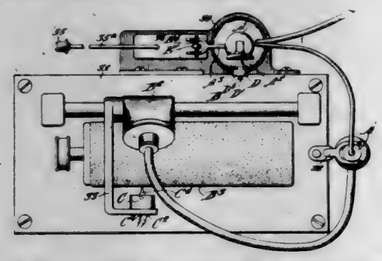
1,560,225. TREAD MEMBER. JAMES DOUGLASS FILLEUL, Manchester, N. H. Filed Feb. 26, 1924. Serial No. 695,353. 1 Claim. (Cl. 305—10.)



A tread of the class described comprising a pair of flexible side members, transversely disposed slats associated with said side member and bridging the space therebetween, means for connecting the end portions of the slats to the side members, said connection permitting the slats to have rocking movement, guides secured to certain of said slats, and crossed flexible members secured to the side members between adjacent guides, said crossed members being secured to the side members at points in relatively close proximity to the guides.

---

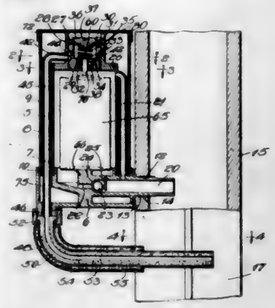
1,560,226. AUTOMATIC RESPONDING AND RECORDING DEVICE FOR TELEPHONES. SYDNEY FISHER, Westport, Conn. Filed Sept. 1, 1921. Serial No. 497,587. 22 Claims. (Cl. 179—6.)



1. An apparatus for attachment to a telephone instrument comprising a dictaphone, means for connecting the dictaphone to adapt the latter to record messages dictated over the telephone, means operated from the call-signal of the telephone to render the dictaphone operative, absent-signalling means operated from said call-signal to notify the calling party that the party called is absent, positively-acting electro-mechanical means for continuing the operation of the dictaphone during dictation and for a predetermined waiting-period previous to and during interruptions in the dictation, and means for causing automatic operation of the absent-signalling means during the waiting-periods to signal the calling party that the apparatus is connected and awaiting the dictation of the message.

---

1,560,227. AIR VENT AND HUMIDIFIER. CLARENCE E. FRAZIER and HELMER R. LINDQUIST, Chicago, Ill. Filed July 9, 1923. Serial No. 650,235. 9 Claims. (Cl. 237—78.)



1. In a device of the class described a chamber having an inlet for connection with a source of steam and an outlet, a valve controlling said outlet and means for automatically opening said valve with a rise in temperature.

---

1,560,228. METHOD OF AND APPARATUS FOR MAKING LOCK WASHERS. GEORGE K. GARRETT, Philadelphia, Pa. Filed Mar. 9, 1925. Serial No. 14,127. 13 Claims. (Cl. 10—73.)

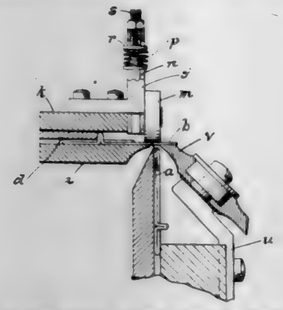
9. The hereindescribed method of making lock washers, which consists in propelling a keystone shaped bar towards coiling devices intermittently, roughening the opposed inclined sides of said bar simultaneously with said propulsion, forming said bar into a helical coil about an axis substantially parallel to the parallel edges of said bar, changing the cross sectional shape of said bar from a keystone to a substantially rectangular section simultaneously with said coil formation, and lastly severing the outer convolutions of said coil alternately with the intermittent propulsion of said bar, whereby a lock washer having offset juxtaposed ends is formed.

---

1,560,229. MACHINE FOR MAKING KNITTED PILE FABRICS. ALFRED A. GRUNDY, Philadelphia, Pa., assignor of one-third to himself, one-third to George Grushkaw, and one-third to John Sichel, all of Philadelphia, Pa. Filed Sept. 18, 1924. Serial No. 738,332. 8 Claims. (Cl. 66—21.)

1. In a knitting machine, the combination with traveling needles and yarn-holding bars adapted to cooperate

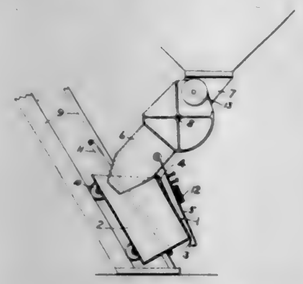
to form elongated loops engaging the bars, of a bite-roller stationary relative to the bars and positioned, in



the travel of the latter, to roll over the bars and press the yarn between it and the bars and thus effect the severance of the yarn.

---

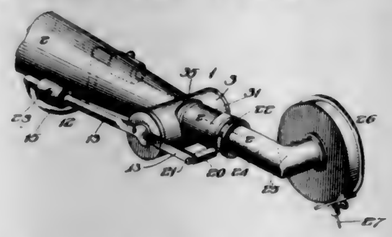
1,560,230. SKIP-HOIST EQUIPMENT. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1924. Serial No. 687,907. 2 Claims. (Cl. 214—125.)



1. Skip hoist equipment having in combination a pivotal loader gate, an ascending and descending skip bucket adapted to close and open the gate, and a cam shoe device carried by one face of the bucket and projecting beyond the lower edge and toward the center line of the bucket to insure positioning of the gate to afford clearance for the passage of the descending bucket.

---

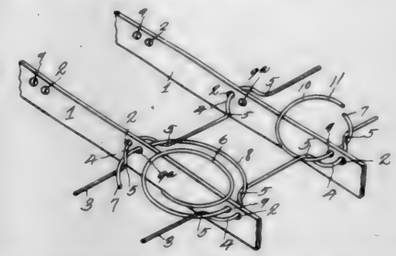
1,560,231. BALANCE BEAM FOR TONE ARM OF TALKING MACHINES AND THE LIKE. ERLE H. HAND, Stapleton, N. Y. Filed July 3, 1922. Serial No. 572,442. 5 Claims. (Cl. 274—23.)



1. An articulated straight tone arm having one portion cylindrical and the other conical, a tone arm joint intermediate said portions, a collar engaging said cylindrical portion and having seats therein, a spring-pressed pin engaging one of said seats, and an arm having a portion secured to an element of the tone arm joint, one end of said arm carrying said spring-pressed pin and the other end of said arm carrying an adjustable counterbalancing device.

---

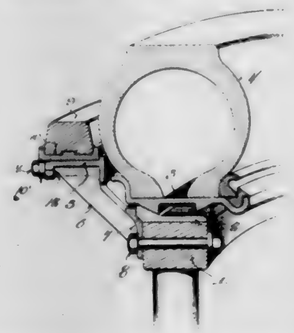
1,560,232. BEDSPRING LOCK. THEODORE HAUSER, Cassopolis, Mich. Filed July 16, 1923. Serial No. 651,735. 6 Claims. (Cl. 5—265.)



1. The combination with a cross rail of a bed spring frame, said cross rail being provided with spaced pairs of apertures, and an end convolution of a helical bed spring extending through the inner apertures of the spaced pairs, of tie wires extending transversely of the rail through the outer apertures of the pairs and interwound with said convolution, by means of which the said convolution is locked to said rail and the tie wires.

---

1,560,233. AUXILIARY WHEEL TREAD. STANLEY P. HICKEY, Coldspring, Wis. Filed Sept. 29, 1923. Serial No. 665,598. 1 Claim. (Cl. 301—39.)



An attachment for a vehicle provided with a felly, said attachment comprising an auxiliary rim adapted to project outwardly from said wheel and having an upstanding inner shouldered portion, said attachment having a plate adapted to be bolted to said felly, a plurality of spaced arms joining said auxiliary rim and said plate, a resilient tread, and a retaining band secured to said resilient tread and adapted to be slipped over said auxiliary rim and having depending lugs, whereby it may be attached to said auxiliary rim.

---

1,560,234. ROTARY SLIP. RICHARD D. HILL, Wichita Falls, Tex., assignor of one-third to John M. Spellman, Esq., Dallas, Tex. Filed Mar. 15, 1924. Serial No. 699,525. 2 Claims. (Cl. 255—28.)

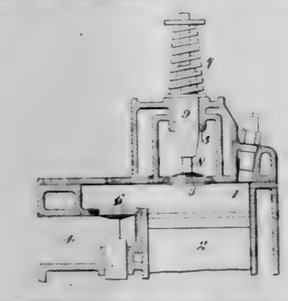
1. In a rotary drilling table, a pair of conically shaped semi-circular members removably mounted therein and adapted to encircle a drill stem, a plurality of tooth mem-

bers slidably mounted in grooves in the inner face of said semi-circular members and projecting inwardly therefrom to form pockets between the same and around

the circumference of said inner face, said pockets being open at the top and adapted to receive coacting lugs therein formed on the drill stem.

---

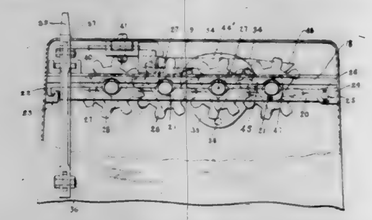
1,560,235. VALVE. ALBERT OTTO HINSCH, San Francisco, Calif. Filed Jan. 5, 1925. Serial No. 552. 6 Claims. (Cl. 123—188.)



1. In combination with a valve and a valve opening controlled thereby and provided with co-operating faces, the face of said valve having a groove affording a plurality of separate nonyieldable seats.

---

1,560,236. FURNACE GRATE. CHARLES G. HOLMES and ARTHUR E. HOLMES, Milwaukee, Wis., assignors to Racine Furnace & Foundry Co., a Corporation of Wisconsin. Filed June 18, 1921. Serial No. 478,589. 2 Claims. (Cl. 126—181.)

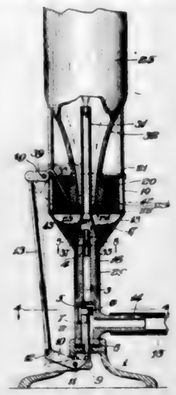


1. In a grate construction, the combination with a housing of a plurality of interconnecting grate bars pivotally mounted therein; a disc provided with a plurality of arcuately spaced pins, carried by one of said bars; a pawl reciprocable transversely of the axis of said disc, adapted to engage said pins to arcuately move said bars; an operating lever movable in a plane parallel to the axes of said bars; and operating connections between said lever and pawl.

---

1,560,237. METHOD OF AND APPARATUS FOR WASHING BOTTLES. CHARLES W. HOTTMANN, Philadelphia, Pa. Filed Aug. 6, 1923. Serial No. 655,801. 2 Claims. (Cl. 15—95.)

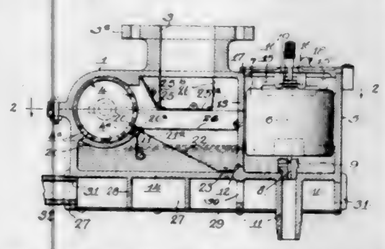
1. In a bottle washing machine, a base provided with a vertical, hollow standard which standard has a restricted passage forming a nozzle, a casing forming a shot receiving chamber, a basket within said casing which casing is carried by said standard, a control valve for said restricted passage, a lower lever fulcrumed to said base one end of which lever is connected with said valve, a rod connected to the other end of said lever, an



upper lever fulcrumed to said casing and having one end projected thereinto and the other end connected to said rod, the free end of said upper lever normally being adapted to be tripped by a bottle neck and means carried within said basket to support the neck of a bottle.

---

1,560,238. CARBURETOR. GABRIEL P. B. HOYT, Jamaica, N. Y., and DAVID B. CARSE, Shron, Conn. Filed Dec. 31, 1921. Serial No. 526,194. 8 Claims. (Cl. 183—11.)



1. In a carburetor, the combination of a casing, having a mixture discharge opening, means for maintaining a constant level of liquid in said casing, an air intake valve comprising a hollow cylindric valve member extending horizontally of said casing above the liquid level and provided with ports, and means associated with said valve member to direct a part or all of the air through the liquid.

---

1,560,239. TABLE. HARRY L. HUDSON, Brooklyn, N. Y. Filed Feb. 6, 1923. Serial No. 617,305. 4 Claims. (Cl. 45—31.)

4. The combination with a table provided with an apron having a shouldered slot, of a folding chair movable into and out of operative position through said slot,

said chair comprising a member slidable in guides beneath the table top, and arranged, when pulled out to the limit of its forward movement, to rest on the shoulders of said slot, a supporting member hinged at its rear edge to the front edge of the sliding member in position when unfolded to rest against the apron, a seat member hinged at its rear edge to the front edge of the supporting member and a leg member hinged at its upper edge to the front edge of the seat member, the chair, when folded, having its sliding, supporting and seat members in horizontal alinement, and the leg member folded underneath the same.

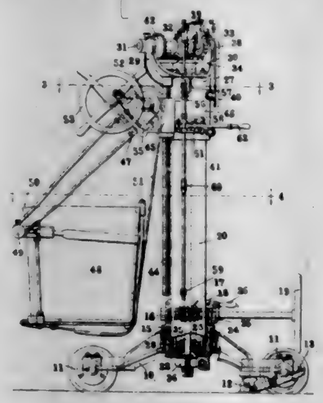
---

1,560,240. PHOTOGRAPHIC SENSITIZER. EDWIN ERNEST JELLEY, Malvern, South Africa. Filed Aug. 11, 1924. Serial No. 731,490. 27 Claims. (Cl. 95—6.)

1. A sensitizing agent for the purpose set forth, consisting of a mixture of a soluble salt of silver and a soluble salt of the hydrazine group.

---

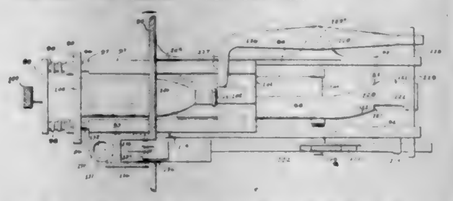
1,560,241. LADLE CARRIER. ARTHUR JONES, Belleville, Ill., assignor to U. S. Smelting Furnace Company, Belleville, Ill., a Corporation of Illinois. Filed Feb. 15, 1924. Serial No. 693,104. 10 Claims. (Cl. 22—82.)



1. In a device of the class described, the combination with a travelling base, of a rotary support carried thereon, a ladle pivotally mounted on said support, power actuated means for raising and lowering said ladle, automatically actuated means for limiting the vertical movement of the ladle, said means comprising a pair of end stops and an intermediate stop, and means for tilting said ladle.

---

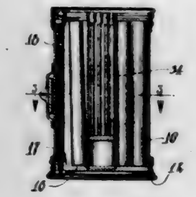
1,560,242. VENDING MACHINE. ELMER M. JONES and SUE WALKER VANCE, Atlanta, Ga.; said Vance assignor to said Jones. Filed Sept. 13, 1920. Serial No. 409,808. 28 Claims. (Cl. 194—2.)



27. In a machine of the character described, the combination of a coin controlled mechanism adapted to dispense an article and a refund controller, and a refund mechanism governed by the insertion of said controller, together with an article having a shape similar to the article issued.

---

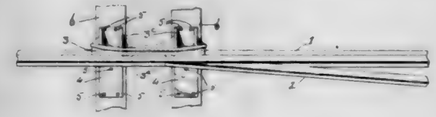
1,560,243. WATERPROOF CONTAINER FOR PERSONAL ACCESSORIES. BERNARD KACZOROWSKI, Yonkers, N. Y. Filed Nov. 13, 1924. Serial No. 749,576. 3 Claims. (Cl. 206—38.)



1. A device of the class described comprising a casing arranged to present separate cigarette and match compartments, a follower in said casing having an annular groove in one face thereof, a tube in said casing engaging at one end in said groove to constitute a match receptacle, and means for moving said follower longitudinally in the said casing to position it near either end of said casing.

---

1,560,244. SWITCH-POINT GUARD. WILLIAM P. KALFF, Hawthorne, N. J. Filed July 25, 1925. Serial No. 45,989. 1 Claim. (Cl. 246—441.)



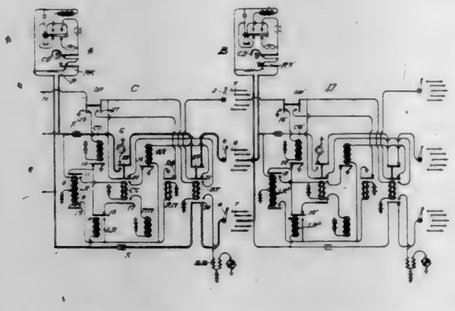
In railway construction, the combination with a running rail and a switch point disposed adjacent to said rail longitudinally thereof, of a guard member having a vertical flange extending along said rail and above the same at the side thereof opposite from said switch point, said flange having its wall surface curved at the ends and provided with an elongated portion in a straight line parallel with the rail, the guard being so disposed that said straight portion overlaps a line running transversely across the extreme end of the switch point, a pair of switch plates formed integral with the guard and extending beneath the rail, said switch plates being recessed to receive said rail and to provide a shoulder adapted to engage the inner edge of the rail base, lugs carried by the guard and extending beneath the head of the rail thereby to brace the guard against the rail without the use of bolts, and means for preventing widening of the track gauge at the point of switch.

---

1,560,245. TELEPHONE SYSTEM. LEROY D. KELLOGG, Deerfield, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1919. Serial No. 317,130. 21 Claims. (Cl. 179—20.)

1. A telephone system including a subscriber's telephone line, a spring-restored automatic switch individual thereto, a pair of line relays for said switch controlled over said subscriber's line, other subscribers' lines, impulse sending means for operating one of said line relays to cause a connection to be established between said first subscriber's line and one of said other subscribers' lines, subscriber-controlled means for main-

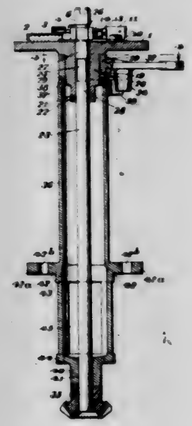
taining said line relay energized and for de-energizing the other of said line relays to signal the called subscriber, and release means for said switch including



a release magnet held energized during conversation and adapted to be de-energized upon the de-energization of one of said relays.

---

1,560,246. IGNITION APPARATUS. ARTHUR ATWATER KENT, Ardmore, Pa. Filed Feb. 20, 1920. Serial No. 360,236. 9 Claims. (Cl. 200—21.)

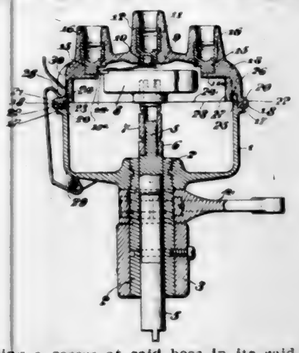


3. Ignition apparatus comprising a base member, ignition circuit controlling contacts carried thereby, a neck on said base member, a cam shaft having a bearing therein, a sleeve through which said shaft extends having at its end adjacent said base member a bearing for said neck and at its other end a bearing for said cam shaft, a member for rotating said base member, and co-acting projections on said member and on said sleeve limiting the rotation on said base member.

---

1,560,247. IGNITION APPARATUS. ARTHUR ATWATER KENT, Ardmore, Pa. Filed July 16, 1923. Serial No. 651,713. 8 Claims. (Cl. 200—19.)

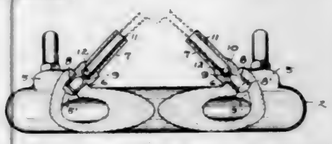
3. Ignition timing apparatus comprising a casing adapted to enclose ignition timing structure, said casing having a transversely extending end surface, a distributor cap having at its open end a surface co-acting with the outer side wall surface of said casing and a second surface co-acting with said end surface of said casing, said cap having on its interior an integral boss, said



cap having a recess at said boss in its said second surface, and a lug projecting from said end surface of said casing into said recess.

---

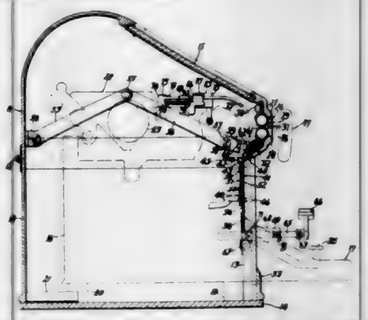
1,560,248. GAS BURNER. HARRY E. KERR, Cleveland, Ohio, assignor to The Cleveland Gas Burner & Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 17, 1924. Serial No. 720,558. 6 Claims. (Cl. 158—104.)



1. A gas burner for heating purposes adapted to produce complete combustion uniformly with various kinds of gases under varying or fluctuating gas pressures, comprising a hollow gas-distributing body having a pair of reversely-inclined nozzles adapted to bring separate streams of gas and air into confluence; each nozzle being a separate removable member having a base portion formed with an enlarged gas-intake recesse terminating in a small and short axial gas orifice adapted to promote high velocity of discharge of the gas through the nozzle, and a lateral air intake opening in the base portion of said nozzle leading to the outlet end of said orifice.

---

1,560,249. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1922. Serial No. 579,560. 17 Claims. (Cl. 197—186.)

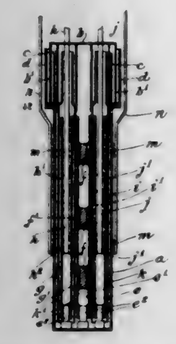


1. The combination with a sound-deadening casing for a front-strike typewriting machine having a platen, typebars pivoted to swing upward and rearward to the platen.

and arranged to form a segmental typebasket, a front plate having a segmental opening therein in conformity with and for access to the type-basket for cleaning of the types, and a frame to which said front plate is so secured as to have a close fit with the front wall of the casing at each side of the keyboard opening in the latter; of a segmental plate for normally closing said segmental opening, the segmental plate being pivoted to the front plate to serve as a door which may be swung open at will.

---

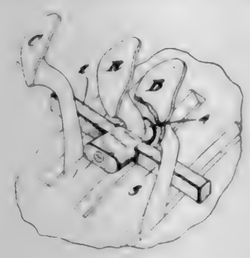
1,560,250. ELECTROLYTIC CELL. ISAAC H. LEVIN, New York, N. Y., assignor, by mesne asignments, to Gas Industries Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1921. Serial No. 505,302. Renewed May 12, 1925. 9 Claims. (Cl. 204—5.)



1. An electrolytic cell embodying therein a container or tank for the electrolyte forming an electrode, closure means for the top of said tank, a partitioning electrode dividing said tank into two communicating electrolyte compartments, said tank and said electrode being of the same polarity, independent terminal bars carried by said tank and said partitioning electrode, inner electrodes of opposite polarity to sand tank and said partitioning electrode arranged upon opposite sides of said partitioning electrode and between same and the wall of said tank, means co-operating with said closure means for preventing the commingling of gases adjacent the top of the cell, and diaphragms extending from said last named means within said compartment and about each of said inner electrodes.

---

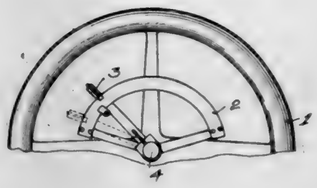
1,560,251. AUTOMOBILE LOCKING DEVICE FOR FORD TRANSMISSION. ANDREW R. DE ROUVILLE and JOHN G. MILLER, Albany, N. Y. Filed June 6, 1924. Serial No. 718,330. 1 Claim. (Cl. 70—126.)



In combination with a plurality of pedals to be locked a body for engaging the front portion of one of said pedals, a pair of arms extending from diametrically opposite sides of said body for engaging the rear side of the remaining pedals and thereby retaining said pedal first mentioned in the pressed or operative position while the remaining pedals are locked in normal position, a locking mechanism included in said body and a shackle forming a portion of the lock mechanism and surrounding the pedal first mentioned as and for the purpose specified.

---

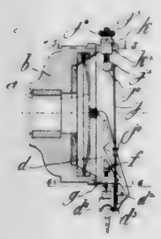
1,560,252. LEVER LOCK. HERBERT ESHELMAN and WALTER C. MCLAM, Spokane, Wash. Filed Oct. 11, 1924. Serial No. 743,087. 5 Claims. (Cl. 74—89.)



1. The combination with a fixed quadrant plate and a gas control lever, of a casing having attaching flanges and a set screw for fastening to said plate, and a resilient detent carried by said casing and located in the path of movement of said lever.

---

1,560,253. VIBRATING DEVICE. HORACE HURM, Paris, France. Filed Mar. 25, 1922. Serial No. 546,930. 5 Claims. (Cl. 274—35.)



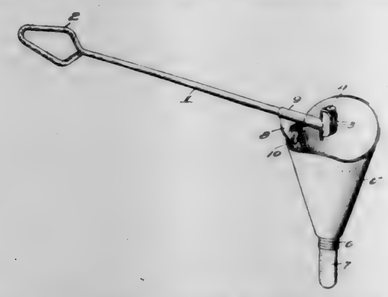
3. In a sound box for a gramophone of the type described, the combination with a box enclosure having a diaphragm therein and a stylus bar having pivotal connection with the edge of the box enclosure and having an inner extremity movably engaging the center of the diaphragm of an adjusting means connected to the edge portion of the box enclosure and comprising a longitudinally movable screw rod and an adjusting bar carried by said rod, and a wire loop applied around a portion of the outer extremity of the stylus bar and having its ends secured in the said adjusting bar.

---

1,560,254. WRENCH CUP. LOUIS FOSTER JACKSON, Alexandria, La. Filed July 10, 1924. Serial No. 725,221. 1 Claim. (Cl. 137—139.)

The combination with an oil wrench, of an oil receiving cup formed of a single piece of sheet metal bent substantially funnel shaped, a bail strip secured to the upper portion of the cup, an eye formed on the upper

end of said strip rotatably and slidably engaged with the shank of the wrench, and a transparent oil receiving



member attachably mounted on the bottom of said funnel shaped cup whereby the quality of the oil in the receiving member may be readily observed.

---

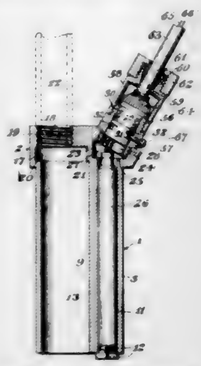
1,560,255. METAL CABINET STRUCTURE. HENRY E. JANES, New York, N. Y., assignor to Janes & Kirtland, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 14, 1924. Serial No. 749,856. Renewed Sept. 21, 1925. 3 Claims. (Cl. 211—7.)

2. In a sheet metal cabinet having a door opening in its wall with its head and sill each formed of a ledge extending inward at an angle to the face of the wall and continuous therewith and a hollow sheet metal door for said opening comprising an inner and outer member secured together in parallelism, hinges for the door each comprising a hinge member carried by the cabinet and a hinge member carried by the door the hinge member carried by the cabinet comprising an arm extending outward through the wall and a fastening member within the wall extending along and secured to the inwardly extending ledge the hinge member carried by the door comprising an arm extending outward through the outer member thereof and a fastening member wholly within the space between the outer and inner door member, securing means for the fastening member within such space, and means for pivoting the parts of the respective hinges together.

---

1,560,256. ELECTRICALLY-HEATED SANDING NOZZLE. CHILION BENJAMIN JOHNS, Ebensburg, Pa. Filed July 14, 1925. Serial No. 43,646. 10 Claims. (Cl. 291—20.)

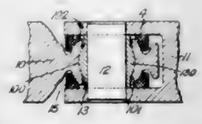
1. An electrically heated sanding nozzle comprising a body portion provided with a sand discharging passage opening at each end and a heating element storage chamber parallel to and separated from said passage and closed at its lower end, and a head integral with the upper end of said body portion and provided with a pair of openings communicating respectively with said passage



and chamber for the passage of sand to the former and electrical connections to the latter, the wall of that opening for the passage of sand provided with means for detachably connecting a sand pipe thereto.

---

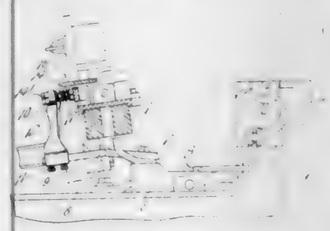
1,560,257. METHOD OF ASSEMBLING LINKS. PHILIP HENRY JOHNSON, Hounslow, England, assignor to Roadless Traction Limited, Gunnersbury House, Hounslow, Middlesex, England. Filed Nov. 6, 1924. Serial No. 748,151. 3 Claims. (Cl. 59—9.)



1. The process of connecting together links having male and female ends which comprises inserting a spherical member into a spherical seating member in said male end, bending down a portion of the spherical seating member to hold the spherical member in place, positioning the male end within the female end, and passing a pin through said ends.

---

1,560,258. ROD FINGER. DEWEY LEE JONES, Columbus, Ga. Filed Mar. 24, 1924. Serial No. 701,506. 1 Claim. (Cl. 139—345.)

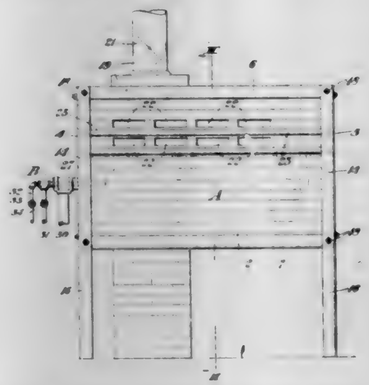


A binder finger for use upon looms having an enlarged transversely bored lower portion, a protector rod removably secured within the bore and having its opposite end portion connected with the loom mechanism, a plunger member transversely disposed within the upper end of the finger, a compression spring encircling the plunger and arranged between the plunger head and finger, a lock-

nut arranged upon the opposite end of the plunger, and a binder arranged adjacent to and resiliently engaging the head of the plunger whereby the loom will continue to operate until a shuttle fails to be boxed.

---

1,560,259. FORGE. CHARLES KARRAL, Danville, Ill. Filed May 21, 1924. Serial No. 714,929. 1 Claim. (Cl. 263—36.)



A heating furnace comprising an elongated hollow body portion, said hollow body being provided with a transverse horizontal wall dividing its hollow interior into a separate combustion chamber and heating chamber, said wall being provided with an opening adjacent one end of said furnace to permit the products of combustion and heat to pass from said combustion chamber into said heating chamber, a burner entering said combustion chamber at the end opposite the said opening leading to the heating chamber, a flue for the escape of the products of combustion leading from said heating chamber, said heating chamber being provided with a plurality of openings for the reception of the articles to be heated, said openings being arranged in horizontal rows, shelf-like supports extending outwardly from the side walls of said furnace below said openings, and closure members mounted on said supports and adapted to be moved into and out of closing position with said openings.

---

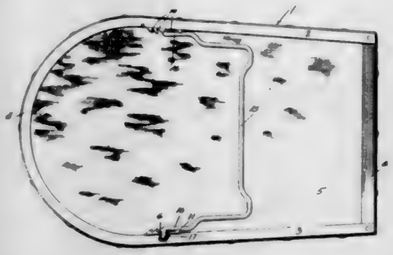
1,560,260. FUSE CAP. THOMAS KERRIGAN, Mahanoy Plane, Pa. Filed July 15, 1922, Serial No. 575,409. Renewed Aug. 14, 1925. 2 Claims. (Cl. 102—9.)

2. In a device of the class described, a cap provided with oppositely disposed openings, a portion of the material freed in the formation of the openings being extended inwardly to constitute holding tongues disposed along one edge of each opening, the material freed in the formation of the opening being extended inwardly to form flanges located along the remaining edges of the opening and converging toward each other.

---

1,560,261. INFANT'S BATH COT. WALTER KLEINESCHAY, Prentice, Wis. Filed Feb. 19, 1923. Serial No. 619,965. 2 Claims. (Cl. 45—50.)

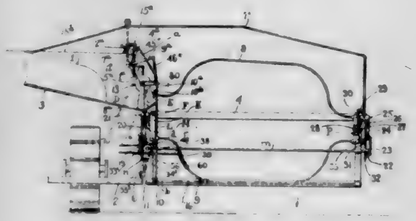
1. In a device of the class described an elongated substantially U-shaped frame with its side members converging toward their free ends, a cross bar connecting the free ends of said members, a flexible covering secured over said frame, a supporting bail having its free ends pivotally mounted in the inner faces of the side members of said frame at a point beyond the transverse median line of the frame nearer the wider curved end thereof, and



means carried by the side members of the frame adjacent the pivotal connection of the bail therewith for engaging said bail to lock it in adjusted position for varying the angle at which the frame is to be supported.

---

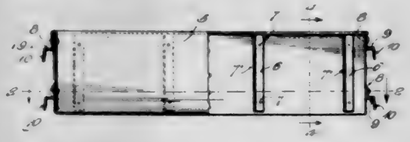
1,560,262. SHOCKER ATTACHMENT FOR HARVESTER BINDERS. NATHANIEL O. KNUTSON, Berwick, N. Dak. Filed Aug. 21, 1920. Serial No. 405,051. 8 Claims. (Cl. 56—419.)



1. In a shocker attachment for harvester binders, the combination of a carrying frame, oscillatory heads thereon, means for oscillating said heads, a compressing arm, and a releasing arm pivoted to one head and detachably locked to the other head, means for depressing the inner portion of the compressing arm and means for opening and closing the releasing arm.

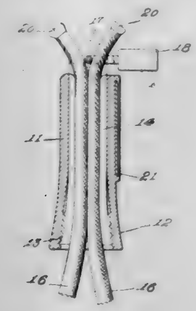
---

1,560,263. FEEDING AND WATERING TROUGH. WILLIAM C. LEDER and JENS P. CHRISTENSEN, St. Paul, Nebr. Filed Oct. 6, 1924. Serial No. 742,008. 2 Claims. (Cl. 119—61.)



1. In a feeding and watering trough, a trough having a flat bottom and substantially vertical side and end walls, guards secured to the outer surfaces of the walls, said guards each comprising a base plate secured to the outer surface of a wall, and an angularly disposed flange having serrations.

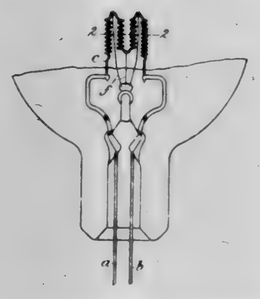
1,560,264. FASTENER. SIMEON LEDOUX, Kansas City, Mo. Filed Feb. 10, 1925. Serial No. 8,314. 3 Claims. (Cl. 24—124.)



1. A mail bag fastener of the character described comprising a hollow cylindrical member having its lower end enlarged and interiorly threaded, a pair of companion sleeve members having their lower ends enlarged and threadedly engaging the threaded portion of the cylindrical member, registering apertured lugs extending from the upper ends of the companion sleeve members, fastening means extending therethrough to hold the guy ropes within the companion sleeve members and against accidental rotation of the companion sleeve members and held therein from accidental displacement.

---

1,560,265. INCANDESCENT ELECTRIC LAMP FOR PROJECTION PURPOSES. DIRK LELY, Jr., Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Mar. 30, 1921. Serial No. 457,141. 1 Claim. (Cl. 176—40.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)

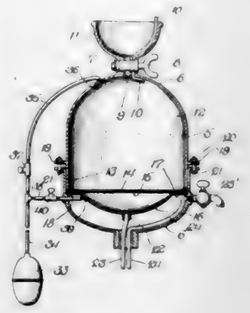


A metallic filament lamp for projection purposes comprising naked incandescent filaments of circular cross-section wound into coils of flattened form, having the outer coils wound into closer spirals than the more centrally situated coils.

---

1,560,266. FILTER DEVICE. HARRY S. LEVINTHAL, Melrose Park, Ill. Filed Mar. 13, 1922. Serial No. 543,313. 2 Claims. (Cl. 210—103.)

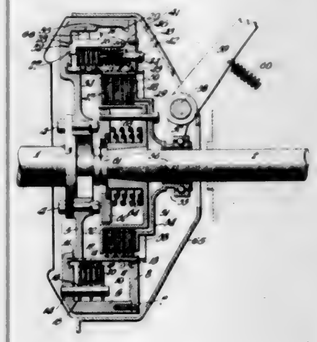
1. A device of the character described comprising an open-ended member having an internal annular shoulder spaced inwardly from the open end and an outwardly extending flange above the shoulder; a cup-shaped partition having an annular rim resting on said shoulder to provide a chamber; a filtering disk resting on said rim; a dome-shaped top member having an open end making telescopic engagement with the first-mentioned member and having a flange around its peripheral surface above the



lower edge and bolts passing through said flanges to hold the top and first-mentioned members together and the filter and partition in place between the first-mentioned member and the top member.

---

1,560,267. AUTOMATIC DRIVE. FISHER H. LIPPINCOTT, Philadelphia, Pa. Filed Mar. 1, 1924. Serial No. 696,125. 10 Claims. (Cl. 192—105.)



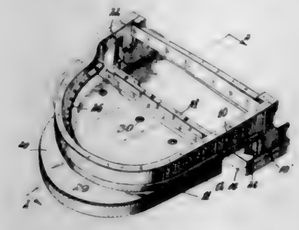
1. In an automatic drive, the combination with a driving member, and a driven member, of a set of driving and a set of driven friction discs contributing to form an operative connection between said members, centrifugally controlled levers operative under centrifugal action to effect lateral displacement of said friction discs to automatically vary the degree of friction between them as the speed of the driving member varies, and resilient means adjustable as to location without varying its degree of resiliency, to limit lateral movement of said discs until the maximum strength of said resilient means is reached, said resilient means then permitting bodily movement of said discs until said levers complete their outward stroke.

---

1,560,268. GRAND-PIANO-BODY CONSTRUCTION. CHARLES LOITSCH, New York, N. Y. Filed Jan. 12, 1923. Serial No. 612,228. 2 Claims. (Cl. 84—184.)

1. In a grand piano, a casing divided along a horizontal line into upper and lower elements, and a sounding board fixed upon the lower elements independently

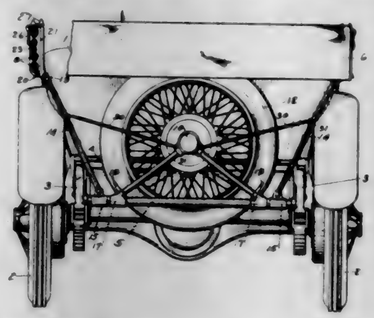
of the upper element and being flush at its sides with the outer face of the said casing element, the upper sec-



tion having downturned parts at its front and covering the front end of the lower sections and being recessed to receive the latter.

---

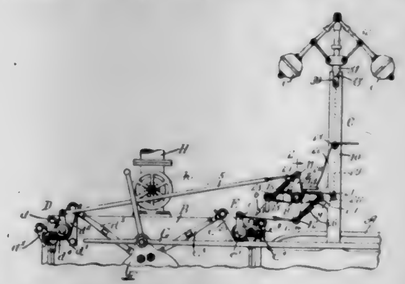
1,560,269. TOP SUPPORT. ALLEN LOOMIS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 10, 1919. Serial No. 323,001. 5 Claims. (Cl. 296—132.)



1. In a device of the character described, a vehicle having a folding top, a body and a frame, top supporting standards pivoted to said frame to swing behind said body transversely thereof and means for limiting the outward movement of said standards.

---

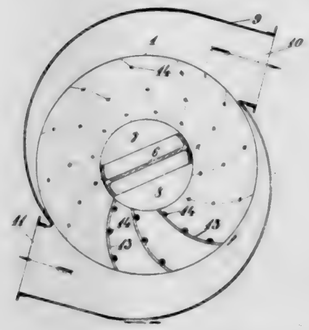
1,560,270. MECHANISM FOR STOPPING RECIPROCATING STEAM ENGINES. EMIL O. LUNDBLAD, Medford, Mass. Filed Dec. 14, 1923. Serial No. 680,746. 3 Claims. (Cl. 137—140.)



1. In a reciprocating steam engine, a cylinder valve operating mechanism, a shaft, a governor mechanism operatively connected to and adapted to rock said shaft, a lever rigidly fastened to said shaft, another lever loosely mounted upon said shaft and operatively connected to said valve mechanism, means to lock said levers together whereby they may move in unison to operate said valve mechanism, means to unlock said levers one from the other and means to operate said valve mechanism to hold the inlet valves thereof permanently closed when said levers have been unlocked one from the other, thereby causing said engine to stop.

---

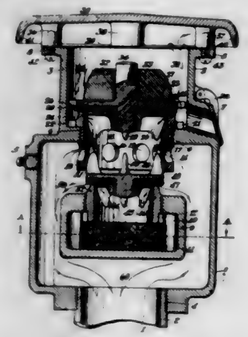
1,560,271. APPARATUS FOR TRANSMISSION OF HEAT FROM ONE MEDIUM TO ANOTHER. ERIK SIGFRID LYNGER, Liljeholmen, Sweden. Filed June 12, 1924. Serial No. 719,643. 3 Claims. (Cl. 257—244.)



1. Apparatus for transmission of heat from one medium to another, comprising a centrifugal blower including a vane wheel, the inlet of which is divided into different compartments for the different media by means of a wall adapted to conduct the media to different portions of the inner circumference of the blower in such a way that a medium drawn in by the vane wheel is delivered into an outlet belonging to said medium.

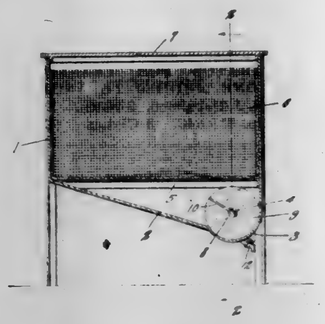
---

1,560,272. COMBINATION PRESSURE AND VACUUM VALVE. ROBERT J. MCAUSLAND, Oklahoma City, Okla. Filed Feb. 19, 1923. Serial No. 619,929. 4 Claims. (Cl. 277—60.)



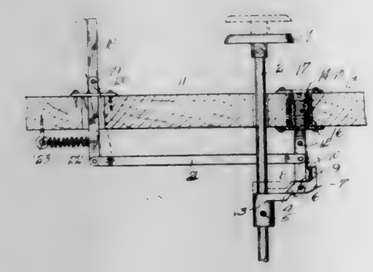
1. A pressure and vacuum valve comprising a casing including pressure and overflow chambers, the latter having a screened outlet communicating with the atmosphere, said casing having an intermediate wall, a cylindrical member mounted in said wall and provided with a valve seat, a pressure valve cooperating with said seat adapted to open due to increased pressure of gases in the pressure chamber, and means for carrying off the overflow.

1,560,273. DISHWASHING MACHINE. HEMAN W. MCKENZIE and RUFUS L. MALTBA, Black Earth, Wis. Filed Mar. 31, 1922, Serial No. 548,336. Renewed Apr. 9, 1925. 1 Claim. (Cl. 141—9.)



In a rotary splasher for throwing a cleansing liquid against the contents of a dishwashing machine, a shaft revolubly mounted longitudinally within and adjacent the bottom of a container, discs secured to and spaced at intervals longitudinally of the shaft, plates extending from disc to disc and secured radially between the same and formed in a spiral along the shaft, so that a liquid will be projected upward and laterally from the splasher, in combination with a liquid container having a vertical front wall, a curved lower front corner, an inclined bottom and vertical rear wall, and means for revolving the splasher.

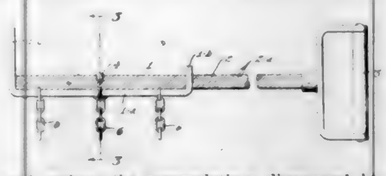
1,560,274. THROTTLE CONTROL. WALTER C. MCLAM and HERBERT ESHELMAN, Spokane, Wash. Filed June 19, 1925. Serial No. 38,238. 5 Claims. (Cl. 74—81.)



1. The combination with a reciprocable member of an actuating gas-control device, of a pivoted spring pressed detent and a suspending link therefor, a pawl on the reciprocable member, and means for moving said detent out of the path of movement of the pawl.

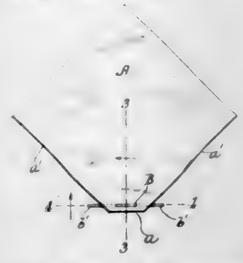
1,560,275. CLEANER AND SCRAPER FOR FURNACE AND BOILER FLUES. RALPH MACCARTHY, Elgin, Ill. Filed Dec. 12, 1922. Serial No. 606,449. 1 Claim. (Cl. 15—104.16.)

A boiler, furnace or tube cleaner comprising a scraping and raking member consisting of an upstanding end member adapted to dislodge the soot and carbon from the boiler, furnace or tube, a member carrying said scraping member and provided with a flexible cable-like handled member, and flexible dangling means depending from said carrying member, also adapted to remove or dislodge the



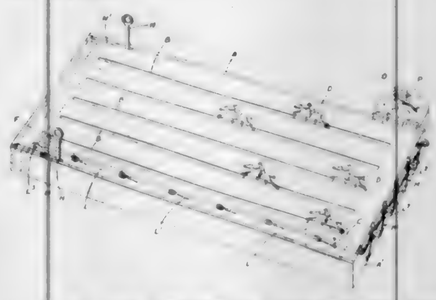
soot and carbon, the accumulations disengaged by said end member and dangling means being removed by said scraping and raking means.

1,560,276. FLEXIBLE SHINGLE. HUGH MACINNES, Jersey City, N. J. Filed Feb. 28, 1923. Serial No. 621,720. 1 Claim. (Cl. 108—8.)



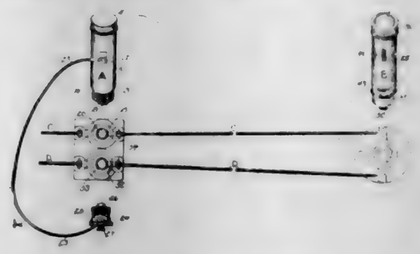
As an improved article of manufacture, a shingle formed of a flat body the under face of which is in the same continuous plane throughout, one edge of the shingle being straight, the body of the shingle having therein a fastener substantially parallel with said straight edge, the ends of the fastener being passed through said body with its end portions extended in opposite directions outwardly beyond the opposite adjacent edges of the shingle body adjacent said straight edge and between the latter and the transverse center line through the shingle.

1,560,277. APPARATUS FOR PLAYING RACE GAMES. JOHN CARLISLE POMEROY MAGWOOD, London, England. Filed Aug. 27, 1923. Serial No. 659,633. 6 Claims. (Cl. 273—86.)



1. A race game apparatus in which successive movements of the game-pieces are dictated by chance, comprising a plurality of game-pieces mounted to move substantially parallel to one another, independent actuating means for each game-piece to propel same in the forward direction, interrupting means arranged at intervals in the path of each game-piece, hand operated means for releasing each game-piece when so interrupted, and a chance device for indicating the successive releases of the game-pieces.

1,560,278. PORTABLE APPARATUS FOR IDENTIFYING ELECTRIC CONDUCTORS. WILLIAM MAHAN, New Haven, Conn. Filed Jan. 23, 1924. Serial No. 688,045. 7 Claims. (Cl. 175—183.)



1. A portable apparatus for identifying electric conductors, comprising two independently-organized, physically separate complementary units, each having a separate source of electric energy and each having two terminals adapted to be connected into a circuit, and the said apparatus also comprising an electrically-operated signal brought into play only by the co-action in series of the electric energy of the physically separate two units.

1,560,279. STOOL AND THE LIKE. CHARLES G. MARKS, Waukegan, Ill. Filed Jan. 17, 1925. Serial No. 3,025. 1 Claim. (Cl. 155—134.)

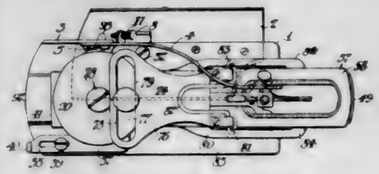
A stool comprising a standard formed from sheet metal and cylindrical in cross-section, a bushing driven into the upper end of said standard whereby to bulge the walls of the latter outwardly, a base having a tapered extension inserted in the lower end of said standard, a rotatable seat, a spindle consisting of a cylinder of sheet metal removably mounted in said bushing, and integral sheet-metal arms projecting radially from the upper end of said spindle and secured to the underside of said seat.

1,560,280. PLUMBING TOOL. HARRY C. MARTIN, San Antonio, Tex. Filed Oct. 20, 1924. Serial No. 744,758. 3 Claims. (Cl. 137—76.)

1. A tool of the character described comprising an elongated tubular member formed with pairs of openings near one end, said tubular member being adapted for insertion within a pipe and a ferrule to be joined thereto, a rod slidably mounted within said tubular member, and pairs of jaw members pivoted within the rod and extending through said openings, the ends of said

jaw members being adapted to engage the inner periphery of the pipe within which the device is inserted, and means for moving the plunger longitudinally for swinging the jaw members outwardly.

1,560,281. ATTACHMENT FOR SEWING MACHINES. ALBERTUS B. MATTINGLY, New York, N. Y. Substitute for application Serial No. 10,505, filed Feb. 25, 1915. Renewed Dec. 28, 1922. This application filed Sept. 10, 1923. Serial No. 662,003. 11 Claims. (Cl. 112—77.)

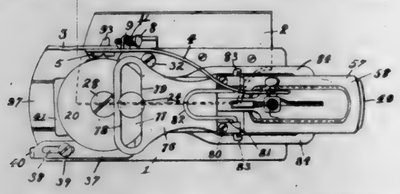


1. The combination with a frame and a work clamp mounted to reciprocate thereon and to vibrate laterally, of a stud, a ratchet cam with five points and working faces mounted on the stud, means for advancing the ratchet cam step by step, the work clamp having a vibrating means connecting it to the ratchet cam, a knife shield carried by the work clamp and movable thereon, a spring member, a knife carried by the spring member adapted to be forced through the material by the needle bar, a yoke formed on the end of the spring member, a rotating cam on said stud, a cam face formed on said yoke and acting in conjunction with the rotating cam on the aforesaid stud, and a spring formed on said yoke for operating the knife at the proper time and withdrawing it from under the needle bar.

1,560,282. ATTACHMENT FOR SEWING MACHINES. ALBERTUS B. MATTINGLY, New York, N. Y. Substitute for application Serial No. 798,972, filed Nov. 3, 1913. Renewed Dec. 20, 1919, Serial No. 346,433. This application filed Sept. 10, 1923. Serial No. 662,004. 10 Claims. (Cl. 112—77.)

1. The combination with a frame and a work clamp mounted to reciprocate thereon and to vibrate laterally, of a stud, a ratchet cam mounted on the stud and having a central perforation and ten perforations in a cir-

cular series around the center, the periphery of the cam having five faces meeting to form five points, advancing means arranged to engage the cam at said perforations to turn the cam step by step, means connected to the work clamp and engaging said cam periphery to vibrate the



work clamp, means for preventing any backward throw of the perforated cam, means for shifting at certain periods the work clamp relatively to its pivot so as to form a button hole with an eyelet end, and means for adjusting the vibrator relative to the stud and needle.

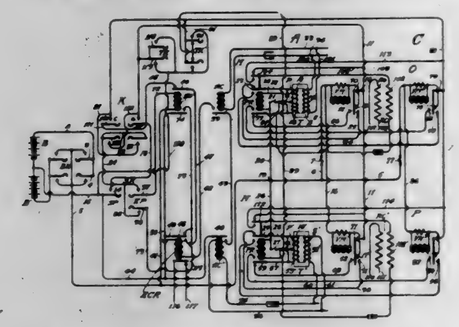
---

1,560,283. STENCIL EMBROIDERY PATTERN. EMMA BERNER MEHLEM, Chicago, Ill. Filed May 1, 1924. Serial No. 710,406. 3 Claims. (Cl. 2—278.)

1. The method of producing an embroidered reticulate article consisting in cutting a pattern through a flexible sheet, securing a backing sheet of contrasting color against the rear side of the pattern sheet to conspicuously display the cut-out pattern therof, placing a reticulate sheet upon the front side of the pattern sheet, and embroidering said reticulate sheet over the distinctively displayed cut-out pattern.

---

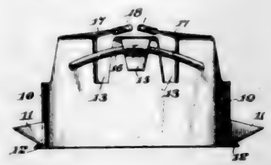
1,560,284. POLE-CHANGER SWITCHING CIRCUIT. JOHN F. MEYERS, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1923. Serial No. 665,798. 9 Claims. (Cl. 179—84.)



1. A switching system of the character described including a pair of pole changers, each of which comprises two units, a key for manually controlling the connection of either pole changer, a switch for starting the operation of said pole changer and control means conditioned by said switch and operating automatically to switch from one pole changer to the other.

---

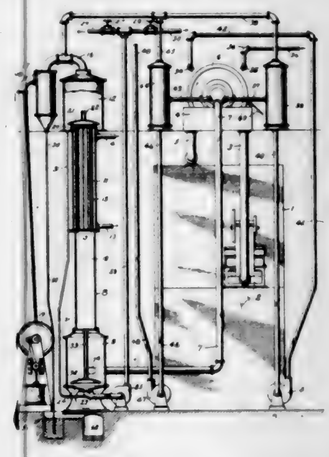
1,560,285. CALF WEANER. FRED MITTELSTADT, Wessington, S. Dak. Filed Feb. 18, 1925. Serial No. 10,066. 1 Claim. (Cl. 119—132.)



A calf weaner comprising a curved nose guard having inwardly directed nostril engaging portions and outwardly directed pointed portions, an eye at the forward portion of the body, and a loop device detachably engaged at its ends in the nose guard and extending through the eye.

---

1,560,286. METHOD AND APPARATUS FOR HANDLING FOAMING AND FROTHING LIQUIDS. WILLIAM D. MOUNT, Lynchburg, Va. Filed Mar. 1, 1924. Serial No. 696,407. 13 Claims. (Cl. 183—2.6.)



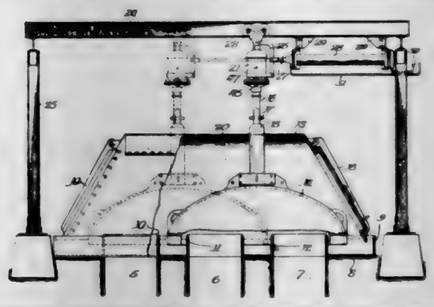
1. A vacuum trap comprising a casing having upper and lower chambers connected by a heated passage, means for introducing the liquid to be treated into the lower chamber approximately tangentially thereof to cause a swirling of the introduced liquid, a pump connected at its suction side to the bottom of the lower chamber for removing the body of the liquid, any foam and froth created and rising through the heated passage being broken up by the heat.

---

1,560,287. REVERSING-VALVE MECHANISM. JOHN A. MURPHY, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed July 3, 1922. Serial No. 572,358. 6 Claims. (Cl. 137—151.)

1. Reversing valve mechanism comprising a valve hood, means for moving said hood vertically and a

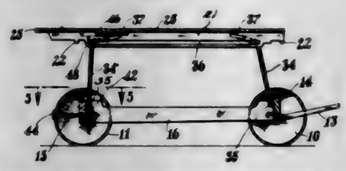
second means adapted to move it horizontally, said means being interconnected whereby the second means



becomes operative upon a predetermined lifting movement by the first means.

---

1,560,288. CHILD'S WAGON. JOHN MURRAY, Lorain, Ohio. Filed Oct. 15, 1924. Serial No. 743,651. 3 Claims. (Cl. 280—30.)



1. A device of the class described comprising an underframe, wheels on which said frame is supported, a platform normally resting on said underframe, and a pair of bail-like members pivoted at their ends to said underframe and adapted to support the said platform in position raised above said underframe, said platform having a pair of joist-bars fixed to the underside thereof, said bars having longitudinal slots in which the said bail-like members engage, a braking element applied to certain of said wheels, and means connected to one of said bail-like members to be operated by movement thereof to move the said braking element to operative position.

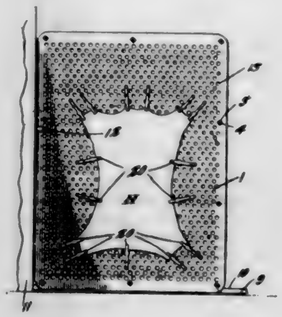
---

1,560,289. MINIATURE LAMP. JOHN L. NOLL, Juniata, Pa. Filed Apr. 7, 1924. Serial No. 704,828. 2 Claims. (Cl. 240—84.)

2. A miniature lamp post comprising a standard formed of a relatively soft metal, an internally threaded lamp receiving socket at one end of the standard, an externally threaded socket engaging projection at the opposite end of the standard, a reinforcing sleeve extending longitudinally within the standard, an insulating plate located at the bottom of the socket, an insulating plate at the outer end of the extension, an electric conductor extending through the reinforcing sleeve and having its opposite ends extending through the insulating plates and contact members at the outer ends of the conductor and bearing against the insulating plates.

---

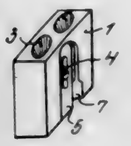
1,560,290. STRETCHER AND DRIER FOR HIDES. PETER T. O'BRIEN, Salem, Mass. Filed Mar. 12, 1923. Serial No. 624,548. 1 Claim. (Cl. 34—26.)



The combination with an upstanding structure and spring clips secured thereto and extending therefrom, said clips being arranged in pairs, of a rail extending from the bottom of the upstanding structure, an upstanding portion on the rail extending longitudinally thereof, and a rack slidably mounted on and supported by the rail and movable against the upstanding structure, said rack including spaced plates slidable along and guided by the upstanding portion on the rail, said plates being movable into engagement by and adapted to be held in upstanding positions by the respective pairs of clips.

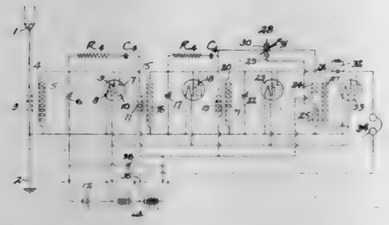
---

1,560,291. PENCIL SHARPENER. OTTO EGON BORK, Copenhagen, Denmark. Filed Aug. 8, 1925. Serial No. 49,012. 3 Claims. (Cl. 120—85.)



1. A pencil sharpener, comprising a body part with a conical bore therein, and a cut-away part forming a longitudinal opening into the conical bore, a knife-edge cutter mounted in said cut-away part and having its cutting edge projecting longitudinally into the conical bore, a scraper mounted on the body part and adapted to sharpen the lead of the pencil only, the said scraper consisting of a polygonal plate arranged to be turned in the plane of its support on the body part in order that any one of its circumferential edges may be brought in position to project into the conical bore in the body part to exert a scraping action on the lead of the pencil or crayon.

1,560,292. RADIOFREQUENCY AMPLIFIER. SAMUEL COHEN, Brooklyn, N. Y., assignor to Osodampa Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1924. Serial No. 736,603. 5 Claims. (Cl. 179—171.)



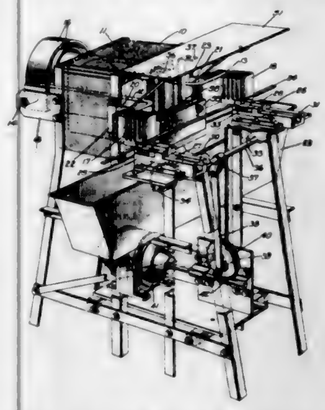
1. A radio frequency amplifier comprising in combination a plurality of electron tubes each having input and output circuits interlinked one with the other, a detector connected with the output circuit of one of said tubes, means connected between the input and output circuits of said tubes immediately preceding the tube next adjacent said detector for preventing regenerative amplification and a three electrode condenser having two of its electrodes connected between the output circuit of said tube immediately preceding the tube next adjacent said detector and the output circuit of said tube next adjacent said detector, and a connection between the third electrode of said condenser and a separate winding magnetically coupled with the input circuit of said detector for permitting regenerative amplification whereby received signaling energy may be impressed at relatively large amplitude upon said detector.

1,560,293. WALL-MOLDING APPARATUS. WALTER T. FELS, Philadelphia, Pa., assignor of one-half to Paul J. Kilbride, Philadelphia, Pa. Filed May 13, 1925. Serial No. 30,073. 6 Claims. (Cl. 25—131.)

1. In a wall molding apparatus, a plurality of screws to engage in the upper portion of a concrete wall under construction and adapted to travel upwardly and withdraw partially from the concrete as the wall is built up course upon course, a nut on each screw to travel upwardly thereon by the rotation of the nut on the screw, the screws having stops thereon above the nuts for the contact of said nuts, a wall form supported by said nuts, and means connected to said nuts for simultaneously turning them.

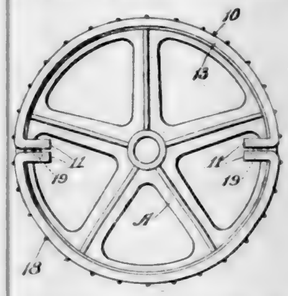
1,560,294. ELECTRIC HEATING APPARATUS. HENRY GRISENHÖNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 25, 1922. Serial No. 603,333. 10 Claims. (Cl. 219—13.)

10. An electric annealing machine comprising a transformer provided with a secondary winding including parallel pivotally mounted bars, said bars having two ends electrically connected and their opposite ends forming terminals, supports under said terminals, feeding members slidably mounted on said supports, gear racks carried by said members, a shaft, gear sectors secured to said shaft cooperating respectively with said racks, and



driving means for rocking said shaft whereby said feeding members are moved away from said terminals to receive an article to be heated and toward said terminals to push the article under said terminals and thereby close a heating circuit through the article.

1,560,295. COURSE INDENTING ATTACHMENT FOR ROAD ROLLERS. RAYMOND W. KEELER, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Jan. 8, 1925. Serial No. 1,287. 2 Claims. (Cl. 94—45.)

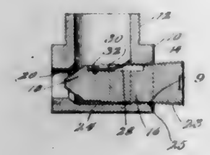


1. An indentation-forming attachment for road rollers comprising oppositely disposed roller clamps, each clamp comprising a plurality of sections adapted to embrace the rim of the roller, each section being formed of angle iron to provide a flange resting upon the rim of the roller and a flange extending vertically inward from the outer edge of the roller, means holding these sections in connected engagement with each other and clamped upon a wheel, and transversely extending flexible indentation-forming members engaged at the ends with said clamp.

1,560,296. SEDIMENT PLUG AND VALVE. BENJAMIN S. MAHAFFEY, Chicago, Ill. Filed July 10, 1922. Serial No. 573,853. 4 Claims. (Cl. 251—152.)

1. A combined sediment plug and valve comprising a plug casing having a sediment collecting chamber therein, opposite sides of the plug casing having openings therein, one of said openings having a seat and the other opening having a thread, a threaded valve member in the latter opening and having one end adapted to engage

the seat and the other end adapted for application of a tool for turning the same, the top of the valve member having a groove therein, and a spring fixed in the groove

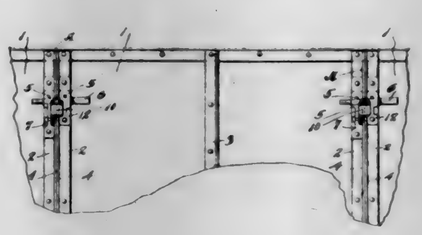


and adapted at its outer end to engage an inner face of the plug to prevent accidental removal of the valve member.

1,560,297. OXIDIZING ORGANIC BODIES. JOSEPH V. MEIGS, Montclair, N. J., assignor, by mesne assignments, to Ellis-Foster Company, a Corporation of New Jersey. Filed Apr. 4, 1919. Serial No. 287,441. 10 Claims. (Cl. 260—108.)

1. In the catalytic oxidation of an organic aromatic body, mixing the vapor of the organic body with an oxygen-containing gas, an internal gaseous cooling agent and a gaseous accelerating agent and subjecting the whole to the action of a vesiculated catalytic agent containing iron oxid combined with an acidic oxid of a metal, at between 200° C., and a red heat, and maintaining the $CO_2$ in the exit gases at not above 3%.

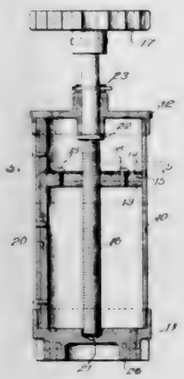
1,560,298. WALL FORM. ROY M. MOSS and OSCAR B. PULIS, Milwaukee, Wis., assignors to Metal Forms Corporation, Milwaukee, Wis., a Corporation. Filed July 3, 1924. Serial No. 724,138. 8 Claims. (Cl. 25—131.)



1. In combination, spaced form units, tie rods extending across the space between the units and having their opposite ends passing through the latter, angle plates on the form units adjacent to the ends of the rods, and wedges slidable at right angles to the tie rods and engageable with the latter to lock them connected with the form units, and clamps connecting the form units together and cooperating with said wedges.

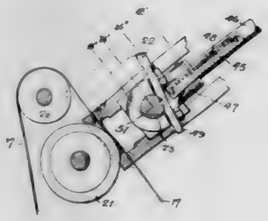
1,560,299. MULTIPLE LUBRICATOR. WILLIAM O. OLSON, Chicago, Ill. Filed Feb. 7, 1920. Serial No. 357,078. 1 Claim. (Cl. 184—38.)

A lubricator comprising an open ended cylindrical body threaded at opposite ends, a distributor head having a threaded cylindrical flange fitted to one end of the body, the outer face of the head having a cylindrical rib pierced by outlet passages communicating with the interior of the body, adjustable regulator plugs extending through the rib and transversely intersecting the respective outlet passages, a cap threaded upon the other end of the body and provided with a central opening having bearing bosses at opposite sides of the cap, a plunger working in the body, a rotatable shaft stepped in a socket in the inner face of the distributor



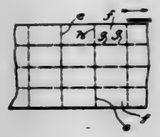
head and extending through the said bosses and opening in the cap, said shaft being screw-threaded below the cap and extending through a screw-threaded opening in the plunger, an annular flange on the shaft and engaged with the inner end of the inner boss, and a handle on the outer end of the shaft.

1,560,300. REGISTRY DEVICE FOR BAG-MAKING MACHINERY. CARL W. OMAN, South Windham, Conn., assignor to The Smith & Winchester Mfg. Co., South Windham, Conn., a Corporation of Connecticut. Filed Apr. 18, 1924. Serial No. 707,445. 6 Claims. (Cl. 93—83.)



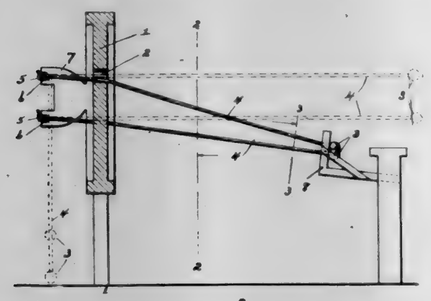
2. In a paper bag machine of the variable speed paper-feed type, a thumb-lip knife, a shaft on which the knife is mounted, a scale mounted in fixed position adjacent the plane of travel of the knife, and means for adjusting the knife with respect to the scale to vary its radius and thus correlate its linear speed to that of the paper web.

1,560,301. ROOFING. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1919. Serial No. 291,401. 2 Claims. (Cl. 154—51.)



1. A sheet of roofing having angularly disposed rows of spaced slits partially defining roofing units which may be readily separated, slits of angularly disposed rows intersecting each other to define the corners of the units whereby the production of ragged corners when the units are separated is prevented.

1,560,302. GAME APPARATUS. ALFRED M. PALMER, Troy, N. Y. Filed July 23, 1921. Serial No. 486,942. 1 Claim. (Cl. 273—98.)

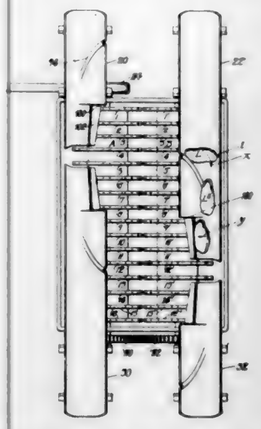


A game apparatus comprising a board provided with an aperture, a missile freely movable through said aperture, a stationary support in rear of said board at a distance therefrom greater than the diameter of the missile, and an elastic connection between said missile and said support at a point substantially in line with the axis of said aperture.

1,560,303. DOUBLE EARPIECE. HERMAN G. PAPE, New York, N. Y. Filed Jan. 17, 1924. Serial No. 686,861. 22 Claims. (Cl. 179—182.)

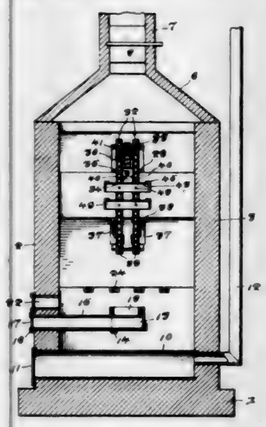
3. An earpiece of the class described having an interior sound chamber of convex formation, said sound chamber being provided with a series of sound swell chambers, said sound swell chambers being provided with a minute compression release or vent, said release or vent opening into a protective groove or hollow located on the exterior of said earpiece.

1,560,304. FEEDER FOR COAL BREAKERS. FRANK PARDEE, Hazleton, Pa. Filed Oct. 24, 1922. Serial No. 596,570. 14 Claims. (Cl. 83—52.)



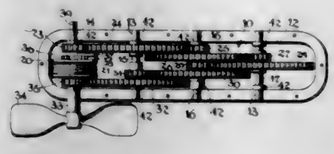
1. In combination with the rolls of a rotary breaker, a feeder for conveying lumps thereto comprising a vibrating member extending lengthwise of said breaker rolls, and arranged to deposit the lumps one at a time on the breaker rolls with their longest axes approximately parallel with the axes of rotation of said rolls.

1,560,305. DEHYDRATOR. ARTHUR W. PARKER, Midwest, Wyo., assignor to Lloyd A. Parker, Midwest, Wyo. Filed Aug. 28, 1924. Serial No. 734,767. 5 Claims. (Cl. 34—11.)



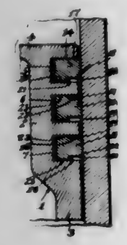
4. A dehydrator of the character described comprising a hot air chamber, a drying chamber and a loading chamber, conveying means extending from the loading chamber into the drying chamber, trays associated with the conveying means, perforated bottoms formed on each tray, elongated strips arranged in said trays and resting upon the bottom thereof, pins rising from each of the elongated strips and being adapted to receive the food products singly, means projecting from the ends of each tray to be received by the conveying means, and said projecting means being spring held and slidably mounted in a manner whereby said trays can be detachably associated with the conveying means and automatically dropped therefrom.

1,560,306. FAN MOTOR. JAMES S. PATTERSON, Abilene, Tex., assignor of one-fourth to William E. Patterson and one-fourth to J. S. Patterson, jr., both of Abilene, Tex. Filed Oct. 6, 1923. Serial No. 666,950. 2 Claims. (Cl. 185—27.)



1. A device of the class described, comprising a support having transversely aligned bearings, a shaft journalled at one end in one of said bearings, a hub element bearing a gear pinion and journalled in the other of said bearings, said hub element formed with a seat to receive the other end of said shaft, a winding drum mounted to rotate with said shaft and carrying a ratchet wheel, a gear pinion rotative upon said shaft and carrying a pawl engaged by said ratchet, a cable having a weight attached thereto at one end and connected at the other end to said drum and adapted to be wound thereon, and a train of gears between the pinion of said shaft and the pinion of said hub element, whereby said drum is rotative under the influence of said weight and the motion of the drum communicated to the hub.

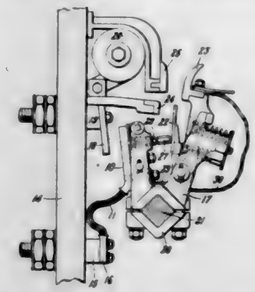
1,560,307. PISTON. DOCK J. FEELER, Nashville, Tenn. Filed July 8, 1925. Serial No. 42,239. 5 Claims. (Cl. 74—109.)



1. A group of spaced piston rings for mounting in the grooved periphery of a piston to prevent oil pumping consisting of at least three in number, each of said rings having the outer portion of the follower face thereof inset to provide in connection with the rear side wall of the groove in which it is mounted a trap opening at the periphery of the piston, each of the opposed walls of each trap extending in the same plane throughout and arranged in parallelism throughout, each of said traps of a depth approximately half the width of the body of a ring and of a width less than a quarter of the width of a piston groove.

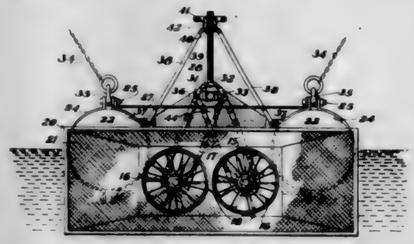
1,560,308. ELECTRICAL SWITCH. CHARLES L. PERRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1923. Serial No. 669,557. 3 Claims. (Cl. 200—166.)

1. In an electric switch, a stationary contact, a stationary terminal, a flexible conductor comprising a plurality of strands having one end fastened to said terminal and its other end forming a movable contact adapted to make contact with said stationary contact,



the strands at said end forming the movable contact being consolidated into a substantially solid and rigid mass.

1,560,309. CURRENT MOTOR. LAURITS A. PETERSEN, Los Angeles, Calif. Filed June 4, 1924. Serial No 717,762. 4 Claims. (Cl. 170—129.)

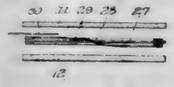


4. In a current motor, the combination of a frame forming a channel with bottom and side walls, a mouth at each end of the channel with converging walls leading to the channel, a plurality of longitudinal shafts journaled within the channel and having water wheels at each end thereof, a plate extending across each end of the channel with circular openings in front of each water wheel and of substantially the same size as the water wheel, a float at each side of the frame and contained within the space between the walls of the mouths with the inner sides of the floats forming upward extensions for the side walls of the channel, clamps encircling the respective floats, brackets secured to the side walls and to the lower extremities of the clamps, transverse bars connecting the upper ends of the clamps, bearings supported by said bars, a power shaft journaled in said bearings and operatively connected to each of the water wheel-shafts, cleats secured to the inner sides of the floats and the channel walls and forming vertical opposed guideways, a gate mounted in said guideways and having vertical slots through which said shafts pass, and screw threaded means for raising and lowering said gate.

1,560,310. GRID-LEAK CONDENSER. CARL PFANSTIEHL and WILLIAM OSCAR BELL, Highland Park, Ill., assignors to Pfanstiehl Radio Company, Highland Park, Ill., a Corporation of Illinois. Filed Jan. 2, 1924. Serial No. 683,952. 7 Claims. (Cl. 250—16.)

4. In a condenser, similar plates alternately oppositely faced, holes in said plates, rivets snugly fitting said holes in the plates, oppositely placed holes in alternate plates larger than the first named holes and

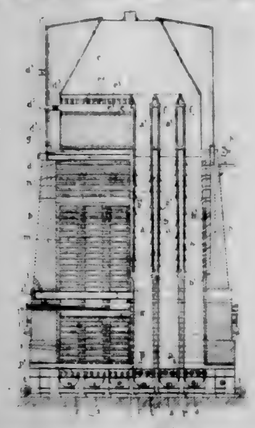
registering with the same, insulating material separating said plates, said insulation snugly fitting said rivets, central openings in two adjacent plates, and a grid leak



extending across said openings, having its ends connected to said plates, and a metal strip slidable over said grid leak to vary the resistance of the same.

---

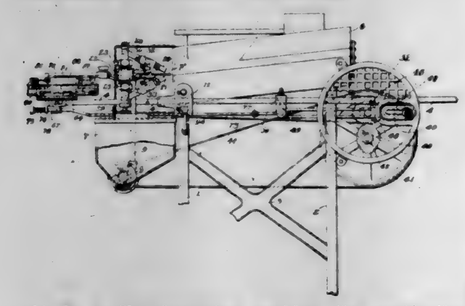
1,560,311. CONTINUOUS DISTILLATION OVEN. JULIEN PIETERS, Paris, France. Filed July 23, 1924. Serial No. 727,737. 5 Claims. (Cl. 202—9.)



1. A vertical apparatus for the continuous distillation of lignite, peat, and like carbonaceous materials, comprising a block, a number of vertical retorts arranged in said block in rows in two directions at right angles to one another,—each retort presenting in cross section a length greater than its width,—and passages in the walls separating said retorts, parallel to the major axes thereof for the passage of heating gases, in combination with flues standing vertically between the retorts, along the major axes of the latter, said flues being adapted to collect the gases of distillation, and other passages connecting each of said retorts with said flues at a plurality of heights.

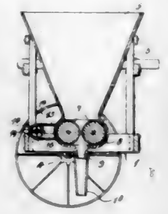
---

1,560,312. FILE-SHARPENING MACHINE. EMLEN P. PITFIELD, Taunton, Mass. Filed Jan. 2, 1920. Serial No. 348,876. 15 Claims. (Cl. 51—10.)



11. In a file sharpening machine, the combination with an abrasive reservoir and a blast gun, of a pump having draft upon said reservoir and connected with said gun.

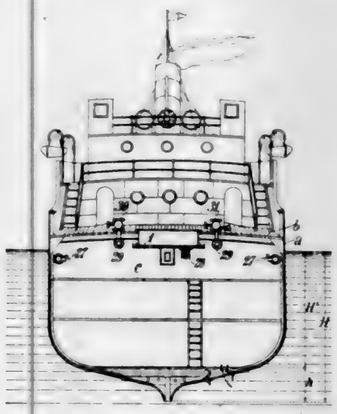
1,560,313. FERTILIZER DISTRIBUTOR. WALTER F. PITTMAN, Kenly, N. C. Filed July 10, 1924. Serial No. 725,206. 1 Claim. (Cl. 221—130.)



A hopper having outward bulges in the side walls above the discharge spout, contiguous feed rollers journaled adjacent the bulges to be approximately one-half housed in said bulges, the remaining or unhoused portions of said rollers constituting the bottom of said hopper and supporting the material therein.

---

1,560,314. MEANS FOR PREVENTING SHIPS AND VESSELS SINKING. JEAN PAUL POLOUECTOFF, Paris, and ILYA BOKHANOWSKY, Toulon, France, assignors of one-half to Wadim de Wergelsky, Paris, France. Filed Aug. 4, 1923. Serial No. 655,757. 8 Claims. (Cl. 114—68.)



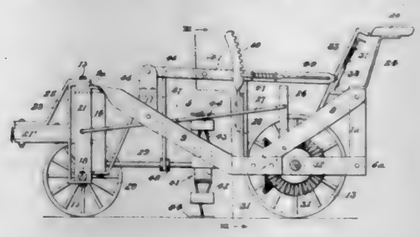
6. A ship divided into air-tight compartments said compartments having hatch-ways, a hatch arranged beneath the deck-plates and movable to open or close said hatch-way, said hatch having an air-lock communicating with the compartment and the atmosphere, and means for forcing compressed air into said compartment.

---

1,560,315. BEET BLOCKER. JOSEPH F. PRENOSIL, Georgetown, Minn. Filed Feb. 7, 1924. Serial No. 691,210. 1 Claim. (Cl. 97—15.)

In a device of the class described, a frame including a rear section formed of connected vertical and horizontal U-shaped members, forwardly and upwardly extending side bars connected to the rear section, cross braces connecting the front end portions of the side bars, a rear axle having ground engaging wheels journaled in the rear section, reversely bent brace members extending downwardly and forwardly from the rear one of the cross braces with their lower ends underlying the front cross brace, a vertical block supported by the front cross brace and the ends of the reversely bent

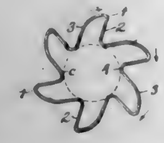
brace members, said block having a well formed longitudinally therein, and a slot formed in the rear wall thereof, a pair of upstanding spaced arms carried by the horizontal U-shaped frame member, a vertically, bodily shiftable shaft having a head at one end received in the well of the vertical block and projecting through



the slot of the same with the remaining end portion of the shaft positioned between the pair of spaced arms, a cutter wheel carried by the shaft, means for connecting the shaft to the rear axle when the shaft is located with the cutting wheel operatively arranged in respect to the ground, and means carried by the rear cross brace for moving said shaft vertically.

---

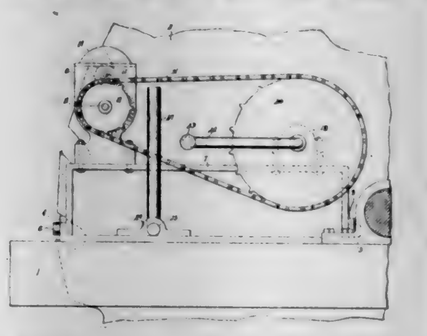
1,560,316. CABLE SPLICE. HARRY PRINCE, Buffalo, N. Y. Filed Apr. 3, 1924. Serial No. 704,083. 2 Claims. (Cl. 173—263.)



1. A cable splice comprising a tube or sleeve formed with longitudinal corrugations and adapted by a series of blows applied to said corrugations to be deformed into mean circular outline whereby the corrugations are laid shingle-wise on one another.

---

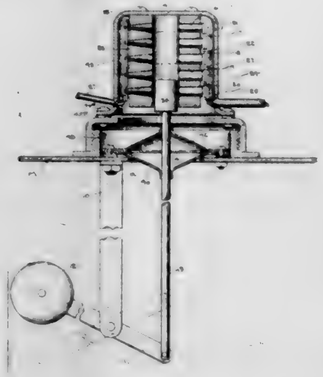
1,560,317. SAW GRINDER. JOHN W. RAUCH and ROYAL R. RAUCH, Newport, Wash. Filed Jan. 28, 1925. Serial No. 5,401. 1 Claim. (Cl. 76—45.)



A means for grinding and sharpening the teeth of a circular saw, in which the said saw is journaled on a bed, comprising a substantially U-shaped frame whose ends are removably journaled in bearings on the bed, a housing on the frame, oppositely directed shafts journaled in bearings in and projecting through the housing, a gear on one of the shafts, a pinion on the other shaft in mesh with the gear, a grinding stone removably secured on the last mentioned shaft, a sprocket wheel on the end of the other shaft, a bearing fixed on the frame, a shaft having a crank handle journaled in the bearing, a comparatively large sprocket wheel secured on the shaft and a sprocket chain trained around this wheel and around the first mentioned sprocket wheel, a rod slidable in bearings on the frame, spaced fingers on the rod straddling the frame, and an operating handle for the rod, for the purpose set forth.

---

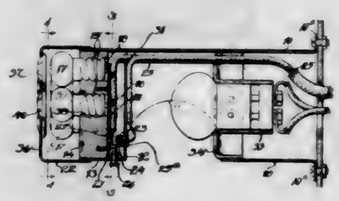
1,560,318. GASOLINE-TANK GAUGE. WALTER F. REED, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 527,456. 1 Claim. (Cl. 200—84.)



The combination with a tank, a lever fulcrumed therein, a float at one end thereof, and a reciprocal plunger pivoted thereto at the other end, a block of insulating material, a series of screws tapped therethrough, and each separated into two sections by a bore through said block, laterally projected contacts carried by the plunger, a plate connecting the outer ends of the other sections, and constituting the common terminals of the opposite ends of said contacts said plunger connecting said terminals.

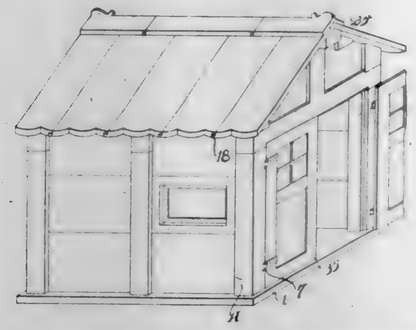
---

1,560,319. ELECTRIC LAMP. WALTER F. REED, Chicago, Ill. Filed Jan. 6, 1922. Serial No. 527,457. 2 Claims. (Cl. 177—324.)



2. In combination, a tubular casing having a lateral opening, a lamp socket within said casing and accessible through said opening, an insulating block disposed at the forward end of said casing, said block having a plurality of passages adapted to receive lamp bases, socket terminals in said passages, and a cap mounted on the forward end of said casing and a plurality of lenses mounted in said cap and disposed over the said sockets.

1,560,320. KNOCKDOWN BUILDING. HENRY REGENAUER, St. Paul, Minn. Filed May 17, 1924. Serial No. 713,946. 6 Claims. (Cl. 72—1.)



1. A knock-down building of the character described having a wall structure consisting of grooved columns spaced apart, anchor bars projecting therefrom, removable wall panels slidably inserted between said columns to be supported thereby, cross beams to interlockingly join opposite wall sections, a longitudinal beam supported by the grooved columns to engage the anchor bars projecting from the columns to interlockingly connect laterally adjacent wall sections, an upright member integral with a cross beam, a ridge beam supported on the upright member to position said upright engaging said ridge beam, and panels supported by the ridge beam and the interlocking beam supported by the columns to form a roof.

---

1,560,321. REENFORCED GLASS. GEORGE BAKER RILEY, East Dulwich, England. Filed Apr. 30, 1925. Serial No. 27,055. 6 Claims. (Cl. 49—81.)

1. A manufacture of reenforced glass of the kind wherein glass sheets are cemented to opposite sides of a sheet of celluloid, characterized in that the glass sheets are treated with a solution containing isinglass and a dextrin gum, the sheet of celluloid is treated with a solution of colophony and castor oil, and the prepared surfaces of the glass and celluloid are united by heat and pressure.

---

1,560,322. RIFLE BARREL AND SIGHT PROTECTOR. WILLIAM F. ROBERTS, Phoenix, Ariz., assignor of one-half to Sidney Owen, Phoenix, Ariz. Filed May 11, 1925. Serial No. 29,506. 4 Claims. (Cl. 42—1.)

1. A gun muzzle and sight protector comprising, a substantially U-shaped element, means upon one leg thereof for closing a gun muzzle, and means carried upon the other leg thereof adapted to protect a front sight, said sight protecting means being longitudinally adjustable upon its supporting leg.

---

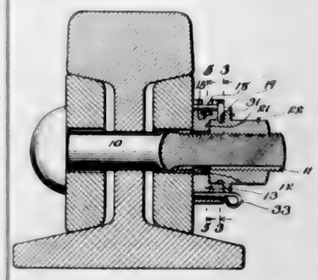
1,560,323. FEVER CURE AND FEVER-PREVENTION MEANS. CHARLES H. ROBERTSON and CHARLES L. ALLISON, Salem, Oreg. Filed June 28, 1923. Serial No. 648,264. 2 Claims. (Cl. 119—146.)

2. In fever cure and prevention means for milk producing animals, an udder apron, a resilient support for holding the same in engagement with an udder, adjustable means for reducing the operative size of the apron to accommodate the same to udders of different sizes, said apron being formed of a fabric sheet folded upon itself

at one end and stitched to provide a plurality of cross pockets, a belt extending through each pocket and anchored therein and attaching means for the resilient supports carried by the ends of the straps.

---

1,560,324. LOCK NUT. JOHN ROGLER, Jefferson, Wis. Filed Feb. 27, 1923. Serial No. 621,563. 1 Claim. (Cl. 151—13.)

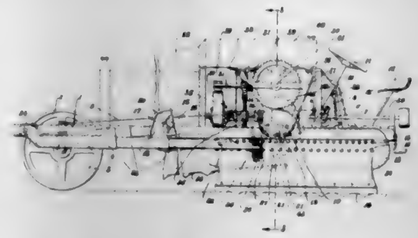


The combination of a bolt having a longitudinal groove extending throughout the length of its threaded portion, a lock fitting about said bolt, a key carried by said lock slidable in said groove, a nut having a series of notches in its outer face, a detent engageable in said notches, means cooperating with said detent to permit a right hand turn of said nut and preventing a reverse turn thereof, a second detent engageable in said notches, means cooperating with said second detent to permit a left hand turn of said nut and prevent a right hand turn of said nut, an arm on said first detent manually operable to move said detent to inoperative position, an arm on said second detent manually operable to move said detent to inoperative position, said lock having a peripheral groove provided with upper and lower undercut portions and a pair of tapered springs having their enlarged ends fitted within said grooves and having their smaller ends operatively engaging said detents and urging said detents towards locking position.

---

1,560,325. TRACTOR. ROBERT E. ROY, Oakland, Calif. Continuation of abandoned application Serial No. 507,358, filed Oct. 12, 1921. This application filed Nov. 22, 1924. Serial No. 751,710. 8 Claims. (Cl. 180—8.)

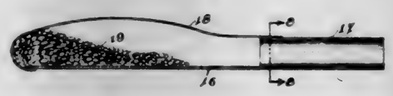
1. A tractor embodying in combination, a frame, a rolling support adjacent to one end of said frame, two sets of treading steppers forming other supporting means for said frame and arranged at opposite sides of the central fore and aft axis thereof, an engine on said frame, and driving connections between said engine and steppers operating to drive a stepper of each set rearwardly at a



certain speed and forwardly at a relatively accelerated speed, said driving connections including two sets of rack faces on each stepper, and two driving spur gears of different sizes meshing therewith.

---

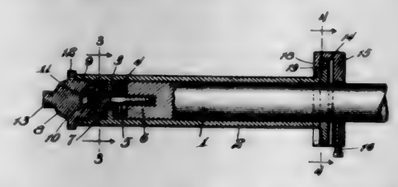
1,560,326. CONFETTI GUN. GRACE G. RUTHERFORD, Libertyville, Ill. Filed June 28, 1924. Serial No. 722,923. 2 Claims. (Cl. 46—37.)



1. A confetti gun, comprising a bag formed of two sheets of material united at their edges in such manner as to form a bag, said sheets being extended at one end into a neck, one of said sheets being further extended at said end and rolled to form a discharge tube.

---

1,560,327. WHEEL AND SHAFT BOXING. CLARENCE B. SCHNEIDER, Garfield, Wash. Filed Dec. 20, 1923. Serial No. 681,862. 2 Claims. (Cl. 301—112.)

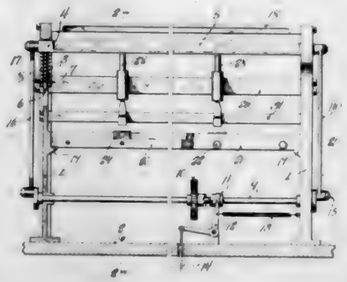


1. A construction of the kind indicated including a shaft and a boxing fitting the journal portion of the shaft, the boxing adjacent one end being provided with an interior division wall having a bearing bushing fitted therein, a spindle threadingly engaged in the extremity of the journal portion of the shaft and extending through the bearing bushing, and a hub cap exteriorly threaded for engagement with the interior threads in the boxing, the spindle being provided with an annular head disposed between the division wall and the inner end of the hub cap to take care of the end thrust in either direction on the shaft.

---

1,560,328. COMBINED STAPLING, PERFORATING, AND PUNCHING MACHINE. MICHAEL F. SCHULIST, Milwaukee, Wis. Filed Aug. 23, 1924. Serial No. 733,802. 3 Claims. (Cl. 1—3.)

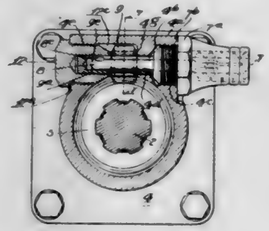
1. The combination of a machine having a pair of uprights, a pair of clamping jaws extending from one upright to the other and constituting a bed plate, a crosshead slidably carried by said uprights and located above said bed plate, manually controlled power driven means for reciprocating said crosshead, a tool having a



base removably locked between said clamping jaws and having a movable plunger located below said crosshead, a guide for said tool, and a stationary bar supporting said guide and having its ends secured to said uprights.

---

1,560,329. FLEXIBLE-SHAFT TRANSMISSION DRIVE. WILLIAM H. SCHULZE, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 7, 1924. Serial No. 684,737. 2 Claims. (Cl. 74—7.)



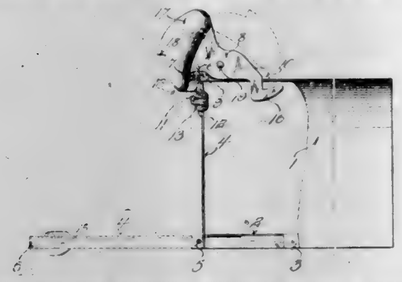
1. In combination with a transmission casing of a motor vehicle and power transmitting train therein, said casing having facing apertures in opposite walls thereof, a flexible shaft having its casing member terminal adapted to fit in and constitute a closure for one of said facing openings; and its rotating shaft member terminal exposed at the end of said casing terminal for rotative engagement; a gear pinion diametered for entrance in the direction of its axis through the other of said casing apertures and having means for rotative engagement with the rotating shaft member, and a closure for the second aperture adapted for insertion in the direction of its axis thereinto, said closure having a journal bearing for the pinion and being adapted for embracing the pinion to stop it in both axial directions.

---

1,560,330. MAIL BOX. FERDINAND SCHWARZ, Sheboygan, Wis. Filed Jan. 23, 1925. Serial No. 4,185. 1 Claim. (Cl. 292—218.)

A mail box comprising a body portion, a door closing one end thereof and pivoted adjacent its lower end to the said body portion, a latch pivoted to the upward forward part of said body portion and having a weighted handle and an inwardly directed latching tongue adapted to be positioned in front of said door when said door is closed, said latching tongue having an aperture therethrough, said latch having an arm extending inwardly of said box and provided with a projecting member adapted to contact with the inner side of said door

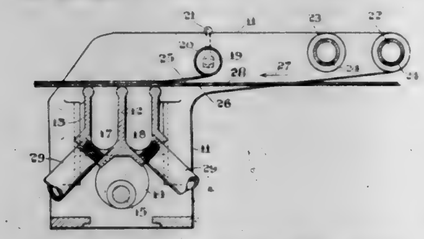
when said latch is rocked rearwardly to thus throw said door open, said weight being so related to the pivot point of said latch as to occupy positions on opposite sides of said pivot point when said latch is in its locking



and unlocking positions, said door having a forwardly projecting eyeletted portion adapted to project through the aperture in said latching tongue, and a lock having a bail adapted to be passed through said eyeletted portion, whereby said door may be locked in closed position.

---

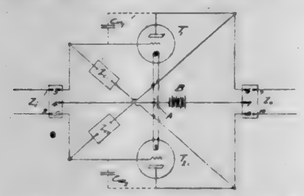
1,560,331. APPARATUS FOR WASHING PAPER-MACHINE FELTS. JOHN T. AYERS, Lachute, Canada. Filed Feb. 16, 1924. Serial No. 693,390. 4 Claims. (Cl. 92—50.)



4. An apparatus for cleaning paper machine felts, comprising a suction box disposed for engagement with the face of the felt, a flexible sealing member positioned above the suction box and the back of the felt, means for rolling the flexible sealing member clear of the felt when it is not in use, and means for directing washing and drying fluids against the back of the felt.

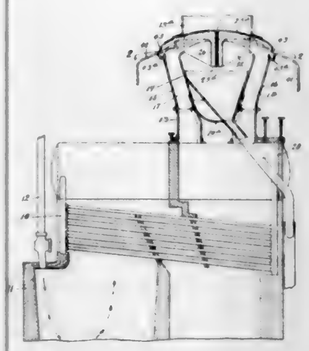
---

1,560,332. METHOD OF AND MEANS FOR REDUCING RETROACTIVE CURRENTS IN PUSH-PULL AMPLIFIERS. STUART BALLANTINE, White Haven, Pa., assignor to Radio Frequency Laboratories, Incorporated, Boonton, N. J., a Corporation of New Jersey. Original application filed Apr. 3, 1923, Serial No. 629,702. Divided and this application filed July 3, 1924. Serial No. 724,123. 4 Claims. (Cl. 179—171.)



1. The method of preventing the output circuits of a push-pull amplifying stage from affecting the input circuit of said stage, which comprises balancing the retroactive current due to the output circuit of one tube of said stage by a neutralizing current established by the output circuit of the other tube of said stage.

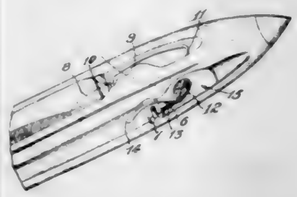
1,560,333. APPARATUS FOR SEPARATING SOLID PARTICLES FROM A GAS STREAM CONTAINING THEM. MAURICE W. CARTY, Boston, Mass. Filed Nov. 22, 1922. Serial No. 602,637. 39 Claims. (Cl. 183—24.)



1. Apparatus for separating solid particles from a gas stream comprising the combination of means to provide a dead gas space, means to establish a suction effect in said dead gas space, a duct to guide the gas stream over and in communication with said dead gas space, and means to direct a jet of water into the gas stream in substantially the direction of motion of the gas stream over said dead gas space.

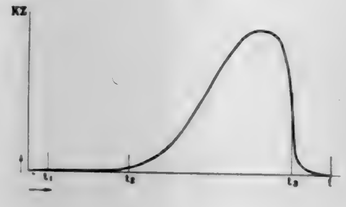
---

1,560,334. WEAVING SHUTTLE. PHILIPPE COMEAU, New Bedford, Mass. Filed May 6, 1924. Serial No. 711,478. 1 Claim. (Cl. 139—221.)



The combination with a shuttle having a bobbin receiving chamber and a thread receiving and guide chamber communicating therewith, said guide member being disposed longitudinally of one end portion of the shuttle and formed with a constricted intermediate portion in proximity to its point of communication with the bobbin chamber, the opposite portion of said chamber being enlarged and having one part thereof opening transversely onto one side of the shuttle, such opening onto said side of the shuttle having a constricted longitudinal way extending therefrom, a shuttle eye positioned in said side of the shuttle having its thread receiving recess communicating with said way, and the thread guide finger formed of a single piece of material having one end thereof anchored in the guide chamber adjacent its point of communication with the bobbin chamber and disposed longitudinally of such guide chamber, the outer part of said finger being bent downwardly and at angles upon itself and disposed in that portion of the same opening transversely onto said side of the shuttle, the free end of the finger being disposed in substantial parallel relationship to an adjacent portion of said side of the shuttle and arranged in proximity to the constricted longitudinal way and said shuttle eye.

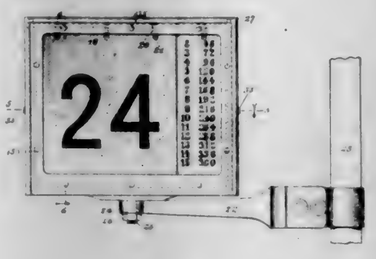
1,560,335. PROCESS OF IMPROVING ALLOYS AND METALS. JOHANN CZOCHRALSKI, Frankfort-on-the-Main, Germany, assignor to American Lurgi Corporation, New York, N. Y., a Corporation. Filed Mar. 27, 1924. Serial No. 702,439. 4 Claims. (Cl. 148—11.)



3. Process of producing single-crystal metal structures of predetermined physical characteristics, which consists in initially cold-working the metal structure to impart to it definite physical qualities, then maintaining the metal thus treated for an extended period at a relatively low re-crystallization temperature favorable to nucleus formation and then raising the crystallization temperature at a relatively high rate and maintaining the crystallization temperature until the conversion to a single crystal structure is completed.

---

1,560,336. INDICATOR. JAMES FOSTER DODD, Delaware, Ohio. Filed July 3, 1924. Serial No. 724,004. 4 Claims. (Cl. 40—102.)

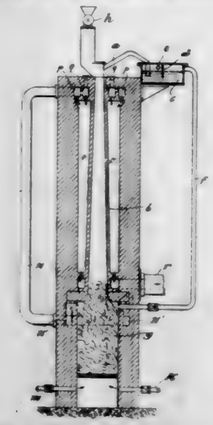


1. An indicator of the class described comprising a card holder having means at the bottom to secure the same to a support and having a top cross bar, a plurality of indicating cards, means swingably suspending said cards from the top cross bar, and a casing formed of side sections, said casing being in separable relation to the card holder and having side members and top members to exclude rain from the card holder, the said casing having transpicuous sides and said cards bearing indicia on faces thereof and so disposed that when a card is swung from one side of the holder over the top cross bar to the other side of the holder the same indicia will appear at both transpicuous sides of the casing.

---

1,560,337. PLANT FOR GASIFYING FUEL. ARTHUR MCDOUGALL DUCKHAM, London, England. Filed May 2, 1921. Serial No. 466,222. 2 Claims. (Cl. 48—73.)

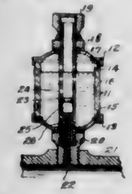
2. In a gas plant for the total gasification of fuel including a carbonizing retort and a gas generator, of the kind herein referred to, a water seal pot divided into equal compartments having free communication for passage of water between them, the outlet pipe of the retort being sealed in one compartment from which the



volatile products escape, and a communicating conduit between the other compartment, above the water level, and the top of the generator.

---

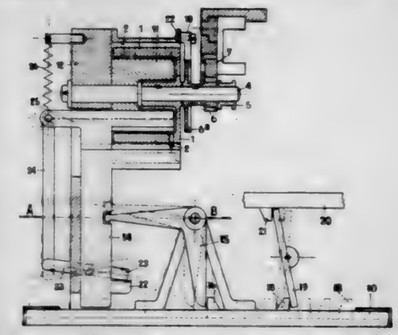
1,560,338. OIL CUP. LESLIE CARL DUTRO, Long Beach, Calif. Filed Sept. 6, 1922. Serial No. 586,486. 5 Claims. (Cl. 184—84.)



1. In a lubricating device, an oil cup adapted to be secured to a bearing to be lubricated, a filling tube in the cup and having a partition forming a well in its lower end, the tube being apertured to permit the oil in the cup to enter the said tube and its well, and a feed tube extending into the well above its communication with the cup.

---

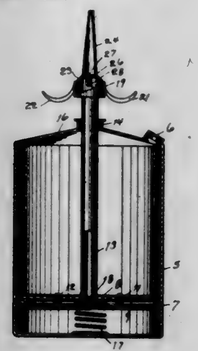
1,560,339. TYPOGRAPHICAL-POINT COUNTER. ARNOLD AUGUST EGLI, Bern, and HANS GRAF, Laupen-Bern, Switzerland, assignors to the Firm Polygraphische Gesellschaft, Laupen-Bern, Switzerland. Filed July 25, 1923. Serial No. 653,688. 24 Claims. (Cl. 276—11.)



1. In a machine for positioning types line for line, a typographical point counter comprising a movable distance measuring member, a fixed stop, arresting mem-

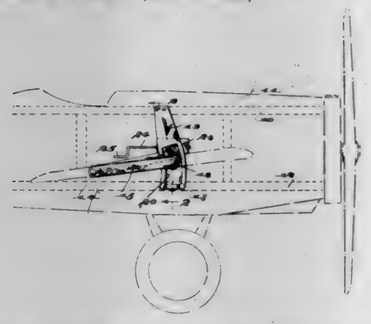
bers arranged in the distance measuring member for determining the extent of its movements, means for shifting an arresting member into the range of the said stop and means for moving the measuring member until a shifted arresting member thereof strikes the said stop.

1,560,340. OIL CAN. VICTOR ERICKSON, San Francisco, Calif. Filed Jan. 31, 1925. Serial No. 6,085. 1 Claim. (Cl. 221—50.)



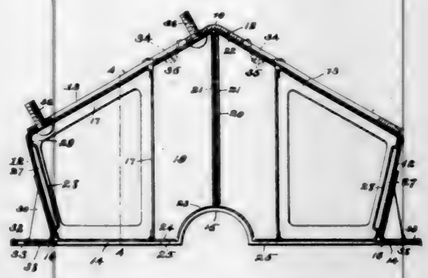
In a device of the character described, a can, a piston mounted in said can, means for normally maintaining said piston out of contact with the bottom of said can, a tubular member secured to said piston, a port formed in said piston and connecting with said tubular member, an enlarged portion formed on said tubular member at a point outside of said can, finger pieces secured to said enlarged portion, a spout removably secured to said enlarged portion, said spout having an enlarged end adapted to fit within the said enlarged portion in such a manner that said spout may project outwardly therefrom or may be reversed so as to be telescoped within said tubular member, and a valve positioned in said spout and adapted to open in such a manner as to discharge the contents of the can through said spout when said spout is projecting outwardly from said tubular member.

1,560,341. AIRPLANE-ADJUSTING DEVICE. HOWARD H. FLATH, Erie, Pa. Filed May 28, 1925. Serial No. 33,530. 5 Claims. (Cl. 244—29.)



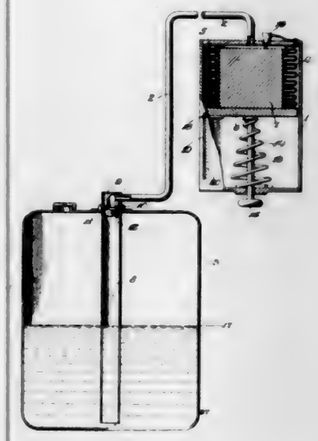
1. In an airplane wing controlling apparatus, forward and rear transverse shaft adapted to carry the wing beams of the plane, bearings in which one of said shafts is mounted, brackets having curved slots in which the other shaft is shiftable and having racks along one side of the slots, gears on said latter shaft engaging the racks, a worm wheel also on said latter shaft, a worm engaging the worm wheel, and a shaft on which said worm is secured, said last named shaft having a crank for manual rotation thereof.

1,560,342. SHEET-STEEL CRANK CASE. WILLIAM J. FOSTER, Dayton, Ohio. Filed Jan. 20, 1922. Serial No. 530,650. 14 Claims. (Cl. 121—194.)



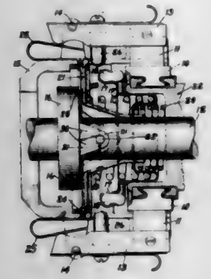
2. A crank case having an upper and a lower section, each section consisting of a skeleton framework having longitudinal and lateral bracing members, and master plates having cross pieces provided with arcuate portions for receiving the main bearings of the crankshaft.

1,560,343. LIQUID-LEVEL GAUGE. ALBERT C. FOULK, Dayton, Ohio. Filed Mar. 21, 1923. Serial No. 626,540. 2 Claims. (Cl. 73—54.)



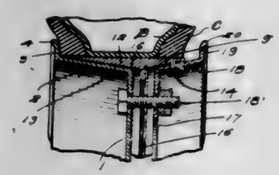
1. A liquid level gauge for a liquid container comprising a pipe projecting into the container through the top of said container, said pipe having its lower end adjacent the bottom of said container and adapted to receive liquid from said container, a float valve in the top end of said pipe, means for displacing the air in said pipe above the liquid level to thereby draw liquid into said pipe to cause the closing of said valve and means controlled by said displacing means for producing an indication proportional to the amount of air displaced, said means comprising an expansible chamber including a resilient bellows, a pipe connecting said expansible chamber to the pipe in said container, spring means normally maintaining said bellows compressed, and hand-operated means for removing the compression on said bellows to allow it to extend and thereby cause liquid to rise in the pipe in the container.

1,560,344. DYNAMO-ELECTRIC MACHINE. JAMES B. FRAWLEY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 16, 1924. Serial No. 686,649. 13 Claims. (Cl. 172—279.)



1. In a dynamo electric machine, a commutator, brushes for said commutator, a short-circuiting means for said commutator, a speed responsive device adapted to operate said short-circuiting means and subsequently raise said brushes, and springs of different relative stiffness for opposing said speed responsive device, the initial movement of said speed responsive device being transmitted through the stiffer spring to move said short-circuiting means into short-circuiting engagement with said commutator and compress the lighter spring without substantially compressing said stiff spring, further movement of said speed responsive device compressing said stiff spring and raising said brushes.

1,560,345. RIM CONSTRUCTION FOR DISK WHEELS. JACOB H. FRIEND, Charleston, W. Va. Filed Feb. 5, 1924. Serial No. 690,754. 5 Claims. (Cl. 152—21.)

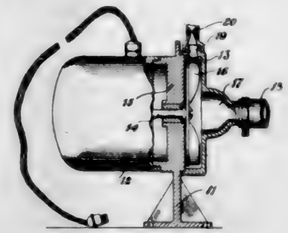


1. In an automobile wheel, a rim section provided with an inclined face, a plate secured to said rim section, a split ring adapted to engage the edges of said plate and having its inner surface inclined to conform to the inclined face of the rim section, and a clamping ring securable to said wheel complemental to said rim section and engaging said split ring.

1,560,346. PLASTIC COMPOSITION AND METHOD OF USING IT. CARL T. FULLER, Nutley, N. J., assignor to General Electric Company, a Corporation of New York. Filed Jan. 20, 1922. Serial No. 530,658. 8 Claims. (Cl. 106—22.)

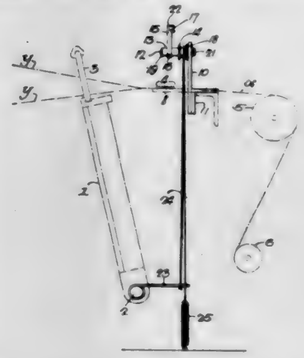
1. A plastic composition comprising an organic compound capable of being cured or hardened without change in color by heating to a critical temperature and having intimately incorporated therein a coloring material which changes color permanently only when heated to said critical temperature at which said compound is cured or hardened.

1,560,347. VACUUM COLLECTOR. LEWIS A. GAMBON, Canton, Ohio. Filed July 27, 1925. Serial No. 46,377. 5 Claims. (Cl. 132—9.)



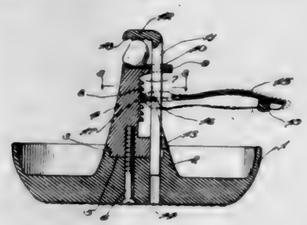
1. A device of the character described including a V-shape trough arranged to be placed around the neck of a person, a tubular channel communicating at one side with the bottom of the trough and a suction tube connected to the central portion of said channel.

1,560,348. SHARPENING DEVICE. CHARLES GEARINGER, Bloomsburg, Pa., assignor to The Magee Carpet Company, Bloomsburg, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1923. Serial No. 621,604. 5 Claims. (Cl. 139—39.)



1. The combination with a loom having a series of bladed pile wires, of a device automatically movable during the operation of the loom to enter between two blades and to simultaneously engage both of them to sharpen them.

1,560,349. NUTCRACKER. JOHN W. SCHWEITZER, Chicago, Ill. Filed July 14, 1923. Serial No. 651,550. 1 Claim. (Cl. 146—14.)

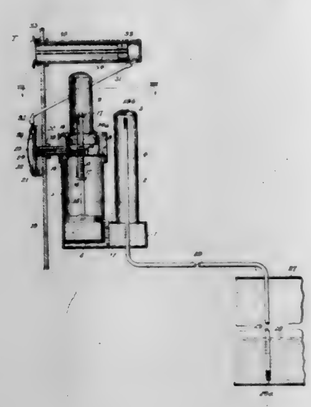


A nut cracker comprising a dish, a support upstanding from the bottom of the dish formed with a depression, a jaw member resting on said support and having a projection arranged in the depression, a screw se-

curing the jaw to the support, a second jaw having a shank slidably supported by said first jaw, a handle having a pin and slot connection with the second jaw, and a vertical series of teeth on the first jaw coacting with said handle for giving movement to the second jaw relative to the first jaw.

---

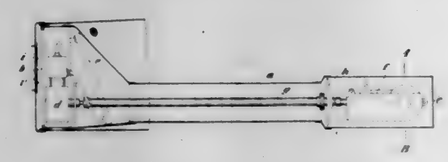
1,560,350. LIQUID-LEVEL INDICATOR. PETER J. SEFERLIS, Ithaca, N. Y. Filed Apr. 3, 1923. Serial No. 629,667. 4 Claims. (Cl. 73—54.)



1. Means for indicating liquid depth, wherein air pressure displacing a liquid causes movement of an indicator arm, comprising a casing having separate chambers containig a low level of liquid, a pipe connected to one chamber at a point above the bottom wall thereof and extending into the other chamber and terminating adjacent the bottom wall of said other chamber whereby the liquid in the first named chamber descends only to a predetermined level, a float in the first named chamber, an indicator arm, operative connections between the float and indicator arm, and a pressure pipe having one end submerged in the liquid to be measured with the other end extending into the other chamber and terminating adacent the upper end thereof above the liquid therein.

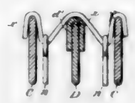
---

1,560,351. FRAME OF POWER-DRIVEN VEHICLES. ARNOLD SEIDEL, Berlin-Charlottenburg, Germany. Filed Dec. 16, 1924. Serial No. 756,305. 2 Claims. (Cl. 180—57.)



1. In a motor vehicle the combination with a body, of a hollow support extending through the body for the reception of the entire drive of the vehicle including the motor, the transmission elments and the rear axle drive, a fan connected to the drive and arranged within the casing, and an adjustable air admission means at the forward end of the support, substantially as and for the purposes set forth.

1,560,352. SINKER FOR KNITTING MACHINES. HARRY N. SHEPPARD, Newark, N. J., assignor to Scott and Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Nov. 13, 1922. Serial No. 600,772. 2 Claims. (Cl. 66—26.)



2. A knitting machine having needles and web-holding sinkers in combination with drop stitch sinkers interspersed in the set of web-holding sinkers and having their edges over which the yarn is laid thickened in comparison with the adjacent sinkers, for the purpose set forth.

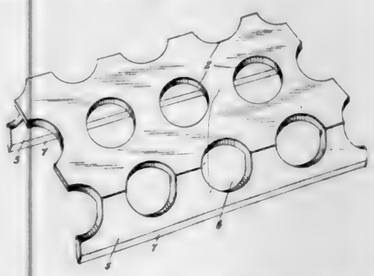
---

1,560,353. TOOL. EDWARD L. SLAGHT, Jr., and WILLIAM FROST, San Jose, Calif. Filed Mar. 26, 1925. Serial No. 18,479. 3 Claims. (Cl. 81—3.)

1. A tool of the character described, comprising an elongated body portion having a pin engaging finger formed thereon, an element slidably mounted thereon and provided with a finger arranged to cooperate with said first mentioned finger to grasp a pin, means for urging said fingers together, and means for slidably moving one finger relative to the other.

---

1,560,354. PAVEMENT. HERMAN H. SMITH, Brooklyn, N. Y. Filed May 14, 1924. Serial No. 713,194. 10 Claims. (Cl. 94—8.)

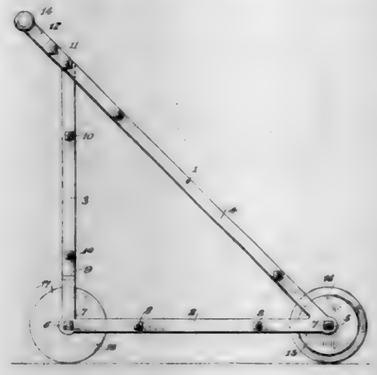


9. A metallic paving insert formed with a body part forming a wearing surface and with a downwardly extending anchoring side, the lower extremity of said anchoring side having a downwardly extending stepped reduced extension constituting a locking lug.

---

1,560,355. LAWN TRIMMER. EUGENE A. SNYDER and FRED C. ANDRETTA, Great Falls, Mont. Filed Nov. 10, 1924. Serial No. 749,008. 1 Claim. (Cl. 97—227.)

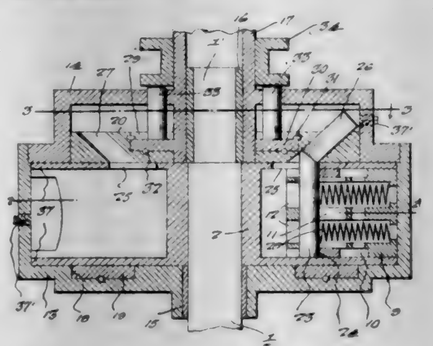
A lawn edge trimmer comprising an upright frame formed of two right triangular members arranged side by side in space relation, the upper portion of one side of each member being extended obliquely rearwardly of the frame, a guide wheel pivotally secured between said members at the forward part thereof, a cutting disk



pivotally secured between said members at the rear part thereof, and hand grips carried upon said oblique portions for propelling the device.

---

1,560,356. COMBINED HYDRAULIC CLUTCH AND TRANSMISSION. FLOYD G. SPENCER, Friendship, N. Y. Filed Apr. 8, 1924. Serial No. 705,072. 3 Claims. (Cl. 192—58.)



3. In a clutch of the class described, a driving shaft, a rotor keyed upon said shaft for rotation therewith, a housing in which said rotor is confined, a driven shaft upon which said housing is fixedly mounted, said housing and rotor being rotatble with respect to each other, spring projected plungers carried by said rotor and engageable with the peripheral wall of said housing, retracting pins for said plungers, there being a pin for each plunger and the pin being connected with the plunger and provided with an outwardly inclined extension, an operating plate for said pins arranged between the housing and rotor, said plate being provided with inclined bores in which the inclined extensions of said pins are slidably received, and means for moving said plate axially whereby to move said pins radially.

---

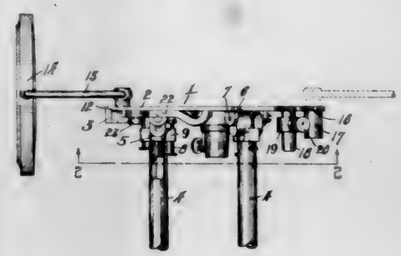
1,560,357. MUSIC-LEAF TURNER. FREDERICK THEIL, Homestead, Pa. Filed July 17, 1922. Serial No. 575,564. 4 Claims. (Cl. 84—495.)

1. In a music leaf turner, a rack embodying a channel-shaped member provided with a depending portion, a plurality of music turning arms pivotally mounted between the upper and lower flanges of said channel member, spring means for swinging said arms from one end of said member to the opposite end thereof, a release finger engaged with said arms, said finger having its inner end enlarged and formed with teeth to provide a ratchet, a hand-operated actuator carrying a spring-pressed pawl for cooperation with teeth of said

ratchet, a pivot pin passing through said depending part, through said actuator and ratchet of the finger, and a supplemental actuator pivoted intermediate its ends on said pivot pin and engaging the first named actuator to move the latter when the supplemental actuator is operated.

---

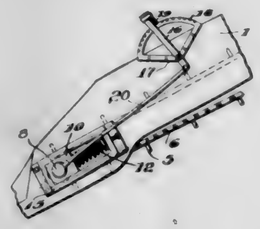
1,560,358. MIRROR STAND. JESSE P. TILSON, Toledo, Ohio. Filed Apr. 20, 1925. Serial No. 24,309. 2 Claims. (Cl. 248—41.)



1. A device of the class described, comprising a top member, pairs of ears on the underside of said member, legs for said member disposed between and pivoted to said ears, lateral extensions on said legs adjacent said member, set screws in said extensions having heads to engage the underside of said member thereby to hold said member in adjusted position and stop lugs on said member against which the heads of said screws are adapted to bear.

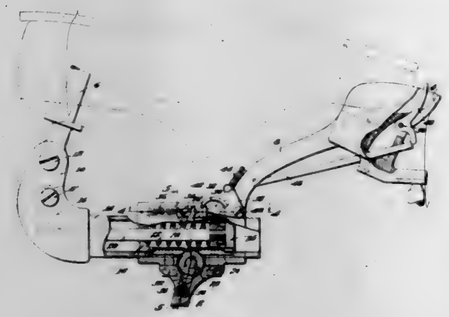
---

1,560,359. POTATO DIGGER. JOHN Q. TILTON, Mattawamkeag, Me. Filed Feb. 20, 1924, Serial No. 694,039. Renewed Aug. 29, 1925. 7 Claims. (Cl. 55—51.)



1. A potato digger embodying a shovel and an endless driven traveling conveyer arranged to receive the load from the shovel, and a spring-held rearwardly yieldable front idler shaft or roller for said conveyer combined with normally inactive means whereby said roller can be held against rearward movement.

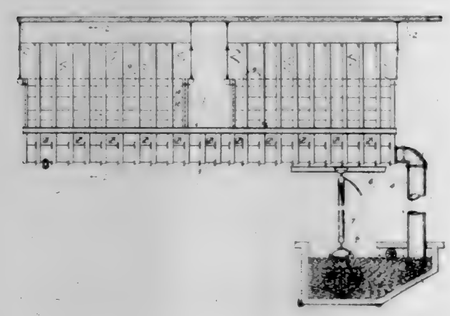
1,560,360. SHOE-SUPPORTING JACK. LAURENCE E. TOPHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 21, 1918, Serial No. 255,209. Divided and this application filed Mar. 1, 1920, Serial No. 362,365. Renewed June 15, 1922. Serial No. 568,581. 19 Claims. (Cl. 12—127.)



1. A jack for shoe machines having, in combination, a heel support, a toe rest, an actuating member arranged to operate during a continuous movement thereof in one direction to adjust the shoe longitudinally of the jack and to clamp the shoe on the jack, mechanism for stopping the shoe adjusting action and for causing the initiation of the shoe clamping action of said member, and means for tripping said mechanism when the shoe is located in a predetermined position on the jack.

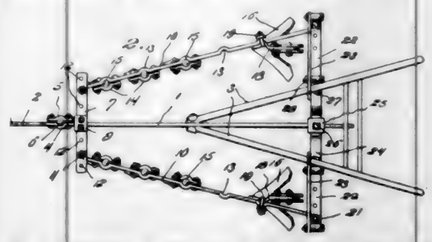
---

1,560,361. FLUID METHOD AND APPARATUS FOR CONTROLLING AND REMOVING MATERIAL FROM HOPPERS. FRANK B. ALLEN, Cynwyd, Pa., assignor, by mesne assignments, to Frank H. Dunbar. Filed Dec. 31, 1923. Serial No. 683,793. 14 Claims. (Cl. 302—14.)



1. In hopper construction, in combination, a hopper having a bottom opening, means for controlling the passage of material from the hopper through the said opening comprising a plate adjustably inclined beneath the said opening, and a supplemental plate rotatably mounted to cooperate with the top surface of the said inclined plate in controlling the passage of material through the said opening and means including a horizontally disposed trough and water under pressure for removing material passing through the said opening.

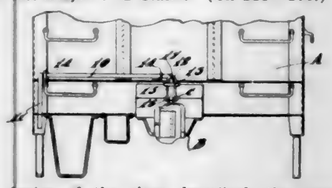
1,560,362. CULTIVATING IMPLEMENT. WALTER S. ANDERSON, Cobbville, Ga. Filed Apr. 18, 1924. Serial No. 707,457. 1 Claim. (Cl. 97—198.)



In a cultivator, a side bar having a transversely disposed semi-circular recess formed therein, a standard having a laterally disposed semi-circular hump formed therein and adapted to enter the recess of the bar, said hump being located at the line between the ends of the standards, a clamp bolt having its intermediate portion disposed transversely of the standard and the bar at the hump and recess thereof, the end portions of the bolt being disposed transversely across the edges of the standard and the bar, a clamp plate applied to the bolt and a soil engaging element carried by the standard.

---

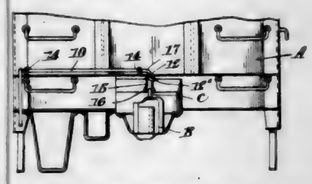
1,560,363. UNCOUPLING DEVICE FOR FREIGHT CARS. REUBEN ARKWRIGHT and ISAK MOELLER, New Glasgow, Nova Scotia, Canada, assignors, by mesne assignments, to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed May 14, 1920. Serial No. 381,311. 1 Claim. (Cl. 213—170.)



In a device of the class described, the combination with an actuating rod, of an arm carried thereby, said arm being split and spread at its outer end to form a T-shaped link retaining end, a coupling pin, and a link member connecting said arm and pin, said member comprising an elongated loop at its lower end engaging with the pin eye and overlapping hooks at its upper end forming a closed slot surrounding the arm at the rear of the T-shaped end, said loop being separable for engagement of the link with the arm.

---

1,560,364. UNCOUPLING DEVICE FOR FREIGHT CARS. REUBEN ARKWRIGHT and ISAK MOELLER, New Glasgow, Nova Scotia, Canada, assignors, by mesne assignments, to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Original application filed May 14, 1920. Serial No. 381,311. Divided and this application filed Dec. 14, 1920. Serial No. 430,871. 1 Claim. (Cl. 213—170.)

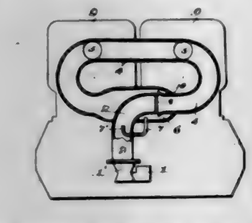


In a device of the class described, the combination with a coupler provided with a locking pin having an eye, of an operating rod having an outwardly extending arm.

the end of said arm being bent backwardly for forming a link retaining loop, and a single link having at its lower end an elongated loop supported at both sides and at its upper end hooks turned inwardly for engaging the arm, the loop on the arm permitting sliding movement of the link in longitudinal direction but limiting the amount of movement both forwardly and rearwardly.

---

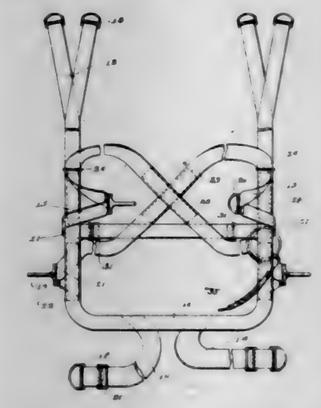
1,560,365. INTAKE MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. GUY M. BALL, Dayton, Ohio. Filed May 17, 1923. Serial No. 639,575. 4 Claims. (Cl. 48—180.)



1. In an internal combustion engine having a carburetor and a plurality of cylinders, an intake manifold having a flared entrance opening and a portion which extends past the cylinder ports in the manifold, said extended portion terminating in an enlarged collector chamber which surrounds said flared entrance opening, and an intake pipe from the said carburetor extending into said manifold, the end of the intake pipe terminating in said enlarged chamber adjacent the flared entrance opening to form an injector.

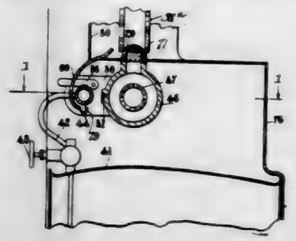
---

1,560,366. PARACHUTE HARNESS. GUY M. BALL, Dayton, Ohio, assignor to Irving Airchute Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed July 25, 1924. Serial No. 728,113. 11 Claims. (Cl. 244—21.)



1. In a parachute harness, a parachute suspension rigging comprising suspension straps extending from the parachute and passing in front of the aviator and beneath the aviator's seat in the form of a sling, a body harness consisting of a single continuous strap having its two ends connected to the lower portions of the upright portions of the said sling, and a single quick releasable fastening device to connect the parts of said body harness together in front of the aviator to retain him securely within the said body harness.

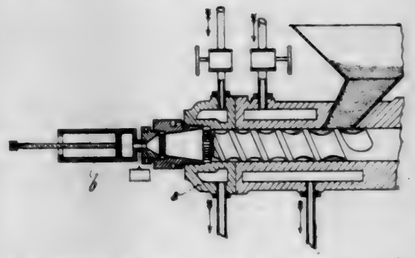
1,560,367. PRODUCTION OF RADIANT HEAT. BENJAMIN BARR, Isleworth, England. Filed Feb. 5, 1923. Serial No. 617,020. 2 Claims. (Cl. 158—62.)



1. An apparatus for heating heat-radiating tubes, comprising a vaporizing tube, an injector-nozzle communicating with said vaporizing tube, an adjustable rod bearing a valve for controlling the flow of fluid through said nozzle, a burner-body arranged substantially parallel to said vaporizing tube, a Bunsen tube connecting said vaporizing tube and said burner body, a tube mounted in said burner body and forming an extension of said Bunsen tube, said burner body having flame orifices directed towards said vaporizing tube, a baffle plate arranged on the outer side of said vaporizing tube, and perforated nozzles on said burner-body for directing flame against heat-radiating tubes.

---

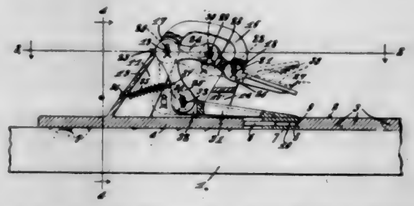
1,560,368. METHOD OF PRODUCING UNITARY FORM PIECES FROM CASEIN ARTIFICIAL HORN. AMANDUS BARTELS, Pferdeweg, and OTTO MIECH, Harburg-on-the-Elbe, Germany. Filed Jan. 12, 1925. Serial No. 2,012. 4 Claims. (Cl. 18—13.)



1. A process for the manufacture of unitary form-pieces from casein artificial horn, comprising extruding a prepared, comparatively firm casein mass and molding it under yielding pressure, hardening the form pieces thus obtained, and then drying them.

---

1,560,369. FLOOR CLAMP. CECIL W. BARTO, Port Angeles, Wash. Filed June 2, 1925. Serial No. 34,404. 4 Claims. (Cl. 254—16.)

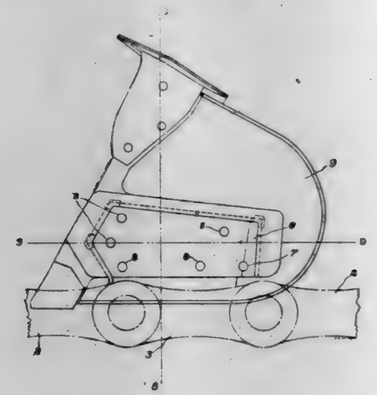


1. A floor clamp comprising a base plate, an inverted yoke-shaped element carried thereby, a clamping member, a shifting bar therefor, and operating means for

said bar, said means including a bell crank pivotally connected to said element and a shifting lever for the bell crank pivotally connected to said element and to one of the arms of said lever.

---

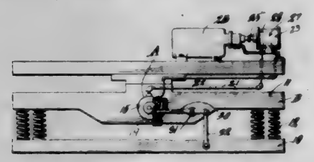
1,560,370. CHAIN BUCKET. HOWARD D. BENNETT, Baltimore, Md. Filed Feb. 2, 1925. Serial No. 6,352. 7 Claims. (Cl. 37—191.)



1. In combination, a chain, a bucket, and means for securing said chain to said bucket consisting of conjugate miter members attached respectively to said chain and said bucket.

---

1,560,371. AUTOMATIC BRAKE CONTROL. JOHN R. Benton, Ajo, Ariz., assignor of one-third to Everett W. Marsh, Ajo, Ariz. Filed Jan. 12, 1925. Serial No. 2,014. 9 Claims. (Cl. 303—22.)

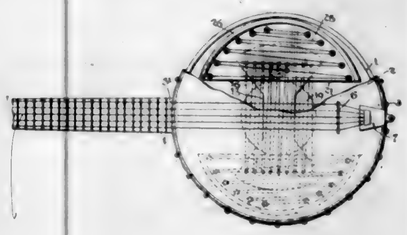


1. The combination with a railroad car embodying a sand bolster and a car bolster resiliently supported by the sand bolster, of a device for automatically governing the brake pressure in an air brake system according to the load including an operating lever rockably mounted at a point intermediate its ends upon the car bolster, a link operatively connecting one end of the lever to the sand bolster, a control valve carried by the car bolster embodying a stem, a crank carried by the stem, and means for operatively connecting the inner end of the lever to the crank.

---

1,560,372. RESONATOR ATTACHMENT FOR BANJOS AND THE LIKE. FRANS R. L. BERGE, Seattle, Wash. Filed June 21, 1924. Serial No. 721,560. 1 Claim. (Cl. 84—270.)

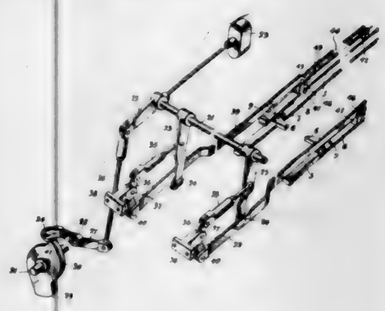
A resonator attachment for the heads of banjos and the like comprising a pair of segmental, pressure exerting plates each having the marginal portion of its upper face provided throughout with an instrument head bearing rib of the same height throughout, a wire strung over and spaced throughout from said upper face of each plate between the rib thereof and further spaced from the head by said rib, a spanner formed with a pair of oppositely extending sector shaped heads each having a segmental outer portion of greater thickness than the inner portion of the head, thereby providing a shoulder intermediate of each head, a wire strung over and spaced throughout from the upper face of the



spanner between said shoulders, said outer portions seating against and spacing the wire on the spanner from the lower face of said plates, and means for varying the pressure between the spanner and said plates.

---

1,560,373. CRATE-ADVANCING MECHANISM. WILLIAM W. BIRNSTOCK, York, Pa., assignor to York Milk Machinery Company, York, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1923. Serial No. 610,358. 9 Claims. (Cl. 198—221.)



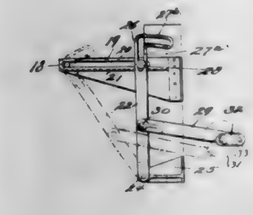
7. In crate-advancing means comprising a reciprocatory member carrying dogs movable relatively to it, and a dog setting element reciprocable with and movable relatively to said member, a pair of actuating elements connected to move in reverse directions relatively to each other to actuate the dog-setting element to respectively set the dogs in operative position when said member is substantially at the commencement of one of its strokes and to set the dogs in inoperative position when said member is substantially at the commencement of its other stroke.

---

1,560,374. CRATE-FEEDING MECHANISM FOR BOTTLE-WASHING MACHINES. WILLIAM W. BIRNSTOCK, York, Pa., assignor to York Milk Machinery Company, York, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1923. Serial No. 674,025. 7 Claims. (Cl. 198—24.)

2. Crate-feeding mechanism for machines of the class described comprising a feed table for the crates, a cross-head guided to reciprocate longitudinally thereof, and a rocker mounted to swing to-and-fro and having an operative connection toward its free end with the cross-head whereby the to-and-fro swinging movement

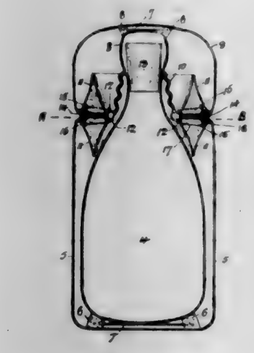
of the rocker toward and from one end of its range of movement will cause advancing and return strokes of the cross-head and to-and-fro movements of the rocker



toward and from the opposite end of its range of movement will take place while the cross-head remains idle at the end of its retracting stroke.

---

1,560,375. TEMPERATURE-MAINTAINING VESSEL. ARTHUR EDWARD BLACKMAN, Franklin, Australia. Filed Sept. 23, 1924. Serial No. 739,403. 3 Claims. (Cl. 220—9.)

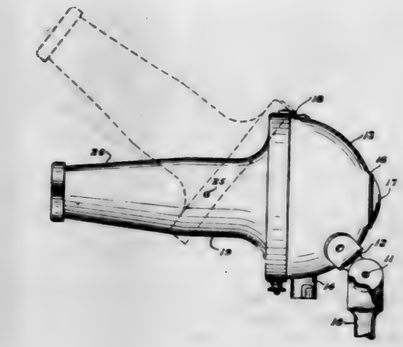


1. In flasks of the kind indicated, an inwardly flanged vacuum container in which a rustless steel highly polished flask is placed, a turned over worm threaded neck to the flask, a flange thereon opposite its container flange, a cap to the flask having a worm and a flange on its lower edge, a vacuum container over the cap, an inwardly turned flange on the cap container opposite that on the cap, annular members of steel foil V-shaped in section in the container and cap container respectively secured to the flanges and filled with glass wool and ruberoid washers between the cap container and the container.

---

1,560,376. AUTOMOBILE HEADLIGHT. GEORGE BOEHMLER, Rockledge, Pa. Filed Oct. 7, 1922. Serial No. 593,061. 1 Claim. (Cl. 240—484.)

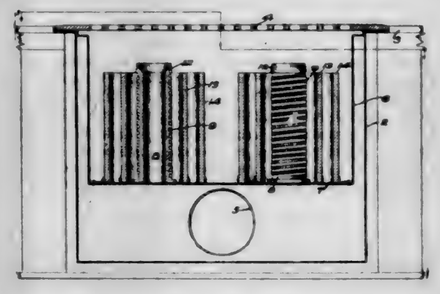
A vehicle headlight comprising a light carrying housing having an open side, a substantially tubular light guiding member having an outwardly flared end and an annular flange about the flared end encompassing the open side of the light carrying housing, said tubular light guiding member being of uniform diameter for a portion of its length outwardly from the flared portion and gradually decreasing in diameter from the outer end of the uniform portion to its outer end, a flat lens carried at the outer end of the tubular portion, a



lens carrying ring mounted in the portion of the tube of the uniform diameter, and a lens carried by said lens carrying ring.

---

1,560,377. ELECTRIC AIR HEATER. HARRY H. DALEY, San Francisco, Calif. Filed May 5, 1924. Serial No. 711,122. 11 Claims. (Cl. 219—39.)



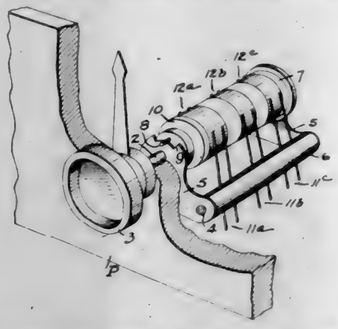
1. In an electric air heater, a shell opening into the room to be heated, an electric heating unit in said shell, a vertically disposed flue open at the top and bottom surrounding the heating unit and spaced from the unit and the walls of the shell whereby the heat of the unit will induce an upward current of air through the flue and a downward current of air through the space between the flue and the shell, an air supply conduit connecting the shell with the atmosphere external to the room and a damper for preventing the flow of air through said conduit.

---

1,560,378. MULTIPLE-CIRCUIT DOUBLE-THROW SWITCH. ERNEST G. DANIELSON, San Francisco, Calif., assignor to E. T. Cunningham, San Francisco, Calif. Filed July 18, 1921. Serial No. 485,697. 1 Claim. (Cl. 200—8.)

In a switch, a rotatable eccentric contact member of cylindrical form, contact fingers arranged to cooperate with said contact member and positioned on opposite sides thereof, and means for holding said member and

fingers on a supporting wall, comprising a pair of bearing plates in which the contact member is rotatable, parallel spacing rods between the bearing plates, said



rods supporting the fingers, and fastening means for each rod adapted to pass through the wall, the plates and engage one end of its respective rod.

---

1,560,379. PRIMARY BATTERY. LEOPOLD DARIMONT, Brussels, Belgium. Filed Aug. 23, 1920. Serial No. 405,323. 1 Claim. (Cl. 136—96.)

A primary battery having an exciter mass consisting of an exciter proper, an anti-acid substantially insoluble powder capable of decomposing ferric chloride, and an agglutinating substance for emulsioning the anti-acid powder, said primary battery also including a depolarizer composed of ferric chloride, a chromic compound for increasing the electrical capacity of the depolarizer, and a solution of sodium chloride for increasing the conductivity of the diluted solution of ferric chloride and for regulating the asmotic pressure.

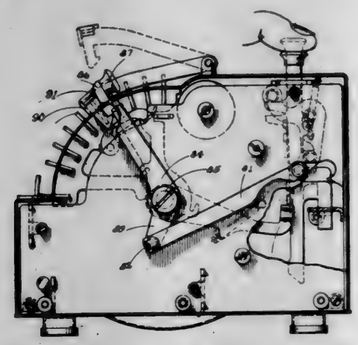
---

1,560,380. MANUFACTURE OF CRYSTALLIZED ZINC SULPHIDE. GEORGES DE HÉDOUVILLE, Longwy, and PIERRE PIPEREAUT, Paris, France. Filed Jan. 2, 1924. Serial No. 684,058. 4 Claims. (Cl. 23—135.)

1. A dry process of manufacturing crystallized zinc sulphide, which consists in causing hydrogen sulphide gas to act on solid oxygenated zinc compounds at a temperature from 250° C. to red heat, substantially as set forth.

---

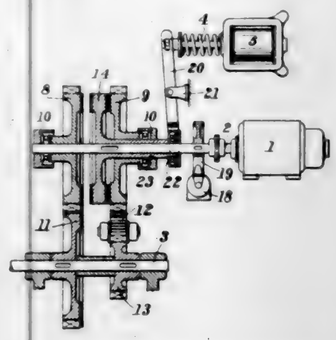
1,560,381. CALCULATING MACHINE. ALTON L. GRAY, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Nov. 12, 1923. Serial No. 674,241. 8 Claims. (Cl. 235—27.)



1. The combination with a calculating machine comprising a plurality of actuators for the different numerical orders and a plurality of clearing means for said machine corresponding individually to said orders, of a device movable to position for securing all of said actuators against unauthorized operation, a lock for retaining said device in securing position and a connection between one of said clearing means and said lock for releasing the latter upon operation of said clearing means.

---

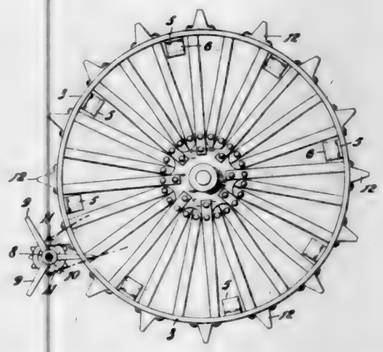
1,560,382. ELECTRIC-MOTOR-CONTROL SYSTEM. ALBERT HENRY JACKSON, Muswell Hill, England. Filed May 8, 1925. Serial No. 28,906. 7 Claims. (Cl. 172—179.)



1. In an apparatus for electric motor control the combination with a master controller of an electromagnetically operated contactor or line switch for the main motor circuit, an auxiliary electric motor adapted to run always in one direction, and operatively connected to switch mechanism for progressively changing the conditions in the main motor circuit and means operatively connected with a member moving simultaneously with the contactor for causing the uni-directional auxiliary motor to drive through friction members which normally stand in reverse, the switch mechanism in either direction according to whether the contactor is open or closed.

---

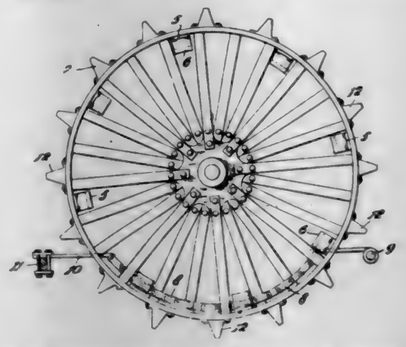
1,560,383. WHEEL FOR TRACTORS AND CERTAIN FARMING IMPLEMENTS. DANIEL JAMES, Essendon, and WILLIAM HENRY KENDELL, Lubeck, Victoria, Australia. Original application filed Oct. 8, 1923, Serial No. 667,105. Divided and this application filed Jan. 3, 1925. Serial No. 318. 2 Claims. (Cl. 280—158.)



1. A tractor wheel having a plurality of annular rim elements arranged in parallel spaced relationship, transverse bars rigidly connecting said rim elements, a shaft mounted in bearings carried by the tractor chassis rearwardly of the wheel, wheels fitted on said shaft, radial arms on each of said wheels operating within the clearance spaces between adjacent rim elements, and means for rotating said shaft.

---

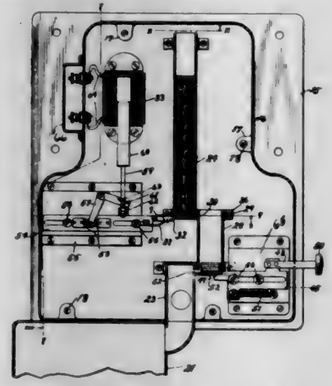
1,560,384. WHEEL FOR TRACTORS AND CERTAIN FARMING IMPLEMENTS. DANIEL JAMES, Essendon, and WILLIAM HENRY KENDELL, Lubeck, Victoria, Australia. Original application filed Oct. 8, 1923, Serial No. 667,105. Divided and this application filed Jan. 3, 1925. Serial No. 319. 2 Claims. (Cl. 280—158.)



1. A tractor wheel having a plurality of annular rim elements arranged in parallel spaced relationship, transverse bars rigidly connecting said rim elements, transverse rods anchored one in advance of and the other rearwardly of the wheel, and cleaning chains secured to said rods and operating interiorly of the wheel perimeter within the clearance spaces between adjacent rim elements.

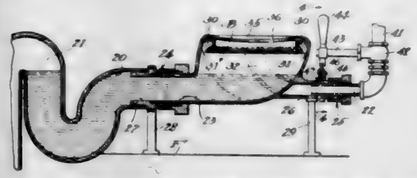
---

1,560,385. COIN OR SLUG ACTUATED SIGNALING DEVICE. JOHN LANG, Chicago, and FRANK S. PILARSKI, Cicero, Ill. Filed June 30, 1924. Serial No. 723,288. 4 Claims. (Cl. 133—5.)



2. In a device of the class described, the combination of a closed receptacle having two compartments for coins, means for retaining a supply of coins in one compartment, a plunger operable for delivering one of said coins into the other compartment, manually operated means for ejecting said coin from the last mentioned compartment into the signaling apparatus of a telephone, and means for actuating said plunger which is positioned so as to be inaccessible to a person actuating said manually operated means.

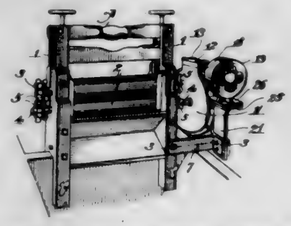
1,560,386. CABINET PLUMBING. JAMES F. LANGSTON, Lancaster, Calif., assignor of one-third to Albert Bullock, Los Angeles, Calif. Filed Aug. 3, 1922. Serial No. 579,371. 3 Claims. (Cl. 4—12.)



1. In combination, a tiltable bowl, inlet and outlet pipes therefor located on a common horizontal axis, swivel joints between the bowl and pipes so that the bowl may tilt on the pipe axis between a substantially horizontal and a substantially vertical position; a trap in the outlet pipe, and the rear end of the bowl having a wall that forms with the bottom and back wall, when the bowl is tilted up, a water container that holds water at a level as high as the trap level.

---

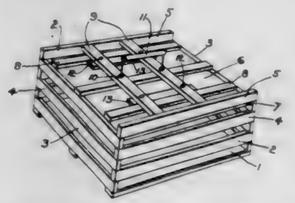
1,560,387. MOTOR DRIVE FOR WRINGERS. HARRY C. LAW, Hastings-on-the-Hudson, N. Y. Filed Nov. 19, 1924. Serial No. 750,858. 1 Claim. (Cl. 74—7.)



An attachment of the character described comprising a bracket adapted at one end to be secured to a wringer, a gear rotatably mounted upon said bracket and arranged to be fixed to the drive shaft of said wringer, a bifurcated extension projecting laterally from said bracket, a vertical post partially received within said bifurcated extension, means associated with said extension and with said post for vertical adjustment of said post, a worm meshing with the gear, a shaft fixed to the worm, and an electric motor motor supported upon said post at the upper end thereof and detachably coupled with said worm shaft.

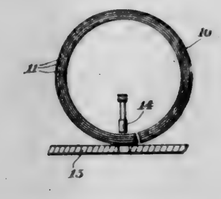
---

1,560,388. COVER FOR EGG CRATES. OSCAR WILLIAM LEIST, Atchelitz, British Columbia, Canada. Filed Nov. 6, 1924. Serial No. 748,160. 4 Claims. (Cl. 217—60.)



1. The combination with a crate having side walls, a cover for the crate and battens upon said side walls adapted to overlie opposing edges of the cover, of pivotally mounted means upon the cover adapted to bear against the battens when in locked position and to be swung out of engagement with the battens to permit the removal of the cover from the crate.

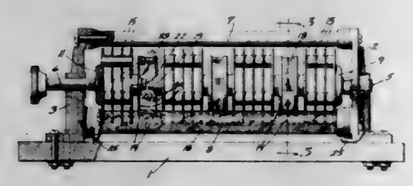
1,560,389. METHOD OF MAKING WOODEN SPOONS. JOHN LEWIS, Brownville, Me. Filed Dec. 24, 1924. Serial No. 757,905. 5 Claims. (Cl. 144—309.)



1. The within described method of cutting from the inside a single unwound roll of veneer comprising a plurality of plies forming a product with unsplintered edges.

---

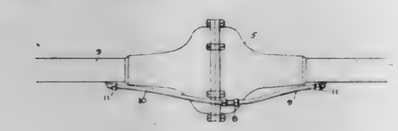
1,560,390. SPARK GAP. JOHN G. H. LIEBEL and EDWIN S. FLARSHEIM, Cincinnati, Ohio. Filed Sept. 24, 1923. Serial No. 664,639. 3 Claims. (Cl. 250—38.)



1. A spark gap comprising a support having opposing centers one thereof axially adjustable, electrode carriers disposed between said centers each carrier having an electrode fixed thereto and opposing an electrode of a second carrier, a yielding disk respectively engaged upon each electrode, and an insulator annulus engaged between and separating the disks of opposing electrodes adapting the opposing electrodes to be compressively adjusted toward each other for regulating the gap therebetween.

---

1,560,391. OIL SAVER. JESSE W. LONDELL, Los Gatos, Calif. Filed Aug. 28, 1922. Serial No. 584,680. 1 Claim. (Cl. 184—7.)

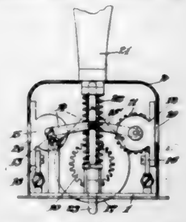


A means for causing oil having flowed out of an automobile differential housing into the axle housing to be delivered back to the differential housing, which means includes a pipe located exteriorly of and connected with said housings and inclined from the point of its connection with the axle housing downwardly to the point of its connection with the differential housing.

---

1,560,392. MEASURING APPARATUS FOR BOARDS. HERBERT MAGER, Vienna, Austria. Filed July 22, 1925. Serial No. 45,376. 3 Claims. (Cl. 33—140.)

1. An apparatus for measuring boards, comprising in combination a casing, a measuring device, movable pins arranged in the said casing, one end of the said pins projecting out of the base-plate of the casing, a spring for resiliently maintaining the pins in this position, an oscillating measurement registering mechanism, pivoted rods connecting the latter with the said pins, and a piece-counting mechanism adapted to cooperate with the said pins.



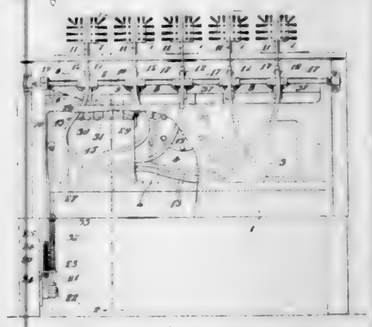
---

1,560,393. CHARGING APPARATUS FOR USE WITH ANNEALING OVENS. PAUL ALPHONSE HUBERT MOSSAY, Ipswich, England. Filed Nov. 13, 1924. Serial No. 749,756. 10 Claims. (Cl. 214—26.)

1. A railless apparatus for charging annealing ovens and for like purposes, comprising a carriage provided with ground wheels, a charging arm supported by said carriage and adapted to reciprocate relatively thereto, a charge carrier connected to one end of said loading arm, said charge carrier being adapted to rest on the ground, and means for automatically maintaining the ground wheels of said carriage with their axes radial to the centre of oscillation of said charge carrier when the charging arm is extended relatively to said carriage, substantially as and for the purpose hereinbefore set forth.

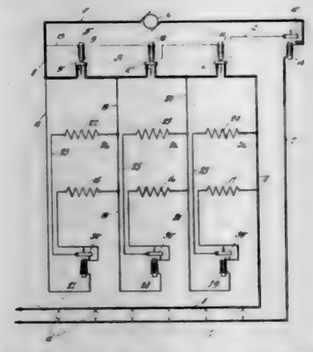
---

1,560,394. PAN-GREASING MACHINE. WILHELM MOLLER, Philadelphia, Pa., assignor, by mesne assignments, to Easy-Pan Greasing Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 5, 1924. Serial No. 754,073. 11 Claims. (Cl. 91—39.)



1. In a pan greasing machine having a grease pump and greasing brushes; grease conduits connected with the pump and movably mounted on the machine, and means for moving the conduits adjacent the brushes and for operating the pump to feed grease through the conduits onto the brushes.

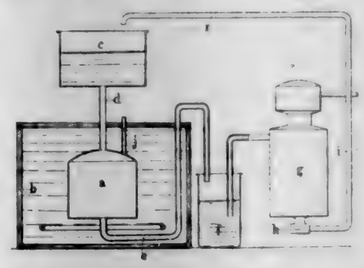
1,560,395. CONTROLLING MEANS FOR FARM-LIGHTING PLANTS. TRAVIS MONK, Crete, Ill. Filed Apr. 11, 1922. Serial No. 551,742. 5 Claims. (Cl. 171—229.)



1. In an electrical system, the combination with a supply circuit, resistance elements connected in circuit with said supply circuit for controlling the current passing therethrough, relays energized in accordance with a characteristic of the current in said supply circuit for controlling the respective resistance elements, resistors arranged to be connected in shunt, respectively, to the resistance elements, and relays energized in accordance with the current flowing through said resistance elements for controlling said resistors, substantially as described.

---

1,560,396. METHOD FOR AUTOMATIC AND RAPID PRODUCTION OF CRYSTALLIZED OR PRESERVED FRUITS. PLACIDE NAVARRE, Paris, France, assignor to Société Fraisse Freres, Cavaillon, Vaucluse, France, and Société P. Navarre & Fils, Paris, France. Filed Oct. 19, 1922. Serial No. 595,598. 3 Claims. (Cl. 99—11.)

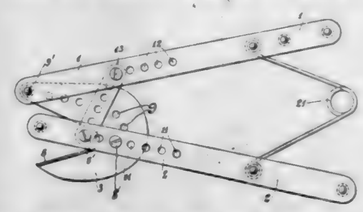


3. A process for the rapid manufacture of conserved fruit which comprises bleaching the fruits in a strong solution of sulphur dioxide and which is maintained at the boiling point, then subjecting the bleached fruits to the action of a sugar syrup at a constant temperature and at a constant pressure all the duration of the process and causing the syrup to circulate in a continuous manner on the fruits, the pressure of the syrup being above atmospheric pressure, and then reconcentrating the syrup continuously at a point during the travel of the syrup.

---

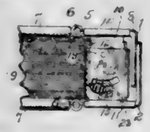
1,560,397. HAND-OPERATED CUTTING AND/OR GRIPPING DEVICE. ALBERT HENRY FRANKS PERL and RICHARD HEMMINGS CARTER, Ladbroke Grove, England. Filed May 29, 1922. Serial No. 564,587. 16 Claims. (Cl. 30—3.)

1. A hand operated device, comprising two operating levers, a link pivotally connecting said levers to cause their operative ends to move apart, and an angle formed link pivotally connected to the operative end of one of the levers and pivotally connected to the other lever remote from the operative end, said angle link having a part to cooperate with the forward portion of one of the levers.



---

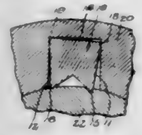
1,560,398. TEMPORARY BINDER. WILLIAM P. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 28, 1921. Serial No. 456,175. 17 Claims. (Cl. 129—13.)



1. In a binder of the kind described, two leaf-embracing members, and an extensible lock connecting said members comprising two members slidable one on the other and respectively attached to said leaf-embracing members, a locking member carried by one of the slidable members and movable to and from a position in which it will lockingly engage the other slidable member, and means cooperating with said locking member to hold the leaf-embracing members from moving outwardly from any point while permitting them to move inwardly, substantially as set forth.

---

1,560,399. KEY. CHARLES F. PRESTON, Sr., Mamaroneck, N. Y. Filed Jan. 11, 1924. Serial No. 685,646. 1 Claim. (Cl. 287—52.)



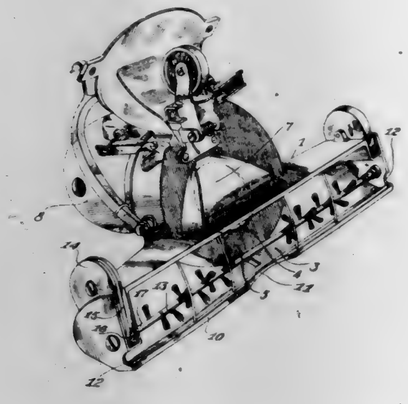
The combination with a hub for pulleys and the like, having a longitudinal rectangular groove in its inner face, a shaft engaging key in said groove, said key the widest at its outer edge and tapering toward its inner edge whereby the key may fulcrum on either of its outer corners in accordance with the direction of the pulley relative to the shaft, and said key having a plurality of relatively sharp inner edges to engage the shaft, said sharp edges sub-divided by a plurality of notches into a series of shaft engaging sections.

---

1,560,400. SUCTION CLEANER. JOHN R. VANDER PUTTEN, Akron, Ohio, assignor, by mesne assignments, to Wise-McClung Company, Limited, New Philadelphia, Ohio, a Partnership Association of Ohio. Filed Feb. 24, 1921. Serial No. 447,510. 1 Claim. (Cl. 15—8.)

A suction cleaner casing forming a vacuum chamber having an elongated mouth with a narrow lip surrounding the same for contacting with carpets and the like

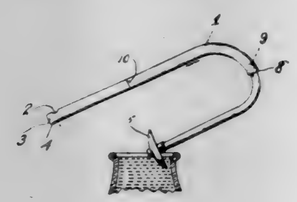
and means for drawing cleaning currents from under and through the same; there being a central exhaust orifice leading from the chamber and transverse notches in the lip at the ends and adjacent the front wall of the mouth causing locally intensified air currents to enter



through the notches and to pass over and along the surface of the carpet from the ends toward the middle of the chamber for drawing refuse into the ends of the mouth and sweeping the surface of the carpet within the same.

---

1,560,401. SIPHON CREAM SKIMMER. BRAXTON D. AVIS, Clarksburg, W. Va. Filed Jan. 4, 1924. Serial No. 684,410. 3 Claims. (Cl. 137—20.)

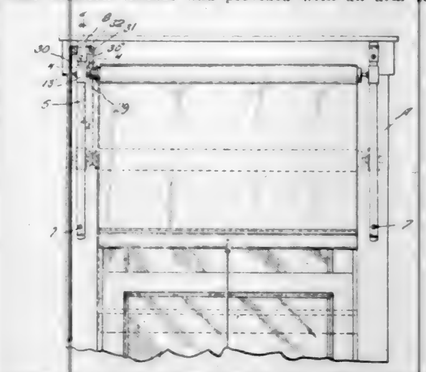


1. A skimmer of the character described comprising a U-shaped tubular member, a ball freely movable by gravity in one portion of said U-shaped member to start siphonic action therein, and the other portion of said U-shaped member being adapted to be inserted in liquid.

---

1,560,402. AUTOMATICALLY-ADJUSTABLE SLIDE-ROLLER WINDOW SHADE. BONNIE T. BRITT, Zebulon, N. C. Filed Dec. 29, 1924. Serial No. 758,668. 2 Claims. (Cl. 156—27.)

2. In a structure of the class described, a pair of rack bars adapted to be supported in parallel spaced relation on a frame, journal casings slidable on the bars, gears in the casings for engaging the rack bars, a rod fixed to the gears, a shade roller rotatable on the rod, a drum on the shade roller, a cable adapted to be wound partially about the drum, a friction means between the roller and the rod, whereby the roller may be rotated independently of the rod or therewith, when the cable is pulled to unwind on the drum and rotate the roller, a crank shaft journalled in one of the casings so that its crank normally engages the gear wheel therein to prevent rotation thereof and provided with an arm terminating in an eye through which the cable extends, so that when the cable is pulled, the arm is actuated to release the crank from the gear wheel.



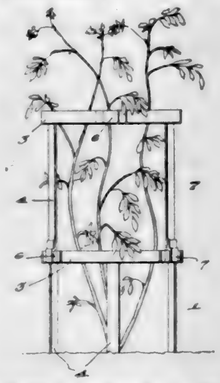
---

1,560,403. TRACK-SANDING DEVICE. WALTER C. BROWN, Salt Lake City, Utah. Filed June 24, 1925. Serial No. 39,293. 2 Claims. (Cl. 291—19.)

2. In a track sanding device, the combination with a steam locomotive, including a smoke box and sand dome, of a sand discharge nozzle, means for conveying sand from said dome to said nozzle, a heating coil in said smoke box, means for delivering compressed air to said coil to be heated therein, and means for conveying the said air from said coil to and delivering the same into said nozzle to dry the sand therein and cause the same to be discharged therefrom.

---

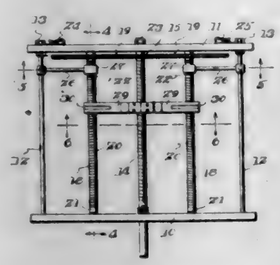
1,560,404. PLANT SUPPORT. JOHN HARRY BROWN, Newport, R. I. Filed Oct. 5, 1923. Serial No. 666,770. 1 Claim. (Cl. 47—47.)



A plant support comprising a lower section formed with a ring member and depending legs, the lower ends of the legs being pointed, sockets formed on the ring member and an upper section formed of a ring member and depending legs, the lower ends of said legs being forked to engage the sockets of the first section.

---

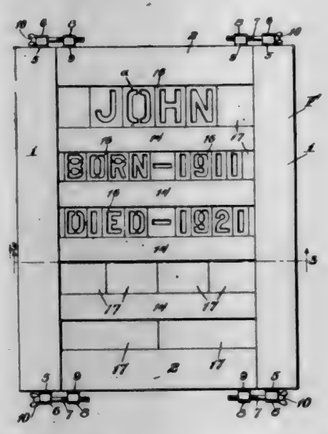
1,560,405. RHEOSTAT. FREDERICK A. CALKINS, McKenzie, N. Dak. Filed Jan. 28, 1924. Serial No. 689,167. 1 Claim. Cl. 201—55.)



A device of the character described comprising front and rear members arranged in space relation, spaced parallel resistance coils journally mounted between said front and rear members, a screw journaled centrally through said front and rear members and located between said resistance coils, intermeshing gears on said coils and screw for effecting simultaneous rotation of all, a slider threaded onto the screw and having its end portions bearing against said coils, rods secured to said front and rear members and located in spaced relation to and outwardly of said coils, and contacts carried by said rods and bearing against the coils.

---

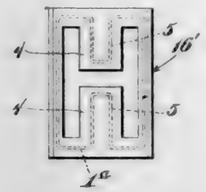
1,560,406. SAND-DUSTING SCREEN. LOUIS H. CARUFEL, Minneapolis, Minn. Filed Mar. 25, 1924. Serial. No. 701,782. 5 Claims. (Cl. 101—128.)



1. A sand blasting screen comprising a frame, said frame consisting of separable side and end members, means carried by the adjacent extremities of the side and end members for connecting said members and to move the same one with respect to the other, bars interposed between and held by opposed members of the frame, stencils arranged between adjacent bars, said bars and the associated members of the frame interfitting when in assembled relation.

---

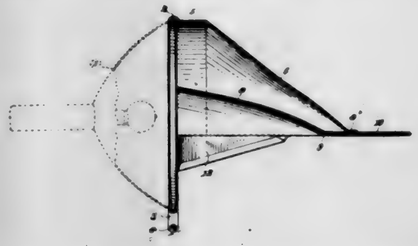
1,560,407. STENCIL. LOUIS H. CARUFEL, Bismarck, N. Dak. Filed Mar. 21, 1925. Serial No. 17,286. 6 Claims. (Cl. 101—127.)



4. In combination with a rubber stencil for a sand blasting screen, a reinforcement embedded within the stencil and extending along the sides thereof.

---

1,560,408. GLARESHIELD. PETER L. CHARLEBOIS, Portland, Oreg. Filed Nov. 6, 1924. Serial No. 748,183. 7 Claims. (Cl. 240—48.4.)



1. In a glare shield of the type described, a clamping ring, a declined transversely curved hood section having its inner edge held in spaced relation to the ring by a trasnversely flat wall and projecting forwardly of said ring with the opposite side edges thereof terminating adjacent the horizontal axis of the ring and a transversely curved forwardly arched declined reflecting wall inclosed in the hood section.

---

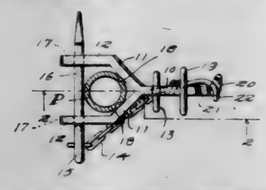
1,560,409. FACE LIFTER. SUSANNA COCROFT, New York, N. Y. Filed Sept. 2, 1924. Serial No. 735,474. 2 Claims. (Cl. 128—76.)

1. A device for the purpose set forth comprising a face muscle lifting and holding element consisting of a flat rectangular coupling strip having its forward portion of greater flexibility than its rear portion, a face adhering member extending lengthwise of, positioned against and projecting from said forward portion, spaced clamping members carried by said forward portion and engaging said adhering member for detachably connecting it lengthwise thereof to said strip, rearwardly extending pulling tapes having their forward ends secured to said rear portion, and a securing strap connected to the rear ends of said pulling tapes.

1,560,410. REFLECTOR SIGNAL. HARRY WARD CONDE and DANA M. PALMER, Ottawa, Ill. Filed Dec. 18, 1924. Serial No. 756,786. 8 Claims. (Cl. 88—1.)

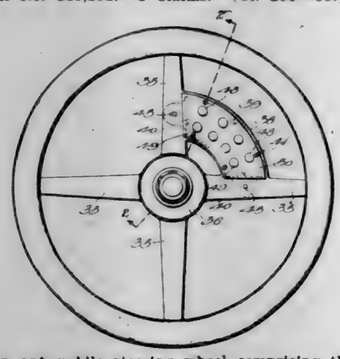
1. A signal comprising a frame having an open side, a reflecting plate supported within the frame, a protecting face plate in direct contact with the reflection plate, and means disposed at said open side to engage and retain both plates in position.

1,560,411. PIPE CLEVIS. WILLIAM H. CONKLIN, Wellfleet, Nebr., assignor of one-half to James Ovens, Wellfleet, Nebr. Filed June 6, 1925. Serial No. 35,423. 2 Claims. (Cl. 294—92.)



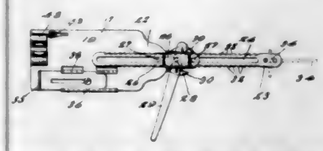
1. A pipe clevis comprising a shank having at one end thereof diverging arms terminating in parallel portions adapted to straddle the pipe, removable means engaging the ends of the parallel portions for preventing escape of the pipe arranged therebetween, means for engaging a hoisting element with the shank intermediate the ends thereof a flexible element engaged with the shank inwardly of the point of engagement with the hoisting element and means for engaging the flexible element with the shank at the outer end thereof comprising a hook at the outer end of the shank for the reception of said flexible element.

1,560,412. AUTOMOBILE SWITCH MOUNTING. JOHN A. CUNNINGHAM, Bethlehem, Pa. Filed May 24, 1923. Serial No. 641,192. 4 Claims. (Cl. 200—59.)



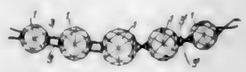
1. An automobile steering wheel comprising the usual hub and spokes and having an integral web connecting two of said spokes, said web having an opening, a switch carrying member having a portion snugly seated in said opening, and means securing said carrying member in said opening for movement bodily with the wheel.

1,560,413. SHADE-ROLLER AND CURTAIN-POLE SUPPORT. BURWELL M. DAVIS, Mount Ulla, N. C. Filed Mar. 1, 1924. Serial No. 696,365. 1 Claim. (Cl. 156—23.)



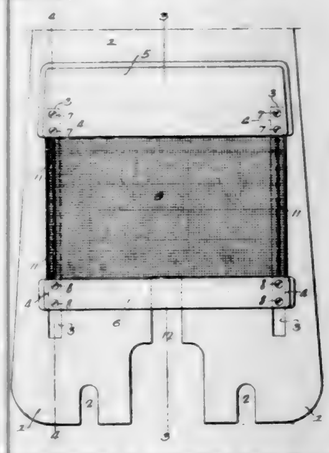
A combined shade roller and curtain pole support comprising frame engaging plates, a longitudinally slotted toothed slide adjustable upon one of said plates, a combined guide and lever support secured to the last mentioned plate and extending through the slot of the slide, a central offset plate having its ends secured to the support and overlapping the slide to hold the latter in position, a lever pivotally mounted between the guide and plate, dogs carried by the lever and engaging the toothed slide to adjust the latter and means connecting the slide and the other plate.

1,560,414. METHOD OF PIERCING, THREADING, AND ENAMELING TRANSPARENT PRECIOUS STONES. EMMANUEL DE HAAN, Paris, France, assignor to Société Boucheron & Radius, Paris, France, a French Corporation. Filed Sept. 11, 1924. Serial No. 737,221. 3 Claims. (Cl. 63—32.)



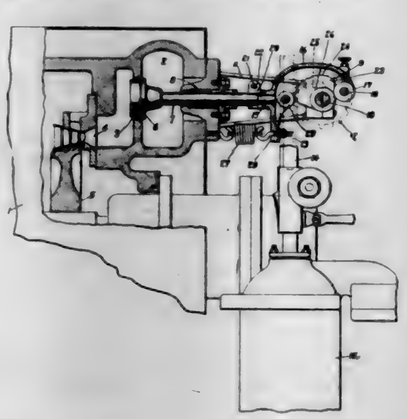
1. An article of jewelry including a plurality of smoothly cut stones, the bodies of each of which are provided with substantially opposite passageways arranged adjacent the outer edge of the body and parallel to each other and perpendicular of the diameter at which they are provided, and a plurality of links engaged with the adjacent passageways of the adjacent stones for connecting all of the stones together.

1,560,415. STOCKING FORM. CHARLES E. DENNISON, Philadelphia, Pa., assignor to Proctor & Schwartz, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1923. Serial No. 630,293. 4 Claims. (Cl. 223—17.)



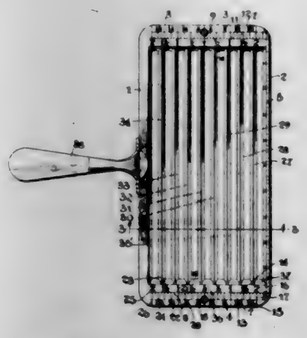
1. The combination in a stocking form of a body portion having longitudinal slots therein; and a sliding frame extending through the slots of the body portion and on each side of said body portion, said frame having a board friction surface on each side, arranged to engage a stocking at its open end.

1,560,416. VALVE MECHANISM. EDGAR D. DICKINSON, Beverly, and REGINALD G. STANDERWICK, Marblehead, Mass., assignors to General Electric Company, a Corporation of New York. Filed Feb. 13, 1924. Serial No. 692,601. 4 Claims. (Cl. 137—139.)



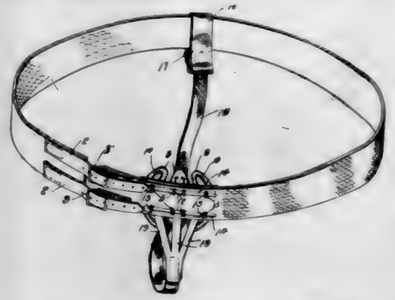
1. In a valve mechanism, the combination of a valve, a stem for the valve, a cam, and a roller carried directly by the stem which roller the cam engages to move the valve, the center of the roller being located to one side of the center of the cam and the point of contact between the cam and the roller being between said centers.

1,560,417. MEASURING DEVICE FOR CUFFS OF TROUSERS. LOUIS DRESCHLER, St. Louis, Mo. Filed Sept. 10, 1923. Serial No. 661,983. 6 Claims. (Cl. 33—174.)



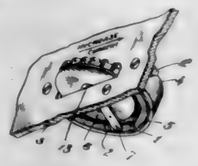
1. A device for the purpose set forth comprising a frame including a pair of side bars and a pair of end bars, each of said end bars being provided with a pair of scales extending oppositely from a medial reference line, and a plurality of combined guide and measuring bars extending from one of the end bars to the other and having the edges thereof alining with certain of the graduation marks of the scales to provide for the measuring of trousers cuffs of various widths.

1,560,418. TRUSS. HOWARD GRAHAM, New Braunfels, Tex. Filed Nov. 17, 1923. Serial No. 675,346. 1 Claim. (Cl. 128—100.)



In a device of the class described, a supporting band, a plurality of relatively narrow closely arranged pads carried by said band, said pads being adapted to simulate the action of the fingers of the human hand, each pad having a resilient wire fastened thereto, said wire having portions arranged at a right angle to its general plane and formed into an upper and a lower eyelet, said supporting band having slots through which said eyelets are passed in an outward direction, and strips removably extending through the eyelets outwardly of the band.

1,560,419. VARIABLE RESISTANCE. ALFRED H. GREBE, Richmond Hill, N. Y., assignor to A. H. Grebe & Co., Inc., Richmond Hill, N. Y., a Corporation of New York. Filed May 25, 1922. Serial No. 563,723. 4 Claims. (Cl. 201—55.)



1. A rheostat comprising a mounting, an adjustment control partially projecting through a slot in said mounting and a resistance element attached to said mounting so as to partially encircle said control.

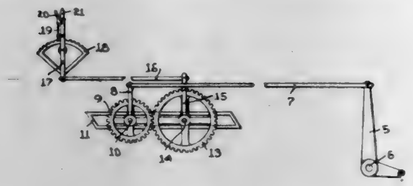
1,560,420. PRODUCTION OF RESIN. FRANK E. GREENWOOD, New Rochelle, N. Y., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,921. 13 Claims. (Cl. 203—6.)

1. The herein disclosed process of extracting rosin from pulp mill black liquor which comprises treating resinous components of the black liquor with a solvent, adding an acid which will liberate resinous elements and enable combination of the same with the solvent, and then separating out the rosin content obtained by said solvent by means of a second solvent immiscible with the first and enabling selective separation of the rosin therefrom.

1,560,421. VALVE-GEAR-OPERATING MECHANISM. RANSOM L. GRIFFIN, Sanford, Fla. Filed Dec. 28, 1923. Serial No. 683,224. 3 Claims. (Cl. 74—39.)

1. In a shift for valve gear, a shaft arm adapted to communicate motion to the valve gear of a locomotive, a rigid member pivotally connected to the arm, a rotatably mounted gear wheel, means for connecting the gear wheel

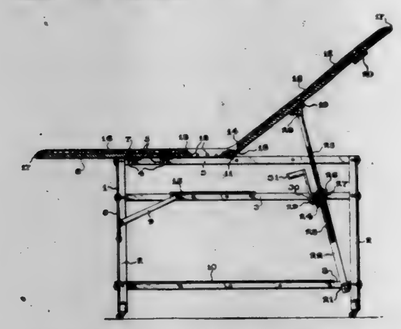
to the member for reciprocating the said member as the gear wheel partially rotates in different directions, a gear wheel rotatably mounted and meshing with the first mentioned gear wheel, a reciprocating member con-



nected to the second mentioned gear wheel and adapted to partially rotate the same in opposite directions, and means for imparting motion to the last mentioned reciprocating member.

---

1,560,422. COMMODE. JOHN MORGAN HENDRIX, Statesboro, Ga. Filed Jan. 19, 1925. Serial No. 3,515. 1 Claim. (Cl. 155—31.)

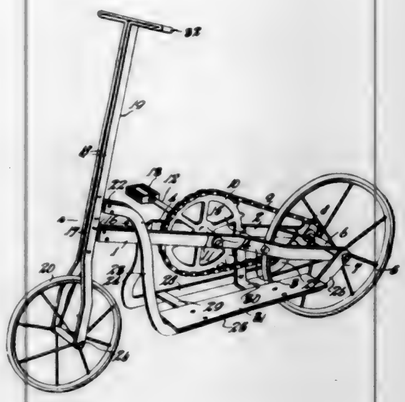


A commode comprising a frame provided with transverse supports connecting the upper part of said frame and longitudinal supports connecting the lower part of said frame, a seat secured to the transverse supports and resting on the frame, a back hinged to the seat, the adjacent hingedly connected parts of the seat and back having an opening conforming to the body of the user, a shelf on the frame immediately below the opening for the support of a pan, a padded covering of a continuous piece engaged over and secured at its margin to the seat and back, means consisting of a forked member pivotally supported on the said longitudinal supports at the lower part of the frame and having a head portion, a jack screw operatively pivoted to the back and passing through the head portion, and a device including intermeshing gears for rendering the jack screw extensible with regard to the forked member.

---

1,560,423. CHILD'S VEHICLE. BEN E. HERVEY, Wilmington, Calif., assignor, by mesne assignments, to Datus M. Hervey, Vallejo, Calif. Filed Mar. 19, 1924. Serial No. 700,359. Renewed Sept. 25, 1925. 2 Claims. (Cl. 208—113.)

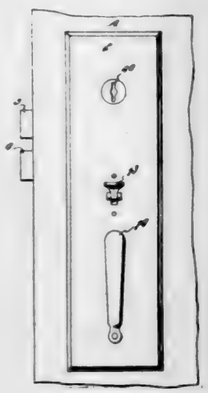
1. In a vehicle of the class described, a main frame composed of two bars, the front ends of which are in juxtaposition and the rear ends of which are offset to receive a wheel, a wheel and axle journalled in the rear ends of said bars, a crank shaft journalled in bearing apertures in said bars intermediate the ends of the same, a sprocket wheel on said crank shaft, a sprocket wheel connected to the rear axle, a chain drive between said sprockets, a sub-frame consisting of bars secured to the first mentioned bars and extending below the same, hinge elements carried by said main and sub-frame bars, a steering post with fork, hinge elements carried by said steering post cooperating with the hinge elements of the



frame bars, a wheel mounted in said fork, the crank of said crank shaft lying to one side of the main frame, and a platform support for said supplemental frame in the side opposite the crank.

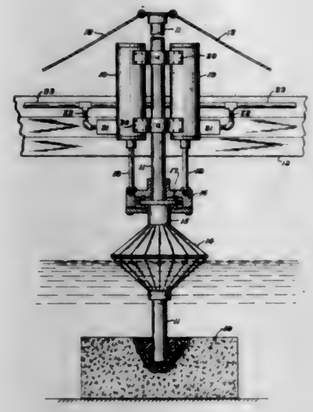
---

1,560,424. LOCK. ANDREW G. HJERT, Seattle, Wash. Filed May 21, 1923. Serial No. 640,582. 2 Claims. (Cl. 70—91.)



1. A lock of the class described comprising a casing, a spring actuated bolt and a dead bolt therein, projections on the bolts, the projection on the spring bolt lying in front of the projection on the dead bolt, a lever pivoted in the casing and engaging the projection on the spring bolt, an arm on the upper end of the lever, a T-shaped barrel, projections thereon for engaging parts on the dead bolt and one of said projections engaging the arm on the lever to cause the lever to retract the spring bolt, a knob operated member for retracting the spring bolt, a latch operated member for retracting the spring bolt and means for preventing movement of the spring bolt by the latch operated member when desired.

1,560,425. WAVE AND TIDE MOTOR. GEORGE S. HUFF, Cape May Court House, N. J., assignor of one-half to Gottlieb O. Lange, Cape May, N. J. Filed Oct. 7, 1922. Serial No. 593,051. 1 Claim. (Cl. 230—32.)



In a wave motor, the combination of a vertical shaft, having its lower end anchored, a float slidably and rotatably mounted upon said shaft, a flanged head carried by the upper end of said float, a block having operative connection with said flanged head, a pair of cylinders supported from said shaft, pistons movable within said cylinders supported from said shaft, pistons movable within said cylinders and connected to said block for movement upon the rise and fall of said float, and compression chests connected to said cylinders and to an outlet pipe.

---

1,560,426. EXPLOSIVE COMPOUND AND PROCESS OF PRODUCING SAME. HAROLD A. LEWIS, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 26, 1925. Serial No. 4,961. 12 Claims. (Cl. 260—142.)

1. A process of producing an explosive compound which comprises condensing a polyhydric alcohol, having not more than 3 hydroxyl groups, with a nitro-chlor aromatic compound and nitrating the product of condensation.

---

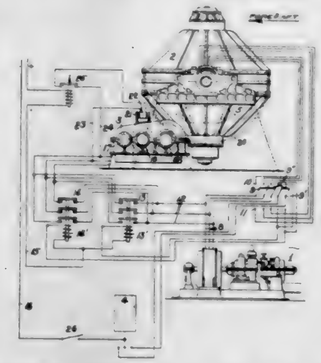
1,560,427. EXPLOSIVE AND PROCESS OF MAKING SAME. ROBERT C. MORAN, Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 26, 1925. Serial No. 4,960. 15 Claims. (Cl. 260—142.)

1. A process of producing an explosive compound which comprises condensing an amino aliphatic alcohol with a nitrochlor aromatic compound and nitrating the resulting product of condensation.

---

1,560,428. DRIVING MEANS FOR SHIPS' GYROSCOPES. SHIERFIELD G. MYERS, Freeport, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 11, 1922. Serial No. 587,351. 14 Claims. (Cl. 74—78.)

1. In a gyroscopic stabilizer for ships, the combination with the rotor of the gyroscope, of a multiple speed alternating current induction motor for spinning said rotor at multiple speeds and means whereby the rotor



may be driven continuously at one speed for rolling the ship and at a different speed for stabilizing the ship.

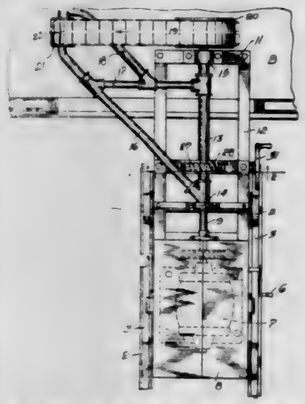
---

1,560,429. SASH FASTENER. ROBERT STUART REID, Prince Albert, Saskatchewan, Canada. Filed Sept. 29, 1913. Serial No. 792,476. 3 Claims. (Cl. 292—198.)

3. The combination with a window frame, of a fastener pivotally mounted in the side of the frame and substantially midway of the height thereof and presenting a comparatively long dog extending into the sash channel of the inner frame and a relatively shorter dog extending into the sash channel of the outer frame.

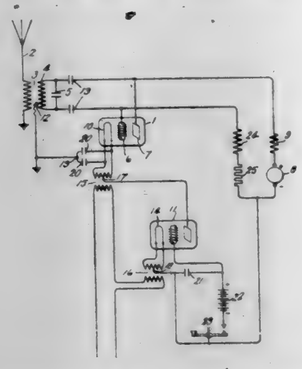
---

1,560,430. CONVEYER. ROBERT B. ROGERS, Chewelah, Wash. Filed July 21, 1924. Serial No. 727,252. 6 Claims. (Cl. 198—2.)



5. In a loader as described the combination with a conveyer frame including a casing, and a power shaft therein, of bearings for the casing, and means for oscillating said casing to either side of the shaft to reverse the position of the loader.

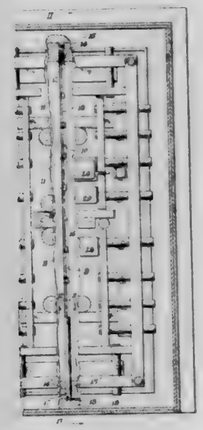
1,560,431. SIGNALING SYSTEM. AUGUST SCHMIDT, Jr., Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 3, 1923. Serial No. 649,371. 5 Claims. (Cl. 250—17.)



1. The combination in a high frequency signaling system of an electron discharge device, circuit connections for said device whereby it is adapted to produce high frequency oscillations, a second electron discharge device connected in circuit with said first device in such a way that current is supplied to the first device through the second device, and means for varying the resistance of the second device substantially instantaneously from a low value to a much greater value, and simultaneously producing a large increase in the resistance of the first device.

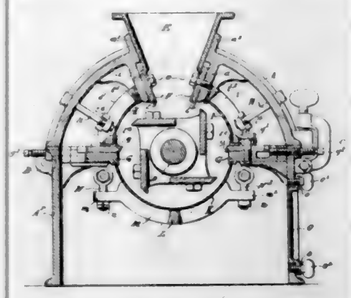
---

1,560,432. AUXILIARY LOCK. ALEXANDER N. SCOTT, Canton, Ohio, assignor to The Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 31, 1922. Serial No. 532,938. 2 Claims. (Cl. 109—3.)



1. An auxiliary lock for safe doors or the like including a vertical guide-way therein, a bolt-weight in the guide-way, and a chain connected above to the door and extending downward along the body thereof to be directly heated thereby and having a plurality of fusible links therein normally suspending the bolt in retracted position.

1,560,433. GRAIN-CRACKING MACHINE. SIMON SNYDER, Muncy, Pa., assignor to Sprout, Waldron & Co., Muncy, Pa., a Corporation of Pennsylvania. Filed Dec. 31, 1924. Serial No. 759,077. 16 Claims. (Cl. 83—6.)



1. A grain cracking or reducing machine comprising a casing composed of upper and lower members and having a rotary cutter therein and knives or cutters projecting inwardly from opposite sides thereof in cooperative relation to said rotary cutter; the lower casing member having a curved perforated plate therein arranged below the rotary cutter, and the upper casing member having a feed hopper and receiving chambers on opposite sides thereof into which granulated material is thrown by said rotary cutter and caused to pass by gravity into the lower casing member; said receiving chambers having curved perforated plates spaced from the inner walls of the upper casing member and having openings in the bottoms thereof for the passage of granulated material therethrough.

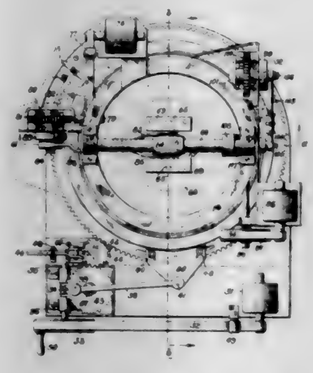
---

1,560,434. WATER HEATER. PRUME M. SPANOGLE, Jackson, Mich. Filed July 3, 1923. Serial No. 649,366. 3 Claims. (Cl. 126—351.)

1. The combination with a water heater comprising a heat insulated housing, a boiler suspended therein and spaced from the bottom thereof to form a combustion chamber, a burner in said chamber, an automatic valve for controlling the supply of gas to said burner, a flue communicating with said housing, a plate valve engageable over said flue, at times, an expansible thermostatic element arranged within said boiler, a non-expansible rod connected to one end of said thermostatic element, a cam mounted in the housing and connected to the remaining end of said non-expansible rod, and another non-expansible rod disposed longitudinally of the housing, connected at one end to said cam and at its other end to said plate valve.

---

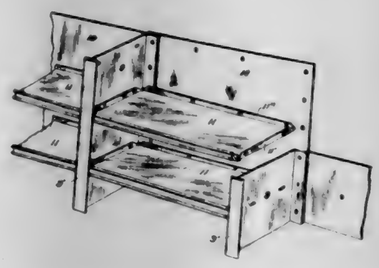
1,560,435. APPARATUS FOR TESTING GYROSCOPIC COMPASSES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 19, 1919. Serial No. 324,747. 30 Claims. (Cl. 73—51.)



1. In a testing stand for gyroscopic compasses, a carriage mounted for turning about a vertical axis, a testing stand supported by said carriage, means for imparting an independent oscillatory motion to said stand in planes at right angles to each other, and means for simultaneously oscillating said carriage about said vertical axis.

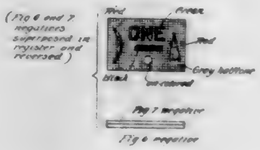
---

1,560,436. SHEET-METAL SHELF. EDWARD C. STAPLES, Canton, Ohio, assignor to United Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed June 2, 1925. Serial No. 34,356. 4 Claims. (Cl. 211—27.)



1. A sheet metal shelf formed with a normal flange on its free edge and a downward forwardly inclined lip flange on the upper edge of the normal flange, and a reinforcing strip secured to the shelf flange and formed with an upward forwardly inclined lip flange on the lower edge thereof.

1,560,437. PROCESS OF PRODUCING COLOR PICTURES. LOREN E. TAYLOR, Los Angeles, Calif., assignor to Famous Players-Lasky Corporation, New York, N. Y., a Corporation of New York. Filed June 19, 1923. Serial No. 646,471. 3 Claims. (Cl. 95—2.)



1. The process of treating an exposed and developed film, that involves etching out from it the exposed portions by submitting it to the action of a solution containing hydrogen peroxide, cupric sulphate and an acid.

---

1,560,438. METHOD OF AND MACHINE FOR COLORING MOTION-PICTURE FILMS. LOREN E. TAYLOR, Los Angeles, Calif., assignor to Famous Players-Lasky Corporation, New York, N. Y., a Corporation of New York. Filed July 5, 1923. Serial No. 649,603. 16 Claims. (Cl. 101—149.)

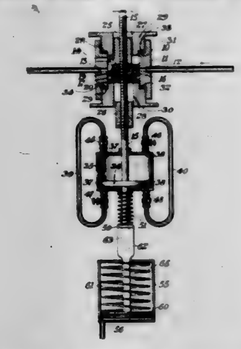
1. A method of coloring films by subjecting the film to be colored to a pressureable contact with a similar film carrying coloring matter, comprising bringing the film together in contact in a substantially rectilinear plane, and exerting pressure against the contacting films at spaced points and on opposite sides thereof.

---

1,560,439. RETARDING DEVICE. ALBERT D. TRENOR, New York, N. Y., assignor to John Hays Hammond, Jr., Gloucester, Mass. Filed Nov. 1, 1917. Serial No. 199,727. Renewed Feb. 23, 1923. 14 Claims. (Cl. 137—139.)

1. A control mechanism comprising a fixed valve casing provided with an inlet port and with an outlet port, a valve arranged to reciprocate in said casing to

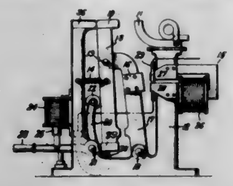
control said ports, a valve stem having a lost motion connection with said valve, means including a fluid actuated device having a lost motion connection with



said valve stem for moving said valve stem in one direction, and means to retard the movement of said valve stem in either direction.

---

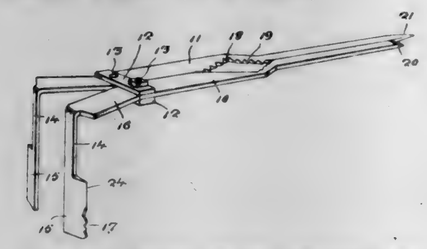
1,560,440. ELECTRIC SWITCH. JOHN F. TRITLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 28, 1921. Serial No. 511,000. 32 Claims. (Cl. 200—89.)



1. An electric switch comprising a pair of relatively movable switch contacts biased to the open position, means for holding the contacts in the closed position, and means for closing the contacts arranged to first put the contacts under strain to the closed position while holding the contacts out of engagement and then release the contacts to close in accordance with the said strain so as to be held in the closed position by the said holding means.

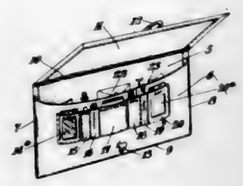
---

1,560,441. LAMP CLEANER. JAMES EDWARD TROSPER, Jacksonville, Ill. Filed Mar. 12, 1924. Serial No. 698,725. 1 Claim. (Cl. 15—104.02.)



A tool of the character described comprising a pair of similarly constructed levers pivotally connected together and arranged in edge-to-edge relation, each lever being similarly bent at one end to form lateral projections and said levers being also shaped adjacent the projections to space the same apart, each of such projections including a reduced portion and a relatively wide portion formed to provide a knife edge, and teeth formed in each knife edge.

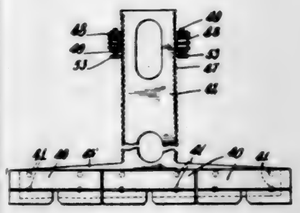
1,560,442. HAND BAG. GERTRUDE S. TROWBRIDGE, Flushing, N. Y. Filed Nov. 20, 1924. Serial No. 750,965. 3 Claims. (Cl. 150—28.)



1. A hand bag for shopping, etc., comprising flexible back and front members connected together at their side and bottom edges to form an envelope with a flexible flap connected to the back member along its top edge and adapted to be bent over and lie in front of and against the front member to close the bag, said back member having a series of pockets on its inside face, and said front member having a series of pockets on its outside face, and means for removably securing said flap to said front member adjacent the bottom part thereof.

---

1,560,443. PARAFFIN-PRESS-PLATE-SEPARATING DEVICE. ANDREW VITENKO, New York, N. Y. Filed Mar. 20, 1925. Serial No. 16,941. 6 Claims. (Cl. 18—1.)



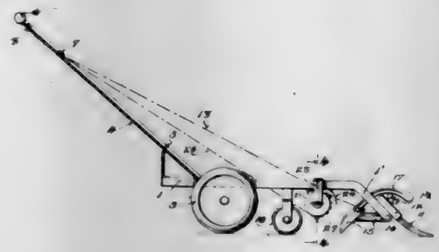
6. A machine of the class described comprising a frame having a pair of longitudinal supports for paraffin molds, a carriage supported on said frame to be movable along the said frame, and means on said carriage for separating individual molds, said means including a vertically movable scrubber knife having a vertical arm formed with worm teeth along the side thereof, a worm gear meshing with said teeth, a spur gear operatively connected to the said worm gear, and mutilated drive gears for said worm gear adapted to alternately mesh with the latter to rotate the same in relatively opposite directions.

---

1,560,444. PROCESS FOR PRODUCING COPPER COATINGS ON NONMETALLIC SUBSTANCES. MAX VOLMER, Hamburg, Germany. Filed Mar. 30, 1921. Serial No. 457,043. 4 Claims. (Cl. 91—68.3.)

1. A process for producing a reflecting copper lining in a double-walled vacuum vessel consisting in first depositing a thin, hardly visible covering of silver on the inner surface of the vessel, producing a copper coating on the said covering, heating the vessel whilst evacuating the space in the double wall, and in subjecting the copper coating to the effect of reducing gases whilst the vessel is heated.

1,560,445. SHELLACKING MACHINE. HENRY WAGNER, Milwaukee, Wis. Filed Dec. 5, 1924. Serial No. 754,105. 6 Claims. (Cl. 91—25.)



1. A surface coating machine comprising a portable carriage, a rotary drum adapted to carry the coating and mounted transversely thereof and having a delivery portion, means for rotating said drum to position said delivery portion either uppermost or lowermost, and an elongated brush extending transversely of said carriage.

---

1,560,446. PULP PROCESS. JOSEPH H. WALLACE, Stamford, Conn., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,963. 3 Claims. (Cl. 92—2.)

1. In the recovery of valuable products from resinous wood the process which comprises extracting such a wood with volatile solvent as long as extraction of resinous matters is easily accomplished, interrupting the extraction and separating the resultant extract, disintegrating the wood with heated alkaline solution to form pulp, and recovering the residual non-volatile and solid resinous matters from the spent alkaline solution.

---

1,560,447. PREPARATION OF WOOD FOR PULP MANUFACTURE. JOSEPH H. WALLACE, Stamford, Conn., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,964. 5 Claims. (Cl. 92—2.)

1. The process of producing long-fibred relatively porous pulp mill chips having materially less resinous matter than that normal to the wood, said resinous matter being distributed substantially uniformly therethrough, which comprises reducing resinous coniferous wood to pulp mill-size chips, subjecting the same to a solvent throughout that period where the action of the solvent is most rapid and the rate of extraction is highest and discontinuing such extractive treatment at or about the point where there is an abrupt reduction in the rate of extraction of matters soluble in said solvent and while there yet remains in said chips a substantial amount of matters soluble in said solvent.

---

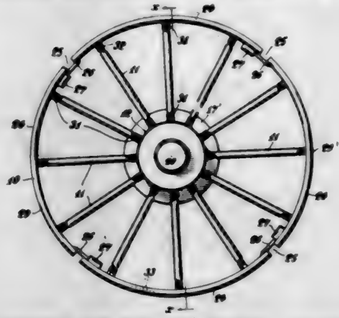
1,560,448. WOOD-PULP MATERIAL. JOSEPH H. WALLACE, Stamford, Conn., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1920. Serial No. 405,965. 7 Claims. (Cl. 92—3.)

5. As a new material, pulp mill chips of coniferous wood having the resinous content thereof reduced but having a substantial residual resinous content distributed to render the texture of said chips substantially uniform.

---

1,560,449. WHEEL. ALFRED WANG, Hoboken, N. J. Filed Apr. 23, 1925. Serial No. 25,211. 6 Claims. (Cl. 152—20.)

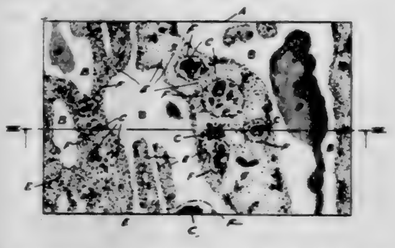
2. A collapsible wheel comprising a plurality of felly segments, each segment having a tongue and guide respectively, and ball bearings provided for said tongues and adjacent felly sections, a hub consisting of two sec-



tions, brackets and bolts for pivotally connecting the spokes with the felly and the hub sections respectively.

---

1,560,450. ARTIFICIAL STONE AND PROCESS OF MAKING. RALPH M. WESELY, Los Angeles, Calif., assignor of one-half to George Smith Macgruer and one-half to Robert Morton Simpson, both of San Francisco, Calif. Filed June 15, 1925. Serial No. 37,361. 14 Claims. (Cl. 18—48.8.)



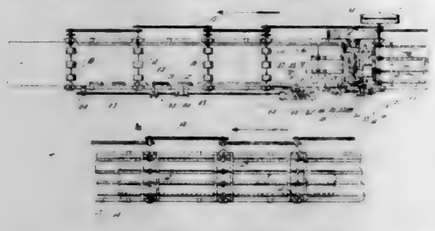
1. Artificial stone consisting of a plastery material at least one surface of which is shaped and striated and formed with sets of undercut voids and additional sets of small voids, the strim constituting the exposed portions of shallow inlays of colored plastery material.

---

1,560,451. ANCHOR FOR AIRSHIPS. WARREN B. WEYRICK, Akron, Ohio, assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 5, 1921. Serial No. 513,095. 12 Claims. (Cl. 189—90.)

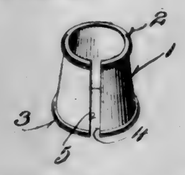
1. An anchor for aircraft comprising a plummet provided with stabilizing means and means for connecting the plummet to an aircraft.

1,560,452. SHEET-TRIMMING MACHINE. GEORGE FREDERICK WIELANDT, Canton, Ohio, assignor to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed June 23, 1923. Serial No. 647,216. 10 Claims. (Cl. 164—49.)



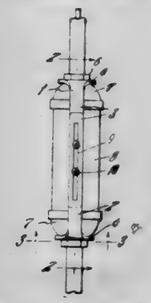
1. A sheet trimming machine including a reciprocating head with shearing edges on opposite sides, shearing dies cooperating with the shearing edges, a stop for detaining one sheet with its rear end in position to be trimmed by one shearing edge and a trip mechanism for controlling the operation of the head arranged to be engaged by a second sheet.

1,560,453. GOLF-TEE MOLD. FRANK H. WIESE, Manitowoc, Wis. Filed Mar. 16, 1925. Serial No. 15,892. 1 Claim. (Cl. 273—33.)



A golf tee mold comprising an annular resilient member having the shape of a truncated cone, said member being formed of sheet material having spaced edges and having rolled upper and lower marginal edges.

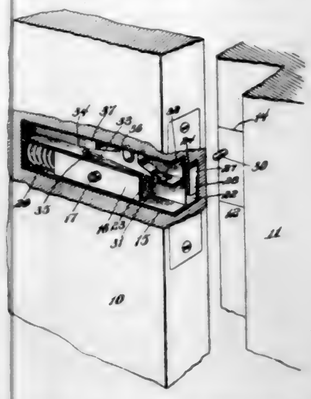
1,560,454. PUMP-CYLINDER PROTECTOR. GUS WIESE, New Hartford, Iowa. Filed June 9, 1925. Serial No. 35,966. 3 Claims. (Cl. 74—108.)



1. A device for the purpose indicated comprising complemental member provided with cylinder cap engaging heads and parallel arms, and means for connecting the arms together at their terminals.

1,560,455. LOCK. JOHN MALBY WILSON, Marion, Ind. Filed Oct. 2, 1924. Serial No. 741,224. 5 Claims. (Cl. 70—29.)

1. The combination with a door, a frame with which the door engages when in closed position, a bolt slidably mounted within the door, means normally maintaining the bolt with one end thereof projected, the frame having a socket receiving the projected end of the bolt when the door is in closed position, of means carried by the door retaining the bolt in withdrawn position,

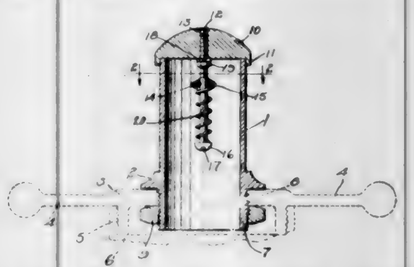


and means carried by the frame releasing the last named means to permit projection of the bolt when the door is fully closed, said last named means limiting the projection of the bolt when released.

1,560,456. METALLIC BILLIARD CUE. ROBERT B. WOLPERT, Minneapolis, Minn. Filed Apr. 13, 1925. Serial No. 22,618. 8 Claims. (Cl. 273—68.)

1. A billiard cue made up of a plurality of cylindrical sections progressively increasing in diameter from the tip toward the butt end and connected by tapered reducing couplings.

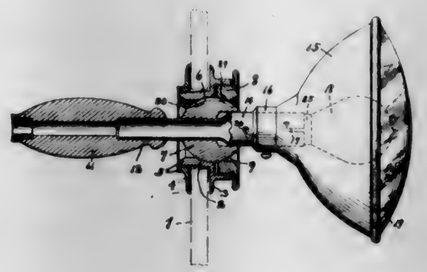
1,560,457. SAFETY VALVE. JOSEPH E. WOOD, Chicago, Ill., assignor of one-half to Fred W. Keech, Chicago, Ill., and one-half to Reliable Safety Valve Co., Chicago, Ill., a Corporation of Illinois. Filed May 13, 1922, Serial No. 560,590. Renewed May 4, 1925. 1 Claim. (Cl. 137—53.)



A safety valve for tanks comprising a cylindrical member having a threaded end, a flange disposed adjacent to the threaded portion, a nut adapted to lock said cylinder to a cover, a cap adapted to close the upper end of said cylinder and having a threaded bore therein, said cap being provided with a guiding flange that is adapted to receive the end of said cylinder, a bar extending transversely across said cylinder, and having an opening therein, a screw slidably disposed in said

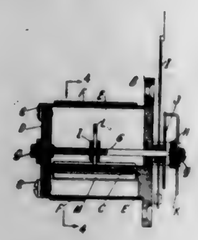
opening and having its threaded end received in said threaded bore in said cap, means for locking said screw to said cap, and a spring mounted on said screw and being disposed between said bar and the head of said screw.

1,560,458. SPOTLIGHT. KARL M. WISE, Birmingham, Mich., assignor, by mesne assignments, to The Clymer Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 7, 1921. Serial No. 459,456. 6 Claims. (Cl. 240—61.)



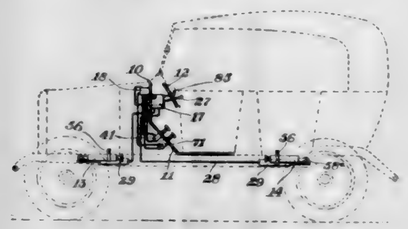
8. A spotlight comprising, a housing adapted to be mounted in a windshield, a lamp supporting member extending through and supported by the housing for substantially universal angular movement with respect to the windshield, a handle carried by one end of said member, a lamp, and means including a stem connecting said lamp and the other end of said member, for supporting said lamp in connection with said member so that the lamp may be oscillated, by movement of said handle, within a limited range about an axis normal to the axis of said member and may be rotated about the axis of said member to increase the range thereof.

1,560,459. ELECTRIC METER. HENRY TOWNSEND WORRALL, Chelmsford, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 2, 1928. Serial No. 616,479. 1 Claim. (Cl. 171—95.)



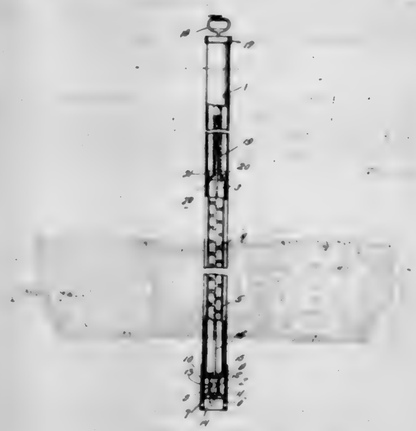
An electric meter comprising an annular coil, a cylinder mounted inside of said coil, a movable iron member, a spindle carrying an indicating needle rotatably mounted coaxially of said coil, an arm fastened to said spindle and located in a plane perpendicular to the axis of said spindle, said arm having an offset portion in the form of an arc concentric with the axis of the spindle, said iron member being mounted on the free end of said arm with one edge close to the inner wall of said cylinder and means forming a chamber in which said iron moves throughout its travel to form a dashpot.

1,560,460. AUTOMOBILE JACK AND BRAKE-OPERATING DEVICE. HARRY ALEXANDER YATES and PERCY ARTHUR STANLEY TODD, Ottawa, Ontario, Canada. Filed Dec. 24, 1924. Serial No. 757,941. 16 Claims. (Cl. 138—9.)



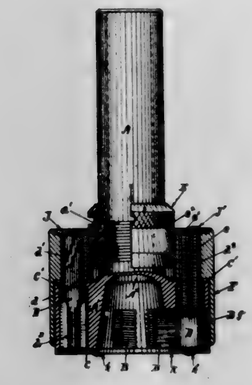
1. Means for jacking automobiles and the like, comprising a jack, a slide valve operable from the driver's seat, a jack operating valve communicating with said jack, a liquid-carrying conduit connecting said valves, means for supplying liquid under pressure to the valves, and rack and pinion means connecting the jack valve with the jack, whereby, on the slide valve being operated, the jack valve is operated to cause the jack to assume a vertical position and to operate the jack, means operable from the driver's seat, for releasing the pressure to cause the jack and slide valve to automatically assume a normal inoperative position.

1,560,461. GASOLINE GAUGE. JAHNEY H. BARNES, Eureka, Kans. Filed Sept. 8, 1924. Serial No. 736,559. 1 Claim. (Cl. 73—120.)



In a gasoline gauge, an elongated cylindrical casing, valve means on one end thereof, a cap on the other end thereof, a glass tube in the casing extending from an intermediate portion thereof to the valve means at one end thereof, said casing provided with an opening extending the approximate length of the tube, an actuating rod associated with the valve means and extending through the casing and through the cap thereof, a handle on the end of the actuating rod, adjacent the cap, a tubular sleeve in the casing extending downwardly from the cap and terminating at its bottom end in a flared portion merging into an upwardly disposed annular flange adapted to rest on the tube.

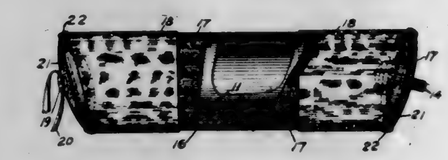
1,560,462. SELF OPENING AND CLOSING THREADING-DIE HOLDER. RUDOLPH A. BOEHM, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa. Filed Sept. 1, 1923. Serial No. 660,555. 7 Claims. (Cl. 10—96.)



2. In a device of the class described, a shank, a head on said shank having a radially movable chaser mounted therein, a spring pressed ring longitudinally slidably mounted on said head, a rotatable shaft mounted in said head and said ring, means on said shaft and said chaser adapted to be co-engaged by reason of a partial rotation of said shaft to retain the chaser in place, co-acting means in said ring and on said shaft adapted to rotate said shaft, a sleeve adjustably secured on said shank, and spring pressed latch mechanism mounted in said ring adapted to engage said sleeve and limit the longitudinal movement of said ring on said head.

---

1,560,463. AIR BAG. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 26, 1923. Serial No. 615,107. 12 Claims. (Cl. 18—45.)

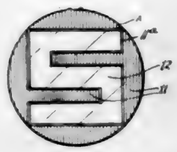


8. A tubular inflatable container comprising walls reinforced with cord elements extending longitudinally of the container and a strip of cross woven fabric of varying width adapted to reinforce one side of said container.

---

1,560,464. ADVERTISING INSERT FOR MOTOR-VEHICLE TAIL LIGHTS. RAYMOND CAMPBELL, Dallas, Tex. Filed Feb. 2, 1925. Serial No. 6,439. 1 Claim. (Cl. 40—131.)

An advertising insert for vehicle tail lamps, in combination with lamp, said insert comprising a disk, a blue letter occupying the central portion of the disk, said letter having a transparent non-colored outline on both inner and outer margins, the remaining portion of the disk being red colored, and both the letter and the red colored portion of the disk being translucent, the red colored portion of the disk for the purpose of displaying a danger signal, and the letter being used for



advertisements; and an entirely white translucent disk and a completely red translucent disk arranged beneath the lettered disk.

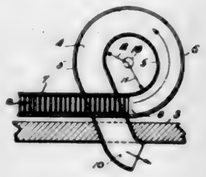
---

1,560,465. METHOD OF TREATING RUBBER. CLARENCE M. CARSON, Akron, Ohio., assignor to The Goodyear Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 7, 1923. Serial No. 617,612. 7 Claims. (Cl. 18—53.)

1. The method of treating rubber which comprises introducing a vulcanization accelerator thereinto in a plurality of separate parts by means of a carrying agent.

---

1,560,466. GRAVITY CONVEYER CHUTE. JAMES S. DA COSTA, Merchantville, N. J., assignor to The Lawson Company, Boston, Mass., a Corporation of New Jersey. Filed Oct. 31, 1924. Serial No. 747,000. 2 Claims. (Cl. 193—12.)



1. A spiral conveyer chute comprising spaced side walls arranged to define an inclined convolute guide channel coiled about a vertical axis, one of said side walls gradually approaching said axis as it descends.

---

1,560,467. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo. Filed Dec. 13, 1923. Serial No. 680,309. 5 Claims. (Cl. 129—24.)

1. In a loose leaf binder, the combination of a pair of rods, each bent to form an arch and a paper-holding prong adjacent thereto, a spring clip in which the arches are mounted to form a toggle, adjacent portions of the arches having mating grooves terminating in shoulders and a rod seated in said grooves and cooperating with the shoulders to hold the paper-holding prongs in alignment.

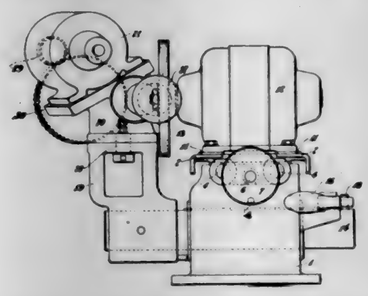
5. A loose leaf binder, the combination of paper holding devices, including pairs of separable prongs, and a spring cover having oppositely disposed notches and perforations, each pair of the said prongs extending through a notch and perforation.

1,560,468. WOODEN SUCKER-ROD GUIDE. JACK C. DODSON, Mexia, Tex., assignor to Mexia Planing Mill Company, a Copartnership composed of L. J. Ingram, Jack Dodson, and John W. Swann. Original application filed Sept. 11, 1923, Serial No. 662,144. Divided and this application filed June 18, 1924. Serial No. 720,777. 10 Claims. (Cl. 308—4.)

1. A guide for sucker rods, comprising a cylindrical body having a longitudinal extending axial bore therethrough and a longitudinal slot communicating with the bore and opening out through the side of the body.

---

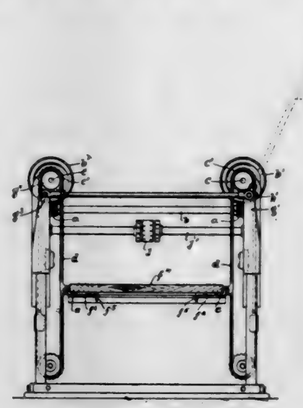
1,560,469. VALVE GRINDER. GEORGE W. FLEMING, Springfield, Mass., assignor to Fleming Machine Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 23, 1922. Serial No. 570,460. 1 Claim. (Cl. 51—106.)



In a machine for grinding the inlet and exhaust valves of an internal combustion engine, the combination with a base piece, a platform movably mounted on the base piece, a motor and a grinding wheel mounted on the movable platform, said motor serving to operate the grinding wheel, means comprising two rods supported in the base, the platform having depending perforated lugs mounted on the rods, a depending threaded lug, a threaded shaft located in said threaded lug for moving the platform with the motor and grinding wheel as a unit, a motor supporting and work holding member reciprocably located in the base-piece below the supporting rods of the movable platform, means including a handle attached to the member and base piece for reciprocating the member in a direction transversely of the direction of movement of the movable platform, a motor mounted on the reciprocable member, a rotatable clutch for receiving the valve stem of a valve, the bevel face of which valve is to be ground; the valve and its stem being rotated by the motor which is mounted on the reciprocable member, the construction being such that the rotatable valve is moved across the face of the grinding wheel.

---

1,560,470. SHEET-FEEDING MACHINE. REUBEN HITCHCOCK, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 23, 1925. Serial No. 32,329. 4 Claims. (Cl. 271—62.)



4. In a sheet feeding machine of the class described, the combination with a rectangular supporting frame, of elevating means therefor, and a plurality of supporting members adapted separately to be inserted in said frame, and interlocking means provided upon said members for insuring their alinement, substantially as set forth.

---

1,560,471. MILK STRAINER. JOHN F. HORNE, Portland, Me. Filed Jan. 21, 1924. Serial No. 687,420. 7 Claims. (Cl. 210—159.)

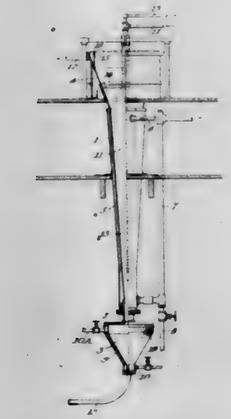
1. A clamping device for clamping a straining cloth or the like to the outside of a cylindrical body, consisting of a band surrounding the body having two adjacent free ends, a connecting loop having its two ends connected one to each of the band and a locking ring adapted to slide longitudinally on said loop for drawing together the two sides of said loop.

---

1,560,472. ORNAMENTATION. CARLOS D. HOPPES, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Oct. 20, 1924. Serial No. 744,843. 1 Claim. (Cl. 41—26.)

The method of ornamenting a rubber surface which comprises applying fluid rubber to said surface, then, before said fluid rubber has set, and while said fluid rubber is still in condition to blend, squirting onto said surface, in overlapping relation to said first fluid rubber, additional fluid rubber of contrasting appearance adapted to at least in part blend with said first fluid rubber, and finally setting said fluid rubbers by effecting vulcanization thereof.

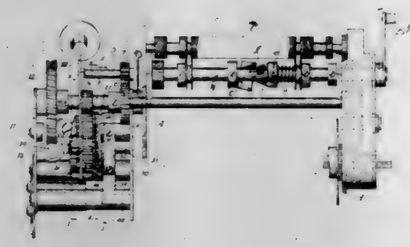
1,560,473. CONTINUOUS CRYSTALLIZING APPARATUS. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 19, 1924. Serial No. 714,515. 4 Claims. (Cl. 23—273.)



1. Crystallizing apparatus comprising an annular vessel, the inner and outer walls of which diverge upwardly, and means for applying a cooling medium to the inner surface of the inner wall.

---

1,560,474. AUTOGRAPHIC REGISTER. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1922. Serial No. 535,338. 11 Claims. (Cl. 282—21.)

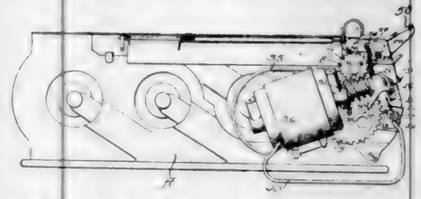


1. The combination in an autographic register with feed rollers one of which is tubular, a shaft reciprocable within the tubular roller and having one end extending beyond the end of said roller, an annular starter collar loose on said tubular roller, and a cone for centering said collar that is secured to and reciprocated by said shaft, of a lever designed to reciprocate said shaft.

---

1,560,475. AUTOGRAPHIC REGISTER. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1922. Serial No. 535,339. 14 Claims. (Cl. 282—21.)

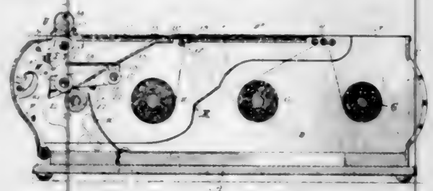
1. In an autographic register, the combination with the feed rollers, of a reciprocable shaft within the bore of one of said rollers, that has a screw-threaded end extending beyond a wall of the register, an annular starter mounted upon and normally eccentric to said shaft, a cone-shaped head secured to said reciprocal shaft and operable to engage and center said starter, of an oscillatory device that engages the screw-threaded



end of said shaft and returns it to its original position, and means that include an electric motor for actuating said mechanism.

---

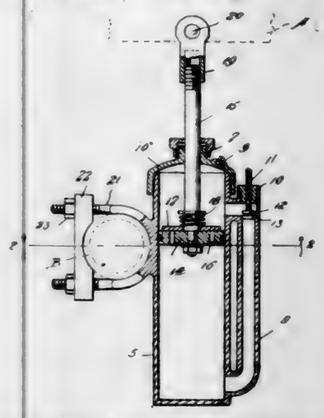
1,560,476. AUTOGRAPHIC REGISTER. LOUIS JENSEN, Chicago, Ill., assignor to United Autographic Register Co., Chicago, Ill., a Corporation of Illinois. Filed May 17, 1923. Serial No. 639,508. 6 Claims. (Cl. 282—16.)



1. In an autographic register a platen across which a record strip and a summary strip are adapted to be moved, feed means including a starter mechanism for moving said record strip, a supplementary strip arranged between said record strip and platen, means for moving said supplementary strip independently of the movement of said record strip, and devices for operatively relating said starter mechanism with the moving means for said supplementary strip.

---

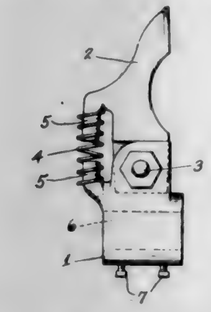
1,560,477. SHOCK ABSORBER. JOHN W. KESSLER, Philadelphia, Pa. Filed June 23, 1923. Serial No. 647,257. 1 Claim. (Cl. 188—88.)



A shock absorber comprising a cylinder provided at its side with a tube portion which communicates with the upper and lower portions of the cylinder, said tube portions having a valve seat, a rod slidably mounted in the cylinder, a piston carried by the rod and housed in the cylinder between the ends of the tube portion, said piston having ports passing transversely therethrough, a valve disc mounted upon the stem and disposed over the ports, a spring carried by the stem and bearing against the disc and serving to hold the same in a closed position over the ports, a plug threaded in the tube portion opposite the valve seat thereof, and a valve adjustably mounted in the plug and adapted to be moved to increase or diminish the area of the passageway through the tube portion.

---

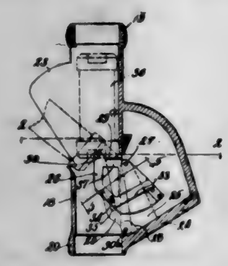
1,560,478. BINDER FINGER. ONESEME LANDRY, New Bedford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 19, 1924. Serial No. 687,293. 1 Claim. (Cl. 139—345.)



In combination with the protector rod of a loom having a dagger, a body having an opening therein to receive the dagger rod for a connection therewith, a finger pivoted to the upper end of the body, confronting projections on the body and finger, a coil spring having its ends surrounding the projections and tending to resist movement of the finger on its pivot, and said finger having its upper end in contacting engagement with the binder of the loom for the purpose specified.

---

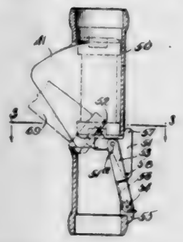
1,560,479. SELECTING APPARATUS FOR CONVEYER SYSTEMS. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Feb. 21, 1925. Serial No. 10,832. 15 Claims. (Cl. 243—16.)



1. A carrier sorting device for carrier despatch systems comprising a tube for directing carriers, an abutment normally positioned within the tube at one side of the latter, and a combined actuating and locking device for the abutment, said device positively preventing movement of the abutment when engaged by carriers of one class, and positively moving the abutment out of the tube when carriers of another type engage said actuating and locking device.

---

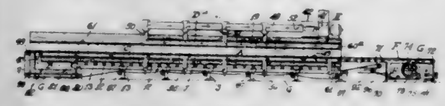
1,560,480. ASSORTING APPARATUS FOR CONVEYER SYSTEMS. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Feb. 21, 1925. Serial No. 10,833. 14 Claims. (Cl. 243—16.)



3. A sorting device for carrier despatch systems comprising a tube for directing carriers, an abutment normally projecting into the path of carriers moving through the tube, and movable means for pivotally supporting the abutment, the abutment being so shaped that carriers of one configuration engage it at a point further from its fulcrum than carriers of another configuration, and means constraining said abutment to move bodily from out of the tube when engaged by carriers of the first kind.

---

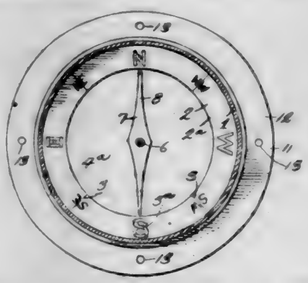
1,560,481. APPARATUS FOR ANNEALING GLASSWARE. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 1, 1925. Serial No. 33,977. 27 Claims. (Cl. 49—47.)



1. A lehr for annealing glassware, comprising a tunnel, a heating flue and a cooling flue associated with said tunnel, means for causing heating and cooling media to flow through said flues at subatmospheric pressure, and means located at intervals along said flues for controlling the temperatures therein.

---

1,560,482. DIRECTION INDICATOR FOR VEHICLES. OLE P. NOISOM, South Bend, Ind. Filed Aug. 22, 1921. Serial No. 494,217. 1 Claim. (Cl. 33—222.)

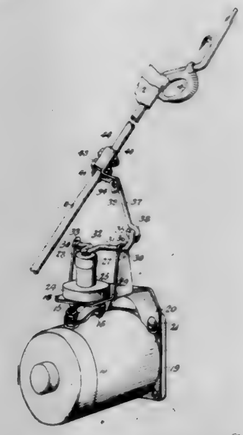


A vehicle compass comprising a casing, transparent covers at the ends of said casing, an inwardly extending annular horizontally disposed flange within the casing and spaced from the ends thereof, a horizontally disposed magnetic needle disposed within the casing and in registration with the horizontally disposed flange and cooperating with compass scale indicia on the upper and

lower faces of the horizontally disposed flange said scales being in reverse relation, pintles carried by said needle and mounted in bearings in the transparent covers, the ends of said casing being threaded, a retaining ring threaded on one end of the casing, a flanged base threaded on the other end of the casing and forming means interchangeable with the retaining ring for supporting the casing from either of its ends, whereby the scale indicia on the horizontally disposed flange will read from right to left when the flange is on either end of the casing.

---

1,560,483. SWITCH-OPERATING DEVICE. ORAN L. OERTEL, Buffalo, N. Y., assignor to Spark Safety Starter Corporation, Buffalo, N. Y., a Corporation. Filed Aug. 3, 1925. Serial No. 47,679. 4 Claims. (Cl. 74—39.)



1. A device for operating a switch from a hand operated rock shaft, comprising a crank shaft having a crank adapted to shift said switch and a rock arm, an actuating arm adapted to be connected with said rock shaft, and a link connecting said rock arm with said actuating arm.

---

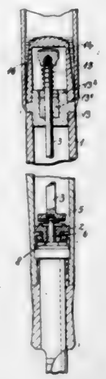
1,560,484. LINK CARRIER FOR PAPER-MATCH MACHINES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Dec. 1, 1924. Serial No. 753,409. 3 Claims. (Cl. 144—65.)

1. A link carrier for paper match machines, having transversely grooved links provided with projections from the side walls of said grooves and extending into the grooves in staggered relation.

---

1,560,485. AUTOMATICALLY-FILLING FOUNTAIN PEN. ERNST RICHARD GUSTAV ALBERT RÖSLER, Hamburg, Germany, assignor to the Firm of Simplo Fullfeder-Gesellschaft Voss, Lausen & Dziambor, Hamburg, Germany. Filed Dec. 11, 1924. Serial No. 755,292. 6 Claims. (Cl. 120—47.)

1. An automatically filling fountain pen comprising a barrel, a piston in the barrel provided with a longitudinal passage, a piston rod having stops between which the piston is adapted to slide longitudinally on said piston rod, one stop being constructed to close said passage in the piston and the other stop to clear said



passage when contacting with the piston, and a spring engaging the piston rod and tensioned on the latter being pushed inwardly, so as to automatically move it outwardly again, when the pressure is reduced.

---

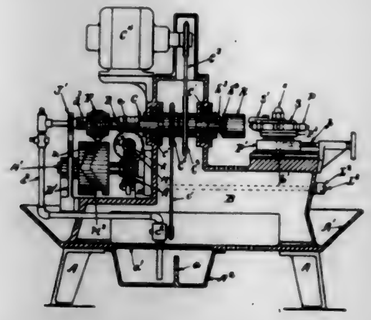
1,560,486. DEVICE FOR SEATING VALVES. JOHN RUMMINS, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 8, 1923. Serial No. 667,432. 6 Claims. (Cl. 78—1.)

1. A valve seating tool comprising an elongated body member adapted to receive blows at its upper end, and having a spherical seat at its lower end; and a spherical anvil held in place within said seat and having an exposed surface adapted to engage the upper end of a valve to be seated.

---

1,560,487. AUTOMATIC SCREW-THREADING MACHINE. ARTHUR A. SHAFER, Erie, Pa., assignor to Rickert-Shafer Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,725. 5 Claims. (Cl. 10—105.)

3. In a machine of the class described, a hollow sleeve shaft, means to rotate said shaft, a shaft slidable within said sleeve shaft having a longitudinal opening in one end thereof, a threading die holder, a shank thereon adapted to be secured in said opening, means to cause said shaft to rotate in unison with said sleeve shaft, horizontal slide mechanism rotatably secured on said shaft, cam mechanism adapted to engage said slide mechanism to cause said shaft to move longitudinally in



said sleeve shaft, and gear and shaft mechanism adapted to rotate said cam mechanism in timed relation to the rotation of said sleeve shaft.

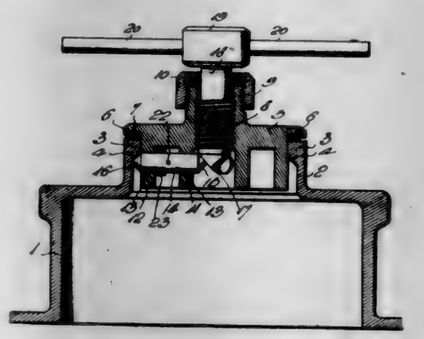
---

1,560,488. METHOD OF TREATING RUBBER. ELLWOOD B. SPEAR, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 6, 1923. Serial No. 611,175. 13 Claims. (Cl. 18—58.)

1. The process of treating rubber or similar materials which comprises introducing unactivated carbon at least partially saturated with a rubber treating gas.

---

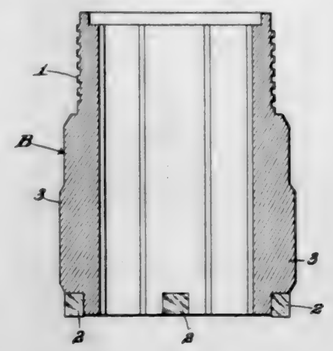
1,560,489. RECEPTACLE CLOSURE. SHERMAN A. YAGER, deceased, late of Pasadena, Calif., by Alice J. Yager, administratrix, Pasadena, Calif. Filed Oct. 3, 1924. Serial No. 741,364. 2 Claims. (Cl. 220—55.)



1. A closure comprising a disk having an axial opening and provided on its inner side with inner and outer continuous flanges which are concentric with said opening, said flanges being formed with radially alined openings, a plurality of pins received slidably in said radially alined openings and having beveled inner and outer ends projecting from said inner and outer flanges, and a screw threaded through said axial opening and having a pointed inner end engaging the beveled inner ends of said pins to project the latter when the screw is threaded inwardly.

---

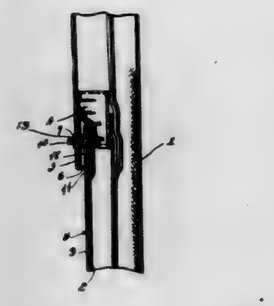
1,560,490. DIAMOND-DRILL BIT. MINAL E. YOUNG, Casper, Wyo. Filed Sept. 4, 1924. Serial No. 735,948. 3 Claims. (Cl. 255—72.)



1. The combination with a drill bit having diamonds projecting beyond its periphery at the working end thereof, of protecting flanges of soft metal carried by the bit and projecting outwardly beyond the diamonds, said flanges being arranged above the diamonds.

---

1,560,491. COTTON-PICKER'S SACK. LOUIS H. YOUNGER, Austin, Tex. Filed Jan. 15, 1925. Serial No. 2,646. 1 Claim. (Cl. 150—2.)



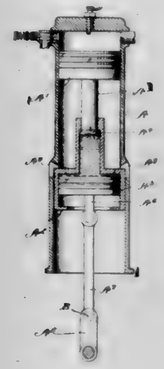
In combination, a cotton picker's sack provided with a transversely extending plait, eyelets carried by the plait, a protector for the under side of the sack and provided with folds embracing the side edges thereof, one end of the protector being positioned beneath the plait, eyelets carried by said end of the protector and registering with the eyelets of the plait, a retaining element passing through the eyelets, and retaining elements engaging the folds.

---

1,560,492. INTERNAL-COMBUSTION ENGINE. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Inc., Miles City, Mont., a Body Corporate. Filed Feb. 2, 1921. Serial No. 441,976. 5 Claims. (Cl. 138—23.)

1. In an internal combustion engine, a pressure developing means, a piston having major and minor diameters, an intermediate piston having major and minor bores, means for reciprocating the minor diameter of the first mentioned piston in the minor bore of said intermediate piston, a secondary piston slidable in the

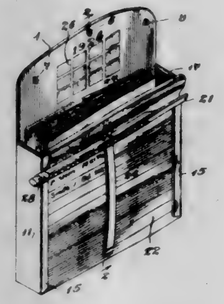
major bore of said intermediate piston, fluid means between said secondary piston and the minor diameter of said first mentioned piston, a power shaft, connecting



means between said power shaft and said secondary piston whereby said power shaft is actuated by the pressure of the said fluid means.

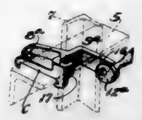
---

1,560,493. HOLDER. PHILIP STEINBERG, Toledo, Ohio. Filed June 18, 1924. Serial No. 720,839. 1 Claim. (Cl. 120—82.)



A holder formed of a single strip of material and comprising a back plate and a front plate having an integral strip of material connecting the lower ends, with the front plate and back plate being located in parallel relation, said back plate having side flanges which are bent forwardly at right angles to the back plate, the front plate having side flanges bent rearwardly and adapted to lie in close contact with the flanges of the back plate, the outer ends of the flanges of the back plate being bent in parallel relation to the back plate and engaging the front plate along its side edges for locking the two plates in parallel relation, flanges projecting upwardly from the back plate adapted to be bent downwardly and engage over the upper edges of the side flanges of the front plate, the upper edge of the front plate being bent downwardly and outwardly and curved to provide a pencil holder, the front plate being provided with a perforation adjacent its lower end and a strip of material having its upper end maintained in position by the lead pencil holder and its lower end inserted in the perforation of the front plate.

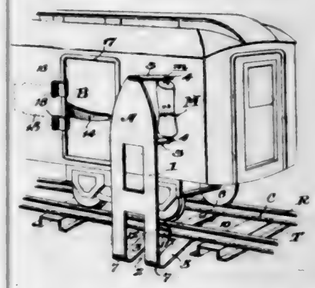
1,560,494. FORM-ALIGNING BRACE. HERAULT A. TRESTER, Milwaukee, Wis., assignor to Metal Forms Corporation, Milwaukee, Wis., a Corporation. Filed Nov. 10, 1920. Serial No. 423,011. 7 Claims. (Cl. 25—131.)



1. A clamp of the character described, including a body portion provided with a pair of jaws adapted to engage intersecting bars, one of said jaws having a hooked formation so that it will interlock with the respective bar, and a movable clamping element permanently carried by the opposite jaw and adapted to engage the other bar to hold the clamp in a tight engagement with the two bars.

---

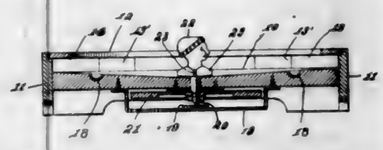
1,560,495. TOY MAIL-BAG-LOADING MECHANISM. HARRY S. BECKER, River Forest, and EARL BOISSELIER and GUY F. SCHUMACHER, Chicago, Ill., assignors to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1924. Serial No. 754,590. 18 Claims. (Cl. 258—7.)



1. A toy mail bag handling apparatus for toy trains comprising a bag support adapted to be detachably fitted to a track and including spaced apart spring arms having means for engaging the ends of a bag and carried by an upright, a base upon which the upright is mounted, and means carried by the base for engaging with a portion of the track thereby to position the mail bag at the proper location with reference to a moving train.

---

1,560,496. GAME. TORGER A. BAKKETUN, Northwood, Iowa. Filed Apr. 12, 1923. Serial No. 631,641. 1 Claim. (Cl. 273—119.)



A game device comprising a board dished toward its center, and having secured to its edges side members which rest upon a supporting surface to elevate the board and present a box-like appearance, a top secured to the side members and formed with a circular opening of less diameter than the playing surface of the board, thereby defining an overhanging flange, a series of recesses formed in the playing surface, the playing surface being inscribed with various indicia, depending brackets in crossed relation secured to the underside of the board,

a shaft having a bearing in said brackets and passed through the board at its lowest point, a fly wheel mounted on the shaft between the brackets and the underside of the board, a flat head rigid on the upper end of the shaft for turning the same, and a plurality of radial arms formed at the base of the head and resting flat on the board, in combination with a plurality of balls disposed on said playing surface and adapted to be engaged by said arms.

---

1,560,497. MUSICAL INSTRUMENT. JOSEPH LE ROY BANKS, Baltimore, Md. Filed July 19, 1922. Serial No. 576,145. 16 Claims. (Cl. 84—93.)

16. A device for playing a harmonica comprising a tracker-bar, means for supporting a music-note sheet for movement across said tracker-bar, and means for supporting a harmonica for adjustment lengthwise of said tracker-bar.

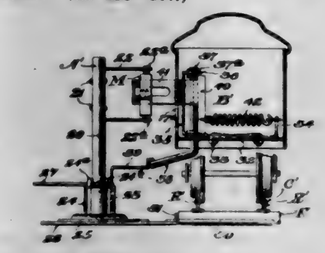
---

1,560,498. TIRE FLAP. THOMAS A. BEANEY, Poughkeepsie, N. Y., assignor to Beaney Rubber Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 25, 1924. Serial No. 752,245. 5 Claims. (Cl. 152—20.)

2. A tire flap including a plurality of sections having overlapping ends slidable upon each other and means for guiding the ends in their sliding movements, and having a valve stem receiving opening located substantially midway between the ends of one of the sections.

---

1,560,499. TOY MAIL-BAG-LOADING MECHANISM. HARRY S. BECKER, River Forest, and EARL BOISSELIER and GUY F. SCHUMACHER, Chicago, Ill., assignors to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Dec. 8, 1924, Serial No. 754,590. Divided and this application filed Apr. 20, 1925. Serial No. 24,666. 10 Claims. (Cl. 258—107.)

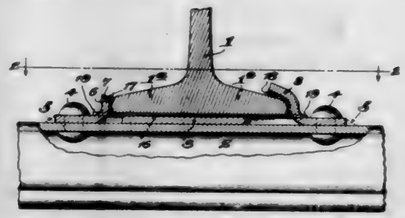


1. A toy mail bay loading mechanism comprising a bag catching device carried by a car and a bag support adapted to be attached to a track, said bag support

comprising a base adapted to engage with the track, and a sleeve rotatably mounted on said base and having a handle, and a post carrying mail bag supporting means fitted into said sleeve.

---

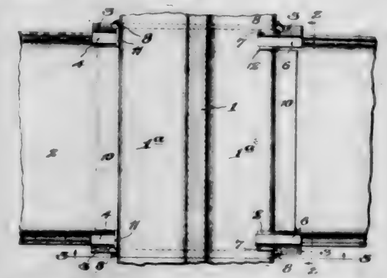
1,560,500. RAIL FASTENER. WILLIAM DALTON, Schenectady, N. Y. Filed Feb. 2, 1925. Serial No. 6,408. 7 Claims. (Cl. 238—107.)



1. Rail fastening means, comprising a plate adapted to be rigidly secured to the tie beneath the rail, and upstanding abutments on said plate to engage the rail flange, the abutment on one side presenting a substantially vertical face to the adjacent edge of said flange, and the abutment on the other side being bent to overlap the adjacent edge of said flange, said overlapping abutment standing at a greater angle to the horizontal than the top surface of said flange whereby the rail is securely held against both lateral and vertical movement but can be removed from the tie by tilting it about the flange edge which lies under said overlapping abutment.

---

1,560,501. RAIL FASTENER. WILLIAM DALTON, Schenectady, N. Y. Filed Feb. 2, 1925. Serial No. 6,409. 4 Claims. (Cl. 238—344.)



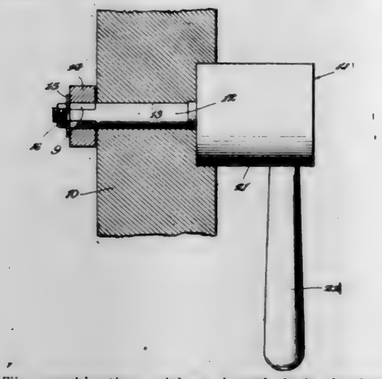
1. Means to removably secure rails to metal ties of inverted U-shape, comprising a plate adapted to be secured to the sides of the tie, one end of said plate extending above the tie and having a vertical face to engage the adjacent edge of the rail flange, and the other end of said plate extending above the tie to engage and overlap the adjacent edge of said flange, the angle of the overlapping portion being steeper than that of the top of the flange, whereby the rail can be removed by tilting it.

---

1,560,502. SOUND-REPRODUCING DEVICE. LEE DE FOREST, New York, N. Y. Filed Jan. 15, 1925. Serial No. 2,548. 20 Claims. (Cl. 179—115.)

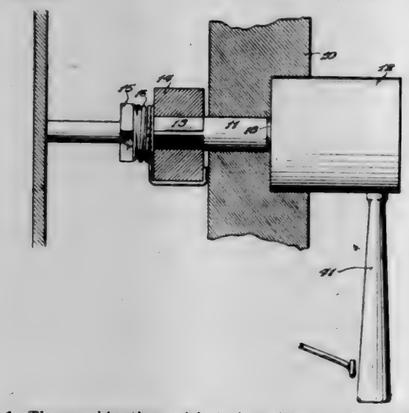
3. A sound reproducing device comprising a fixed membrane and a sound reproducing member attached tangentially to the marginal edge thereof.

1,560,503. LEVER LATCH FOR SAFE LOCKS. WILLIAM FRED DOENGES, San Antonio, Tex. Filed Aug. 23, 1922, Serial No. 583,818. Renewed June 19, 1924. 7 Claims. (Cl. 70—91.)



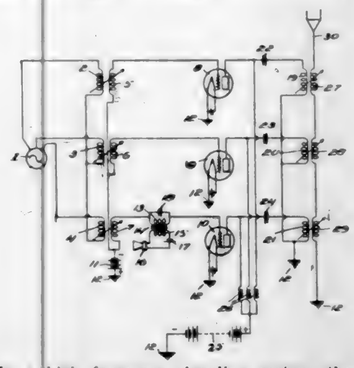
2. The combination with a barrel lock, having an eccentric stud; of a hub in which the barrel lock is mounted, a handle on said hub, guiding means in said hub, a slide provided with a radial lug and mounted in said guiding means fo rtransverse reciprocation in the hub, said slide having engagement with said stud, a revoluble member mounted coaxially with said barrel lock in said hub, said member having a recess corresponding to said radial lug and adapted to engage therewith in one position of said slide, a retaining plug in said guiding means for transverse reciprocation in said hub and antifriction bearings between said revoluble member and said plug on the one hand, and between the hub and the revoluble member on the other hand.

1,560,504. LEVER HANDLE FOR SAFE LOCKS. WILLIAM FRED DOENGES, San Antonio, Tex. Filed July 7, 1923. Serial No. 650,040. 11 Claims. (Cl. 70—91.)



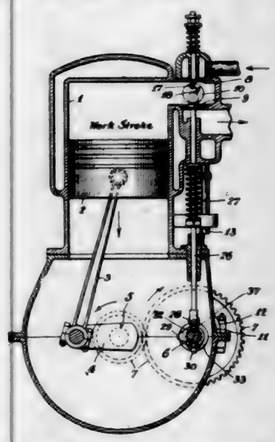
1. The combination with a barrel lock, of a hub in which the barrel lock is mounted, a cam secured to said barrel and adapted to turn therewith operated by a key, said hub having a cylindrical chamber, a revoluble member in said hub, said revoluble member having radially directed notches, a plurality of latches adapted to engage in said notches and guiding means in said chamber for said latches, elements tending yieldingly to hold the latches in said notches, said cam being arranged between and engaging with said latches and adapted to raise the same out of the notches on the turning of said barrel by said key.

1,560,505. METHOD OF CARRIER-FREQUENCY SUPPRESSION. ROBERT D. DUNCAN, Jr., East Orange, N. J., assignor to Wired Radio Inc., New York, N. Y., a Corporation of Delaware. Filed May 19, 1925. Serial No. 31,393. 17 Claims. (Cl. 179—171.)



1. In a high frequency signaling system, the combination of a source of three phase high frequency current, a work circuit, signaling means associated with said source, the said high frequency source, work circuit and signaling means being so associated that both during and intermediate the signaling periods that component of the high frequency current which is unaffected by the signaling means is suppressed from said work circuit.

1,560,506. INTERNAL-COMBUSTION ENGINE. LEONARD H. DYER, New York, N. Y. Filed May 29, 1923. Serial No. 642,231. 10 Claims. (Cl. 123—41.)



1. An engine of the four stroke cycle type, having an exhaust valve, a rotating valve operating shaft, for opening said valve, means for reversing the direction of rotation of the engine and shaft, and means operatable by the direction of rotation of the valve operating shaft for timing the period of valve opening in relation to the point of ignition, said means actuating the exhaust valve on the first exhaust stroke following the change of direction of rotation of the engine.

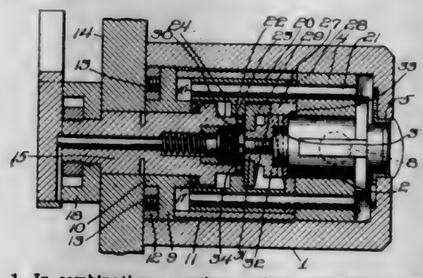
1,560,507. GRINDER. ALBERT F. FROUSSARD, St. Louis, Mo. Filed Nov. 5, 1923. Serial No. 672,868. 4 Claims. (Cl. 51—206.)

1. In a grinder the combination of a rotating head having a plurality of plane sides in its periphery, and

a plurality of retainers secured to the said sides, the said retainers each consisting of a base plate on the said sides, and side plates extending perpendicularly from the said base plate and connected thereby, there

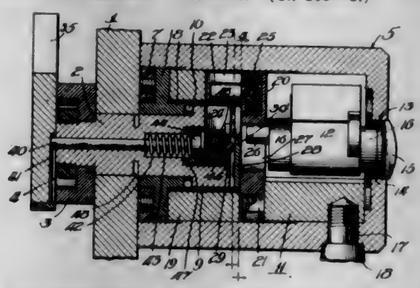
being beveled outer faces at the base of said side plates, the said retainers being arranged contiguously to one another with the said beveled faces forming their common meeting faces.

1,560,508. LOCK FOR HANDLES OF SAFES OR VAULTS, ADAM GABRIEL, Chicago, Ill., assignor to William F. Doenges, San Antonio, Tex. Filed Jan. 28, 1924. Serial No. 688,911. 7 Claims. (Cl. 109—3.)



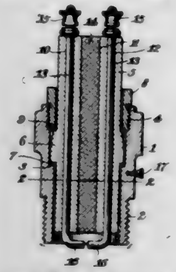
1. In combination, a casing, a shaft extending through a wall of the casing, said wall having an inwardly-directed hub surrounding said shaft, the shaft having at the inner end beyond the hub a noncircular portion, a member housed in said casing and interlocked therewith so as to be held against rotation therein and be free to slide relatively thereto between a working and an idle position in the direction of the length of said shaft, said member having an annular part that surrounds the said hub in all positions of said member and a part fitting upon said noncircular part of the shaft only in the working position of said member, and key-controlled means for moving said member between its said positions.

1,560,509. THERMALLY-CONTROLLED SAFETY HANDLE FOR DOORS. ADAM GABRIEL, Chicago, Ill., and WILLIAM F. DOENGES, San Antonio, Tex.; said Gabriel assignor to said Doenges. Filed Jan. 28, 1924. Serial No. 688,936. 17 Claims. (Cl. 109—3.)



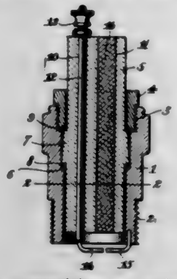
1. In combination, a wall, a bolt-actuating shaft extending through said wall, a bolt actuator associated with the shaft on one side of the wall, a handle member on the shaft on the other side of the wall, and means controlled by the temperature within said handle for bringing about an inoperative relation between the shaft and said actuator.

1,560,510. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,409. 1 Claim. (Cl. 123—169.)



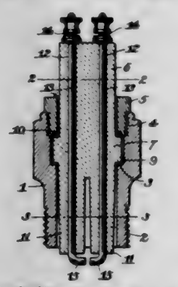
A spark plug, comprising a casing, an insulating core in the casing and of a length greater than the casing and projecting appreciably above the upper end of the casing, said core having three parallel bores, a transparent core secured in the central bore and extending throughout the length of the core, and a pair of electrodes projecting through the other bores and having terminals at their inner ends spaced apart and located in line with the transparent core.

1,560,511. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,410. 1 Claim. (Cl. 123—169.)



A spark plug, comprising a casing, an insulating core in the casing having a pair of parallel bores extending throughout the length thereof, one bore being appreciably larger than the other, an electrode located in the smaller bore and projecting through the core, terminals on the electrode and on the inner end of the casing, spaced apart and providing an arc in line with the larger bore, and a transparent core extending throughout the length of the first-mentioned core and fitting the larger bore of the latter.

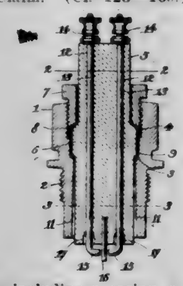
1,560,512. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,411. 1 Claim. (Cl. 123—169.)



A spark plug including a casing, a core in the casing, a pair of electrodes projecting through the core and parallel to each other, said core at its inner portion com-

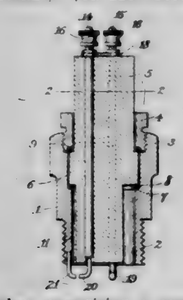
prising a pair of separate members being circular in cross section, and the inner face of the casing being recessed concentrically with the members whereby an annular space is provided in the casing around each electrode carrying member.

1,560,513. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,412. 1 Claim. (Cl. 123—169.)



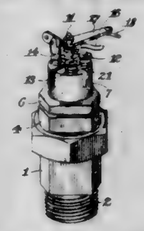
A spark plug, including a casing, a core in the casing, a pair of electrodes in the core, an isolated conductor located at the inner end of the core and spaced from the terminals of the electrodes, said core at its inner end being substantially elliptical in cross section, the shell or casing being substantially circular in cross section and having recesses in its opposite walls whereby the surface of the shell or casing is spaced from the edges of the core.

1,560,514. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,413. 3 Claims. (Cl. 123—169.)



1. A spark plug, comprising a casing, a core in the casing, three electrodes in the core, terminals on two of the electrodes forming a spark gap, a terminal on the casing spaced from a terminal on the third electrode forming a second spark gap, and said electrodes connected in series.

1,560,515. SPARK PLUG. LOUIS HIRSCH, Mesilla Park, N. Mex. Filed July 26, 1924. Serial No. 728,414. 3 Claims. (Cl. 123—169.)

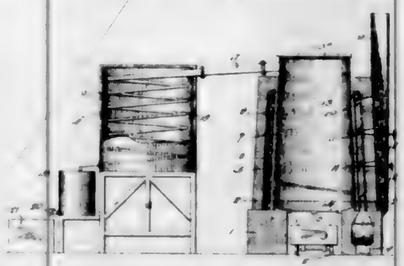


1. A spark plug, comprising a casing, a core in the casing, four electrodes in the core providing two spark gaps at their inner ends, and all of said electrodes connected in series, one of said electrodes movable to open the normal circuit and provide a spark gap between the same and the casing.

1,560,516. ROAD RAIL. HERAULT A. TRESTER, Milwaukee, Wis., assignor to Metal Forms Corporation, Milwaukee, Wis., a Corporation. Filed March 15, 1922. Serial No. 544,025. 10 Claims. (Cl. 25—118.)

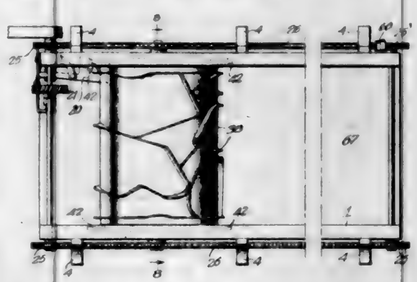
1. A rail form of the character described, including a body portion formed with an upright working face, and a series of transversely disposed hollow arch shaped reinforcements engaging the back of the working face and inclined downwardly and rearwardly therefrom, the front end of the arched reinforcements extending the full height of the upright working face and the inclined tops thereof forming substantially diagonal brace members.

1,560,517. APPARATUS FOR WOOD DISTILLATION. JOHN L. WEAVER, New Orleans, La. Filed Mar. 21, 1921. Serial No. 457,228. 6 Claims. (Cl. 203—6.)



2. In wood distillation apparatus of the kind described, the combination with a distillation retort, of a helical flue, a stack communicating with the flue in different horizontal planes, and dampers controlling communication between the stack and the flue, the dampers being in different horizontal planes.

1,560,518. CLOTH-CUTTING MACHINE. MORRIS DORMAN, Baltimore, Md. Filed May 29, 1925. Serial No. 33,788. 19 Claims. (Cl. 164—28.)



1. In a cloth cutting machine a cylindrical member and a cylindrical shell endwise slidably removably engaged thereover and carrying the cutting members.

Patents Nos. 1,560,519 to 1,561,451.

THE
# OFFICIAL GAZETTE
OF THE
# United States Patent Office.

Vol. 340—No. 2. TUESDAY, NOVEMBER 10, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Resignation of Assistant Commissioner Fenning.

Mr. Karl Fenning, who in June, 1921, relinquished a successful practice in Cleveland to accept the position of Assistant Commissioner, in response to Commissioner Robertson's urgent desire to secure a competent man for this place, resigned on November 4, 1925. Mr. Fenning has performed the responsible duties of his office with distinction and ability. Many important improvements in the conduct of the Office are due to this energetic and public-spirited official, and it is with regret that his resignation is accepted. Mr. Fenning will enter the Department of Justice to take charge of patent matters for the Government. That department is to be congratulated upon its good fortune in securing so valuable an official for this work.

## ADJUDICATED PATENTS.

(C. C. A. III.) The Miller patent, No. 878,225, for milk-pasteurizing device, claim 5 *Held* invalid. *Creamery Package Mfg. Co.* v. *Miller Pasteurizing Mach. Co.*, 6 F. (2d) 838.

(C. C. A. III.) The Miller patent, No. 945,570, for large-capacity ice-cream freezer, claims 7, 8, 10, 11, 12, 20, and 21 *Held* valid and infringed. *Creamery Package Mfg. Co.* v. *Miller Pasteurizing Mach. Co.*, 6 F. (2d) 838.

(C. C. A. N. Y.) The Kirsch patent, No. 1,240,582, for sectional curtain rod, *Held* invalid for lack of invention. *Kirsch Mfg. Co.* v. *Gould Mercereau Co.*, 6 F. (2d) 793.

## NOTICE TO ATTORNEYS.

**A circular letter reading as follows has been placed in the mail addressed to each attorney on the roster:**

**"Your name appears on the roster of those registered to practice before the United States Patent Office. We are preparing to revise the roster to eliminate the names of those who are dead or who have retired from practice before this Office.**

**"You are reminded that the rules provide that attorneys registered in this Office should keep the Office advised of any change of address. To this end will you please fill out the form below and return this letter immediately.**

**"Your failure to fill out and return this letter will be considered your authorization to remove your name from the roster."**

**Attorneys who have not received this circular and who wish their names to be retained on the roster should immediately write the Commissioner of Patents to that effect and give him their full names and business addresses, together with their registration numbers and the names of any firms of which they are members or with which they are associated.**

## Condition of Applications Under Examination at Close of Business October 30, 1925.

(Total number of applications awaiting action, excluding Trade-Mark Division, 40,227: Trade-Mark Division, 2,089. Oldest new case, Apr. 18, 1925; oldest amended, Apr. 24, 1925. The dates given are 1925.)

| Room No. | Divisions, Examiners, and Subjects of Inventions. | Oldest new application and oldest action by applicant awaiting office action. New. | Amended. | No. of applications awaiting action. |

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

EX PARTE BERGER.

*Decided March 28, 1924.*

1. ANTICIPATION—PATENT IN WHICH TERMS ARE MISAPPLIED DOES NOT ANTICIPATE CLAIMS FOR DIFFERENT STRUCTURES IN WHICH SAME TERMS ARE CORRECTLY USED.

Where a prior patent shows numbers printed in alternate rows of red and black with the red numbers immediately above the black and the specification refers to the numbers as being "superposed," *Held* that this term, which is misapplied in the patent, can not be used as a verbal anticipation of applicant's claims, which use the same term to cover a plurality of indicating marks of different colors occupying the same space, since structure, not words, is dealt with.

2. SAME—NONANALOGOUS ART—DIFFERENT PROBLEMS.

Claims covering a calibrated chart for a measuring apparatus, having a tabular set of inscriptions printed in one color and a second set superposed thereon and printed in another color, together with corresponding color screens, are not anticipated by a signal for automobile use showing superposed designs of different colors on a transparency, beneath which are two lamps of corresponding colors, the arts not being so close or analogous as to preclude invention in transferring the idea from one art to the other, and the problems being different.

3. SAME—SAME—SAME.

Claims for a measuring apparatus comprising a calibrated chart having superposed inscriptions of opposite colors, together with corresponding color screens, are not anticipated by an advertising device having a red figure superposed on a green figure, with two transparent coverings, one red and the other green, the arts and the problems to be solved being different.

[Note.—This application has resulted in Reissue Patent No. 15,884, May 13, 1924.]

Application for patent.

APPEAL from Examiners in Chief.

MEASURING APPARATUS.

Application filed September 3, 1920, No. 408,091, for reissue of patent granted March 4, 1919, No. 1,295,842.

*Messrs. Cooper, Kerr & Dunham* for the applicant.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiners in Chief affirming the Primary Examiner in rejecting claims 4 to 7, 9, and 11 to 14 of an application for reissue of Patent No. 1,295,842.

Accident, inadvertence, or mistake and timely filing of the application for reissue are admitted.

The invention of the patent relates specifically to a computing scale in which there is a cylinder which revolves and carries a plurality or series of progressive indications. At diametrically opposite points on the cylinder identical marks are carried, so that through proper viewing means one mark may be seen by a person on one side of the scale and an opposite corresponding or identical mark seen by a person on the other side of the scale. It has become desirable to place a large number of characters indicating weight and price on the cylinder to such an extent that the surface has been practically entirely covered. So that the scale may operate properly, it is desirable that the size and weight of the cylinder be kept as small as possible. Applicant has discovered that he can employ a single space for a plurality of indicating marks by having them superimposed and of different colors. For instance, a green "5" may be superimposed upon a red "3," and the combined mark when viewed through a green screen will read "5," but if viewed through a red screen will read "3."

Six claims have been allowed applicant pointing out in more or less detail his invention as applied to a cylinder of a scale.

The claims here in issue include:

4. In or for a measuring apparatus, a calibrated printed chart having a tabular set of inscriptions printed in one character or color, and superposed on the same a second or separate tabular set of inscriptions printed in a dissimilar character or color and in a predetermined relation to the first set.

6. A measuring apparatus comprising a calibrated chart relatively shiftable in accordance with the quantity measured and viewable by different lights and printed with two superposed systems of inscriptions of opposite colors, in combination with optical screens of corresponding colors adjacent the chart.

11. A measuring apparatus comprising in combination, a chart, an index cooperative with said chart, said chart and index being relatively movable, said chart being provided with a plurality of superimposed differently colored series of progressive indications, and means comprising a color filter for causing one of said series to become predominantly visible with respect to said index.

The references are: Smith, No. 998,414; Rawlings, No. 1,032,024; Lowenstein, No. 1,168,084.

[1] Smith does not relate to scales, but does show a calculating cylinder in which he proposes to have visible two adjacent numbers. He apparently prints his numbers in alternate rows of red and black. The red figure appears immediately above the black figure. His specification refers to the figures as being "superposed." They are not in fact such, since in no instance does his red figure occupy the same space as his black figure, and the figures do not overlie each other or overlap; one is merely printed in the space above the space occupied by the other. We can not take the term "superposed," which is misapplied, of Smith and use it as a verbal anticipation of the present claims, since we are dealing not with words, but with structures. This seems to have been admitted by the tribunals below.

[2] Lowenstein shows a signal specially intended, apparently, for automobile use, in which he shows superimposed or overlapping designs upon a plate or transparency, beneath which are two lamps. One design may be red, the other green, one lamp red, and the other green. Lowenstein thus accomplishes the economy in space applicant accomplishes, but he does not do it in a measuring

or calculating machine, nor had he before him the problem of applicant. I do not believe the art of Lowenstein is so close or analogous to the art of applicant as to preclude invention in transferring the idea from one art to the other.

[3] Rawlings is an advertising device in which a figure in red is superposed on a figure in green, and the device is provided with two transparent coverings, one red, and the other green, so that when the picture is properly placed there will be visible only the green marks or only the red marks. I do not think this art is near enough to applicant's art to be pertinent, nor had Rawlings applicant's problem before him.

It is noted that the claims here involved relate not to a scale, but to a measuring apparatus or to a chart. The title of applicant's patent for which he now asks a reissue is a "Measuring Apparatus," and he apparently is justified in asking for claims of this breadth. Economy of space in an ordinary measuring apparatus may be a matter of material moment.

Claim 4 of the original patent does not relate to a scale, but merely to a printed chart in a measuring apparatus. The present claims are within the scope of that claim, and hence should be allowed.

None of the claims of the original patent in terms calls for a stationary chart and a movable index; nor do they call for an index and chart being relatively movable. Each claim of the patent specifies a movable chart excepting claim 4, which merely specifies a printed chart without indicating that it is movable or that there is relative movement between it and the index. Applicant under these circumstances clearly is entitled to a claim broad enough to include relative movement between the chart and index, irrespective of whether the chart itself is the movable part, under the well known doctrine that there is ordinarily no patentable distinction in moving A and holding B stationary over moving B and holding A stationary. The claims will therefore be allowed.

After the argument on this appeal applicant submitted two additional claims, 16 and 17, drawn toward but somewhat narrower than claim 4 of the patent. These claims relate specifically to a scale. The amendment presenting them, therefore, will be entered and the claims allowed.

The Examiners in Chief are reversed.

---

HULL *v.* PARADIS AND MCCOUBREY.

*Decided June 14, 1924.*

EQUITABLE ESTOPPEL—LACHES—COPYING CLAIMS FROM PATENT—CANCELLATION AND RESTORATION OF COPIED CLAIMS.

Where H. filed his application copying claims from P. and McC's. patent within two months after the grant of the patent, substituted differently-worded but commensurate claims to the same subject matter during prosecution of his application in response to rejections on P. and McC. and other patents without attempting to differentiate from P. and McC.'s patent, specifically stating that he made the invention prior to the filing of P. and McC.'s application, and where H. restored the claims of the patent four months after he had canceled them, but more than two years after the grant of P. and McC.'s patent, *Held* that H. was not estopped to make the claims of the patent.

Patent interference No. 48,980.

APPEAL from the Examiners in Chief.

VEHICLE BODIES.

Application of Mathew R. Hull filed January 2, 1920, Serial No. 349,015.

Patent granted to Lubin Paradis and Hammond B. McCoubrey November 11, 1919, No. 1,321,389, on an application filed February 14, 1918, Serial No. 217,454.

*Mr. Frank W. Woerner* and *Mr. Ernest W. Bradford* for Hull.

*Mr. Clyde L. Rogers* and *Messrs. Townshend & Townshend* for Paradis et al.

FENNING, *Assistant Commissioner:*

This is an appeal by the senior party Paradis et al. from the decision of the Examiners in Chief reversing the decision of the Examiner of Interferences.

The senior party brought a motion for judgment on the record on the ground that Hull is estopped from making the claims. This motion was granted by the Examiner of Interferences, who entered judgment awarding priority to the senior party. The Examiners in Chief held Hull not estopped and reversed the decision of the Examiner of Interferences. They found no basis for making an award to either party and specifically refrained from doing so. No appeal lies from their decision; but since they inadvertently set a time limit of appeal the instant appeal will be considered on its merits, especially since neither party objects to such procedure.

Paradis et al. have Patent No. 1,321,389 granted on November 11, 1919. Hull filed on January 2, 1920, his three original claims being copies of claims 2, 6, and 7 of the senior party's patent. The Examiner apparently did not notice that the claims were copied from the Paradis et al. patent, for he rejected them on another reference without mentioning said patent, requiring an affidavit under rule 94, or setting a time limit for reply under *Weber and Woodford*, 264 O. G. 863; 1919 C. D. 65. As the prosecution of the case progressed the Examiner also relied on additional references, including the Paradis et al. patent. Hull then canceled his original claims and substituted his present claims 1 and 2 on May 25, 1922. About four months later, on September 22, 1922, Hull restored his original claims as present claims 4, 5, and 6. The Examiner rejected claim 5 as not supported by Hull's disclosure, and set up the interference with claims 4 and 6 (the patentee's claims 2 and 7) as the issue.

The senior party urges that Hull is estopped from making the claims under the doctrine of *Chapman et al.* v. *Wintroath*, 272 O. G. 913; 1920 C. D. 465; 252 U. S. 126. Hull presented the patentee's claims within two months from the grant of the patent. He has been asserting his right to these claims continuously since that date, with the exception of the period of about four months between May 25, 1922, when he canceled them, and September 23, 1922, when he reinstated them. If he had other commensurate claims to the same subject matter during this period, it is clear that he is not estopped under the *Chapman et al.* v. *Wintroath* doctrine (*Ex parte Hanson*, 26 O. G. 201; 1919 C. D. 33, and *Chapman* v. *Beede*, 323 O. G. 230). I am satisfied that claims 1 and 2 are such claims. While worded slightly different from the issue, they are directed to the same subject matter. When Hull canceled his original claims on May 25, 1922, and presented present claims 1 and 2 as substitutes therefor, he made no attempt to differentiate claim 1 from the senior party's patent, but did specifically state that he made the invention prior to the filing date of the application on which the senior party's patent was granted. He has shown no intention of acknowledging any prior rights in the senior party.

It is obvious that Hull can not have a patent for claims 1 and 2 unless he proves that he made the invention prior to the senior party. These claims do not differ patentably from the invention claimed by Paradis and McCoubrey, and they appear to read directly on the patented device. It is believed that Hull has had claims commensurate with the patent claims continuously since he filed his application, which was within two months after the grant of the patent.

The decision of the Examiners in Chief is affirmed, and the Examiner of Interferences is instructed to set new dates for the taking of testimony.

---

PLUMSTEAD *v.* BRADLEY AND MCKEEFE.

*Decided December 2, 1924.*

INTERFERENCE—RULE 128—DISCOVERY OF REFERENCE AFTER JUDGMENT ON THE RECORD.

Where the Primary Examiner discovers a reference after judgment of priority on the record, the question of the applicability of the reference should not be considered inter partes under rule 128, but after the judgment becomes final the Primary Examiner should take the matter up ex parte in the application of the winning party.

[Note.—In this case an order to show cause why judgment on the record should not be entered against P. was issued June 28, 1924. On July 30 judgment on the record was rendered in favor of B. and McK. On August 5 the Examiner recommended that the Law Examiner consider the patentability of the reference under rule 128, and on August 9 the Law Examiner requested jurisdiction for that purpose. Proceedings were suspended and the case was transmitted to him on August 12, and a day for hearing was set. On petition by B. and McK. the actions of the Examiner of Interferences and the Law Examiner suspending the interference and granting a hearing were set aside. The present decision is on a petition by P. for reconsideration.]

Patent interference No. 50,976.

ON PETITION.

COOKING LIQUOR.

Patent granted Joseph E. Plumstead April 1, 1924, No. 1,488,830, on application filed January 18, 1924, No. 687,133; division of application filed April 18, 1923, No. 632,927.

Application of Linn Bradley and Edward P. McKeefe filed April 10, 1924, No. 705,711; division of application filed March 28, 1921, No. 456,187.

*Messrs. Spear, Middleton, Donaldson & Hall* for Plumstead.

*Messrs. Pennie, Davis, Marvin & Edmonds* for Bradley and McKeefe.

FENNING, *Assistant Commissioner:*

Rule 128 provides that after a reference is called to his attention the Law Examiner "may" request the suspension of the interference until the final determination of the pertinence and effect of the reference. If the Law Examiner asks for jurisdiction and sets a hearing, it would certainly be within the jurisdiction of the Commissioner under his supervisory authority to vacate that hearing, there being no mandatory rule requiring the hearing to be had.

If the Law Examiner had refused to set the hearing, because priority had been awarded, no court would issue a mandamus requiring the Office to set a hearing.

It is to be noted in the present case that Plumstead was under an order to show cause, and no good reason is seen why the Primary Examiner or the Law Examiner did not let the question of the reference wait over until after formal judgment was entered against Plumstead and the decision had become final. The Primary Examiner could then have taken the matter up ex parte with Bradley and McKeefe.

Being of the opinion that no hearing should be set for the consideration of a reference after a judgment of priority, I directed that the order of the Law Examiner setting a hearing be vacated. Upon further consideration I am of the opinion that this was the proper action, and the petition of Plumstead filed November 29, 1924, is denied.

---

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,444,836, H. Horig, Ignition system for internal-combustion engines and the like purposes, decided September 24, 1925, claim 9.

Pat. 1,491,907, O. C. Goeriz, Water-turbine draft tube, decided September 18, 1925, claims 1 to 8, inclusive.

Pat. 1,525,827, D. C. Prince, Production of alternating currents, decided October 3, 1925, claims 1 to 4, inclusive.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 37,662, Soap and certain named toilet preparations, A. T. Wood, Detroit, Mich. Registered January 21, 1902. Decided October 3, 1925.

T. M. 124,508, Certain named foods, California Ripe Olive Co., San Francisco, Calif. Registered February 25, 1919. Decided September 18, 1925.

T. M. 127,467, Candy, The O-H Company, New York, N. Y. Registered November 11, 1919. Decided October 3, 1925.

T. M. 128,267, Certain named foods, Sunical Packing Company, Oroville, Calif. Registered December 30, 1919. Decided September 18, 1925.

T. M. 128,268, Certain named foods, Sunical Packing Company, Oroville, Calif. Registered December 30, 1919. Decided September 18, 1925.

T. M. 128,269, Certain named foods, Sunical Packing Company, Oroville, Calif. Registered December 30, 1919. Decided September 18, 1925.

## TRADE-MARKS CANCELED.

129,616. Certain named toilet preparations. George H. Betts, New York, N. Y. Registered March 9, 1920. Canceled October 15, 1925.

144,201. Leather belts for supporting wearing apparel. Miller & Gleason, Newport News, Va. Registered June 28, 1921. Canceled October 26, 1925.

157,288. Electric signal lamps. Standard Auto Parts Co. of America, Newark, N. J. Registered July 25, 1922. Canceled October 20, 1925.

161,871. Asphalt shingles. Ford Roofing Products Co., Chicago, Ill. Registered November 21, 1922. Canceled October 26, 1925.

191,992. Hair tonic or scalp lotion. Kelly Brothers, New Lexington, Ohio. Registered November 25, 1924. Canceled October 15, 1925.

## Disclaimers.

1,483,379.—*William M. Reed*, Louisville, Ky. AIR FILTERING AND CLEANING DEVICE. Patent dated February 12, 1924. Disclaimer filed October 9, 1925, by the assignee, *Reed Air Filter Company*.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"10. An air filtering and cleaning device comprising a casing open at front and back; a filter unit including a frame and a fibrous filling mass removably mounted in said casing; and a series of screens removably mounted on said casing spaced from and overlying said unit on the intake side of said frame."

1,058,210.—*Allie Ray Welch and Fred Stimson Welch*, Pontiac, Mich. METHOD OF FINISHING CASTINGS. Patent dated April 8, 1913. Disclaimer filed October 19, 1925, by the assignee, *American Plug Company*.

Hereby enters this disclaimer to restrict and limit the terms of the specification and claims.

And your petitioner hereby disclaims from the process covered by said patent, any process which embodies as a step the forming of an undercut shoulder to extend over the edge of the disk to hold it in position after it has been spread on the shoulder, such as shown and described by United States Letters Patent to H. R. Towne, No. 879,694, granted February 18, 1908, and limits the process to closing a hole in a casting by enlarging the outer end of the hole so as to form a shoulder between said outer end and the inner end, the enlarged end of the hole being cylindrical and of no greater diameter immediately adjacent the shoulder than at any point more remote therefrom, placing a concaved disk having a substantially cylindrical edge on said shoulder and flattening said disk so as to force its edge against the cylindrical wall of said enlarged portion of the hole with sufficient pressure to firmly hold the disk in position by reason of the fit of the disk in said hole.

And your petitioner hereby limits and confines the claims of said Letters Patent to a process as described therein in which the enlarged portion of the hole is of minimum diameter adjacent the shoulder and the disk is held in position by its pressure and fit against the wall of the enlarged portion of the hole adjacent the shoulder.

1,472,014.—*Stephen J. Clulee*, Attleboro, Mass. TEMPLE-BAR CONSTRUCTION. Patent dated October 23, 1923. Disclaimer filed October 15, 1925, by the assignee, *Bay State Optical Co.*

The word "flexible" as used throughout the claims, and specifically claims 2, 3, 4, 7, 8, 9, and 10, is liable to too broad an interpretation, and, so interpreted, to cover elements not intended to be covered by this term, the liability to such possible interpretation not being intended or foreseen and thus being accidental, and it is hereby stated that the said term "flexible" as thus used means nonsolid and self-adjusting and having an ease of flexing of the order of that of a coiled member; and the term "flexed" as used in claim 7 implies flexibility as above defined, and any broader meaning or interpretation of such terms is hereby disclaimed.

Further to clarify the term "flexible," not only in its intrinsic meaning, but with relation to the "main body portion," and to restrict the latter term and disclaim possible unduly broad interpretation thereof, it is hereby stated that by the term "main body portion" as used throughout the claims is meant a member large in circumference and relatively nonflexible as a whole, as compared with the flexible metallic extension, and of a circumference substantially equal to or larger than the entire extension, metallic and nonmetallic, and a broader interpretation or meaning of the said term is hereby disclaimed.

1,527,118.—*Stephen J. Clulee*, Attleboro, Mass. EYEGLASS CONSTRUCTION. Patent dated February 17, 1925. Disclaimer filed October 15, 1925, by the assignee, *Bay State Optical Co.*

The word "flexible" as used throughout the claims, and specifically claims 1, 2, 5, 6, 9, 12, 13, 14, 15, 16, 17, 19, 20, 23, 25, and 26, is liable to too broad an interpretation, and, so interpreted, to cover elements not intended to be covered by this term, the liability to such possible interpretation not being intended or foreseen and thus being accidental, it is hereby stated that the said term "flexible" as thus used means nonsolid and self-fitting and having an ease of flexing of the order of that of a coiled member, and any broader meaning or interpretation of such term is hereby disclaimed.

Further to clarify the term "flexible," not only in its intrinsic meaning, but with relation to the "main body portion," and to restrict the latter term and disclaim possible unduly broad interpretation thereof, it is hereby stated that by the term "main body portion" as used throughout the claims, and specifically claims 12, 13, 14, 15, 16, 17, 19, 20, 24, 25, 26, 27, 28, 29, and 30, is meant a member large in circumference and relatively nonflexible as a whole, as compared with the flexible metallic extension, and of a circumference substantially equal to or larger than the entire extension, metallic and nonmetallic, and a broader interpretation or meaning of the said term is hereby disclaimed.

## Adhesion of Australia to International Convention for the Protection of Industrial Property.

The following communication, referred to this Office by the Secretary of Commerce, is published for the information of those concerned:

DEPARTMENT OF STATE, *Washington, Oct. 8, 1925.*

The honorable the SECRETARY OF COMMERCE.

SIR: I have the honor to enclose for the information of the Commissioner of Patents a translation of a note from the chargé d'affaires ad interim of Switzerland, notifying the Government of the United States that the Commonwealth of Australia has adhered to the Convention signed at Washington on June 2, 1911, amending the International Convention for the Protection of Industrial Property, signed at Paris on March 20, 1883, and revised at Brussels on December 14, 1900, and that the Commonwealth of Australia wishes to be considered as a contracting country in the Union for the Protection of Industrial Property to which it had, as a colony, adhered as early as August 5, 1907.

The attention of the Commissioner of Patents is invited to the statement of the chargé d'affaires, that as a consequence of the adherence of the Commonwealth of Australia all the contracting countries are now governed by the one text of the Convention revised at Washington in 1911, and that, therefore, the situation due to that Commonwealth remaining heretofore bound only by the Paris Convention of 1883, as revised at Brussels in 1900, has come to an end.

I have the honor to be, sir, your obedient servant.

For the Secretary of State:
J. BUTLER WRIGHT,
*Assistant Secretary.*

Enclosure: From chargé d'affaires ad interim of Switzerland, September 25, 1925.

LEGATION OF SWITZERLAND,
*Washington, D. C., Sept. 25, 1925.*

MR. SECRETARY OF STATE.

By notes of July 30, and August 20, last, the legation of His Britannic Majesty informed the Swiss Federal Council that the Government of the Australian Federation (Commonwealth of Australia) gives its adhesion to the Convention signed in Washington on June 2, 1911,

which Convention amends the Union Convention of Paris of March 20, 1883, for the protection of industrial property, revised at Brussels on December 14, 1900, and wishes to be considered as a contracting country in the Industrial Union to which it had, as a colony, adhered as early as August 5, 1907.

In accordance with article 13 of the Union Convention, the Australian Government asks to be placed in the third class with regard to the contribution to the expenses of the International Bureau.

I have the honor to bring the foregoing communication to Your Excellency's knowledge. It affords pleasure to the Federal Council to note in this connection that as a consequence of the adhesion under consideration all the contracting countries are now governed by the one text of the Union Convention revised at Washington in 1911, and thereby the régime which was still alive on account of the Australian Federation, remaining heretofore bound by the Convention of Paris of 1883, as revised at Brussels in 1900, alone, has finally come to an end.

Be pleased to accept, Mr. Secretary of State, et cetera.

GIRARDET,
*Chargé d'Affaires ad interim of Switzerland.*

His Excellency Mr. FRANK B. KELLOGG, Secretary of State, Washington, D. C.

## Adhesion of Turkey to International Convention for the Protection of Industrial Property.

The following communication, referred to this Office by the Secretary of Commerce, is published for the information of those concerned:

DEPARTMENT OF STATE,
*Washington, Sept. 29, 1925.*

The honorable the SECRETARY OF COMMERCE.

SIR: I have the honor to enclose for the information of the Commissioner of Patents a translation of a note from the chargé d'affaires ad interim of Switzerland, concerning the adherence of the Turkish Government to the International Convention for the Protection of Industrial Property, signed at Paris on March 20, 1883, and revised at Washington on June 2, 1911, and to the arrangement relating to the international registration of trade-marks, signed at Madrid on April 14, 1891, revised in Brussels on December 14, 1900, and in Washington on June 2, 1911.

I have the honor to be, sir, your obedient servant.

For the Secretary of State:
J. BUTLER WRIGHT,
*Assistant Secretary.*

Enclosure: From chargé d'affaires ad interim of Switzerland, September 25, 1925.

LEGATION OF SWITZERLAND,
*Washington, Sept. 25, 1925.*

MR. SECRETARY OF STATE:

By notes of August 6 and 22 last and of the 1st instant, the Legation of Turkey informed the Swiss Federal Council that under the provisions of the Commercial Convention annexed to the Lausanne Peace Treaty, the Turkish Government adheres to the International Convention of Paris of March 20, 1883, revised in Washington on June 2, 1911, for the protection of industrial property, and also to the arrangement relative to the international registration of trade-marks, signed at Madrid on April 14, 1891, revised in Brussels on December 14, 1900, and in Washington on June 2, 1911. With respect to its contribution to the expenses of the International Bureau, the Turkish Government expressed a wish to be put in the fourth class.

In accordance with article 16, paragraph 3, of the Union Convention, the said adhesions will take effect one month after the sending of this notice, that is to say, on and after the 10th of October, 1925.

I have the honor to be, your excellency, et cetera.

GIRARDET,
*Chargé d'Affaires ad interim of Switzerland.*

His Excellency Mr. FRANK B. KELLOGG, Secretary of State, Washington, D. C.

## Notice of Publication.

U. S. PATENT OFFICE, *Washington, Oct. 19, 1925.*

*Home Art Masters, Inc., its assigns or legal representatives, take notice:*

An application was filed in this Office by the Library Bureau, of Cambridge, Mass., for cancellation of trade-mark registration No. 97,675, issued June 16, 1914, to Louise Brigham, of 546 East Eighty-ninth Street, New York, N. Y. The assignment records of this Office show a transfer of title of this registration to the Home Art Masters, Inc., a corporation of New York. Since the Office has been unable to obtain the post-office address of the Home Art Masters, Inc., the proceeding can not be instituted. Therefore notice is hereby given that unless said Home Art Masters, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

## Interference Notices.

U. S. PATENT OFFICE, *Washington, Oct. 20, 1925.*

*Harry Leigh Curran, his assigns or legal representatives, take notice:*

An interference has been declared by this Office between applications for patents filed by Louis Carrol Howard, of 612 West One hundred and eighty-fourth Street, New York, N. Y., and Harry Leigh Curran, of 244 West Seventy-sixth Street, New York, N. Y. Counsel for Curran states that the present whereabouts of Curran is unknown to him. Notice is hereby given that unless said Curran, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 17, 1925.*

*International Shade Co., its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of the Incandescent Supply Company, 468 West Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered June 24, 1918, No. 92,222, to the International Shade Co., 46 Harrison Avenue, Springfield, Mass., and a notice of such declaration sent by registered mail to said International Shade Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said International Shade Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 15, 1925.*

*Arondack Spring Company, its assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of David J. Fitzgerald, jr., 32 Glen Street, Glens Falls, N. Y., for registration of a trade-mark and trade-mark registered October 9, 1906, No. 56,581, to Arondack Spring Company, Saratoga Springs, N. Y., and a notice of such declaration sent by registered mail to said Arondack Spring Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Arondack Spring Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 10, 1925.

[VOL. 340. No. 2.]

**The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.**

**Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.**

**As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.**

Ser. No. 166,896. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATIONAL EGG PRODUCTS COMPANY, Los Angeles, Calif. Filed July 14, 1922.

WHIPP-ITT

*Particular description of goods.*—Powder for Making Marshmallows.

*Claims use* since June 14, 1924.

Ser. No. 181,653. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) SOCIÉTÉ FRANÇAISE TUBOGOLNIK, Levallois-Perret, France. Filed June 7, 1923.

1860
T.P.A.P.M.
СПЕТЕРБУРГЪ.

*Particular description of goods.*—Rubber Bulbs, Rubber Water Bottles, Rubber Syringes, Rubber Air Cushions, Rubber Tubs, Rubber Tubing, Rubber Gloves, and Dental Rubber, All of the Foregoing Articles Being for Surgical, Dental, or Invalid Use.

*Claims use* since January, 1888.

Ser. No. 183,260. (CLASS 15. OILS AND GREASES.) DORN OIL COMPANY, Cleveland, Ohio. Filed July 16, 1923.

Rapid

*Particular description of goods.*—Gasoline and Kerosene.

*Claims use* since Jan. 1, 1923.

Ser. No. 183,363. (CLASS 15. OILS AND GREASES.) CENTRAL COMMERCIAL COMPANY, Chicago, Ill. Filed July 18, 1923.

STASO

*Particular description of goods.*—Oils and Greases—Namely, Gasoline, Naphtha, Kerosene, Fuel Oil, Flux Oil, Transmission Oil, Motor Oil, Engine Oil, Harvester Oil, Tractor Oil, Lubricating Grease, and Thread-Cutting Oil.

*Claims use* since Jan. 23, 1923.

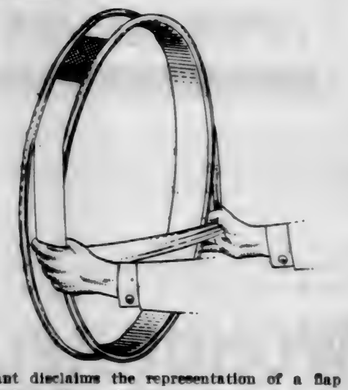
Ser. No. 183,455. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SCARAMELLI & COMPANY, INC., doing business as Serto Packing Co., New York, N. Y. Filed July 19, 1923.

SERTO

*Particular description of goods.*—Food Products—Namely, Canned Fruits, Canned Vegetables, Canned Fish, Tomato Sauce, and Olive Oil.

*Claims use* since 1914.

Ser. No. 193,118. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) NORTH EASTERN RUBBER CO., Elisabeth, N. J. Filed Mar. 1, 1924.



Applicant disclaims the representation of a flap and rim apart from the mark as shown.

*Particular description of goods.*—Flaps for Automobile Rims.

*Claims use* since January, 1922.

Ser. No. 194,478. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) A. R. PURDY COMPANY, INC., New York, N. Y. Filed Mar. 26, 1924.

PLANET

*Particular description of goods.*—Annealed Cutter Blanks, Alloy Steels, Tool and Drill Steels, Annealed Punch and Die Steels, Spring and Machinery Steels, Coppered Bessemer Rods; Pick, Wedge, and Hammer Steels; Sheet Steel for all Uses, Music Wire for Springs, Oil-Tempered Spring Wire, Cold-Rolled Steel, High-Speed Steel, Forgings, and Drill Rods.
*Claims use* since January, 1911.

---

Ser. No. 197,163. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NEW JERSEY MOTORS, INC., Keyport, N. J. Filed May 16, 1924.

NJM

*Particular description of goods.*—Internal-Combustion Engines and Parts Thereof.
*Claims use* since August, 1921.

---

Ser. No. 200,123. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) D. B. SCULLY SYRUP CO., Chicago, Ill. Filed July 16, 1924.

LUSHUS FRUIT PRESERVES

No claim is made to the words "Lushus Fruit Preserves" apart from the mark as shown in the drawing.
*Particular description of goods.*—Fruit Preserves.
*Claims use* since May 28, 1924.

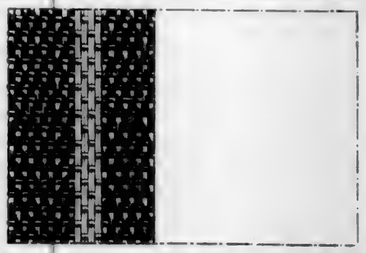
---

Ser. No. 201,586. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSIE B. SAMPLE, Eudora, Ark. Filed Aug. 18, 1924.

WONDERFUL

*Particular description of goods.*—Hairdressing Such as Pressing Oil or a Hair Grower.
*Claims use* since Jan. 23, 1918.

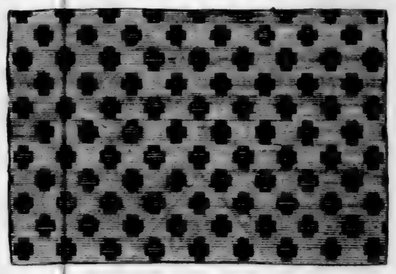
Ser. No. 201,635. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE WESTERLY TEXTILE COMPANY, Westerly, R. I. Filed Aug. 19, 1924.



The representation of the goods apart from the mark shown by the drawing is disclaimed. The mark consists of woven threads of white or silver artificial silk of a stripe comprising the trade-mark.
*Particular description of goods.*—Draperies and Dress Goods.
*Claims use* since about Feb. 1, 1924.

---

Ser. No. 202,257. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) LEWIS MANUFACTURING COMPANY, Walpole, Mass., assignor, by mesne assignments, to First National Bank of Boston, Boston, Mass., a Corporation of Massachusetts, and Olaf Olsen, Milton, Mass., trustees. Filed Sept. 5, 1924.



*Particular description of goods.*—Absorbent Gauze, Absorbent Cotton, Absorbent Waste Cotton, Sterilized Gauze, Bandages, Bandage Rolls, and Adhesive Plasters.
*Claims use* since about Mar. 15, 1920.

---

Ser. No. 202,609. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE BRUNSWICK-BALKE-COLLENDER COMPANY, Chicago, Ill. Filed Sept. 15, 1924. Under section 5b of the act of 1905 as amended in 1920.

BRUNSWICK

*Particular description of goods.*—Bowling-Alley Pin Setters and Supplies and Equipment Therefor.
*Claims use* since Aug. 1, 1924.

---

Ser. No. 203,003. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Sept. 24, 1924.

APOTHESINE

Trade-mark consists of the word "Apothesine."
*Particular description of goods.*—Anæsthetics.
*Claims use* since July 1, 1917.

Ser. No. 203,332. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEFA PIETRA SANTA GRISI, Mexico, Mexico. Filed Oct. 2, 1924.

José Grisi

The name "Jose Grisi" is disclaimed except in the manner shown. It is a facsimile signature of Jose Grisi (deceased), the originator of the product to which the trade-mark is applied.
*Particular description of goods.*—Medicinal Plaster for the Treatment of Wounds, Sores, and the Like Conditions.
*Claims use* since 1874.

---

Ser. No. 203,840. (CLASS 37. PAPER AND STATIONERY.) HERBERT O. ROSS, St. Louis, Mo. Filed Oct. 13, 1924.

Handifax

*Particular description of goods.*—Card Systems, Indexing Systems, Record Systems, and Filing Systems and Materials and Equipment Therefor—Namely, Indicators, Individual and Class Distinguishers, Tabs, Cards, and Holders, or Containers, to Which Cards or Record Sections are to be Attached.
*Claims use* since Sept. 1, 1924.

---

Ser. No. 203,981. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SOUTHERN LABORATORIES, INC., West Point, Va. Filed Oct. 16, 1924.

VITAKOL

*Particular description of goods.*—Preparation for External Application in Relieving Fatigue and Soreness and for Use in Bathing.
*Claims use* since Apr. 15, 1924.

---

Ser. No. 205,223. (CLASS 39. CLOTHING.) NU-WAY SHOE CO., New York, N. Y. Filed Nov. 13, 1924.

Nu-Way

*Particular description of goods.*—Shoes Made of Leather, Rubber, Fabric, and Combinations of the Same and Also of Various Compositions in Part and as a Whole.
*Claims use* since August, 1919.

Ser. No. 206,242. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) KWIK-KUT KNIFE COMPANY, St. Louis, Mo. Filed Dec. 4, 1924.

KWIK-KUT

*Particular description of goods.*—Pocket, Desk, or Sewing-Basket Knife.
*Claims use* since Oct. 20, 1921.

---

Ser. No. 206,828. (CLASS 32. FURNITURE AND UPHOLSTERY.) M. S. CROW, INC., Shanghai, China; Chicago, Ill.; and Santa Barbara, Calif. Filed Dec. 17, 1924.

*Particular description of goods.*—Shensi Chests and Lacquered Chairs and Tables for Household Use.
*Claims use* since June 1, 1921.

---

Ser. No. 206,905. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) KLEINBERGER & COMP. AKTIENGESELLSCHAFT, Duisburg, Germany. Filed Feb. 6, 1925.

Autodoktor

*Particular description of goods.*—Liquid Automobile Polishes.
*Claims use* since July 9, 1924

---

Ser. No. 207,025. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE MORNANITE LABORATORIES, Brooklyn, N. Y. Filed Dec. 20, 1924.

THE
MORNANITE
DENTIFRICES

No claim is made to the exclusive use of the word "Dentifrices" apart from the mark shown in the drawing.
*Particular description of goods.*—Dentifrices.
*Claims use* since Dec. 8, 1924.

Ser. No. 207,240. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed Dec. 26, 1924.

RELIANCE

*Particular description of goods.*—Inner Tubes for Pneumatic Vehicle Tires, said Inner Tubes being Composed Wholly or in Part of Rubber.
*Claims use* since Jan. 20, 1924.

---

Ser. No. 207,412. (CLASS 39. CLOTHING.) JACOB KOHN, doing business as Standard Textile Company, Memphis, Tenn. Filed Dec. 29, 1924.

*Particular description of goods.*—Work Shirts (Men's).

Filed July 22, 1924. Serial No. 200,363. PUBLISHED AUGUST 25, 1925.

205,476. HORNS FOR LOUD-SPEAKING RECEIVERS AND FOR THE BASES WHICH SUPPORT SAID HORNS IN CONNECTION WITH RADIO DEVICES. WINKLER-REICHMANN COMPANY, now Reichmann Company, Chicago, Ill.
Filed May 31, 1924. Serial No. 198,551. PUBLISHED JULY 21, 1925.

205,477. SHOES FOR MEN, WOMEN, AND CHILDREN, MADE OF FABRIC AND IMITATION LEATHER IN WHOLE OR COMBINED WITH LEATHER, HAVING EITHER FABRIC, IMITATION LEATHER, RUBBER, OR LEATHER SOLES, AND WITH OR WITHOUT HEELS. THE FAIR DRY GOODS COMPANY, Eagle Pass, Tex.
Filed June 5, 1924. Serial No. 198,128. PUBLISHED AUGUST 25, 1925.

205,478. SPRAYS, INSECTICIDES, DISINFECTANTS, AND DEODORANTS. HERCULES CHEMICAL CO. INC., Philadelphia, Pa.
Filed May 24, 1924. Serial No. 197,541. PUBLISHED DECEMBER 9, 1924.

205,479. HATS FOR WOMEN. CHICAGO BARGAIN HOUSE, Chicago, Ill.
Filed May 19, 1924. Serial No. 197,256. PUBLISHED NOVEMBER 25, 1924.

205,480. GLOVES AND MITTENS OF LEATHER, FABRIC, AND A COMBINATION OF LEATHER AND FABRIC. THE BOSS MANUFACTURING COMPANY, Kewanee, Ill., and Brooklyn, N. Y.
Filed March 27, 1924. Serial No. 194,521. PUBLISHED NOVEMBER 11, 1924.

205,481. GLOVES AND MITTENS OF LEATHER, FABRIC, AND A COMBINATION OF LEATHER AND FABRIC. THE BOSS MANUFACTURING COMPANY, Kewanee, Ill., and Brooklyn, N. Y.
Filed March 27, 1924. Serial No. 194,518. PUBLISHED NOVEMBER 11, 1924.

205,482. FACE LOTION. CHARLES WOLL. Elizabeth, N. J.
Filed July 9, 1925. Serial No. 217,126. PUBLISHED AUGUST 25, 1925.

205,483. SUPPOSITORIES USED IN THE TREATMENT OF DIABETES. THE DRUG PRODUCTS CO. INC., Long Island City, N. Y.
Filed July 10, 1925. Serial No. 217,140. PUBLISHED AUGUST 25, 1925.

205,484. SUGAR. ALBERT LEO, Chicago, Ill.
Filed July 10, 1925. Ser. No. 217,164. PUBLISHED AUGUST 25, 1925.

205,485. HAIR PREPARATIONS—NAMELY, HAIR GROWER AND PRESSING OIL. HELEN WOODFORK, St. Louis, Mo.
Filed July 9, 1925. Serial No. 217,125. PUBLISHED AUGUST 25, 1925.

205,486. PREPARATION FOR TREATMENT OF THE HAIR. OSEE HARLO, Detroit, Mich.
Filed July 9, 1925. Serial No. 217,093. PUBLISHED AUGUST 25, 1925.

205,487. ANALGESIC AND ANTISEPTIC DENTAL PREPARATION. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1925. Ser. No. 216,987. PUBLISHED AUGUST 25, 1925.

205,488. RAT VIRUS. PARKE, DAVIS & COMPANY, Detroit, Mich.
Filed July 7, 1925. Serial No. 216,986. PUBLISHED AUGUST 25, 1925.

205,489. ROUGES. VIVI, INC., New York, N. Y.
Filed July 6, 1925. Serial No. 216,951. PUBLISHED AUGUST 25, 1925.

205,490. ASTRINGENT AND ANTISEPTIC SOLUTION FOR HALITOSIS FOR USE IN THE MOUTH, NOSE, AND THROAT. JOHNSON & JOHNSON, New Brunswick, N. J.
Filed July 6, 1925. Serial No. 216,914. PUBLISHED AUGUST 25, 1925.

205,491. PREPARATION FOR THE TREATMENT OF TUBERCULOSIS. SISABO DRUG COMPANY, INC., Dover, Del.
Filed July 2, 1925. Serial. No. 216,798. PUBLISHED AUGUST 25, 1925.

205,492. PREVENTIVE OINTMENT AGAINST VENEREAL DISEASES. MARY LEMMERT, doing business as Protect-em Chemical Company, Detroit, Mich.
Filed July 2, 1925. Serial No. 216,787. PUBLISHED AUGUST 25, 1925.

205,493. MALT SIRUP FOR FOOD PURPOSES. KOFFMAN & BLUMENAU, Bay City, Mich.
Filed June 27, 1925. Serial No. 216,547. PUBLISHED AUGUST 25, 1925.

205,494. COTTON WASTE. KILBURN MILL, New Bedford, Mass.
Filed June 25, 1925. Serial No. 216,406. PUBLISHED AUGUST 25, 1925.

205,495. MUFFLERS AND SCARFS OF WOVEN MATERIAL MADE OF WOOL, WORSTED, SILK, COTTON, RAYON, CAMEL'S HAIR, ALPACA, OR ANY COMBINATIONS OF SUCH MATERIALS. N. P. & J. TRABULSI, New York, N. Y.
Filed June 23, 1925. Serial No. 216,303. PUBLISHED AUGUST 25, 1925.

205,496. PETROLEUM JELLY AND CATARRHAL JELLY. BENZ TOILET PRODUCTS, INC., Syracuse, N. Y.
Filed June 22, 1925. Serial No. 216,138. PUBLISHED AUGUST 25, 1925.

205,497. HAND CREAM. MELANIE F. JAEGER, doing business as Physicians' Supplies Company. New York, N. Y.
Filed June 20, 1925. Serial No. 216,102. PUBLISHED AUGUST 25, 1925.

205,498. MINERAL SUBSTANCE EMPLOYED IN THE TREATMENT OF RHEUMATISM, GOITER, MALARIA, BRIGHT'S DISEASE, NERVOUSNESS, WEAK STOMACH, FEMALE COMPLAINTS, AND TORPID LIVER. ALBERT T. EMERY, Kansas City, Mo.
Filed June 20, 1925. Serial No. 216,092. PUBLISHED AUGUST 25, 1925.

205,499. RAMIE FIBER THAT HAS BEEN DEGUMMED, CLEANED, AND OPENED. FIBRE DEVELOPMENT COMPANY, Whitinsville, Mass.
Filed June 10, 1925. Serial No. 215,560. PUBLISHED AUGUST 25, 1925.

205,500. PREPARATIONS FOR THE TREATMENT OF HEADACHE, DROWSINESS, BAD TASTE IN THE MOUTH, TORPID LIVER, CONSTIPATION, BILIOUSNESS, NAUSEA, FLATULENCE, BELCHING OF WIND, SOUR STOMACH, DISTRESS AFTER EATING, AND POOR APPETITE. DR. KILMER & Co., Binghamton, N. Y.
Filed June 9, 1925. Serial No. 215,519. PUBLISHED AUGUST 18, 1925.

205,501. CHEMICAL SOLUTION APPLIED OR DESIGNED TO BE APPLIED TO INTERNAL-COMBUSTION ENGINES AS A DETONATION COUNTERACTANT. AMERICAN KATALITE CORPORATION, New York and Brooklyn, N. Y.
Filed June, 8, 1925. Serial No. 215,432. PUBLISHED AUGUST 25, 1925.

205,502. CERTAIN TOILET ARTICLES. BARNÄNGENS TECKN. FABRIKERS A. B., Stockholm, Sweden.
Filed December 1, 1922. Serial No. 172,721. PUBLISHED AUGUST 11, 1925.

205,503. ELECTRICALLY-OPERATED TILTING REFLECTORS FOR LIGHT-PROJECTING DEVICES. THE FEDERAL MANUFACTURING COMPANY, Columbus, Ohio, assignor to Leo R. Yeager, Columbus, Ohio.
Filed September 7, 1923. Serial No. 185,458. PUBLISHED AUGUST 25, 1925.

205,504. PASTES, POWDERS, AND LIQUIDS FOR BEAUTIFYING AND PRESERVING THE TEETH, SKIN, AND HAIR, AND PERFUMERY. SOCIÉTÉ ANONYME DES ETABLISSEMENTS ROUZAUD "A LA MARQUISE DE SÉVIGNE" CHOCOLAT DE ROYAT, Royat-les-Bains, France.
Filed June 14, 1924. Serial No. 198,591. PUBLISHED MARCH 31, 1925.

205,505. CERTAIN TOILET ARTICLES. LES PARFUMS DE ROSINE, New York, N. Y.
Filed July 21, 1924. Serial No. 200,826. PUBLISHED AUGUST 11, 1925.

205,506. WATER SOFTENER. WALTER H. HILL, doing business as Craxit Chemical Co., Peoria, Ill.
Filed August 11, 1924. Serial No. 201,238. PUBLISHED AUGUST 11, 1925.

205,507. GERMICIDE OR ANTISEPTIC. ABBOTT LABORATORIES, Chicago, Ill.
Filed November 13, 1924. Serial No. 205,188. PUBLISHED AUGUST 11, 1925.

205,508. SHOES MADE OF LEATHER, RUBBER, FABRIC, AND COMBINATIONS OF THE SAME AND ALSO OF VARIOUS COMPOSITIONS IN PART AND AS A WHOLE. NU-WAY SHOE CO., New York, N. Y.
Filed November 13, 1924. Serial No. 205,224. PUBLISHED AUGUST 25, 1925.

205,509. TOILET ARTICLE IN THE FORM OF A POWDER AND USED TO RELIEVE WRINKLES, SUNBURN, FRECKLES, AND PIMPLES. THE WRINKLE-INE CHEMICAL COMPANY, Denver, Colo.
Filed December 12, 1924. Serial No. 206,649. PUBLISHED AUGUST 4, 1925.

205,510. HÆMOSTATIC. FLINT, EATON & COMPANY, Decatur, Ill.
Filed January 15, 1925. Serial No. 208,131. PUBLISHED AUGUST 4, 1925.

205,511. PERFUMES, TOILET WATERS, FACE LOTIONS, FACE CREAMS, FACE AND TOILET POWDERS, ROUGES, AND LIP STICK AND BATH SALTS. STORRER LABORATORIES, INC., New York, N. Y.
Filed February 28, 1925. Serial No. 210,320. PUBLISHED AUGUST 18, 1925.

205,512. MEN'S AND YOUNG MEN'S SUITS AND OUTER COATS IN ONE, TWO, THREE, AND FOUR PIECE GARMENTS; OVERCOATS, TOPCOATS, SACK COATS, WAISTCOATS, KNICKERS, AND BREECHES. FRUHAUF BROS & CO., New York, N. Y.
Filed March 17, 1925. Serial No. 211,162. PUBLISHED AUGUST 25, 1925.

205,513. GLOVES OF LEATHER, RUBBER, AND FABRIC, OF LEATHER AND RUBBER, OF LEATHER AND FABRIC, AND OF RUBBER AND FABRIC. C. D. OSBORN CO., Chicago, Ill.
Filed March 26, 1925. Serial No. 211,695. PUBLISHED AUGUST 18, 1925.

205,514. GLOVES OF LEATHER, RUBBER, AND FABRIC, OF LEATHER AND RUBBER, OF LEATHER AND FABRIC, AND OF RUBBER AND FABRIC. C. D. OSBORN CO., Chicago, Ill.
Filed March 26, 1925. Serial No. 211,696. PUBLISHED AUGUST 18, 1925.

205,515. GLOVES OF LEATHER, RUBBER, AND FABRIC, OF LEATHER AND RUBBER, OF LEATHER AND FABRIC, AND OF RUBBER AND FABRIC. C. D. OSBORN CO., Chicago, Ill.
Filed March 26, 1925. Serial No. 211,697. PUBLISHED AUGUST 18, 1925.

205,516. STORAGE-BATTERY SOLUTION. G. J. AGE & Co., Muscatine, Iowa.
Filed May 7, 1925. Serial No. 213,945. PUBLISHED AUGUST 18, 1925.

205,517. LIQUID MEDICAL PREPARATION FOR THE RELIEF OF INDIGESTION. ROYAL PRESCRIPTIONS COMPANY, INC., Oneonta, N. Y.
Filed May 21, 1925. Serial No. 214,689. PUBLISHED AUGUST 18, 1925.

205,518. HAIRDRESSING CREAM. ISIDOR POSNER, New York, N. Y.
Filed June 1, 1925. Serial No. 215,178. PUBLISHED AUGUST 25, 1925.

205,519. PREPARATION FOR EXTERMINATING RATS. CARPENTER'S ANTIRATUM COMPANY, Washington, D. C.
Filed June 10, 1925. Serial No. 215,551. PUBLISHED AUGUST 11, 1925.

205,520. CHEMICAL MATERIALS FOR USE AS CATALYST. MINE SAFETY APPLIANCES COMPANY, Pittsburgh, Pa.
Filed June 10, 1925. Serial No. 215,581. PUBLISHED AUGUST 18, 1925.

205,521. MIXTURES OF OXYGEN AND CARBON DIOXIDE FOR TREATING ASPHYXIA FROM CARBON MONOXIDE, ALCOHOLIC INTOXICATION, DIETHERIZATION, MORPHINE NARCOSIS FOR PREVENTION OF RESPIRATORY FAILURE AND FOR AIDING IN RESUSCITATION AFTER RESPIRATORY FAILURE DUE TO ANY CAUSE. MINE SAFETY APPLIANCES COMPANY, Pittsburgh, Pa.
Filed June 10, 1925. Serial No. 215,580. PUBLISHED AUGUST 18, 1925.

205,522. FACE POWDERS, FACE CREAMS, FACE PACKS, TOILET WATERS, ROUGES, PERFUMES, HAIR TONICS, HAIR OILS, DENTIFRICES, TOOTH POWDERS, TALCUM POWDERS, NAIL POLISHES, DEODORIZING PREPARATIONS, BATH SALTS, SMELLING SALTS, AND SACHETS. PARIS LABORATORIES, New York, N. Y.
Filed June 26, 1925. Serial No. 216,473. PUBLISHED AUGUST 18, 1925.

205,523. FACE POWDERS, FACE CREAMS, FACE PACKS, TOILET WATERS, ROUGES, PERFUMES, HAIR TONICS, HAIR OILS, DENTIFRICES, TOOTH POWDERS, NAIL POLISHES, DEODORIZING PREPARATIONS, BATH SALTS, SMELLING SALTS, AND SACHETS. VIVI, INC., New York, N. Y.
Filed June 26, 1925. Serial No. 216,489. PUBLISHED AUGUST 18, 1925.

205,524. FACE POWDERS, FACE CREAMS, FACE PACKS, TOILET WATERS, ROUGES, PERFUMES, HAIR TONICS, HAIR OILS, DENTIFRICES, TOOTH POWDERS, NAIL POLISHES, DEODORIZING PREPARATIONS, BATH SALTS, SMELLING SALTS, AND SACHETS. VIVI, INC., New York, N. Y.
Filed June 26, 1925. Serial No. 216,490. PUBLISHED AUGUST 18, 1925.

205,525. INSECTICIDES AND FUNGICIDES. NEW YORK INSECTICIDE CO., Medina, N. Y.
Filed June 26, 1925. Serial No. 216,471. PUBLISHED AUGUST 11, 1925.

205,526. DRY SURGICAL DRESSING AND ANTISEPTIC HEALING POWDER. H. K. MULFORD COMPANY, Philadelphia, Pa.
Filed June 26, 1925. Serial No. 216,470. PUBLISHED AUGUST 11, 1925.

205,527. LYE. WM. SCHIELD MFG. CO., St. Louis, Mo.
Filed June 25, 1925. Serial No. 216,432. PUBLISHED AUGUST 11, 1925.

205,528. NONFREEZING SOLUTION FOR AUTOMOBILE RADIATORS. POLAR PRODUCTS COMPANY, Eau Claire, Wis.
Filed June 25, 1925. Serial No. 216,429. PUBLISHED AUGUST 11, 1925.

205,529. OVERALLS. EMMET A. JONES, Atlanta, Ga.
Filed June 24, 1925. Serial No. 216,344. PUBLISHED AUGUST 25, 1925.

205,530. MUFFLERS AND SCARFS OF WOVEN MATERIAL MADE OF WOOL, WORSTED, SILK, COTTON, RAYON, CAMEL'S HAIR, ALPACA, OR ANY COMBINATIONS OF SUCH MATERIALS. N. P. & J. TRABULSI, New York, N. Y.
Filed June 23, 1925. Serial No. 216,302. PUBLISHED AUGUST 25, 1925.

205,531. FACE POWDERS, FACE CREAMS, TOILET WATERS, ROUGES, LIP STICKS, EYEBROW PENCILS, PERFUMES, HAIR TONICS, HAIR OILS, DENTIFRICES, TOOTH POWDERS, NAIL POLISHES, DEODORIZING PREPARATIONS, BATH SALTS, SMELLING SALTS, TALCUM POWDERS, AND SACHETS. THE ELCAYA COMPANY, INC., Long Island City, N. Y.
Filed June 22, 1925. Serial No. 216,165. PUBLISHED AUGUST 18, 1925.

205,532. TOILET PREPARATIONS. LENTHERIC, INC., New York, N. Y.
Filed June 16, 1925. Serial No. 215,862. PUBLISHED AUGUST 11, 1925.

205,533. PREPARATIONS FOR TREATING THE HAIR. GERTRUDE BERNSTEIN, doing business as Williamsburg Barber Supply Co., Brooklyn, N. Y.
Filed June 16, 1925. Serial No. 215,844. PUBLISHED AUGUST 11, 1925.

Filed June 15, 1925. Serial No. 215,799. PUBLISHED AUGUST 11, 1925.

205,536. SKIN CREAM. FLORENCE N. LEWIS, doing business as Elizabeth Arden, New York, N. Y.
Filed June 15, 1925. Serial No. 215,797. PUBLISHED AUGUST 11, 1925.

205,537. ASTRINGENT. FLORENCE N. LEWIS, doing business as Elizabeth Arden, New York, N. Y.
Filed June 15, 1925. Serial No. 215,796. PUBLISHED AUGUST 11, 1925.

205,538. PREPARATION TO DESTROY THE CARBON FORMED IN INTERNAL-COMBUSTION ENGINES. EMBRY BROTHERS, INC., Melrose, Mass.
Filed June 15, 1925. Serial No. 215,779. PUBLISHED AUGUST 11, 1925.

205,539. TEXTILE STARCH. CLINTON CORN SYRUP REFINING COMPANY, Clinton, Iowa.
Filed June 15, 1925. Serial No. 215,770. PUBLISHED AUGUST 11, 1925.

205,540. PREPARATION FOR THE TREATMENT OF COLDS, CATARRH, AND ASTHMA. C. S. LONG, Portland, Oreg.
Filed June 13, 1925. Serial No. 215,749. PUBLISHED AUGUST 18, 1925.

205,541. CHOCOLATE-COATED CONCENTRATES OF ACIDOPHILUS BACILLI IN AGAR CUBES. H. K. MULFORD COMPANY, Philadelphia, Pa.
Filed June 10, 1925. Serial No. 215,587. PUBLISHED AUGUST 11, 1925.

205,542. ELECTRIC STARTING APPARATUS FOR INTERNAL-COMBUSTION ENGINES, ELECTRIC LIGHTING APPARATUS, ELECTRIC IGNITION APPARATUS, ELECTRIC SIGNAL HORNS, AND ELECTRIC MOTORS FOR GENERAL USE. NORTH EAST ELECTRIC COMPANY, Rochester, N. Y.
Filed April 17, 1925. Serial No. 212,864. PUBLISHED AUGUST 4, 1925.

205,543. SHAPED HEEL INSERT MADE OF RUBBER OR OTHER SUITABLE MATERIAL AND ADAPTED TO BE PLACED IN SAID SHOE AT THE HEEL PORTION THEREOF TO PREVENT SILK STOCKINGS FROM WEARING BY COMING IN CONTACT WITH AND RUBBING AGAINST THE LEATHER OF THE SHOE. GOTHAM SILK HOSIERY CO. INC., New York, N. Y.
Filed April 13, 1925. Serial No. 212,605. PUBLISHED AUGUST 18, 1925.

205,544. CHEMICAL COMPOUND, WHICH, WHEN ADDED TO CERTAIN PETROLEUM OR OTHER HYDROCARBON PRODUCTS, SUCH AS GASOLINE, PRODUCES A MOTOR FUEL PARTICULARLY DESIGNED AND ADAPTED FOR USE IN INTERNAL-COMBUSTION ENGINES OF MOTOR VEHICLES TO INCREASE MILEAGE, POWER, AND ACCELERATION, TO REMOVE AND PREVENT CARBON DEPOSITING, TO LUBRICATE CYLINDER WALLS, AND TO ELIMINATE DETONATION AND KNOCKS. KLEENER MANUFACTURING CO., Germantown, Philadelphia, Pa.
Filed April 8, 1925. Serial No. 212,384. PUBLISHED AUGUST 4, 1925.

205,545. TRANSMISSION, BRAKE, AND FRICTION LININGS. WORLD BESTOS CORPORATION, New York, N. Y.
Filed April 7, 1925. Serial No. 212,358. PUBLISHED JULY 14, 1925.

205,546. BRASSIÈRES AND GIRDLES. V. B. BRASSIERE CO., New York, N. Y.
Filed April 1, 1925. Serial No. 212,052. PUBLISHED AUGUST 25, 1925.

205,547. MEDICINES FOR CERTAIN NAMED PURPOSES. HAYUNGA'S PHARMACY AND DUNDAS DRUG COMPANY, New York, N. Y.
Filed April 1, 1925. Serial No. 212,000. PUBLISHED AUGUST 4, 1925.

205,548. LEATHER SOLES, TAPS, AND SLIP SOLES. PENN LEATHER COMPANY, Philadelphia, Pa.
Filed March 27, 1925. Serial No. 211,757. PUBLISHED AUGUST 25, 1925.

205,549. STORAGE-BATTERY PLATES AND PARTS THEREOF. HARRISON SMITH COMPANY, Oklahoma City, Okla.
Filed March 27, 1925. Serial No. 211,745. PUBLISHED AUGUST 25, 1925.

205,550. PERFUMES AND HYGIENIC PRODUCTS—NAMELY, BATH SALTS, ASTRINGENTS, COLD CREAMS, COMPACTS, FACE PACKS, TOILET POWDERS, REFILLS, SHAMPOOS, TALCUM POWDERS, EYEDROPS, TOILET WATERS, SMELLING SALTS, AROMATIC VINEGARS, SKIN CREAMS, FACE POWDERS, ROUGES, SKIN BLEACHES, LIP STICKS, EYEBROW PENCILS, BEAUTY CLAY, VANISHING CREAMS, SACHETS, FACIAL PAINTS, AND HAIR, FACE, AND HAND AND FOOT LOTIONS. FRANKLIN SIMON & CO., INC., New York, N. Y.
Filed March 26, 1925. Serial No. 211,673. PUBLISHED AUGUST 4, 1925.

205,551. RADIO RECEIVING SETS AND ACCESSORIES—NAMELY, DIALS, SOCKETS, CRYSTALS, CRYSTAL RECTIFIERS, TRANSFORMERS, AND JACKS. RAYMOND B. YALE, doing business as Yale Radio Electric Company, Los Angeles, Calif.
Filed March 21, 1925. Serial No. 211,436. PUBLISHED AUGUST 25, 1925.

205,552. SAFETY CUT-OFF FOR ELECTRICAL APPARATUS. E. MEYER-BOCHSLER, Zurich, Switzerland.
Filed March 18, 1925. Serial No. 211,219. PUBLISHED AUGUST 4, 1925.

205,553. CONDENSERS AND SOCKETS FOR VACUUM TUBES FOR RADIO APPARATUS AND PARTS THEREOF. NELSON TOOL COMPANY INC., New York, N. Y.
Filed March 13, 1925. Serial No. 210,975. PUBLISHED AUGUST 25, 1925.

205,554. RADIO RECEIVING SETS, LOUD SPEAKERS AND UNITS, TRANSFORMERS, TUNING UNITS, PLUGS, VARIABLE CONDENSERS, JACKS, DIALS, AND SOCKETS. ELECTRICAL RESEARCH LABORATORIES, INC., Chicago, Ill.
Filed March 2, 1925. Serial No. 210,372. PUBLISHED MAY 26, 1925.

205,555. LINIMENTS. THE PENETRENE CORPORATION, Cleveland, Ohio.
Filed February 27, 1925. Serial No. 210,252. PUBLISHED AUGUST 4, 1925.

205,556. INCLOSED ELECTRIC-LIGHTING UNITS. FULLERTON ELECTRIC CO. INC., New York, N. Y.
Filed February 24, 1925. Serial No. 210,055. PUBLISHED JUNE 9, 1925.

205,557. RADIO APPARATUS—NAMELY, RADIO RECEIVING SETS COMPLETELY ASSEMBLED, RADIO KITS CONSISTING OF A BOX OR OTHER CONTAINER CONTAINING THE UNASSEMBLED PARTS OF A RADIO RECEIVING SET, RADIOTRANSFORMERS, RADIOCONDENSERS, RADIORHEOSTATS, RADIOPOTENTIOMETERS, RADIOCOILS, RADIODIALS, RADIOPANELS, RADIOJACKS, RADIO TUBE SOCKETS, RADIOCABLES, RADIO BINDING POSTS, LOUD SPEAKERS, SWITCHES, PLUGS, AND TERMINALS. MARATHON RADIO CORPORATION, San Francisco, Calif.
Filed January 5, 1925. Serial No. 207,665. PUBLISHED AUGUST 25, 1925.

205,558. MICROPHONES, ELECTRICALLY-OPERATED LOUD SPEAKERS, ELECTROSTATIC-SOUND REPRODUCERS, IONIZED AIR-GAP SOUND RECEIVERS, TELEPHONE TRANSMITTERS AND RECEIVERS, GLOW DISCHARGE TUBES, ELECTRICALLY-OPERATED MACHINES FOR PHOTOGRAPHICALLY RECORDING SOUND ON TRANSPARENT FILMS, ELECTRICALLY-OPERATED MACHINES FOR REPRODUCING SOUND PHOTOGRAPHICALLY RECORDED ON TRANSPARENT FILMS, PHOTOELECTRIC CELLS, AND THERMIONIC AMPLIFIERS. TRI-ERGON A.-G., Zurich, Switzerland.
Filed December 29, 1924. Serial No. 207,417. PUBLISHED AUGUST 18, 1925.

205,559. LADIES' HATS. SADIE PERLYSKY, Hartford, Conn.
Filed January 29, 1925. Serial No. 208,822. PUBLISHED AUGUST 18, 1925.

205,560. RADIO SETS, RADIO APPARATUS—NAMELY, RECEIVING AND TRANSMITTING SETS AND PARTS THEREOF, TRANSFORMERS, AMPLIFYING HORNS, CONDENSERS, HEAD SETS, AND PARTS THEREOF. AMERICAN INTERSTATE RADIO SERVICE, New York, N. Y.
Filed December 16, 1924. Serial No. 206,760. PUBLISHED APRIL 7, 1925.

205,561. RADIO RECEIVING SETS AND PARTS THEREOF. ADAMS MORGAN COMPANY, INC., Upper Montclair, N. J.
Filed December 15, 1924. Serial No. 206,711. PUBLISHED MARCH 10, 1925.

205,562. CANDY. THE SWEETS COMPANY OF AMERICA, INC., New York, N. Y.
Filed December 4, 1924. Serial No. 206,262. PUBLISHED APRIL 28, 1925.

205,563. MEDICINES FOR HEADACHES, MEGRIMS, HAY FEVER, INFLUENZA, ARTERIOSCLEROSIS, TUBERCULOSIS, CHLOROSIS, SEASICKNESS, DIPHTHERIA, AND WHOOPING COUGH, DOG'S DISTEMPER, AND CHILBLAINS, CREAM FOR COLD IN THE HEAD, DIETETIC ALIMENTS, LOTIONS FOR THE HAIR, HAIR OIL, AND DENTIFRICES OF ALL KINDS. INTERNATIONALE LABORATORIEN ARLESHEIM A. G., Arlesheim, Switzerland.
Filed November 25, 1924. Serial No. 205,880. PUBLISHED JULY 21, 1925.

205,564. MEDICINES—NAMELY, UNGUENT FOR THE RELIEF OF PAIN, LOTION FOR THE RELIEF OF PAIN, BODY MASSAGE LOTION, REFRESHING LOTION, SUNBURN MEDICINE, MEDICINE FOR ASTHMA, RHEUMATISM, THROAT AFFECTIONS, HEADACHE, TOOTHACHE, FEVER, WOUNDS, AND POISON IVY. PIETRO MARISCA, Los Angeles, Calif.
Filed November 24, 1924. Serial No. 205,769. PUBLISHED FEBRUARY 24, 1925.

205,565. MEN'S UNLINED DRESS GLOVES MADE OF LEATHER, OF FABRIC, OF RUBBER, AND OF COMBINATIONS OF THE SAME. O. C. HANSEN MANUFACTURING CO., Milwaukee, Wis.
Filed March 23, 1925. Serial No. 211,469. PUBLISHED AUGUST 8, 1925.

205,566. LADIES' HATS. LICHTENSTEIN & LIBERMAN, INC., New York, N. Y.
Filed June 19, 1925. Serial No. 216,057. PUBLISHED AUGUST 25, 1925.

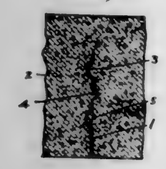
# REISSUES

## NOVEMBER 10, 1925.

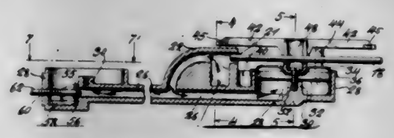
16,202. ROADWAY JOINT. BERNARD BRIODY, Youngstown, Ohio, assignor to Truscon Steel Company, a Corporation of Michigan. Filed Aug. 29, 1925. Serial No. 53,419. Original No. 1,537,063, dated May 12, 1925, Serial No. 312,164, filed July 21, 1919. 5 Claims. (Cl. 94—18.)



1. In a roadway, a body of concrete constituting the pavement of the roadway, and a strip of metal embedded in the concrete and corrugated longitudinally, whose length is the width of the pavement and whose upper edge is below the surface of the roadway, the tongues of concrete formed by the corrugations on the adjacent road sections serving to keep said sections in alinement.

---

16,203. GASOLINE CAMP STOVE. LOUIS B. GOLDBERG, NATHAN GOLDBERG, JACOB M. GOLDBERG, and WILLIAM GOLDBERG, Denver, Colo. Filed Aug. 7, 1925. Serial No. 48,908. Original No. 1,517,355, dated Dec. 2, 1924, Serial No. 509,396, filed Oct. 21, 1921. 9 Claims. (Cl. 158—65.)

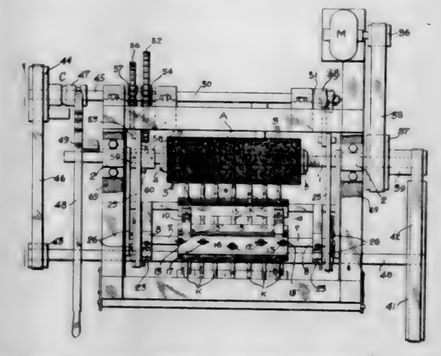


4. In a camp stove, a manifold, an upwardly opening burner connected therewith, a vaporizing cup between the manifold and the burner, a guard plate on the burner said guard plate having a central depression adapted to serve as a fuel cup, and a fuel conduit leading across said cups to said manifold.

---

16,204. POLISHING MACHINE. FRANK RAMSTETTER and WILLIAM J. BRITT, St. Louis, Mo., assignors to Simmons Hardware Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 16, 1922. Serial No. 594,954. Original No. 1,356,737, dated Oct. 26, 1920, Serial No. 266,630, filed Dec. 13, 1918. 20 Claims. (Cl. 51—91.)

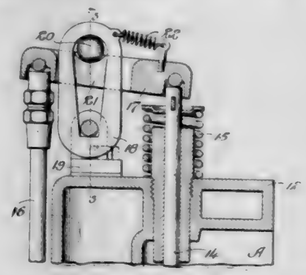
1. In a knife polishing machine, a rotary polishing roll, a yielding knife holder whereby the knives are yieldingly held with their blades engaging the periphery of said rotary polishing roll, means whereby one of said parts is moved toward and away from the other to engage different portions of each knife blade with said polishing roll, and adjustable means for varying the frictional contact between said polishing roll and the knife blades, said adjustable means including bearings wherein said



roll is rotatably mounted, adjusting screws for moving said bearings and operating means whereby said screws are adjusted simultaneously.

---

16,205. VALVE-OPERATING MECHANISM. DORSEY F. ASBURY, Broomes Island, Md. Filed Feb. 11, 1925. Serial No. 8,574. Original No. 1,481,951, dated Jan. 29, 1924, Serial No. 374,997, filed Apr. 19, 1920. 21 Claims. (Cl. 123—90.)



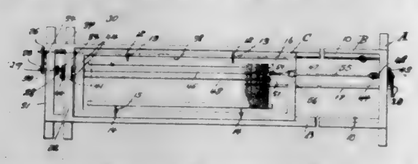
17. In a valve operating mechanism, a rocker arm and a support therefor one of which is provided with a trough of V-shaped cross section, and a member between said rocker arm and said support rolling in said trough.

---

16,206. HEDDLE-SPACER-INSERTING MACHINE. FRED E. BEARDEN, Spartanburg, S. C., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 22, 1921. Serial No. 494,385. Original No. 1,339,313, dated May 4, 1920, Serial No. 307,046, filed June 27, 1919. 18 Claims. (Cl. 28—46.)

1. A machine for inserting a helically-coiled wire between the cords of a harness comprising means to support the harness, a helical screw or worm, a feed member for a helically coiled wire, means active upon the helically coiled wire for opening the coils successively, and means

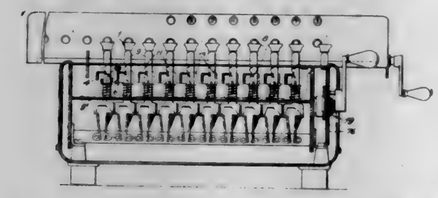
for spreading the supporting cords of the heddle eyes of the harness and positioning the same relative to the



first named means for the automatic placing of the eye supporting cords successively thereby in the helices of the coiled wire.

---

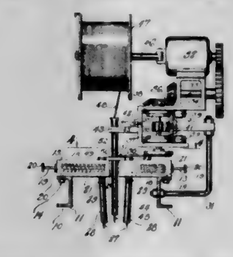
16,207. KEYBOARD-CLEARING MEANS FOR CALCULATING MACHINES. EDGAR E. PHINNEY, Saugus, Mass., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of New York. Filed Sept. 21, 1925. Serial No. 57,802. Original No. 1,432,616, dated Oct. 17, 1922, Serial No. 364,042, filed Mar. 8, 1920. 4 Claims. (Cl. 235—60.)



3. In a key-set calculating machine, an operating shaft, spring-retracted numeral keys, means for retaining said keys in depressed position, means for releasing the keys from said retaining means including a cam on said operating shaft and an adjustable lever, and means for adjusting said lever longitudinally of said shaft, into or out of contacting position with said cam, including a depressible key having a cam wall engaging said lever.

---

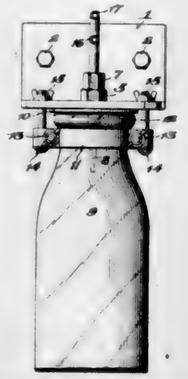
16,208. WEAVING MACHINE. ALFRED WILD, Milwaukee, Wis., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1922. Serial No. 604,428. Original No. 1,386,826, dated Aug. 9, 1921, Serial No. 339,147, filed Nov. 19, 1919. 17 Claims. (Cl. 139—12.)



1. A weaving machine comprising means for supporting a templet body having a plurality of spaced warp members all fixed at one of their ends thereto, a plurality of carrying members for said warp members and in which the other ends of the warp members engage, there being a carrying member for each warp member, and means for interweaving a weft between said warp members by inserting said weft from those ends of the warp members engaged in said carrying members.

---

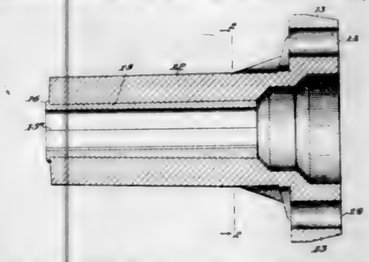
16,209. PURIFIER FOR GASOLINE SYSTEMS. ORA H. JUSTUS, Parkersburg, W. Va. Filed Aug. 8, 1925. Serial No. 49,152. Original No. 1,464,822, dated Aug. 14, 1923, Serial No. 435,909, filed Jan. 8, 1921. 8 Claims. (Cl. 210—165.)



3. In a gasoline system, a bracket formed for connection to the dash of an automobile, a receptacle having a bead adjacent its mouth, a gasket interposed between the receptacle mouth and the bracket, a clamp arranged about the receptacle mouth and engaged with and beneath the bead, an inlet and an outlet in the bracket, and a series of independent means to connect the clamp to the bracket to thereby draw the receptacle against the gasket.

---

16,210. DRILL HEAD. ALFRED E. WILLIAMS, Copper Hill, Ariz. Filed May 18, 1925. Serial No. 31,239. Original No. 1,498,598, dated June 24, 1924, Serial No. 695,874, filed Feb. 28, 1924. 5 Claims. (Cl. 308—237.)

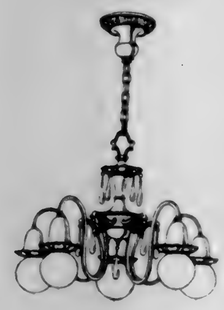


4. A front drill head, for a stope hammer machine, provided with an opening therethrough, combined with a steel bushing fitting tightly in said opening and having a slightly protruding end which is upset to form a bead to hold the bushing in place, but which bead may be cut away to enable the bushing to be driven out of the head when desired, the contacting portions of one of said parts being slightly tapered so that said bushing may be driven tightly in said head and may be readily driven out when said bead is removed.

# DESIGNS

## NOVEMBER 10, 1925.

68,687. CHANDELIER. HARRY AGLOW, New York, N. Y., assignor to Artcraft Metal Stamping Corporation, a Corporation of New York. Filed Sept. 18, 1925. Serial No. 14,812. Term of patent 3½ years.



The ornamental design for a chandelier, substantially as shown.

---

68,688. CUP. THOMAS B. ANDERSON, Coshocton, Ohio. Filed July 17, 1925. Serial No. 14,124. Term of patent 3½ years.

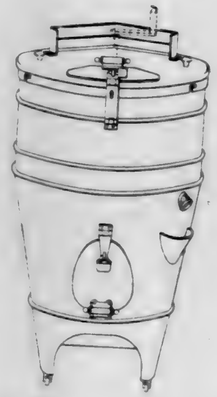
The ornamental design for a cup as shown.

---

68,689. RING. ALFRED E. BEAURDOARD, Central Falls, R. I. Filed Aug. 28, 1924. Serial No. 10,569. Term of patent 14 years.

The ornamental design for a ring, as shown.

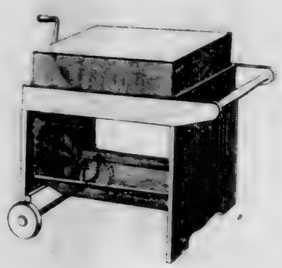
68,690. CASING FOR A DISPENSING CABINET. MARCUS BLOOM, Charlotte, N. C. Filed Nov. 17, 1923. Serial No. 7,797. Term of patent 14 years.



The ornamental design for a casing for a dispensing cabinet as shown.

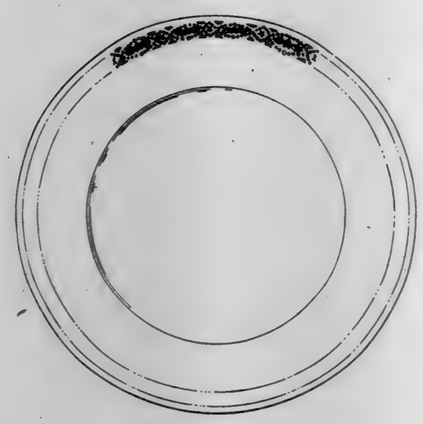
---

68,691. PHONOGRAPH CABINET OR SIMILAR ARTICLE. HARRY L. BRADLEY, Milwaukee, Wis., assignor of one-half to Lynde Bradley, Milwaukee, Wis. Filed June 1, 1925. Serial No. 13,615. Term of patent 7 years.



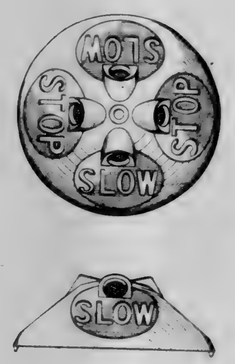
The ornamental design for a phonograph cabinet or similar article, as shown.

68,692. CHINA PLATE OR SIMILAR ARTICLE. EUGENE A. DE LAN, New Castle, Pa., assignor to Shenango Pottery Co., New Castle, Pa., a Corporation of Pennsylvania. Filed Sept. 17, 1925. Serial No. 14,801. Term of patent 7 years.



The ornamental design for a china plate or similar article, as shown.

68,693. TRAFFIC SIGNAL. GEORGE L. ESTES, Oklahoma City, Okla. Filed July 3, 1925. Serial No. 13,989. Term of patent 14 years.



The ornamental design for a traffic signal, as shown.

68,694. URN OR SIMILAR ARTICLE. EDWARD A. FARR, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 1, 1925. Serial No. 14,678. Term of patent 7 years.

The ornamental design for an urn or similar article substantially as shown.

68,695. COFFEEPOT OR SIMILAR ARTICLE. EDWARD A. FARR, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 1, 1925. Serial No. 14,679. Term of patent 7 years.

The ornamental design for a coffeepot or similar article substantially as shown.

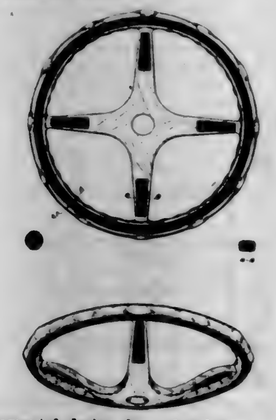
68,696. COVER PAPER. WILLIAM S. FOWLER, Holyoke, Mass., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed July 31, 1925. Serial No. 14,294. Term of patent 14 years.

The ornamental design for cover paper as shown.

68,697. BUTTON. SAMUEL FRANKLIN GAMMON, Jacksonville, Fla., assignor to The International Association of Civitan Clubs, Birmingham, Ala., a Corporation of Alabama. Filed Mar. 16, 1925. Serial No. 12,739½. Term of patent 14 years.

The ornamental design for a button, as shown.

68,698. HANDWHEEL. HARVE D. GEYER, Dayton, Ohio, assignor, by mesne assignments, to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 10, 1922. Serial No. 1,669. Term of patent 7 years.



The ornamental design for a handwheel as shown.

68,699. BOX OR SIMILAR CONTAINER. ARTHUR T. GOLLNIK, New York, N. Y. Filed Aug. 17, 1925. Serial No. 14,504. Term of patent 7 years.

The ornamental design for a box or similar container, as shown.

68,700. DOLL OR SIMILAR ARTICLE. MAX GOODMAN, New York, N. Y. Filed Sept. 28, 1925. Serial No. 14,930. Term of patent 14 years.

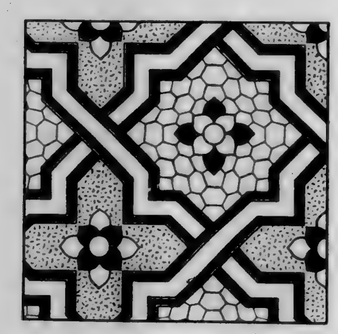
The ornamental design for a doll or similar article as shown.

68,701. RADIATOR. AUSTIN H. HART, Greenwich, Conn., assignor, by mesne assignments, to Rome Radiation Company, Inc., a Corporation of New York. Filed May 23, 1924. Serial No. 9,692. Term of patent 14 years.

The ornamental design for a radiator, as shown.

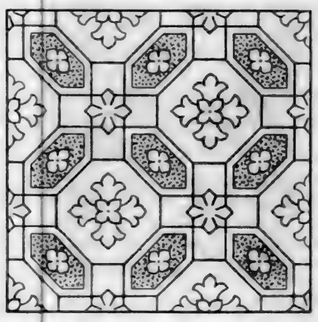
---

68,702. LINOLEUM OR SIMILAR ARTICLE. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1924. Serial No. 10,366. Term of patent 7 years.



The ornamental design for linoleum, or similar article as shown.

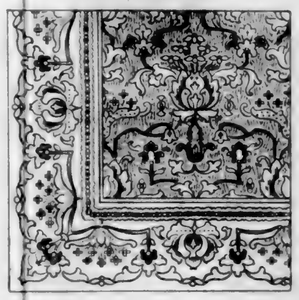
68,703. LINOLEUM OR SIMILAR ARTICLE. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1924. Serial No. 10,367. Term of patent 7 years.



The ornamental design for linoleum or similar article as shown.

---

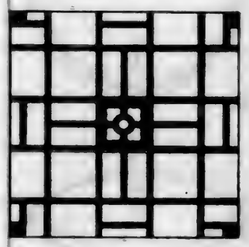
68,704. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1924. Serial No. 11,484. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering substantially as shown.

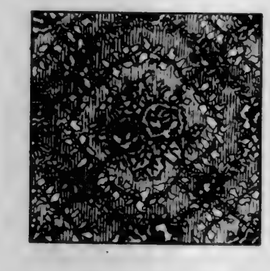
---

68,705. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 11,726. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering, as shown.

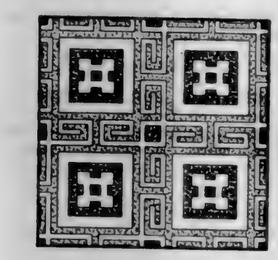
68,706. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 11,727. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering, as shown.

---

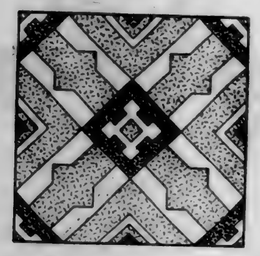
68,707. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,124. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering, as shown.

---

68,708. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,125. Term of patent 7 years.



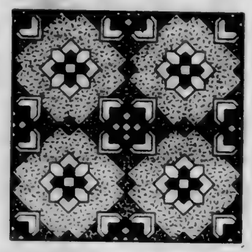
The ornamental design for linoleum or similar floor covering, as shown.

68,709. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,126. Term of patent 7 years.

The ornamental design for linoleum or similar floor covering, as shown.

---

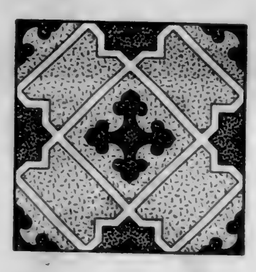
68,710. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,127. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering, as shown.

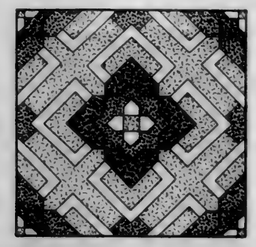
---

68,711. LINOLEUM OR SIMILAR FLOOR COVERING. CHARLES F. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,128. Term of patent 7 years.



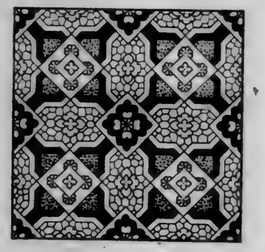
The ornamental design for linoleum or similar floor covering, as shown.

68,712. LINOLEUM OR SIMILAR FLOOR COVERING. HARRY S. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,119. Term of patent 7 years.



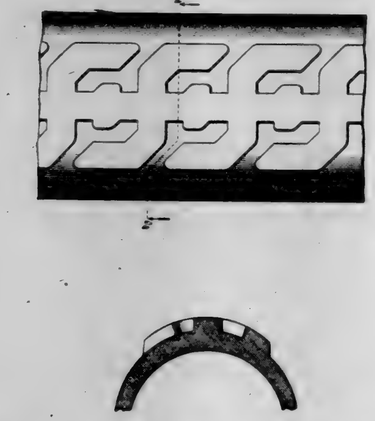
The ornamental design for linoleum or similar floor covering as shown.

68,713. LINOLEUM OR SIMILAR FLOOR COVERING. HARRY S. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1925. Serial No. 12,122. Term of patent 7 years.



The ornamental design for linoleum or similar floor covering, as shown.

68,714. RESILIENT TIRE. ROBERT IREDELL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 15, 1922. Serial No. 2,260. Term of patent 14 years.

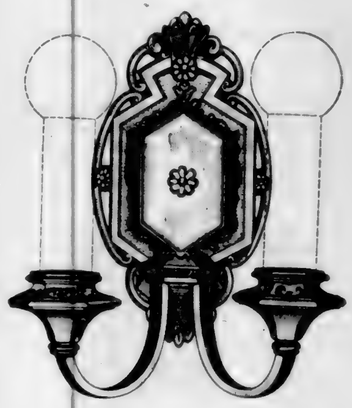


The ornamental design for a resilient tire, as shown.

68,715. COMBINED TOOTHPICK SERVER AND NAPKIN HOLDER. DELBERT W. JEWELL, Kalamazoo, Mich. Filed July 13, 1925. Serial No. 14,073. Term of patent 3½ years.

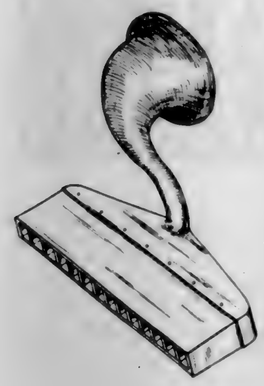
The ornamental design for a combined toothpick server and napkin holder, as shown.

68,716. BRACKET BACK FOR LIGHTING FIXTURES. MICHAEL JONICK, New York, N. Y., assignor to Jonick Sirken Co., Inc., a Corporation of New York. Filed July 10, 1925. Serial No. 14,045. Term of patent 3½ years.



The ornamental design for a bracket back for lighting fixtures as shown.

68,717. HARMONICA. HENRY KATZ, New York, N. Y., assignor to The Ferdinand Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 14,593. Term of patent 7 years.



The ornamental design for a harmonica as shown.

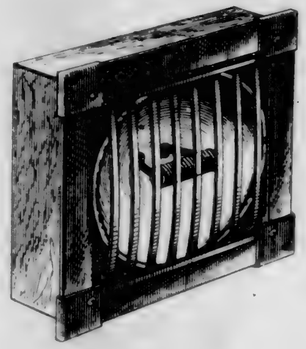
68,718. DISPLAY RACK. MAURICE S. KELLER, New York, N. Y. Filed July 27, 1925. Serial No. 14,231. Term of patent 3½ years.

The ornamental design for a display rack as shown.

68,719. FISH LURE. MICHAEL F. KIRWAN, O'Neill, Nebr. Filed Aug. 28, 1923. Serial No. 7,115. Term of patent 7 years.

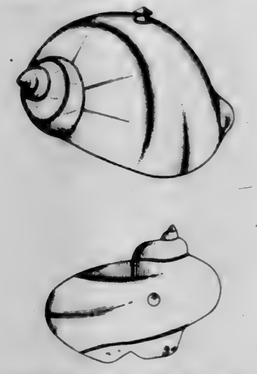
The ornamental design for a fish lure, as shown.

68,720. ELECTRIC WALL HEATER. RICHARD G. LEDIG, Philadelphia, Pa., assignor to A Mecky Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1925. Serial No. 14,747. Term of patent 7 years.



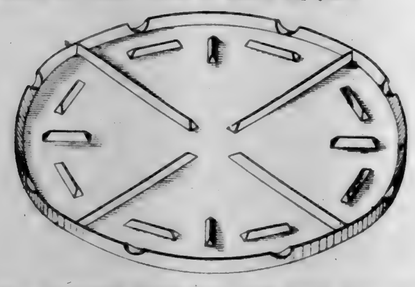
The ornamental design for an electric wall heater, as shown.

68,721. LAMP SHADE. GEORGE A. LIPPINCOTT, Philadelphia, Pa. Filed May 2, 1925. Serial No. 13,307. Term of patent 3½ years.



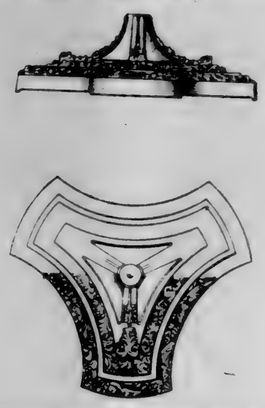
The ornamental design for a lamp shade, as shown.

68,722. HEAT GUARD STOVE PLATE. FRANK H. LONGACRE, Kansas City, Mo. Filed Aug. 24, 1922. Serial No. 3,544. Term of patent 3½ years.



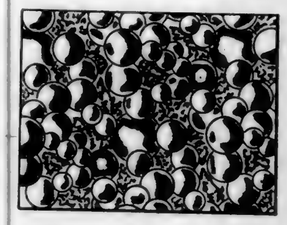
The ornamental design for a heat guard stove plate, as shown.

68,723. LAMP BASE. JACOB MANDEL, Chicago, Ill., assignor to Wellington-Stone Company, Inc., Chicago, Ill., a Corporation of Illinois. Filed June 5, 1925. Serial No. 13,064. Term of patent 3½ years.



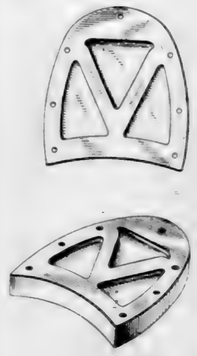
The ornamental design for a lamp base as shown.

68,724. COVER PAPER. RICHARD L. MARWEDE, New York, N. Y., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed July 31, 1925. Serial No. 14,283. Term of patent 14 years.



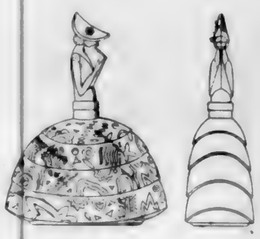
The ornamental design for cover paper as shown.

68,725. RUBBER HEEL. ELIJAH MCCOY, Detroit, Mich., assignor of one-half to George W. Jones, Detroit, Mich., and one-half to C. J. Broner, Detroit, Mich. Filed Feb. 19, 1923. Serial No. 5,211. Term of patent 3½ years.



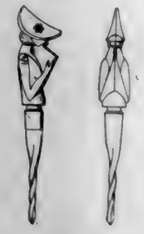
The ornamental design for a rubber heel, as shown.

68,726. BOTTLE. ALBERT MOSHEIM, East Orange, N. J. Filed Aug. 20, 1925. Serial No. 14,539. Term of patent 14 years.



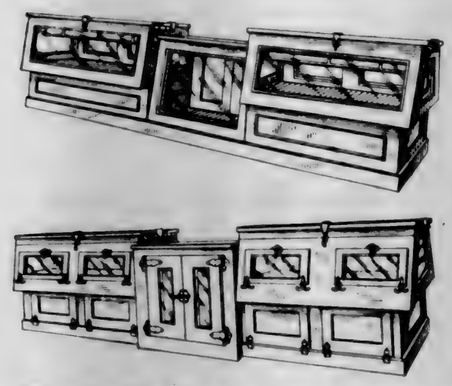
The ornamental design for a bottle, as shown.

68,727. BOTTLE STOPPER. ALBERT MOSHEIM, East Orange, N. J. Filed Aug. 20, 1925. Serial No. 14,540. Term of patent 14 years.



The ornamental design for a bottle stopper, as shown.

68,728. FREEZER DISPLAY CASE. JERE J. MURPHY, Naugatuck, Conn., assignor to The Lasher Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 26, 1925. Serial No. 14,598. Term of patent 14 years.



The ornamental design for a freezer display case as shown.

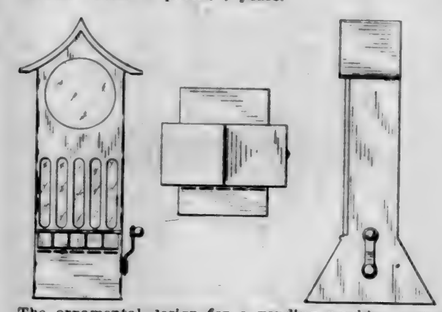
68,729. BOOTH. WILMA M. PAIGE, Joplin, Mo. Filed June 5, 1925. Serial No. 13,682. Term of patent 14 years.

The ornamental design for a booth substantially as shown.

68,730. BOOTH. WILMA M. PAIGE, Joplin, Mo. Filed July 20, 1925. Serial No. 14,141. Term of patent 14 years.

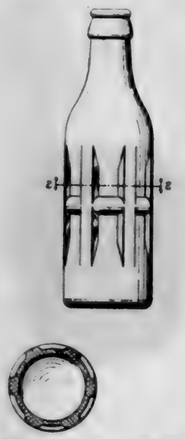
The ornamental design for a booth as shown.

68,731. VENDING-MACHINE CASING. JOHN C. QUINTIN, Alhambra, Calif., assignor to Harry Woollen, Los Angeles, Calif. Filed Mar. 28, 1925. Serial No. 12,932. Term of patent 7 years.



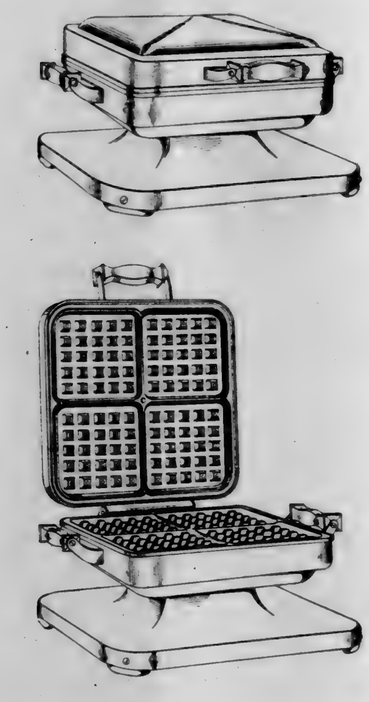
The ornamental design for a vending machine casing, as shown.

68,732. BOTTLE. CHAPMAN J. ROOT, Terre Haute, Ind. Filed May 1, 1925. Serial No. 13,282. Term of patent 14 years.



The ornamental design for a bottle as shown.

68,733. WAFFLE IRON OR SIMILAR ARTICLE. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1925. Serial No. 14,768. Term of patent 14 years.

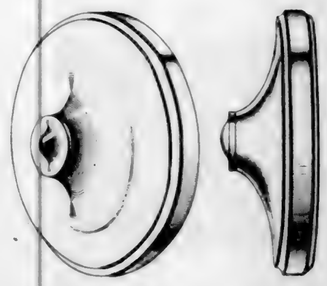


The ornamental design for a waffle iron or similar article as shown.

68,734. RADIO DIAL. SAUMEL RUTTENBERG and MEYER NATHAN LEIBOWITZ, Brooklyn, N. Y. Filed Sept. 11, 1925. Serial No. 14,760. Term of patent 7 years.

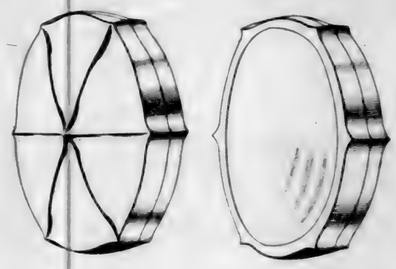
The ornamental design for a radio dial, as shown.

68,735. VEHICLE HEADLIGHT HOUSING. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed July 9, 1924. Serial No. 10,092. Term of patent 14 years.



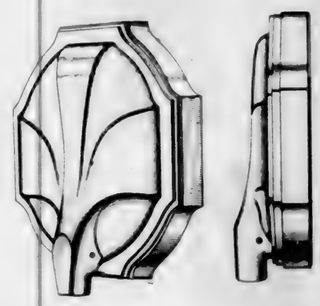
The ornamental design for a vehicle headlight housing as shown.

68,736. VEHICLE HEADLIGHT HOUSING. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed July 9, 1924. Serial No. 10,093. Term of patent 14 years.



The ornamental design for a vehicle headlight housing as shown.

68,737. VEHICLE HEADLIGHT HOUSING. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed July 9, 1924. Serial No. 10,095. Term of patent 14 years.



The ornamental design for a vehicle headlight housing as shown.

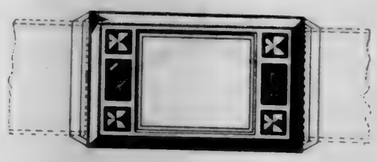
68,738. STOVE. ELMER A. SATTLER, Belleville, Ill. Filed July 29, 1925. Serial No. 14,257. Term of patent 7 years.

The ornamental design for a stove, as shown.

68,739. STOVE. ELMER A. SATTLER, Belleville., Ill. Filed July 29, 1925. Serial No. 14,258. Term of patent 14 years.

The ornamental design for a stove, as shown.

68,740. WRIST-WATCH CASE. HARRY W. SCHWETTMAN, Cincinnati, Ohio, assignor to The Gruen Watch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 26, 1924. Serial No. 9,706. Term of patent 3½ years.



The ornamental design for a wrist watch case, as shown.

68,741. ELECTRIC CHANDELIER. ALFRED P. SEIBELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Company, Orange, N. J., a Corporation of New Jersey. Filed Aug. 8, 1925. Serial No. 14,345. Term of patent 3½ years.

The ornamental design for an electric chandelier, as shown.

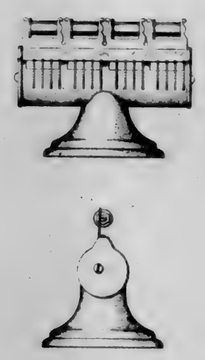
68,742. TOY ANIMAL. ALBERT SÉROR, New York, N. Y. Filed Sept. 24, 1925. Serial No. 14,895. Term of patent 3½ years.

The ornamental design for a toy animal, as shown.

68,743. DEFLECTOR FOR HEADLIGHTS. MELVIN ROBERT SMITH, Danbury, Conn., assignor to D-Flecto Light Company, Danbury, Conn. Filed July 16, 1925. Serial No. 14,111. Term of patent 7 years.

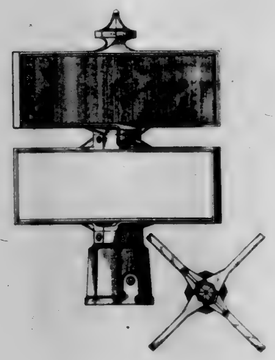
The ornamental design for a deflector for headlights, as shown.

68,744. RECORDER FOR CARD GAMES. ERNEST C. STYBERG, Racine, Wis. Filed Feb. 16, 1925. Serial No. 12,389. Term of patent 3½ years.



The ornamental design for a recorder for card games, as shown.

68,745. STREET SIGN. RAY A. THOMPSON, Chicago, Ill. Filed May 18, 1925. Serial No. 13,471. Term of patent 14 years.

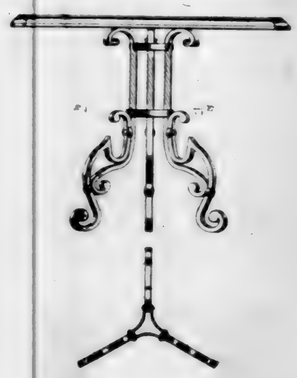


The ornamental design for a street sign as shown.

68,746. DISPLAY STAND OR SIMILAR ARTICLE. GEORGE R. WAALER, Chicago, Ill., assignor to Crystal Fixture Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 14,716. Term of patent 7 years.

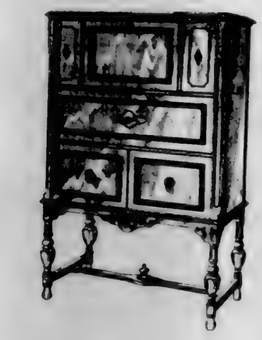
The ornamental design for a display stand or similar article, as shown.

68,747. DISPLAY BENCH OR SIMILAR ARTICLE. GEORGE R. WAALER, Chicago, Ill., assignor to Crystal Fixture Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 14,717. Term of patent 7 years.



The ornamental design for a display bench or similar article, as shown.

68,748. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed July 6, 1925. Serial No. 14,006. Term of patent 7 years.

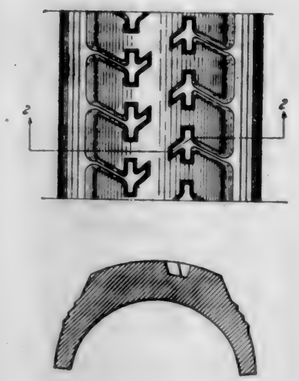


The ornamental design for a radiocabinet, substantially as shown.

68,749. CABINET FOR SOUND-PRODUCING DEVICES. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Aug. 10, 1925. Serial No. 14,372. Term of patent 7 years.

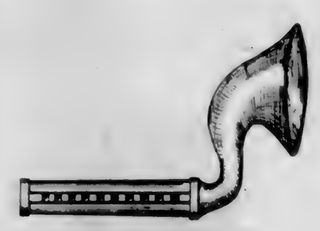
The ornamental design for a cabinet for sound producing devices, substantially as shown.

68,750. RESILIENT TIRE. PAUL WORTH, Akron, Ohio, assignor to The India Tire and Rubber Company, Mogadore, Ohio, a Corporation of Ohio. Filed July 9, 1923. Serial No. 6,730. Term of patent 14 years.



The ornamental design for a resilient tire, as shown.

68,751. HARMONICA. HENRY KATZ, New York, N. Y., assignor to The Ferdinand Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 14,594. Term of patent 7 years.

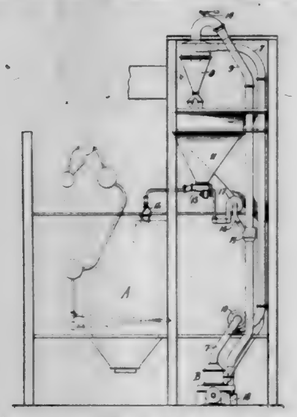


The ornamental design for a harmonica as shown.

# PATENTS

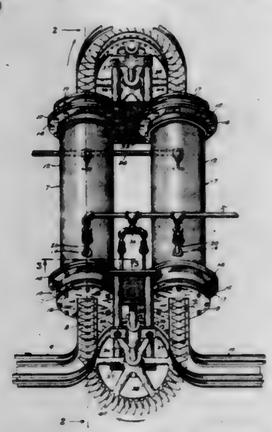
## GRANTED NOVEMBER 10, 1925.

1,560,519. HANDLING AND FEEDING OF PULVERIZED COAL. ARTHUR V. ADAMSON, Hempstead, N. Y., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Nov. 19, 1924. Serial No. 750,731. 3 Claims. (Cl. 302—22.)



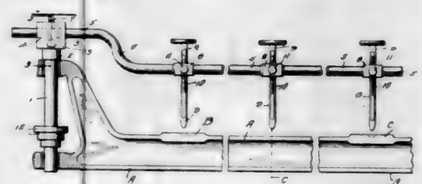
1. The combination in a fuel supply system, with a closed circulation of carrying air, a mill, a separator, a pipe from mill to the separator, a return pipe, a feeder, a conduit for conveying excess air in the system to the feeder, and a condensate collector for such conduit.

1,560,520. EXHAUST BOX. AMOS IVAN ADDISON, Long Beach, Calif., assignor to The Curtis Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 9, 1922. Serial No. 599,775. 4 Claims. (Cl. 126—272.)



1. An exhaust box comprising the combination of a pair of separate tunnel like heating chambers disposed parallel and adjacent to one another, an endless flexible conveyer rove through said chambers to form a closed loop so as to travel therethrough in series, and driving means geared outside of said chambers to said conveyer and disposed adjacent thereto.

1,560,521. DEVICE FOR GAUGING AUTOMOBILE AXLES. THORNWELL H. ANDREWS, Charlotte, N. C. Filed July 30, 1924. Serial No. 729,194. 5 Claims. (Cl. 33—180.)

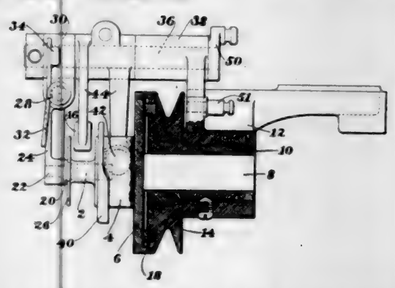


1. A device for testing axles, consisting of a king-pin adapted to be inserted in the swivel bearings of the axle, the king-pin having an enlarged head, a rod adjustably mounted in the head of the king-pin and extending longitudinally of the axle, and a plurality of depth gauges, adjustably mounted on the said rod.

1,560,522. HOIST. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by direct and mesne assignments, to Erie Steam Shovel Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 4, 1923. Serial No. 660,775. 9 Claims. (Cl. 74—107.)

1. In a hoist, the combination of a drum; a motor driving the drum; a speed sensitive control mechanism controlling the motor; a clutch through which the drum is driven from the motor; and means operable by the same motion of an operator setting the clutch and varying the control mechanism.

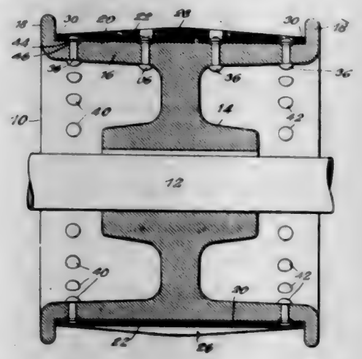
1,560,523. BOBBIN-WINDING MACHINE. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1919. Serial No. 291,268. 14 Claims. (Cl. 242—22.)



1. A bobbin winding machine having, in combination, a rotary driving member, a rotary driven member movable

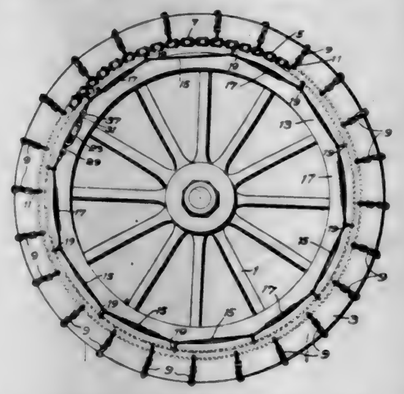
axially into and out of driving contact with the driving member, a bobbin supporting spindle connected with the driven member, a cam secured to the driven member to rotate therewith, an abutment arranged to engage the cam and cause the cam by its rotation to move the driven member axially out of contact with the driving member and movable into and out of the path of the cam, and means controlled from the thread wound on the bobbin for controlling the position of the abutment.

1,560,524. PULLEY. EDWARD S. AVERY, East Hampton, N. Y. Filed July 9, 1924. Serial No. 724,958. 8 Claims. (Cl. 64—45.)



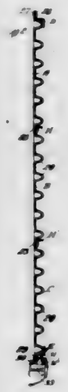
1. A metallic pulley having an outer coating of metal differing from the body portion of the pulley and a layer of resilient material vulcanized directly to the outer coating of the pulley.

1,560,525. TENSIONING DEVICE FOR TIRE CHAINS. CHARLES S. BARRELL, Boston, Mass. Filed Mar. 25, 1921. Serial No. 455,608. 5 Claims. (Cl. 152—14.)



3. A tensioning device for tire chains having side chains and cross chains, comprising a flexible member adapted for location within one of the side chains, elements adapted for connecting the flexible member at intervals with the side chain and for causing said member to assume a polygonal form, said flexible member including coil springs, and means for tensioning said coil springs, said connecting eelments and coil springs being distributer with a frequency such that all of the cross chains may be drawn into snug relation with the tread of the tire.

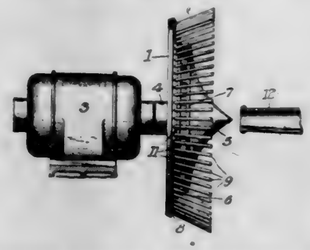
1,560,526. METAL DOOR. ALLAN S. BARROWS, Chicago, Ill. Filed May 8, 1919, Serial No. 295,603. Renewed July 22, 1921. Serial No. 486,808. 37 Claims. (Cl. 189—46.)



1. A door of the character described, comprising sheet metal and commercially rolled shapes, the sheet metal having portions thereof extending outwardly from the inner plane of the door along the edges of the door, said shapes being secured to the sheet metal along the edges and each of said shapes including a section at right angles to the plane of the door also extending outwardly from said inner plane and a section parallel thereto, said shapes being rigidly united to said outwardly extending portions of the sheet metal, the door having multiple-ply flat marginal portions, one ply of each of which is constituted by the section of the corresponding shape which extends parallel to said plane of the door.

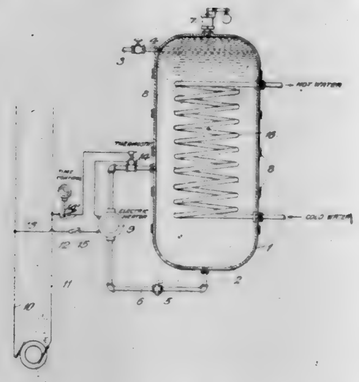
18. In combination with a railway car having a door opening, door supporting means arranged under said door opening, and a sheet metal door provided at its lower edge with a hollow box-like structure, the bottom of which bears on said door supporting means.

1,560,527. SPRAYING APPARATUS. EDWIN M. BASSLER, Milwaukee, Wis. Filed Dec. 8, 1921. Serial No. 520,801. 12 Claims. (Cl. 299—63.)



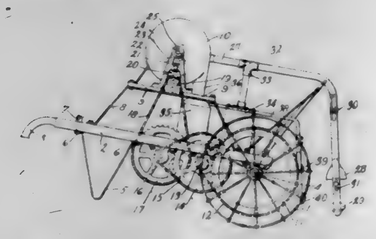
1. In spraying apparatus, the combination of a rotatable disk, spaced pins which project from a face of said disk at a distance from its axis of rotation, means for rotating said disk, means for discharging liquid upon the face of said disk from which the pins project, the centrifugal action of the disk when rotated operating to project the liquid discharged upon said disk outwardly across the face thereof and to deliver it in the form of a thin sheet or film to the pins which project from said disk, which will subject said sheet or film of liquid to a beating and centrifugal action and will project it outwardly in the form of spray.

1,560,528. HOT-WATER HEATING SYSTEM. FRANK GEORGE BAUM, San Francisco, Calif. Filed Apr. 25, 1924. Serial No. 708,890. 4 Claims. (Cl. 219—38.)



1. A water heating system comprising a relatively strong closed tank for containing a heat storage liquid, a heating element associated with said tank including a conductor for a heat-generating medium in communication therewith, two automatic devices for controlling the passage of said medium in said conductor, one being time-controlled and the other being responsive to the temperature of said liquid in the tank, and a water coil heater within the tank and communicating with inlet and outlet conduits external of the tank.

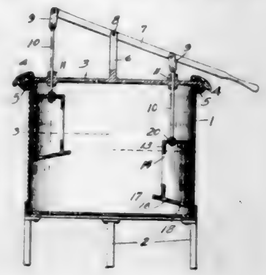
1,560,529. COMBINATION BUG COLLECTOR AND SPRAYING APPARATUS. FRANK B. BETTS, Jr., Dayton, Ohio. Filed May 10, 1922. Serial No. 559,789. 2 Claims. (Cl. 43—140.)



1. An implement of the character described, including in combination with a wheeled carriage, a suction device mounted on said carriage and operably connected therewith, a connection extended from said device, adapted to receive the insects sucked therethrough, and having a plurality of intakes connected thereto arranged in different planes, angularly disposed and adjustable vertically as a unit and also relatively one to another to adapt the same to the size of plants to be operated on, and adapted to be advanced with the travel of said carriage along a row of plants in close proximity to the plants to subject the same to the suction of said device.

1,560,530. WASHING MACHINE. WILLIAM F. BLAKE and ETHEL R. BLAKE, Toledo, Ohio. Filed Jan. 20, 1923. Serial No. 613,845. 4 Claims. (Cl. 259—112.)

3. A washing machine plunger forming a receiver for clothes and water and having an opening in one wall for admitting clothes and water to the interior of said plunger and having its opposite wall curved to conform to the curvature of the wall of a tub, the lower

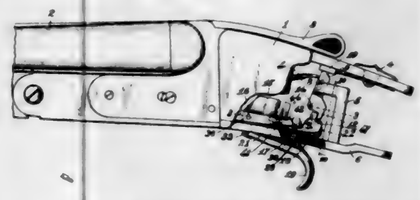


margin of said opening being sufficiently above the bottom of said plunger to form a pocket in the lower portion of the plunger.

1,560,531. AUTOMATIC SWITCH. WILLIAM G. BLAUVELT, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 24, 1924. Serial No. 715,709. 3 Claims. (Cl. 179—27.5.)

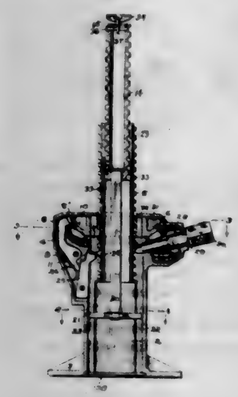
1. In an automatic switch, a terminal bank comprising a plurality of projecting contact lugs arranged in rows forming channels therebetween, and a plurality of brush sets for engaging said terminal lugs and having their tips positioned for travel in said channels, a pair of said channels being individual to each said brush set.

1,560,532. GUN. JAMES C. BROYLES, Birmingham, Ala.; Mrs. Celeste V. Broyles, administratrix of James C. Broyles, deceased. Filed June 9, 1924. Serial No. 718,867. 4 Claims. (Cl. 42—42.)



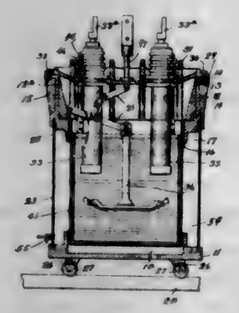
1. In a multiple barrel gun, the combination of actuating sears, a trigger, means actuated thereby for operating one of the sears, a slide shiftable to position for operating the other sear and adapted to be actuated by said trigger for effecting operation of said other sear, means for retaining the slide out of the operative position during operation of the first sear, means for shifting the slide to the sear-operating position, a safety lever adapted to be moved to and from a position preventing movement of the trigger, and a projection on the lever adapted to engage and restore said slide to its inoperative position.

1,560,533. VEHICLE JACK. JOHN H. BURKHOLDER and JOHN A. CHATER, Ashland, Ohio, assignors to Elite Manufacturing Company, a Partnership or Firm composed of John H. Burkholder, P. E. Countryman, and E. L. Kilhefner, Ashland, Ohio. Filed June 23, 1924. Serial No. 721,786. 9 Claims. (Cl. 254—102.)



2. A vehicle jack, comprising a standard, a tubular main screw engaged with said standard having an inner lift screw, a rotatable gear mounted upon said standard and slidably splined to said main screw, a stopping device pivoted upon said standard adapted to engage the teeth of said gear, said device having a depending finger, a pivoted presser bar engaging said finger, and means carried by said lift screw adapted to actuate said presser bar to tilt said device into engaging position with the teeth of said gear upon the maximum upward movement of both screws.

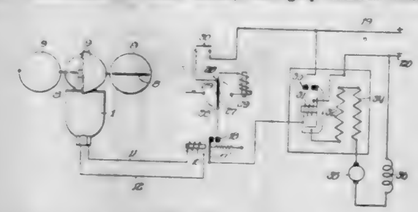
1,560,534. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Aug. 18, 1920. Serial No. 404,412. 33 Claims. (Cl. 200—150.)



6. An electric switch having the combination of an enclosing casing, a fluid receptacle disposed within the casing, and means connecting said casing and oil receptacle yieldingly.

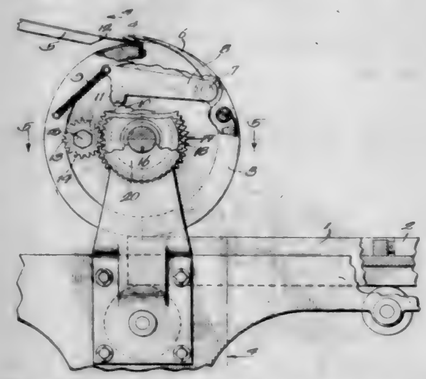
1,560,535. ANEMOMETER. CARL O. BURTON, Duluth, Minn. Filed Mar. 27, 1922. Serial No. 546,982. 1 Claim. (Cl. 188—155.)

Traveling crane control means, including, in combination, an anemometer device, an electric generator connected to be driven by said anemometer device, the motive mechanism of said crane, rail grip control mech-



anism, and a unitary relay responsive to the voltage developed by said generator for governing said rail grip control mechanism and said motive mechanism.

1,560,536. PRINTING PRESS. ALFRED C. CHRISTOPHERSON, Chicago, Ill., assignor to Hacker Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1925. Serial No. 11,194. 3 Claims. (Cl. 101—409.)

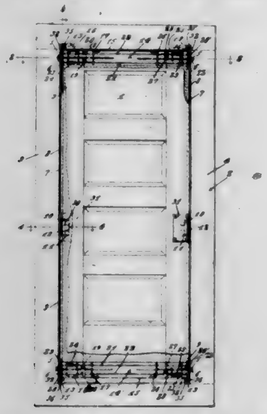


1. In a printing press, the combination with two complemental printing members of which one is a rotatable sheet receiving cylinder turning more than a revolution in its operating cycle; of sheet grippers carried by the cylinder and having means for applying them to sheets fed to the cylinder; mechanism for releasing the grippers and inclusive of complemental members, one of these members being carried by the cylinder and coupled with the grippers and the second member being mounted to turn about the axis of the cylinder to be adjustable in functioning position with respect to its complemental member and the cylinder; and gearing having a portion upon the cylinder and eccentric to the cylinder axis and a complemental portion coaxial with the cylinder and coupled with the second aforesaid gripper releasing member, said gearing being constructed to place the latter member in functioning position at the beginning and ending of the operating cycle of the cylinder.

1,560,537. COMBINED LATCH AND HINGE. JOSEPH S. COLE, Muncie, Ind. Filed Dec. 1, 1922. Serial No. 604,447. 2 Claims. (Cl. 16—147.)

1. The combination with a supporting structure having an opening provided with a closure; of a hanger for said closure including a pair of longitudinally extending spring projected rods to enter sockets in the wall of said opening, means to retract said rods to release the closure, and transversely arranged spring projecting locking bars carried by said closure, metal strips arranged on said structure opposite the ends of said locking bars, said strips being bulged outwardly and inclining

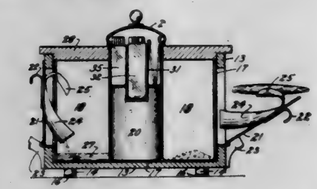
gradually upward from their ends toward their centers, said centers being designed to bindingly engage with said



bars when the closure is closed, and hold the closure against lateral movement, and means for releasing said locking bars.

---

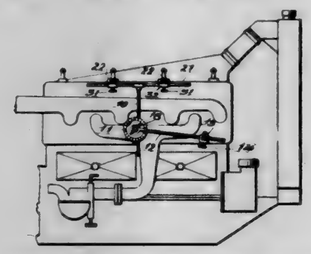
1,560,538. SMOKER'S ARTICLE. LEO E. COOKE, Denver, Colo. Filed May 9, 1924. Serial No. 712,017. 3 Claims. (Cl. 131—51.)



1. A smoker's article comprising a housing; a container placed within said housing; a door hinged on said housing and a cigar holder and ash tray secured to said door and arranged to deposit their contents into said container as said door is closed.

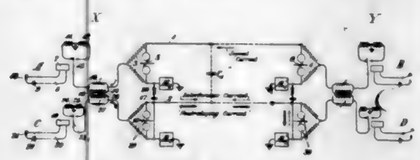
---

1,560,539. IDENTIFYING MEANS FOR MOTOR VEHICLES. WILLIAM D. COOPER, St. Paul, Minn., assignor of forty-nine two-hundredths to Henry Weiler and forty-nine two-hundredths to Robert C. Sweet, both of St. Paul, Minn. Filed Nov. 19, 1923. Serial No. 675,501. 7 Claims. (Cl. 33—174.)



1. A device of the class described comprising, an element adapted to be mounted in a predetermined position on a motor vehicle, and a plurality of graduated members carried by said element and arranged to be manipulated to measure the coordinates of identifying marks on the vehicle.

1,560,540. MEANS FOR PREVENTING ELECTRICAL INTERFERENCE. SAMUEL I. CORY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 1, 1922. Serial No. 533,370. 10 Claims. (Cl. 178—69.)



1. In a system for reducing receiving-end cross-fire in telegraph circuits, the method which consists in transmitting over any circuit of a system a signaling impulse adapted, by the admittance of the system, to create an interfering impulse in the other circuits of the system, and simultaneously inducing in the other circuits of the system, by means of the transmission of the said signaling impulse over the said first mentioned circuit, neutralizing impulses to substantially neutralize the effect of the interfering impulse upon the distant receiving apparatus of the said other circuits.

---

1,560,541. FILM-DYEING APPARATUS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 5, 1924. Serial No. 697,142. 11 Claims. (Cl. 8—19.)

5. Apparatus for the purpose described comprising two separated driving means for engaging and feeding strip material, and means for actuating said driving means to feed the material at the same speed, one of said driving means being mounted on a movable carrier, and the other of said driving means being disconnectible from said actuating means without disconnection of the first driving means, whereby stress is exerted between the strip material and said first driving means to move the latter and its carrier.

---

1,560,542. CELLULOSE ACETATE COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 28, 1924. Serial No. 728,729. 8 Claims. (Cl. 106—40.)

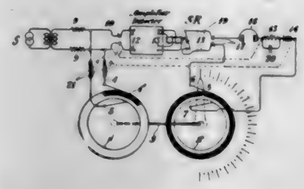
2. A composition of matter comprising a solution of colloidized acetone-soluble cellulose acetate containing cresyl p-toluene sulfonate.

---

1,560,543. TESTING CIRCUITS FOR ECHO SUPPRESSORS. GEORGE CRISSON, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,740. 12 Claims. (Cl. 179—175.)

5. A system for testing the make time of a translating arrangement including a relay operating in response to

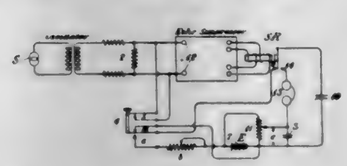
electric current, said system comprising means for applying current to said relay during successive intervals of pre-assigned duration, a signaling circuit controlled by said translating arrangement, means to produce sig-



nals in said circuit corresponding to successive applications of current, and means to vary the time of the production of the signals with respect to the instant at which the current is applied until a signal is produced at the instant the translating arrangement operates.

---

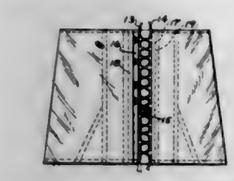
1,560,544. TESTING CIRCUITS FOR ECHO SUPPRESSORS. GEORGE CRISSON, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,741. 9 Claims. (Cl. 179—175.)



1. The method of testing the operating time of a translating arrangement including a relay responsive to electric current, which consists in applying current to the input terminals of the translating arrangement for a period of time, and gradually building up a potential during the time that it takes for the translating arrangement to respond to the conditions of current and no current at its input.

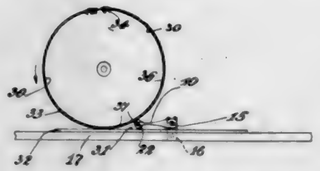
---

1,560,545. CORSET. KATHERINE E. CUNNINGHAM, Chicago, Ill., assignor to The H. W. Gossard Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1924. Serial No. 745,045. 3 Claims. (Cl. 2—39.)



1. A corset comprising a body having reinforcing members along separated adjustable laced edges, spaced closed lacing eyelets provided with a base rigidly secured to each of said members projecting toward the other member and with the axes of the eyelets substantially parallel to the reinforcing members, each eyelet comprising a plurality of adjacent coaxial loops of wire rounded in cross section having the ends thereof spaced and shaped for attachment to one of said reinforcing members, the rear of the eyelet extending inwardly not beyond the inner surface of said body.

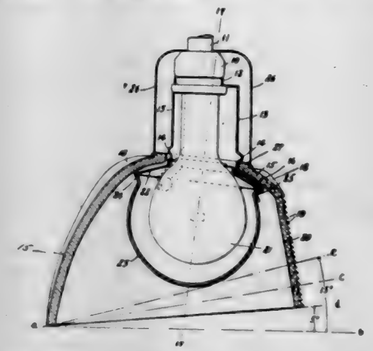
1,560,546. SLITTER AND PERFORATOR FOR CYLINDER AND KELLY PRESSES. JOHN A. DAVIDSON, Brooklyn, N. Y. Filed Dec. 26, 1924. Serial No. 758,041. 5 Claims. (Cl. 101—250.)



1. The combination with a cylinder printing press, including a rotary cylinder and a movable bed, a perforator or slitter mounted with its cutting edge in close relation to the printing surface and cooperating therewith in its cutting operation.

---

1,560,547. LIGHTING FIXTURE. LEROY C. DOANE, Cleveland, Ohio, assignor, by mesne assignments to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed July 26, 1921. Serial No. 487,734. 6 Claims. (Cl. 240—127.)



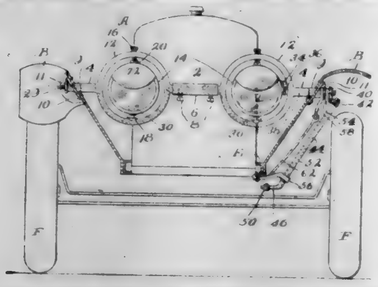
1. In a lighting fixture for incandescent electric lamps, a reflector, an inclosing bowl and a holder comprising means for attachment to a suitable support and rotation thereon, a plurality of supporting members having means therein for engaging said reflector, and means on each of said supporting member for engaging said inclosing bowl below said reflector, said supporting members varying in length between the attachment means and the reflector engaging means so that the rotation of the holder produces a change in the inclination of the axis of the reflector without affecting the other parts of the fixture.

---

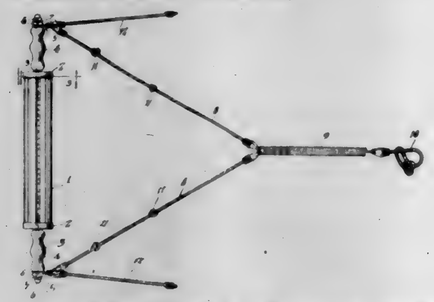
1,560,548. DIRIGIBLE HEADLIGHT. JOHN M. DORTON, Bonner Springs, Kans. Filed July 27, 1923. Serial No. 654,158. 2 Claims. (Cl. 240—61.)

1. In a dirigible headlight for motor vehicles, a rockable frame extending across the forward portion of the motor vehicle, bearings fixed to opposite sides of the motor vehicle and in which said frame is mounted, manually controlled means for rocking said frame in a vertical plane, a pair of headlights mounted to rock in a vertical plane with said frame and also independently thereof in a horizontal plane, a rack fixed to one of said headlights to rock the same in said horizontal plane, means connecting the headlights so that they will rock together in a horizontal plane, a gear intermeshing with said rack, a shaft journalled in the rockable frame and having said gear fixedly mounted thereon,

a second gear fixed to said shaft, and mechanism controlled by the steering mechanism of the car for actuating said second gear and through the intermediacy of the intervening parts above-mentioned effect the rocking of the headlights in a horizontal plane.

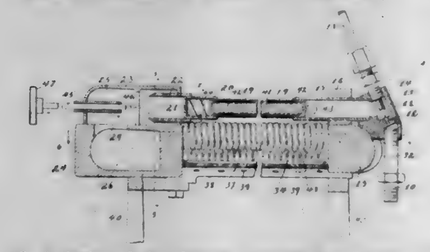


1,560,549. MASSAGE EXERCISER. WILLIAM DUNCAN, Los Angeles, Calif. Filed Sept. 19, 1921. Serial No. 501,582. 3 Claims. (Cl. 128—57.)



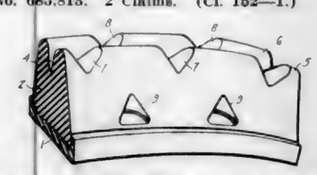
1. In a massage exerciser, a freely rotatable longitudinally grooved massage roller constructed to engage the side of one's body or limb and project at each side beyond the same, a tension member having means for attachment to a support, flexible cables connected to the opposite ends of the roller so as to pass on opposite sides of said body or limb and connected with the tension member, whereby the user of the device may move the roller to and fro while the tension member operates to press the same against the body or limb being massaged.

1,560,550. HYDROCARBON BURNER. WILLIAM H. DUNKERLEY, Paterson, N. J. Filed Nov. 16, 1923. Serial No. 675,038. 3 Claims. (Cl. 158—65.)



3. A device of the character described comprising primary burner tubes side by side and each consisting of a helix, a secondary mixing chamber with which one end of said tubes communicate, a primary mixing chamber above said secondary mixing chamber, a Y shaped member connecting the other ends of said tubes, a vaporizing tube communicating with said primary mixing chamber and extended above said tubes, and a valve controlled oil-supply for said vaporizing tube.

1,560,551. CUSHION TIRE. ERNST EGER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Jan. 12, 1924. Serial No. 685,813. 2 Claims. (Cl. 152—1.)

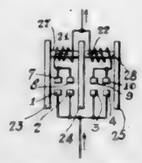


1. A cushion tire provided in the center of its periphery with an annular channel dividing it into two tread portions, each of said tread portions being notched in staggered relation to the other, the side walls of the tire having cavities remote from the tread portions and between radii extending to adjacent notches in each of the tread portions, said cavities being triangular in side elevation an diminishing in cross-section inwardly of the tire.

1,560,552. SOUND-REPRODUCING INSTRUMENT. LEE W. ESTERBROOK, Washington, D. C. Filed June 17, 1924. Serial No. 720,635. 5 Claims. (Cl. 181—32.)

1. A diaphragm for sound reproducing or recording instruments comprising a small sheet of resilient material and members consisting of flexible strips of varying length arranged at equal distances each from its nearest neighbor on one face of the diaphragm and closely attached thereto.

1,560,553. ELECTRIC SWITCH. CLARENCE T. EVANS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 26, 1921. Serial No. 472,642. 1 Claim. (Cl. 200—147.)



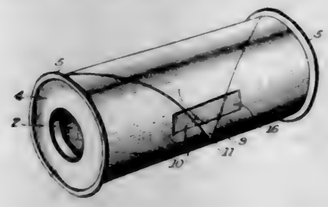
The combination with an electric switch having a plurality of sets of cooperating contacts affording parallel conducting paths, of a blow out device comprising a plurality of coils respectively subjected to the current traversing said parallel paths and further comprising end pole pieces to be traversed by the flux of both of said windings when said sets of contacts are closed, and an intermediate pole piece adapted to concentrate the flux of either of said windings in the region of its controlling contacts upon opening of the other of said contacts.

1,560,554. PROCESS OF TREATING CELLULOSE-ACETATE REACTION MIXTURES. EDWARD S. FARROW, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 4, 1924. Serial No. 730,119. 5 Claims. (Cl. 260—102.)

1. The process of separating and subdividing cellulose acetate from a reaction mixture of high viscosity, which

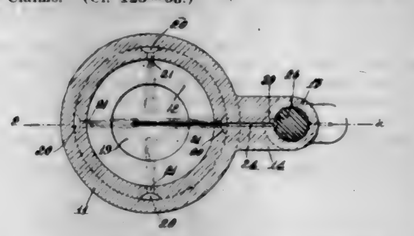
comprises forcing blades through said mixture and gradually adding liquid water during said forcing of said blades until cellulose acetate is precipitated in subdivided form.

1,560,555. PACKAGE OF SENSITIZED MATERIAL. EDWARD P. FLYNN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 15, 1923. Serial No. 625,241. 2 Claims. (Cl. 206—59.)



1. A package of sensitized material comprising a rolled band, the outer end portion of which is tapered, all of said tapered portion being reinforced by a double thickness formed by folding the material back on itself, and a sticker sheet lying across said tapered portion, the ends of the sticker sheet being secured to the next inner convolution of the band and constituting the sole sealing means for the package, the extreme end of the tapered portion extending beyond the sticker sheet and constituting a manipulating tab.

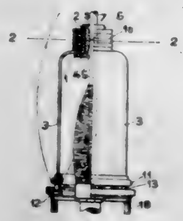
1,560,556. FUEL INJECTION AND MIXING MEANS FOR INTERNAL-COMBUSTION ENGINES. EUGENE A. FORD, Newton, Mass., assignor to R. E. D. Engine Company, Inc., New York, N. Y., a Corporation of New York. Filed July 3, 1920. Serial No. 393,927. 8 Claims. (Cl. 123—32.)



1. A fuel injection means for a high compression internal combustion engine, comprising the combination with the cylinder and piston of such an engine, of an auxiliary chamber, a transfer passage between said auxiliary chamber and the combustion space of said cylinder, and an auxiliary piston working in the auxiliary chamber closely fitting the same and adapted at one end to cross the entrance from said chamber of the transfer passage, the auxiliary chamber having an enlarged portion between said passage and its head and the piston having a zone carrying a multiplicity of intersecting grooves arranged to establish communication between said enlarged portion and the transfer passage when the auxiliary piston nears the head of the auxiliary chamber.

1,560,557. SPINNING MACHINE. WILLY FREUND, Chemnitz, Germany. Filed Mar. 6, 1925. Serial No. 13,546. 12 Claims. (Cl. 118—62.)

1. In a spinning apparatus of the character described, the combination with a spindle and with a cap connected slidably to said spindle, of a plurality of rotatable supporting elements for said cap, and a stationary cage holding and controlling said supporting elements so



that the yarn is subjected, during each revolution of the spindle, to a succession of instantaneous retardations.

1,560,558. PROCESS FOR PREVENTION OF DECAY OF CITROUS FRUITS. HARRY R. FULTON and JOHN J. BOWMAN, Washington, D. C. Filed Sept. 11, 1925. Serial No. 55,861. 1 Claim (Cl. 99—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

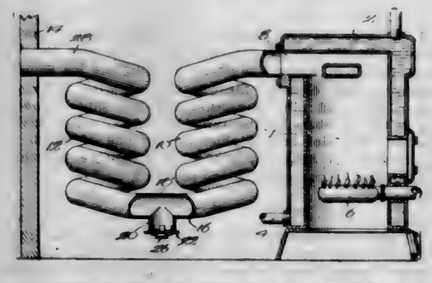
A method for the prevention of decay of fresh citrous fruits consisting in the treatment of such fruits with an aqueous solution comprising lithium carbonate, at a temperature below 120° F.

1,560,559. PROCESS FOR PRESERVATION OF FRESH FRUITS AND VEGETABLES. HARRY R. FULTON and JOHN J. BOWMAN, Washington, D. C. Filed Sept. 14, 1925. Serial No. 56,415. 2 Claims. (Cl. 99—1.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. An improved process for preparing fresh fruits and vegetables for market which comprises the application to the surface of such articles of an aqueous solution containing the sodium oxide radical and the boric acid radical in the proportion of one to three and of such a strength as to effectively retard the growth and development of the organisms that cause stem-end rot, blue-mold rot, and other forms of decay.

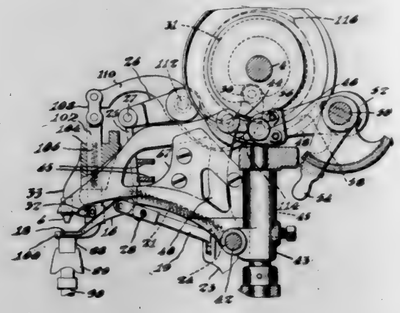
2. An improved process for preparing fresh fruits and vegetables for market which comprises the application to the surface of articles of a solution containing approximately 5 parts by weight of borax and 0.43 parts by weight of sulphuric acid in 100 parts by weight of water, to effectively retard the growth or development of the organisms causing stem-end rot, blue-mold rot, or other forms of decay.

1,560,560. HEATING ATTACHMENT. IRWIN A. GARDNER, Chicago, Ill. Filed Apr. 10, 1925. Serial No. 22,101. 5 Claims. (Cl. 126—99.)



1. A heating attachment for furnaces consisting of a double coil of pipe for conveying the flue gases from the furnace to the chimney, said coil being formed in two connecting sections having parallel axes.

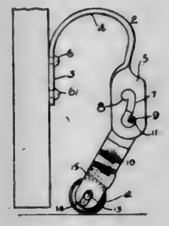
1,560,561. EYELETING MACHINE. JOHN WILLIAM GODDARD, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 15, 1922. Serial No. 561,116. Renewed Feb. 16, 1924. 19 Claims. (Cl. 218—14.1.)



1. An eyeleting machine comprising an eyelet-inserting tool and a clenching tool arranged in permanent coaxial relation to each other, said clenching tool having a clenching shoulder formed to pass through a lacing-hole in one layer of an article of work so as to clench an eyelet between two layers of said article, and work-positioning mechanism arranged to force the work onto said clenching tool far enough to place said shoulder between two of the layers before the eyelet is inserted.

---

1,560,562. DOOR HOLDER. JOHN FRENCH GOLDING, New York, N. Y. Filed Dec. 27, 1921. Serial No. 525,216. 16 Claims. (Cl. 292—338.)

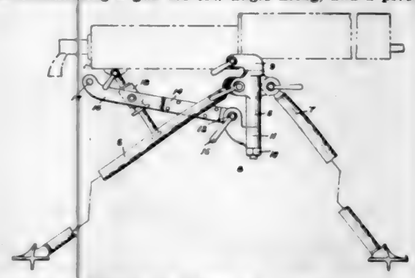


1. A door holder having in combination a spring member adapted to be attached to a door and the like so as to extend away therefrom, a swingable leg member having a foot element for engagement with the floor, and a slot and pin connection between said members, one of the members having the slot and the other having the pin, said slot having shoulders by one of which the leg member is held down and by the other of which the leg may be suspended above the floor.

---

1,560,563. COMBINATION MOUNT FOR MACHINE GUNS. WALTER T. GORTON, U. S. Army. Filed Aug. 20, 1925. Serial No. 51,463. 5 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

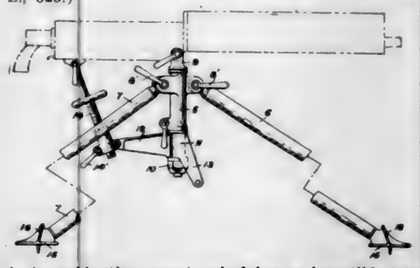
4. A mount for machine guns embodying a central head, supporting legs pivotally secured thereto, a stem rotatable in said head, a yoke on one end of the stem for trunnioning a gun for low angle firing, and a pivoted



cradle on the other end of the stem provided with means for supporting the rear end of the gun.

---

1,560,564. COMBINATION MOUNT FOR MACHINE GUNS. WALTER T. GORTON, U. S. Army. Filed Aug. 20, 1925. Serial No. 51,465. 6 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



4. A combination mount embodying an invertible tripod having its legs adjustably attached at one end of the tripod head, and means on either end of the tripod head, for trunnioning a gun.

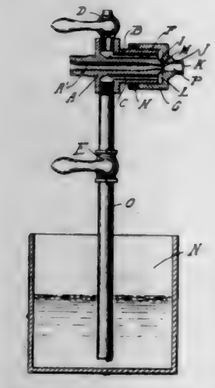
6. A leg for invertible tripods and the like having its feet formed by shoes approximately perpendicular to each other, one portion of each shoe adapted to enter the ground when the other shoe rests upon the ground.

---

1,560,565. WIRE SPOKE FOR WHEELS. JAMES H. GRAHAM, Torrington, Conn. Filed May 24, 1922. Serial No. 563,402. 5 Claims. (Cl. 301—104.)

2. A wire spoke for vehicle wheels having a relatively short central cylindrical section of small diameter, and relatively long end section, of larger diameter.

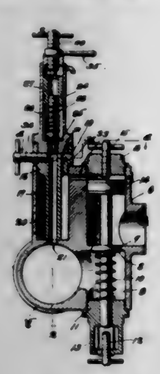
1,560,566. OIL BURNER. ALBERT EDWARD GRANT, New York, N. Y., assignor, by mesne assignments, to Grant Oil Burner Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 15, 1923. Serial No. 668,568. 4 Claims. (Cl. 158—74.)



1. An oil burner of the character described comprising a body portion having an unobstructed central steam passage extending entirely therethrough and an oil and an air passage located diametrically opposite to each other at an equal distance from said steam passage, means for controlling the flow of air through said air passage and a cap adjustable on said body portion adapted to close communication between said steam passage and said air and oil passages.

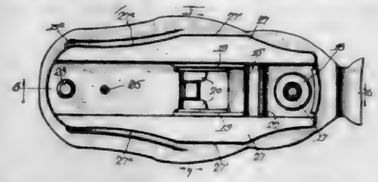
---

1,560,567. WATER-RELIEF VALVE. JORDAN W. GRANT, Portsmouth, Va. Filed July 7, 1925. Serial No. 42,049. 3 Claims. (Cl. 137—53.)



2. In a device of the character described, a body portion including a lateral valve housing and a vertical valve housing, said lateral valve housing having a lateral outlet opening, a valve for normally preventing the passage of liquid through the outlet opening, a slidable piston in the vertical valve housing, a valve including a valve stem movable in the second mentioned valve housing, a coiled spring on the valve stem and engaging the piston for restricting movement of the valve and valve stem, means for regulating the movement of the last mentioned valve, and said last mentioned valve adapted to be operated to admit fluid to the lateral valve housing to unseat the valve operating therein.

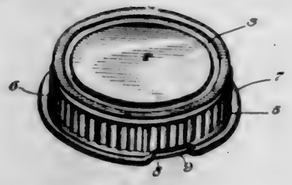
1,560,568. MANUFACTURE OF CARPENTERS' PLANES. GEORGE D. HAINES, Chicago, Ill., assignor to Vaughan & Bushnell Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1924. Serial No. 725,837. 15 Claims. (Cl. 76—101.)



1. That improvement in the manufacture of plane-bodies comprising a substantially flat sole or bottom, side flanges and attaching lugs, which consists in forging a bar of metal into a blank shaped to form the sole of the plane with integral attaching lugs on one face thereof and laterally extending portions, then bending only the laterally extending portions at an angle to the sole to extend upwardly therefrom to form the plane-sides, and then finishing the blank to form the plane-body.

---

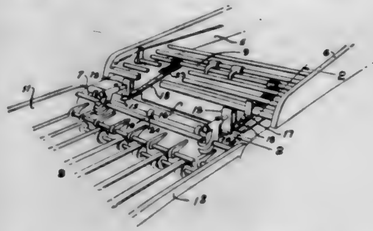
1,560,569. METAL CAP OR CLOSURE. CHARLES HAMMER, Hollis Court Boulevard, Queens County, N. Y. Filed Feb. 2, 1925. Serial No. 6,196. 4 Claims. (Cl. 215—44.)



1. A metal closure for glass containers, comprising a top having a depending skirt provided with a beaded or curled lower edge flattened or pressed upwardly and inwardly to form a relatively long inwardly extending locking lug having its inner face inclined to the top of the cap.

---

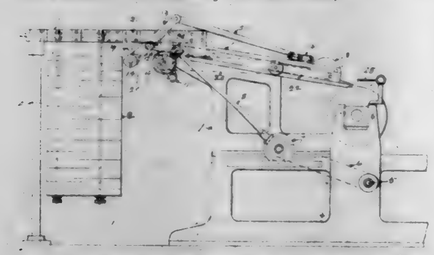
1,560,570. ATTACHMENT FOR PRINTING PRESSES. WILLIAM C. HAMMERSMITH, Denver, Colo. Filed Oct. 27, 1924. Serial No. 746,081. 4 Claims. (Cl. 271—53.)



1. In a printing press, in combination, a rotating cylinder provided with gripping devices, means for feeding sheets of paper to said cylinder, means for guiding the paper into position to be engaged by the grippers, said guide means comprising a tongue adapted to support a sheet of paper, a stop mechanism operatively associated with said tongue for stopping a sheet of paper in proper position to be engaged by the grippers, and a resilient tongue secured at one end to a fixed support and located above the first-mentioned tongue, said resilient tongue being adapted and adjusted to exert a yielding pressure

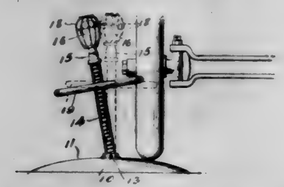
on the upper side of a sheet of paper as it is fed toward said stops for the purpose of holding it against the supporting tongue.

1,560,571. SHEET-FEEDING MACHINE. JAMES G. HARDIE, Canton, N. Y. Filed Mar. 21, 1922. Serial No. 545,551. 12 Claims. (Cl. 271—46.)



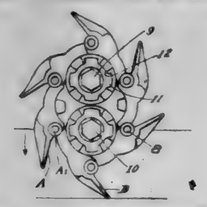
2. In a sheet-feeding machine, means adapted to advance a sheet to a predetermined position, a reciprocating member adapted to advance said sheet and deposit it upon a slower-moving means, which is adapted to place said sheet against stops.

1,560,572. TRAFFIC SIGNAL. PHILIP R. HATTON, Lebanon, N. H., assignor to The Lebanon Machine Co. Inc., Lebanon, N. H. Filed Sept. 11, 1923. Serial No. 662,070. 4 Claims. (Cl. 40—145.)



1. In a device of the character described, a base, a light element, an oscillatable mounting therefor, extending upwardly from the base, and an encircling member carried by the mounting spaced a distance above the base lying below the light and projecting a distance therebeyond horizontally, for the purposes described, said encircling member comprising an annular rim, a hub part adjustable vertically on the mounting, and connecting parts between rim and hub.

1,560,573. EARTH-SPADING DEVICE. CHRISTIAN F. HEINSS, Sr., Fort Madison, Iowa. Filed Jan. 9, 1925. Serial No. 1,469. 6 Claims. (Cl. 97—212.)

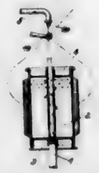


3. In a device of the character described, the combination of a pair of interspaced disks, the upper being formed as a sprocket and driven, and the lower having a curved periphery, and a chain passing over said disks, said chain being formed of links having means for engagement with the upper or sprocket disk, and a curved bearing face, and said links having spades thereon, said links being of a length approaching the length of the diameter of the lower disk.

1,560,574. PROCESS FOR EXTRACTION OF COPPER FROM THE MATTE. ALBERT H. HENDERSON, Baltimore, Md. Filed May 9, 1921, Serial No. 467,987. Renewed Apr. 21, 1925. 20 Claims. (Cl. 75—18.)

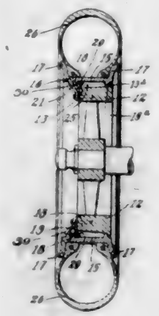
1. A method of treating copper matte to render the copper easily extractable comprising the step of subjecting the matte to the action of an alkali carbonate, fluxing agents and a hypo-chlorite of alkali, at a raised temperature.

1,560,575. APPARATUS FOR TREATING ARTIFICIAL THREADS WOUND ON BOBBINS. WILHELM HOHMANN, Delitzsch, near Halle, Germany, assignor to Actien-Gesellschaft für Anilin-Fabrikation, Berlin, Germany. Filed Dec. 1, 1924. Serial No. 753,252. 16 Claims. (Cl. 117—2.)



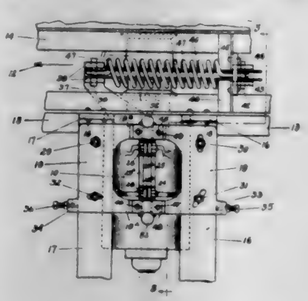
1. Apparatus for treating artificial thread, comprising a hollow perforated cylinder defining a bobbin, a spindle, means for detachably securing the bobbin to the spindle and for centering it thereon, means for rotating the spindle and means for feeding a liquid into the interior of the bobbin.

1,560,576. DEMOUNTABLE RIM FOR VEHICLE WHEELS. GEORGE HOMIAK, Newmarket, N. H. Filed May 27, 1925. Serial No. 33,131. 1 Claim. (Cl. 301—35.)



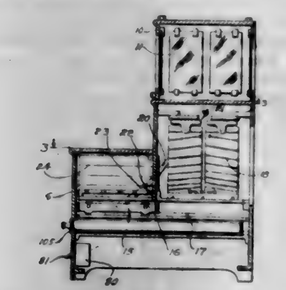
For use with a vehicle wheel whose felly has a bevelled peripheral face and an external stop bead at the inner edge thereof; a two-part demountable rim comprising an inner ring embracing the periphery of the felly and provided with an external tire-confining flange, said ring having at its inner edge an internal stop bead adapted to bear on the stop bead of the felly, and at its outer edge an inwardly projecting locking bead and a locking tongue projecting inward from the bead, the inner ring being spaced from the peripheral face of the felly to form an annular recess; and a flexible resilient non-continuous outer ring, provided with an external tire-confining flange, an external locking groove adapted to receive the locking bead, a slot adapted to receive the locking tongue, and an inner side face formed to enter said recess and bear on the outer edge of the peripheral face of the felly, the inner ring being normally circular and adapted to be distorted to engage its slot with the locking tongue, and to thereafter enter said recess to engage its locking groove with the locking bead and seat its side face on the felly.

1,560,577. GENERATOR MOUNTING FOR RAILWAY CARS. GEORGE E. HULSE, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 27, 1924. Serial No. 695,401. 16 Claims. (Cl. 105—102.)



2. In a generator suspension for railway cars, in combination, supporting means mounted beneath the car, a shaft journaled in said supporting means, a generator, and a supporter lug connected to said generator and through which said shaft passes, said lug having a loose fit on said shaft at its central portion and being clamped securely about the same adjacent its ends.

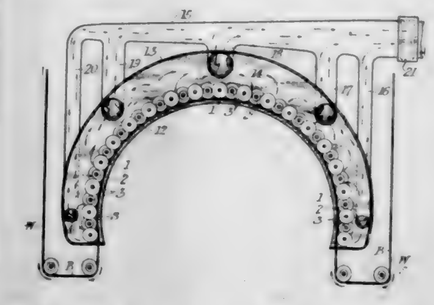
1,560,578. BREAD TOASTER. FREDERICK E. HUMMEL and JOHN J. NORTH, Chicago, Ill. Filed Feb. 4, 1924. Serial No. 690,580. 16 Claims. (Cl. 219—19.)



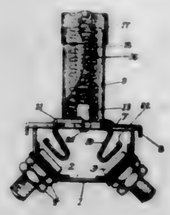
2. A bread toasting machine comprising a casing, a horizontally movable carriage slidable within said casing, a carriage operating lever having connection with the carriage, a manually operated lever associated with said first named lever and having means for swinging the carriage operating lever to operating position, and means whereby to hold the carriage operating lever in a set position.

1,560,579. SUCTION CONVEYER FOR SHEET MATERIAL. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 28, 1923. Serial No. 676,635. 6 Claims. (Cl. 271—2.3.)

1. In a conveyer for sheet material, the combination with a plurality of intermeshed conveyer rollers, some rollers being of greater diameter than others, and arranged with their peripheries lying close to each other whereby interstices are left between the rollers, said rollers forming one wall of a suction chamber associated with the rollers, and means for drawing air through the interstices between the rollers to hold material being conveyed against the rollers.

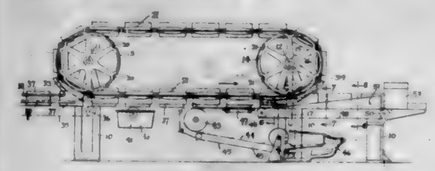


1,560,580. ELECTRIC STARTING-MOTOR SWITCH. HAROLD L. JOYCE, South Orange, N. J., assignor to Tiffany Manufacturing Co., Newark, N. J. Filed Feb. 14, 1925. Serial No. 9,162. 5 Claims. (Cl. 200—159.)



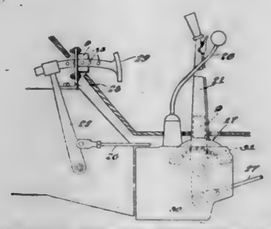
4. In a switch of the class described, including a box, cover, stem, cap and return spring within the stem; a pair of contacts positioned within the box so their faces are oppositely inclined to each other, a spring contact member and a guide member carried on the end of the plunger, the contact member being insulated, said contact member having its ends formed in reverse curves so as to insure a wiping and full area engagement with said box contacts.

1,560,581. BOOK-COVERING MACHINE. CHARLES A. JUENGST, Croton Falls, N. Y., assignor to American Assembling Machine Company, Memphis, Tenn., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,164. 19 Claims. (Cl. 11—3.)



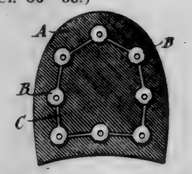
1. In a book covering machine, a looped endless book conveyor having a continuous advancing movement in a vertical plane, means for feeding books in upright position in parallelism with the conveyor and at the beginning of the lower run thereof, and means for holding and releasing the books at the end of the lower run whereby the latter travel only in a substantially horizontal, straight-line path through the machine.

1,560,582. SAFETY BRAKE LOCK AND BRAKE-LOCKING DEVICE FOR AUTOMOBILES AND TRUCKS. FRANK H. KAGARISE, Sharpsville, Pa. Filed Dec. 17, 1923. Serial No. 681,170. 2 Claims. (Cl. 70—128.)



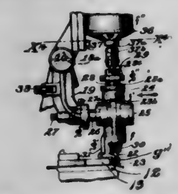
1. A lock for a movable brake lever comprising in combination a casing adapted to be mounted on an automobile, a bolt slidably mounted in said casing, said bolt having an annular collar adjacent one end and a flared shoulder adjacent its other end, a spring surrounding said bolt and bearing at one end against said collar and at its other against the casing, spring actuated opposing dogs mounted in said casing, the opposing faces of said dogs longitudinally grooved to enclose the body portion of said bolt, and having beveled transverse notches across said grooves adapted to receive and hold said flared shoulder, said dogs adapted to be engaged and spread apart by a key.

1,560,583. RUBBER HEEL. WILLIAM J. KENT, Brooklyn, N. Y. Filed July 27, 1923. Serial No. 654,175. 1 Claim. (Cl. 36—35.)



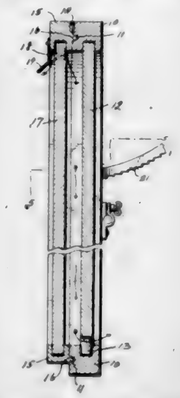
A rubber heel comprising a block of resilient rubber having nail holes, and washers embedded within it coincident with such holes and at a sufficient distance from the opposite faces of the block to afford a substantial intervening cushion, and relatively slender tie-portions connecting said washers, the washers and tie-portions being a single punching from a sheet of metal of uniform thickness, and the tie-portions being strong enough to connect the washers and hold them in spaced relation until placed in the mould, while so pliable as not to materially affect the pliability or cushioning action of the rubber heel.

1,560,584. APPARATUS FOR SPLICING MOTION-PICTURE FILMS. ROY HENRY KLAFFKI, Los Angeles, Calif. Filed Oct. 17, 1921. Serial No. 508,397. 4 Claims. (Cl. 154—42.)



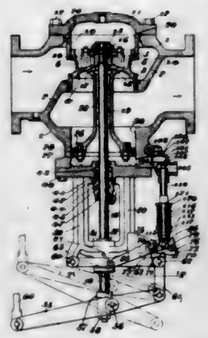
1. Film splicing apparatus comprising means for supporting a film comprising a photographic film per se and its base, rotatable means for removing the photographic film from its base, and means for operating said rotatable means; said rotatable means comprising a tool having an edge adapted for superficial contact with the film base and being mounted for rotation about an axis perpendicular to the plane in which the film is supported and movable in a plane parallel to said plane of film support.

1,560,585. WINDSHIELD. WILLIAM A. KLINGBERG, Afton, Okla. Filed Mar. 15, 1924. Serial No. 699,522. 2 Claims. (Cl. 296—94.)



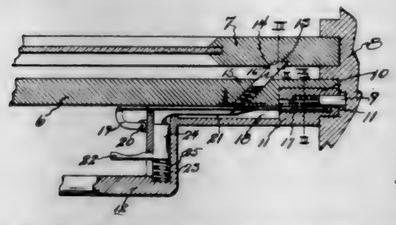
1. In combination with a windshield embodying the usual main frame, a frame supported thereby, a second frame pivoted to the first named frame and shiftable from a position paralleling the first-named frame to a position at an angle to said frame, and means for maintaining the last named frame in a desired angular relation to the first named frame, glasses for said frames the glass of the outer frame having openings adjacent the upper end thereof, the glass of the lower frame having openings adjacent the lower edge thereof.

1,560,586. COMBINED CONTROL AND TRIP VALVE. PAUL W. KNAUF, Cynwyd, Pa., assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1922. Serial No. 582,393. 11 Claims. (Cl. 137—139.)



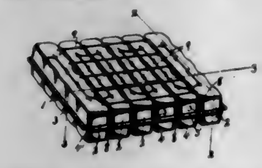
2. In a combined control and trip valve structure, the combination of a valve, a casing therefor having an opening leading from the outlet side thereof underneath the said valve, a valve for controlling the passage of steam through said opening, a trip device, and means intermediate the said trip device and the second named valve for operating the latter, said means having connection with said trip device and adapted to be positively actuated thereby.

1,560,587. COMBINATION COACH-WINDOW LOCK AND HANDLE. CLARKE R. LAKE, Peoria, Ill. Filed Dec. 13, 1924. Serial No. 755,656. 6 Claims. (Cl. 292—33.)



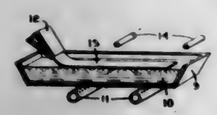
6. In a coach double window, a lifting handle mounted on the inner window frame and means including a slidably mounted trigger carried by and operable from said handle for selectively causing the windows to be coupled for raising or lowering together, substantially as set forth.

1,560,588. SPRING CUSHION. WILLIAM LEWIS, Utica, N. Y. Filed Feb. 21, 1924. Serial No. 694,285. 3 Claims. (Cl. 5—353.)



1. In a spring cushion, a row of coiled springs arranged in parallel spaced relation, opposed fabric strips extending across opposite ends of the springs and portions thereof folded between the springs and stitched together, and additional fabric strips extending across the outer faces of the first-named strips and adjacent ends of the springs and stitched together at opposite sides of the row.

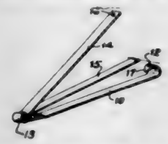
1,560,589. METHOD OF DRYING MATERIAL. BERNARD R. ANDREWS, Braintree, and STANLEY P. LOVELL, Brockton, Mass. Filed May 25, 1922. Serial No. 563,481. 6 Claims. (Cl. 34—24.)



5. The steps in the method of drying material which carries a volatile liquid, which consist in passing an air current over the material at a rate to cause normally by said evaporation a reduction in the temperature of the material to a point below that of the air current and below the dew-point of the surrounding atmosphere, and subjecting said material to the action of radiant heat in sufficient quantities to maintain the material at a temperature above said dew-point.

1,560,590. HAIR CURLER. JOSEPH M. LOZANO, Philadelphia, Pa., assignor to West Electric Hair Curler Co., Philadelphia, Pa. Filed May 27, 1924. Serial No. 716,159. 2 Claims. (Cl. 132—41.)

1. A hair curler having a base member, a plurality of relatively narrower arms formed integral and hinged to said base member, one of said arms being shorter than the other said arms and means for locking the longer of said arms to said base member and an upward bend in said

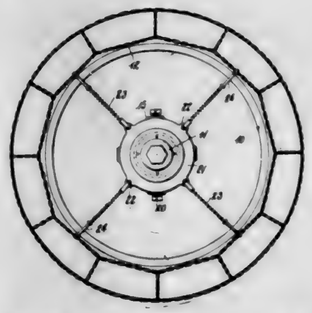


base member adjacent to the hinged end thereof, to retain said integrally formed arms spaced from said base member.

1,560,591. PROCESS FOR MAKING PAPER PULP. BERTRAM T. MCBAIN, JOHN E. ALEXANDER, and GOSTA GENBERG, Port Edwards, Wis., assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis., a Corporation of Wisconsin. Filed Sept. 2, 1922. Serial No. 586,037. 7 Claims. (Cl. 92—11.)

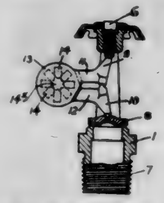
1. The process of making a light colored paper from resinous wood, which comprises treating the wood by the usual sulphate process and then treating the resulting pulp with sulphite acid.

1,560,592. DEVICE FOR TAKING UP SLACK IN ANTI-SKID CHAINS. JOHN A. MCBRADY, St. Paul, Minn. Filed Sept. 10, 1924. Serial No. 736,932. 3 Claims. (Cl. 152—14.)



2. A device for taking up slack in antiskid chains comprising a centrally apertured housing adapted to encircle the hub of an automobile wheel, means for holding the said housing stationary with respect to the wheel hub, a ring loosely connected to one face of the said housing so as to be movable both radially and circumferentially of the wheel hub, and tensionable connecting-devices carried by the said ring for attachment to the anti-skid chain.

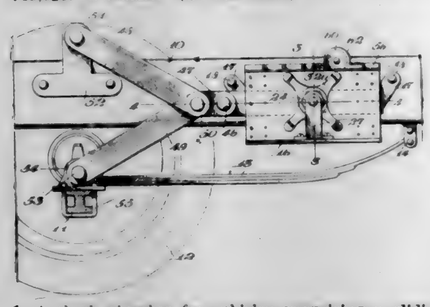
1,560,593. SPRINKLER HEAD. JOSEPH A. MCELROY, New York, N. Y. Filed Feb. 28, 1922. Serial No. 539,821. 7 Claims. (Cl. 169—39.)



1. The herein described tension device for sprinkler heads, the same comprising a pair of levers each having one arm provided with an enlarged portion, each enlarged portion having a plurality of depressions radi-

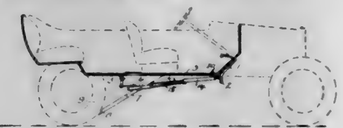
ating from a common center, and a solder fusible at a predetermined temperature, filling said depressions and normally holding said enlarged portions together.

1,560,594. SHOCK ABSORBER. DANIEL FRANCIS MCMAHON, Cicero, Ill. Filed Oct. 24, 1924. Serial No. 745,625. 2 Claims. (Cl. 188—129.)



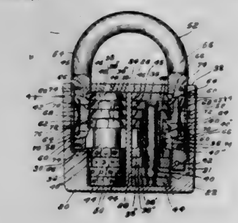
1. A shock absorber for vehicles comprising a sliding plate, friction plates maintained in engagement with the sliding plate to resist movement thereof, a pair of rods adapted to connect the sliding plate with the chassis and an axle of said vehicle, and a roller mounted to engage one edge of the sliding plate.

1,560,595. SANDER FOR AUTOMOBILES. JOSEPH MALANCA, Tacoma, Wash. Filed Oct. 20, 1924. Serial No. 744,660. 2 Claims. (Cl. 291—34.)



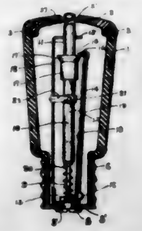
1. In an automobile sander, the combination of a sand box; sand pipes leading therefrom to the automobile wheels; a slide valve interposed between said sand box and said pipes whereby the flow of sand is controlled; a brake applying apparatus including a brake rod; a sleeve mounted on said brake rod and connected to said slide valve; a lug on the brake rod; and a hook on the sleeve and adapted to be brought into releasable engagement with said lug, whereby the sleeve and valve are actuated by the motion of the brake rod when the hook is in such engagement.

1,560,596. LOCK. LEONARDO MARRA, Providence, R. I. Filed Oct. 20, 1924. Serial No. 744,708. 2 Claims. (Cl. 70—113.)



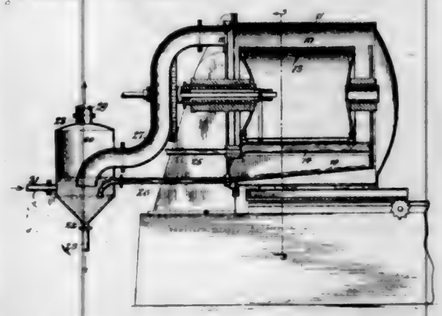
1. A permutation padlock, comprising a lock casing having two compartments, each having a shackle arm receiving aperture and an aperture in the side thereof, a series of rotatable tumbler members contained within each compartment having shaft portions contained respectively within the hollow shaft portions of other tumbler members, enlarged locking portions radially notched grouped on one end of said shafts substantially contiguously to the enlarged locking portions of the other tumbler members and rotating dials therefor having permutation characters thereon grouped on the opposite end of said shafts substantially contiguously to the dials of the other tumbler members, said dials being visible and rotatably operable through the side apertures in the casing to align said radial notches to form channels and a shackle member having two arms, each arm having a notched rack mounted on springs in a channel therein whereby said shackle may be inserted within said lock when the locking portions of said tumbler members are in any position to retain the shackle to the lock and whereby on rotation of said dials to the predetermined setting, the radial notches of each series of tumbler members may be aligned to form a channel to permit withdrawal of said shackle arms.

1,560,597. AUTOMATIC CUT-OUT. ERNEST MEIER-JOHAN, Cincinnati, Ohio. Filed Apr. 18, 1922. Serial No. 555,205. 17 Claims. (Cl. 200—116.)



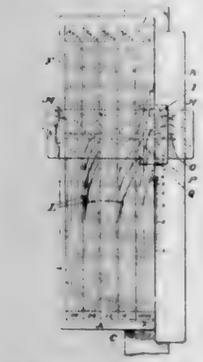
1. In an automatic cut out, a porcelain housing having a hole through one end, a porcelain cap having a hole therethrough mounted upon the other end, a screw extending therein and having a reduced stem, a fibre pin having a socket adapted to receive said stem and slidably mounted in the hole in said cap, a U-shaped bracket mounted on said screw and insulated therefrom, a holding nut on said screw insulated from said U-shaped bracket, a spring finger forming part of said bracket, and having a lip, a collar fixed on said fibre pin and having a tapered shelf adapted to engage said U-shaped bracket, a tapered conducting collar fixed on said fibre pin, an arm on said bracket and a beveled lug on said arm adapted to engage said tapered collar.

1,560,598. VACUUM DRYING APPARATUS. HENRY D. MILES, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,203. 5 Claims. (Cl. 159—17.)



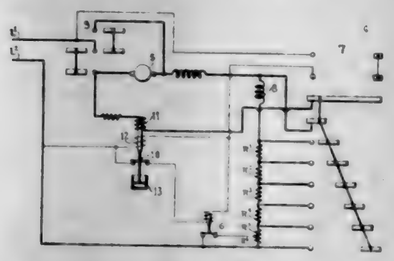
1. A vacuum drying apparatus comprising means for desiccating the liquid, means for supplying the liquid to be desiccated, and means for producing a vacuum in the apparatus having a conduit leading from said desiccating means into said liquid supplying means.

1,560,599. SLIDE RULE. CHARLES C. MOLER, Hagerstown, Md. Filed July 18, 1925. Serial No. 44,599. 3 Claims. (Cl. 235—70.)



2. A slide rule comprising a slide having on one face thereof a scale and on the reverse face a scale a second slide frictionally engaging the first mentioned slide, and having on one face thereof a scale adjacent the first scale on the first mentioned slide, and a second scale on the second mentioned slide adjacent a pointer on a third slide, said second slide frictionally engaging the third mentioned slide, the latter slide having on its reverse face a plurality of scales an indicator embracing the three slides and having a hair line on each face of the rule, and a second indicator slidable on the first indicator, and having a hair line at right angles to the hair line of the first indicator.

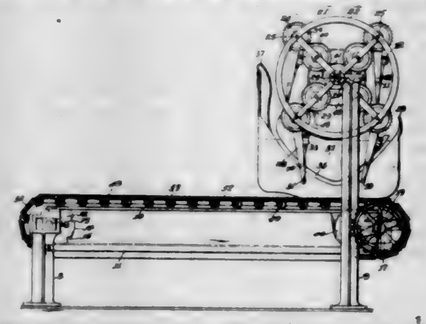
1,560,600. CONTROLLER FOR ELECTRIC MOTORS. NIELS L. MORTENSEN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 17, 1924. Serial No. 707,031. 5 Claims. (Cl. 172—179.)



2. The combination with an electric motor having accelerating resistance and control means providing for establishment jointly of power and dynamic circuits for the motor, of associated means providing for commutation of said resistance differently with respect to the power and dynamic circuits of the motor, said means including means to include selectable values of said resistance in the field circuit of the motor, and means to limit temporarily the value of such field weakening resistance that may be so included in circuit.

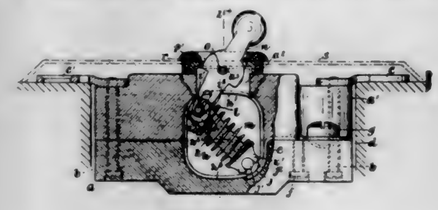
1,560,601. CLAY-PRODUCT-CUTTING MACHINE. MAX MUELLER, St. Louis, Mo. Filed Sept. 27, 1923. Serial No. 665,106. 4 Claims. (Cl. 25—110.)

1. A clay products cutting machine comprising an endless conveying table, a cutting drum provided with a plurality of meshing gears in operative relation with said table, and a means for simultaneously operating



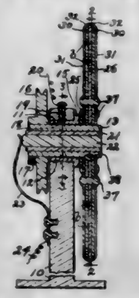
said drum in proper unison with the movement of said table.

1,560,602. CIRCUIT-CONTROLLING MEANS. CHARLES A. NELSON, Brooklyn, N. Y. Original application filed Jan. 27, 1922, Serial No. 532,235. Divided and this application filed June 23, 1924. Serial No. 721,867. 2 Claims. (Cl. 200—67.)



1. A circuit-controlling device comprising, in combination, two coacting members one of which is a circuit-controlling member and one of which has a runway and the other a convex surface in contact with the runway and one of which members is also spring-held against the other and spring-urged lengthwise of the runway, said runway having a concave rise rising suddenly relatively to the remainder of the runway but curved to a greater radius than said convex surface in contact therewith.

1,560,603. ELECTRIC HEATER. FRED G. NIECE, Cleveland, Ohio, assignor to Arthur Morgan Smith, Cleveland Heights Village, Ohio. Filed Oct. 10, 1923. Serial No. 667,599. 8 Claims. (Cl. 219—34.)

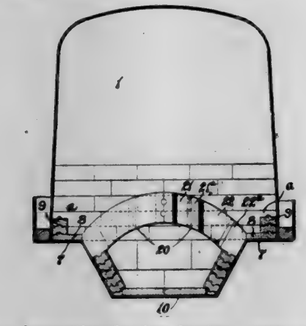


7. A rotary electric heater which comprises a tubular shaft adapted to be electrically connected to one terminal of a source of electrical energy and having a slot, means for supporting the shaft, means for rotating the

shaft, an insulating tube arranged internally of and extending endwise of the shaft and having a slot which registers with the slot in the shaft, a current-conducting member surrounded by said insulating tube and adapted to be electrically connected to the other terminal of the aforesaid source of electrical energy, an insulating and heat-transmitting disks extending circumferentially of and rotatable with the shaft, a heat-developing conductor comprising a resistance wire which extends circumferentially of the shaft and is confined by said disks, and an insulating block engaging the aforesaid slot in the shaft, the aforesaid wire being electrically connected at one end portion thereof to the shaft, and the other end portion of said wire extending through said block and into the slot in the aforesaid insulating tube and being electrically connected to the aforesaid current-conducting member surrounded by said tube.

---

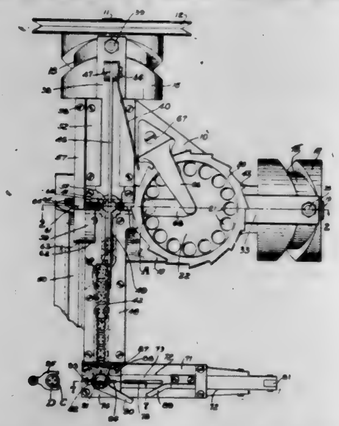
1,560,604. LOCOMOTIVE-FIRE-BOX STRUCTURE. LE GRAND PARISH, Mountain View, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,182. 8 Claims. (Cl. 110—87.)



1. In a locomotive fire box having a pan, a lining for the bottom of the pan, side linings for the pan resting upon and securing the bottom lining, an arch resting upon the side linings, and fire box floor linings positioned by the ends of the arch.

---

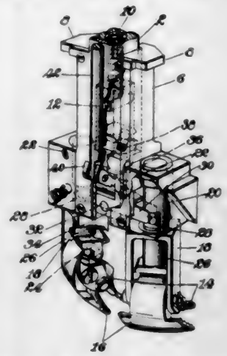
1,560,605. BUTTON-FEEDING MECHANISM. SAMUEL D. POLSEN, Bridgeport, Conn. Filed Mar. 12, 1924. Serial No. 698,694. 17 Claims. (Cl. 112—113.)



17. In a machine for sorting articles each having faces of different configuration, a container for said articles, means for removing the articles one by one from the container either face up, an article sorting station, means for advancing each article removed from the container to said sorting station, means cooperating at the sorting station for carrying articles having corresponding face up in the same direction away from the sorting station and for carrying articles having opposite face up in a direction different from that in which articles having corresponding face up are carried, and means for turning said last mentioned articles over in the machine.

---

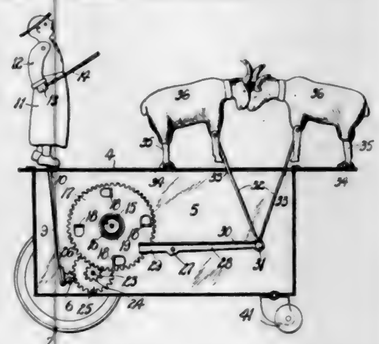
1,560,606. GRIPPER. CHARLES F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Aug. 15, 1917, Serial No. 186,314. Divided and this application filed July 25, 1922. Serial No. 577,377. 13 Claims. (Cl. 12—11.1.)



3. A toe gripper having, in combination, a gripper casing, a plurality of pairs of gripper jaws carried by said casing and relatively movable to conform to different shapes of toes, a gripper bar, and means comprising a latch for connecting said gripper bar to the jaws in any position of the jaws to close them and to operate them to pull an upper, said latch being movable after the upper has been pulled to disconnect the bar from the jaws to cause the jaws to release the upper.

---

1,560,607. FIGURE WHEELED TOY. ROCCO RICATTI, St. Louis, Mo. Filed Feb. 2, 1925. Serial No. 6,186. 3 Claims. (Cl. 46—45.)



1. A toy comprising a carriage, a spring motor, a train of gears and wheels for driving said carriage, a lever pivoted intermediate its ends carried by said carriage, projections formed on one side of one of said gears and adapted to contact with one end of said lever whereby said lever is intermittently rocked and the opposite end of said lever suddenly raised and lowered, a top for said carriage, a plurality of animals pivotally secured at their hind legs to said top, and a lever mechanism secured to said animals and the pivoted lever for suddenly raising and lowering the fore part of said animals during the operation of said motor.

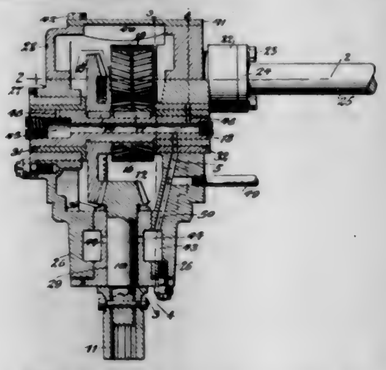
---

1,560,608. ROOF. ROBERT R. RICHARDSON, Glendale, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed Dec. 3, 1924. Serial No. 753,589. 3 Claims. (Cl. 108—9.)

1. A roof formed of composition shingles of substantially uniform thickness laid in courses, said shingles having greater length in one direction than the other, and the courses formed by rows of shingles set lengthwise of the slope of the roof, alternating with rows set crosswise of the slope of the roof, with the lower edges of the rows set lengthwise, co-inciding with the lower edges of the rows set crosswise, and the rows set crosswise overlapping the upper ends of the rows set lengthwise.

---

1,560,609. DRIVING MECHANISM. EARL H. SHERBONDY, Cleveland, Ohio, assignor to Charles A. Criqui, Buffalo, N. Y. Filed Feb. 7, 1924. Serial No. 691,084. 2 Claims. (Cl. 74—7.)

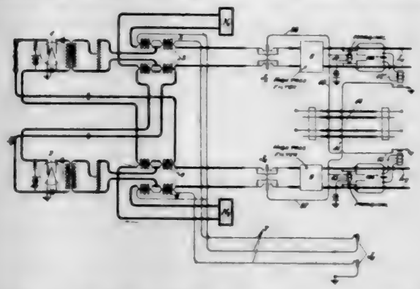


1. A driving mechanism comprising a driving shaft, an intermediate counter shaft arranged at right angles to said driving shaft, intermeshing gear wheels mounted respectively on said driving and counter shafts, a plurality of driven shafts arranged parallel with said counter shaft, a driving gear wheel mounted on said counter shaft, driven gear wheels arranged respectively on said driven shafts and meshing with said driving gear wheel, and a housing enclosing said gear wheels and provided with bearings in which said shafts are journaled, and said housing being divided on a plane extending through the axis of said counter shaft.

---

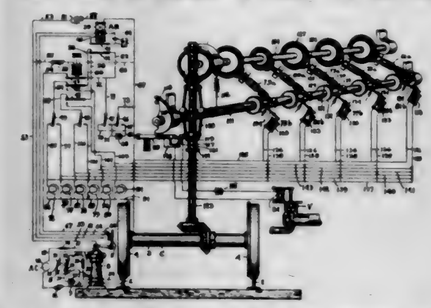
1,560,610. SUPERVISORY CIRCUITS. HUGH F. SHOFFSTALL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,695. 7 Claims. (Cl. 179—171.)

1. The combination with a repeater circuit comprising supervisory windings on the output transformers of the repeater, and monitoring jacks associated with said windings; of a supervisory circuit comprising switching means for connecting said supervisory circuit with said jacks, an operator's talking set, a talking key, and an inequality ratio repeating coil associated with said talking set, said coil being operatively connected with said talking set by the operation of said key.



---

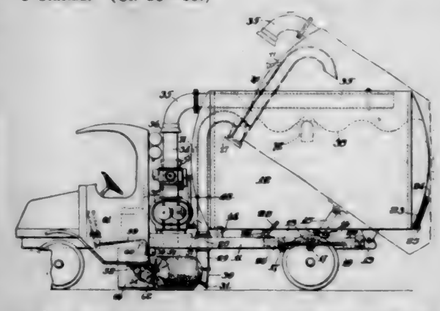
1,560,611. SPEED-CONTROL SYSTEM FOR VEHICLES. PAUL J. SIMMEN, Eden, N. Y. Filed Apr. 21, 1921. Serial No. 463,328. 18 Claims. (Cl. 246—182.)



12. In a system of speed control for vehicles, speed control mechanism including an operating shaft, unit gear connections driven thereby, certain of said gear connections being geared to said shaft at different ratio from the other connections and means responsive to particular circuit conditions in the vehicle for selecting and establishing the operation of a particular gear connection.

---

1,560,612. MEANS FOR STREET CLEANING. MIRABEAU SIMS, Philadelphia, Pa., assignor to J. A. Horner, Bath, Pa. Filed Jan. 6, 1920. Serial No. 349,790. 4 Claims. (Cl. 15—19.)

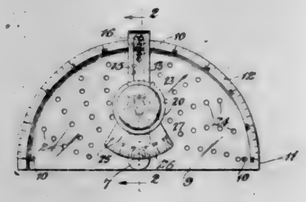


3. In street cleaning apparatus, the combination of a vehicle, a tank supported thereon, a suction nozzle and

means connecting the same with the tank, an exhauster connected with the tank, said exhauster comprising a rotor, an internal combustion engine for driving said rotor, and means for communicating the heat from the engine exhaust to the path of travel from nozzle to tank, as and for the purpose described.

---

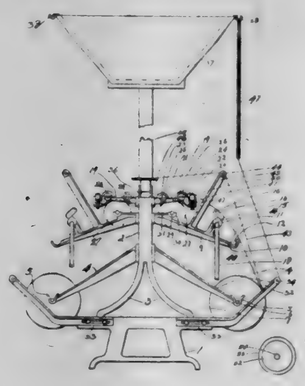
1,560,613. VERNIER DIAL. MARCOS SINGER, Yonkers, N. Y. Filed Dec. 20, 1924. Serial No. 757,110. 6 Claims. (Cl. 74—7.)



3. In a vernier dial, a main dial plate adapted to be fixed to a panel and provided with an off-set flange having calibrations thereon, an arm fixed at one of its ends to a part to be adjusted and having its other end slidably engaged with said flange and provided with an index spur moving over the calibrations thereon, a vernier dial plate adjustable longitudinally along said arm and rotatable with respect thereto, and means for imparting a further adjustment to said arm upon said first named dial in the rotation of said vernier dial plate.

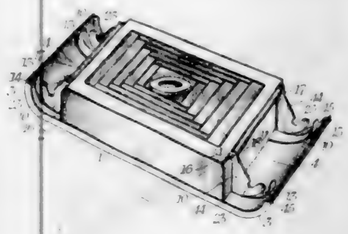
---

1,560,614. MACHINE AND PROCESS FOR RECLAIMING SILK. CHARLES A. SNYDER, Philadelphia, Pa. Filed July 2, 1923. Serial No. 648,941. 3 Claims. (Cl. 28—17.)



1. A silk reclaiming machine comprising in combination a frame; an unraveling drum; a shaft upon which said drum is mounted; open bearings carried by the frame in which said shaft is journalled; a tray mounted upon the frame; an absorbent strip located in said tray and projected beyond the edge of the same; a steam chest one surface of which is adapted to iron a thread drawn thereover; a winding drum; means to revolve said drum by friction; a guide interposed between the steam chest and said winding drum; a second winding drum; and means for revolving the last named drum by friction.

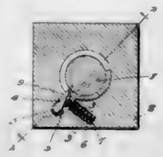
1,560,615. SPOOL HOLDER FOR CAMERAS. CHARLES F. SPEIDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,860. 6 Claims. (Cl. 242—71.)



1. In a photographic roll holder, the combination with spaced spool supporting members including hooks having slots to receive the ends of a film spool, of spring members adapted to press upon the flanges of a spool to hold the ends of the film spool in the hooks.

---

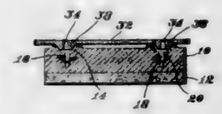
1,560,616. NUT LOCK. ROSWELL G. STALLARD, Centralia, Wash. Filed Mar. 18, 1925. Serial No. 16,490. 1 Claim. (Cl. 151—25.)



In combination with a threaded bolt and a nut thereon having a substantially V-shaped recess in its outer side disposed radially, with its enlarged end in communication with the bolt opening, and having a socket leading from a side of the recess and opening through the outer side of the nut, opposite longitudinal walls of the socket projecting inward to overhang the open side of the socket, of a coiled spring in the said socket, and a dog having its outer end seated against the outer small end of the said recess and pivoted therein, said dog engaging the spring and having its sides forwardly converged and its extremity rearwardly beveled to form a wedge-shaped point having opposite edges to bite into the walls of adjacent threads of the bolt.

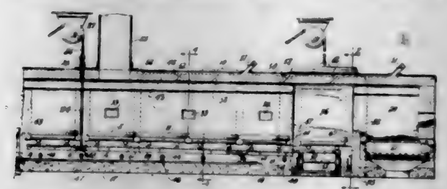
---

1,560,617. METHOD OF AND MEANS FOR ATTACHING ELASTIC HEELS TO BOOTS OR SHOES. SAMUEL STANICK, Marlboro, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 24, 1921. Serial No. 480,056. 16 Claims. (Cl. 1—36.)



1. A method of attaching elastic heels containing washers, consisting in first forcing the washers into predetermined, fixed, relative positions, and then driving heel attaching fastenings through the holes of the washers thus positioned.

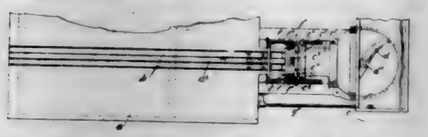
1,560,618. BRICK-TREATING APPARATUS. ENOCH P. STEVENS, Chicago, Ill.; Mary Ann Stevens executrix of said Enoch P. Stevens, deceased. Filed Oct. 26, 1922. Serial No. 596,027. 9 Claims. (Cl. 25—142.)



1. Apparatus of the character described comprising a heating tunnel for loaded cars with means for maintaining a flow of heating medium therethrough; and a discharge and cooling chamber for the cars opening laterally from said tunnel at its hotter end.

---

1,560,619. MACHINE FOR CUTTING BUTTER AND THE LIKE. RICHARD F. STEWART, Briarcliff Manor, N. Y. Filed Nov. 4, 1924. Serial No. 747,834. 9 Claims. (Cl. 31—14.)

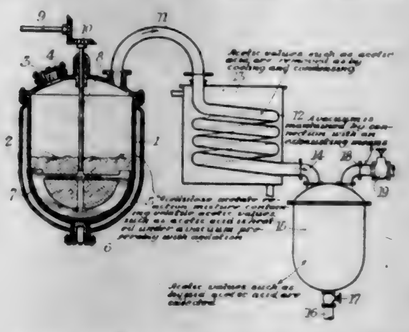


2. In a machine for cutting material of the nature described, a hopper to receive the material in bulk, a discharge chute leading from the hopper, an arm adapted to move into the mouth of the chute and a revolving paddle to oscillate the arm into and away from the mouth of the chute.

6. In a machine of the character described, devices for discharging, cutting and conveying material in a straight line, including a discharge chute, a vertically reciprocating cutter mounted in proximity to the chute, conveyor means onto which the material is discharged for cutting and means engaged by the discharged material to initiate operation of the cutting and conveying devices.

---

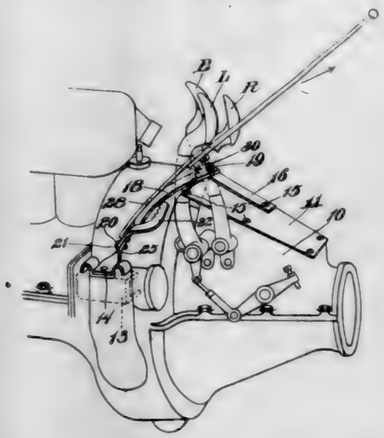
1,560,620. PROCESS OF MANUFACTURING CELLULOSE ACETATE. ALBERT F. SULZER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 28, 1925. Serial No. 5,396. 6 Claims. (Cl. 260—102.)



1. In the process of manufacturing cellulose acetate, the steps of heating, under a vacuum, a cellulose acetate reaction mixture containing volatile acetic values to evolve vapors of said values at a temperature below the one at which the cellulose acetate is degraded, and removing and liquefying said vapors.

---

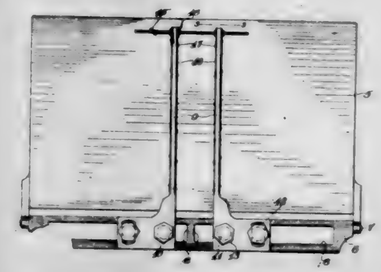
1,560,621. TRANSMISSION-PEDAL CONTROL. JOHN J. SWANSON, Elgin, Nebr. Filed July 30, 1925. Serial No. 47,059. 5 Claims. (Cl. 74—81.)



1. In combination with a transmission including a pedal oscillatable in a vertical plane, the oscillation of the pedal to one extreme of its movement being variable, a spring tending to return the pedal from the last named position, a latch pivotally supported from the transmission housing to swing in a horizontal plane, said latch having a pedal engaging face provided with notches for the reception of the pedal, said pedal engaging face being spirally disposed to the pivot of the latch, means likewise supported from the transmission casing oscillatable in a substantially vertical plane at right angles to the plane of movement of the pedal for shifting said latch into pedal engaging position and a spring operatively engaged with the latch for moving the latch to position where the pedal is released.

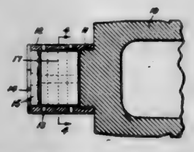
---

1,560,622. PERFORATING AND SCORING ATTACHMENT FOR PRINTING PRESSES. MORRIS TEPPER, Chicago, Ill. Filed Dec. 11, 1924. Serial No. 755,271. 6 Claims. (Cl. 164—98.)



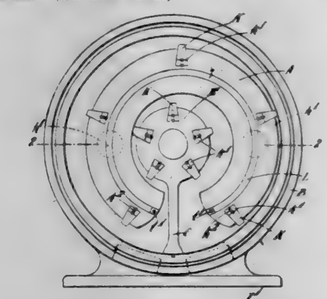
1. A scoring and perforating appliance for platen presses comprising a bar carried by the gripper carriage, and a scoring or perforating blade attachable to either side of such bar.

1,560,623. CARTRIDGE FOR PROJECTILES. HAROLD G. TOWNER, New Haven, Conn. Filed June 30, 1924. Serial No. 723,291. 4 Claims. (Cl. 102—12.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



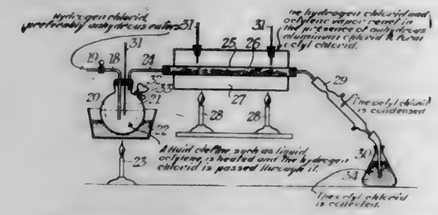
1. A cartridge for projectiles including a perforated shell and a plurality of powder rings within the shell.

1,560,624. PUMP, ENGINE, AND THE LIKE. CROMWELL HAMFORD VARLEY, Chilworth Hill, near Guildford, England. Filed Nov. 6, 1923. Serial No. 673,071. 9 Claims. (Cl. 103—131.)



1. An engine or pump of the kind set forth comprising a displacer, means for imparting a paracyclic movement to said displacer, a hollow casing surrounding said displacer and forming a working face for the exterior face thereof, a central web on said casing which constitutes a working face for the rear side of said displacer, and a cover plate detachably connected to the casing which forms a working face for the front of said displacer.

1,560,625. PROCESS OF MAKING ALKYL CHLORIDES. WILLIAM R. WEBB, Rochester, N. Y., assignor, by mesne assignments, to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Filed July 18, 1924. Serial No. 726,861. 10 Claims. (Cl. 260—166.)

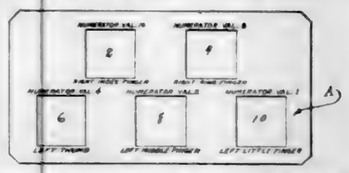


1. The process which comprises the step of reacting upon an olefin with hydrogen chloride in the presence of aluminum chloride until an alkyl chloride is produced.

1,560,626. PROCESS FOR THE MANUFACTURE OF HIGH-PERCENTAGE, NONDECOMPOSABLE, DURABLE SOAP. ADOLF WELTER, Krefeld-Pzeinhafen, Germany. Filed Jan. 8, 1923. Serial No. 611,500. 3 Claims. (Cl. 87—5.)

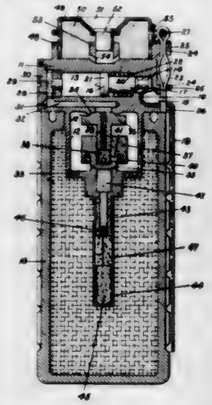
1. A process for the manufacture without the addition of water of non-decomposable soap of high fatty acid content, by mixing at the temperature of the approximate melting point of the fatty acids, a measured quantity of water free alkaline carbonate with commercial fatty acids, said measured quantity being approximately double the quantity required for the complete saponification of said fatty acid, and said excess of alkaline carbonate being approximately the quantity necessary for the absorption by said excess of all the carbon dioxide resulting from said saponification whereby a soap is formed containing a substantial excess of the bicarbonate of said alkali and approximately no stronger alkaline impurities than said bicarbonate of soda.

1,560,627. PRIMARY CLASSIFICATION PLATE. MARCEL J. WIABT, Ogden, Utah. Filed Mar. 30, 1923. Serial No. 628,932. 2 Claims. (Cl. 35—12.)



1. A finger print apparatus comprising a card having finger print impressions thereon and arranged in horizontal rows and a plate adapted to be positioned upon the card and having openings adapted to be moved into register with the finger print impressions upon the card.

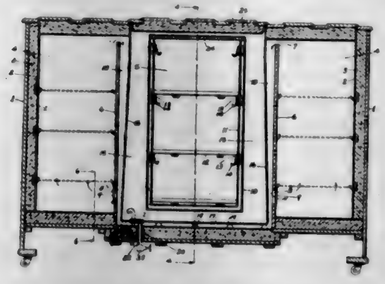
1,560,628. GRENADE. SAMUEL WILEY, Metuchen, N. J. Filed July 21, 1924. Serial No. 727,332. 15 Claims. (Cl. 102—29.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A combination hand and rifle grenade including a body, a bouchon for closing said body, a striker in the bouchon, a lever for holding the strike in cocked position, a pin for locking said lever, a breech cap carried by the bouchon, a propellant powder within the cap and a bracket secured to the cap for receiving the locking pin whereby the same is extracted from the lever when the propellent charge is exploded.

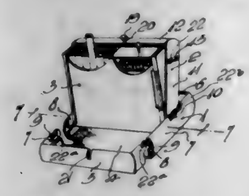
1,560,629. REFRIGERATOR. WILLIAM P. WILLSON, Arlington, Vt., assignor to William E. Kidder, Kalamazoo, Mich. Filed Aug. 20, 1923. Serial No. 658,474. 2 Claims. (Cl. 62—68.)

2. A refrigerator comprising a casing, a provision chamber at each end of said casing, a refrigerating chamber disposed centrally within said casing, and a U-shaped refrigerant chamber comprising side and bottom walls disposed in spaced relation to the side and bottom walls of said refrigerating chamber, said provision chambers each being provided with an inner wall disposed



in spaced relation to the side walls of said refrigerant chamber providing unobstructed air passages, there being circulating openings in the top and bottom of said provision chamber inner walls, such inner walls being otherwise imperforate.

1,560,630. COLLAPSIBLE CASE. ARTHUR H. WOLFE, Philadelphia, Pa., assignor of one-half to Durward A. Wolfe, Grand Rapids, Mich. Filed Oct. 16, 1924. Serial No. 744,011. 3 Claims. (Cl. 206—38.)



1. A device of the class described comprising a casing having an open upper side, said casing being provided with tracks throughout the length of two of its opposed side walls, a sheath within the casing having an open side normally disposed downwardly, said sheath having shoes engaging the aforesaid tracks and mounting the sheath pivotally and slidably in the casing, so that it may be moved out of said casing, inverted and reinserted into the casing in an inverted condition, a member movably mounted in said sheath, and means for projecting said movable member from the open side of said sheath when the latter is inverted and reinserted into the casing.

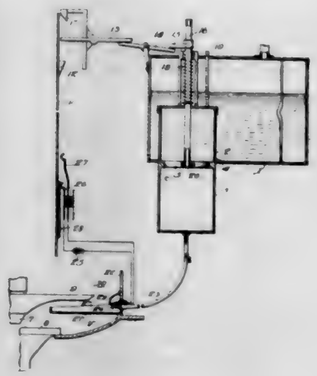
1,560,631. MOCCASIN. DONALD B. ABBOTT, Yarmouth, Me. Substitute for application Serial No. 686,286, filed Jan. 15, 1924. This application filed June 17, 1925. Serial No. 37,873. 4 Claims. (Cl. 36—47.)

1. A moccasin, the vamp portion of which on its under side has a curved seam extending longitudinally of the vamp from its rear edge toward the ball portion of the vamp and another curved seam in front of that first mentioned which extends crosswise of the vamp.

1,560,632. MOCCASIN. DONALD B. ABBOTT, Yarmouth, Me. Substitute in part for abandoned application Serial No. 686,286, filed Jan. 15, 1924. This application filed June 17, 1925. Serial No. 37,874. 4 Claims. (Cl. 36—47.)

1. A moccasin vamp having in its underside a seam of general L-shape extending from the rear edge of the vamp to a point near the ball portion of the vamp.

1,560,633. IGNITING DEVICE FOR FURNACES. ADOLPHUS M. ALLEN, Minneapolis, Minn. Filed Oct. 8, 1921. Serial No. 506,437. 3 Claims. (Cl. 175—115.)



1. An igniter for a furnace comprising a supply receptacle for readily inflammable liquid fuel, a metering chamber in constant communication therewith through a relatively small orifice, a receiving chamber below the metering chamber with a relatively large orifice affording communication between said chambers, and a valve controlling it, an open trough or pan in the furnace connected with the receiving chamber and electrical igniting means associated with the pan, together with means for simultaneously energizing the electrical igniter and opening the valve for releasing a charge of liquid fuel from the metering chamber.

1,560,634. STITCHED BUTTONHOLE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 15, 1923. Serial No. 680,832. 8 Claims. (Cl. 112—264.)

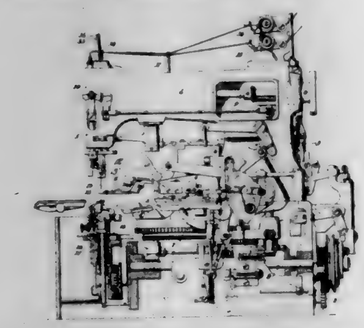
1. A stitched buttonhole comprising a fabric having an overseam including upper thread means formed into four laterally spaced rows of loops passing through to the under face of the fabric, and a pair of under threads

extending along the margins of the overseam and formed into loops each of which passes through a loop of upper

thread in each of the two adjacent rows and embraces a loop of upper thread in each of the two remote rows.

---

1,560,635. BUTTONHOLE-SEWING MACHINE. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 15, 1923. Serial No. 680,833. 6 Claims. (Cl. 112—157.)

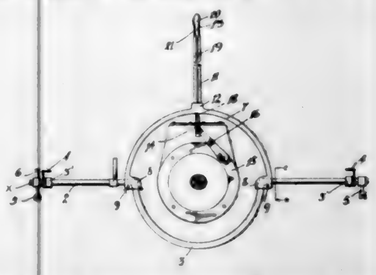


1. Overseaming stitch-forming mechanism for sewing machines comprising, in combination, upper-thread mechanism having a plurality of jogging needles fixed relatively to one another, and under-thread mechanism comprising a pair of threaded loopers each of which seizes thread-loops from both of said needles.

---

1,560,636. CENTER EMERGENCY BRAKE AND CONTROL LEVER FOR MOTOR VEHICLES. GROVER CLEAVLAND ALLEN, Joplin, Mo., assignor of one-fourth to Menzo Platner and one-fourth to Russell L. Rice, both of Joplin, Mo. Filed Sept. 29, 1924. Serial No. 740,633. 2 Claims. (Cl. 74—39.)

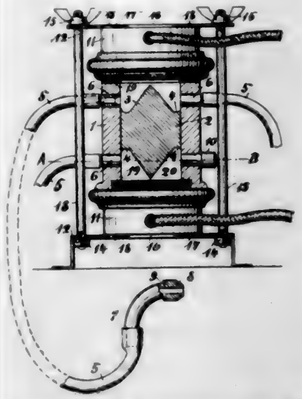
1. The combination with a motor vehicle having an emergency brake shaft, said emergency brake shaft having a portion intermediate its length formed substantially semi-annular and having substantially straight aligned portions at the opposite end, of a semi-annular member, sockets at each end of said semi-annular member arranged each to receive portions of said brake shaft including a portion of the semi-annular part and a portion of the straight part of the brake shaft, bolts projected through said sockets beyond that portion of the sockets occupied by the brake shaft, and a hand lever



carried by said semi-annular member whereby actuation of the hand lever may cause positive movement of the brake shaft.

---

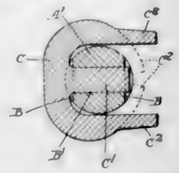
1,560,637. SOUND DISTRIBUTOR. CARL ANDERSEN and AAGE CHRISTIAN SYLVEST, Copenhagen, Denmark. Filed Aug. 13, 1924. Serial No. 731,824. 3 Claims. (Cl. 179—146.)



1. In an apparatus for reinforcing and distributing the sound from two telephones each having a diaphragm, a distributing cone facing each diaphragm, a hollow body in which said cone is arranged and fixed in front of the diaphragm of each telephone.

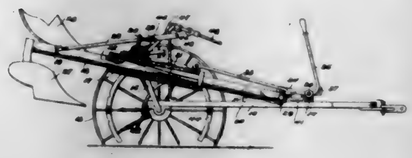
---

1,560,638. COMBINED COTTER PIN AND WASHER. MILES S. ANDERSON, Indianapolis, Ind., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 9, 1924. Serial No. 731,238. 5 Claims. (Cl. 74—8.)



4. A unit washer and cotter pin comprising a washer body, a pin projecting from said body, flexible, relatively non-resilient securing arms terminating the opposite ends of said washer body and adapted to be bent inwardly toward the outer end of the pin, said arms being substantially longer than said pin.

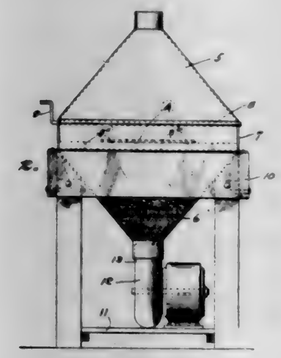
1,560,639. REVERSIBLE WHEELED PLOW. MARTIN L. ANDREWS, Millerton, Pa., assignor of one-half to Luell J. Roberts, Sabinsville, Pa. Filed July 1, 1920. Serial No. 393,247. 8 Claims. (Cl. 97—26.)



1. In a plow of the class described, a wheeled frame, a rotatable and vertically movable plow beam, right and left hand plows secured to said beam, and connections including a sleeve through which the beam extends with a sliding fit, between said beam and frame, whereby the beam may be rotated as it moves downwardly to bring either plow into operative position.

---

1,560,640. COOLING MACHINE. ALBERT H. ANTZ, San Francisco, Calif., assignor to Sierra Art & Engraving Co., San Francisco, Calif., a Corporation of California. Filed Nov. 13, 1924. Serial No. 749,719. 2 Claims. (Cl. 62—11.)

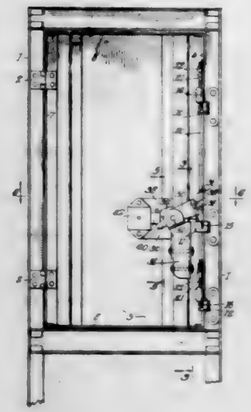


2. In a cooling machine, a chamber whose internal diameter respectively reduces in two directions from its center, means for supporting a plate in said chamber at the large part thereof, and means for causing an induced air current to flow through said chamber and to be brought into impingement first against one side of the supported plate and then against the other side thereof.

---

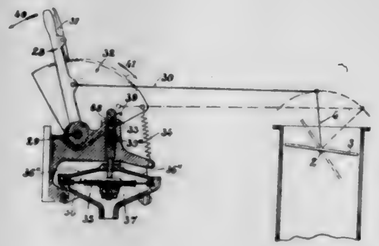
1,560,641. DOOR-LOCKING MECHANISM. JAMES E. BALES, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed June 25, 1921. Serial No. 480,282. 14 Claims. (Cl. 70—29.)

1. Door locking mechanism having a latch for locking the door, a handle on the front of the door for lifting the latch, a spring urged bolt for locking the latch in acting position, key-operated means accessible by key from the front of the door for retracting the bolt, means for preventing the bolt from locking prematurely including a dog for holding the bolt retracted, and means operated by the door frame as the door is closing for moving the dog to release the bolt.



---

1,560,642. CONTROL OF CARBURETORS. MARIUS JEAN-BAPTISTE BARBAROU, Paris, France. Original application filed Feb. 23, 1924, Serial No. 694,805. Divided and this application filed June 10, 1925. Serial No. 36,237. 1 Claim. (Cl. 123—75.)



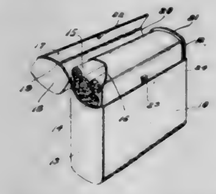
A control gear for the carburetor of an internal combustion engine comprising in combination a control member operated by the operator and operatively connected to the carburetor throttle, a pivoting sector, means for removably locking said control member in position upon said sector, an elastic membrane subjected on one face to a predetermined constant pressure and on the other face to the surrounding atmospheric pressure, means for operatively connecting said sector to said elastic membrane and yielding means for constantly urging said sector towards its position corresponding to the highest atmospheric pressure.

1,560,643. MICROPHONE BUTTON. WALTER H. BARBER, Melrose, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Dec. 15, 1921. Serial No. 522,500. 5 Claims. (Cl. 179—122.)

1. A microphone button comprising two electrodes, granular carbon located between said electrodes, and an unstretched rubber diaphragm, one of said electrodes being clamped to said diaphragm.

---

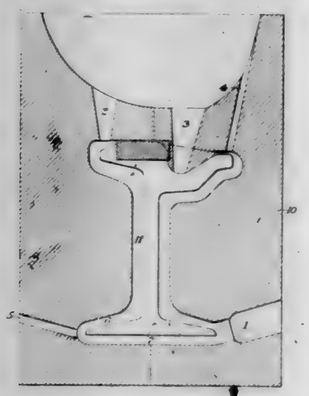
1,560,644. CIGARETTE CASING. ELI J. BEAUPRE, North Attleboro, Mass. Filed Dec. 5, 1923. Serial No. 678,608. 3 Claims. (Cl. 206—41.)



1. A sheet metal casing for cigarettes comprising a body member of a strip of sheet metal folded into U-shape in cross section forming front, bottom and back walls substantially the length of a cigarette, walls at the end of said body, and a cover hinged to said body and having a portion of one of the end walls attached thereto to expose the end of a cigarette when open.

---

1,560,645. MOLD FOR THERMITE WELDING AND THE LIKE. EDWARD F. BEGTRUP, Jersey City, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Nov. 2, 1923. Serial No. 672,316. 3 Claims. (Cl. 22—204.)



2. A mold for welding irregular sections, involving a pocket or recess in the mold cavity, said mold having a heating gate, connecting with the interior at the bottom thereof, and a vent opening connecting the pocket or recess with the exterior of the mold.

1,560,646. POWER-TRANSMITTING CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed June 14, 1923. Serial No. 645,224. 5 Claims. (Cl. 74—32.)

1. In a chain, in combination, a longitudinally slotted, hollow pivot of more than semi-circular extent, two series of toothed links pivoted thereon with links in each series the reverse of other links in the same series, and means whereby the slot is maintained facing transversely to the line of pull.

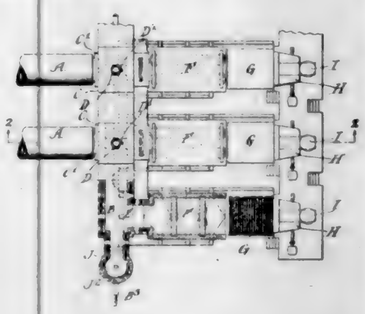
---

1,560,647. POWER-TRANSMITTING CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Company, Hartford, Conn., a Corporation of Connecticut. Continuation of application Serial No. 563,532, filed May 25, 1922. This application filed May 15, 1925. Serial No. 30,640. 20 Claims. (Cl. 74—32.)

1. A chain link containing an interrupted circular slot and a sprocket-engaging tooth, the interruption facing toward said tooth.

---

1,560,648. WASTE-HEAT PLANT AND METHOD OF OPERATING THE SAME. JOHN E. BELL, Brooklyn, N. Y. Filed Dec. 23, 1922. Serial No. 608,680. 8 Claims. (Cl. 122—7.)



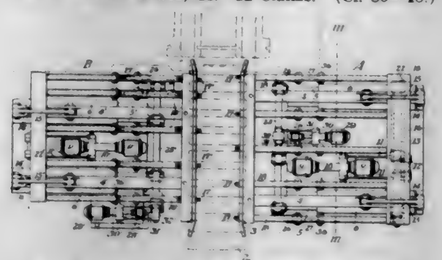
5. In a plant comprising one or more industrial furnaces each having a housing chamber into which the gases from the furnaces pass, a common flue for receiving the gases from said chambers and a plurality of waste heat boilers connected to said flue, and having draft fans for maintaining a proper draft, the combination therewith of a draft stack connected to the common flue of a height adapted to maintain a suction in the flue and furnaces equal to that normally existing therein and a capacity which will enable it to carry off excess gases in the flue when one or more but not all of the boilers and fans are not in use and a series of stacks connected one to each housing chamber through which the gases from the connected furnaces can be diverted at will.

1,560,649. PROCESS OF RECOVERING SODIUM-ACID SULPHITE FROM THE WASTE LIQUORS OF THE SODIUM-ACID-SULPHITE PULP PROCESS. JAMES BEVERIDGE, Richmond, Va., assignor to James Brookes Beveridge, Richmond, Va. Filed Dec. 12, 1924. Serial No. 755,435. 6 Claims. (Cl. 23—46.)

2. The process of treating the waste liquors from the sodium acid sulphite wood pulp process, which comprises the draining of the waste liquor from the pulp, neutralizing a portion thereof by the addition of a suitable alkali thereto, evaporating the solution thus formed, mixing a portion of unneutralized waste liquor with the concentrated product produced by evaporation, carbonizing the solution thus formed, leaching the carbonized product to remove the soluble contents thereof, and thereafter treating the solution thus produced to effect the formation of sodium acid sulphite.

---

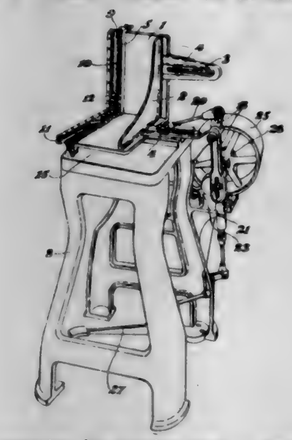
1,560,650. MANIPULATOR. FLORENCE C. BIGGERT, JR., Crafton, and LANE JOHNSON, Ingram, Pa., assignors to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 24, 1923. Serial No. 641,148. 12 Claims. (Cl. 80—48.)



1. In a manipulator, in combination with ingot feeding means, means movable transversely of and above said feeding means for engaging the ingots and shifting the same laterally on said feeding means, supporting means for said ingot engaging means supported wholly outside the area beneath said feeding means and at approximately the level of the latter and independently thereof and for straight-line movement, means for actuating said supporting means, and ingot turning means mounted for movement for independently of said first mentioned means in one direction, substantially as described.

---

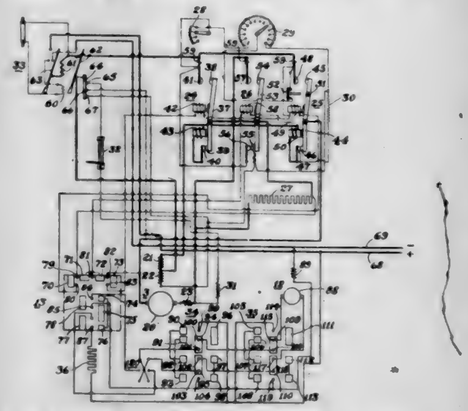
1,560,651. APPARATUS FOR USE IN COVERING CARDBOARD AND LIKE BOXES. EDWIN LESLIE BISHOP, Birmingham, England. Filed Oct. 3, 1924. Serial No. 741,489. 7 Claims. (Cl. 93—54.)



1. In apparatus for covering boxes, a box carrier, a relatively fixed wiper element, a finger carrier, fingers carried by said finger carrier, means to move said finger carrier toward and from the box carrier longitudinally with respect thereto so that the fingers pass over the wiper element and partly over the box carrier, and means to impart relative reciprocating lateral movement to the said carriers to cause the fingers to move to and from the sides of the box carrier.

---

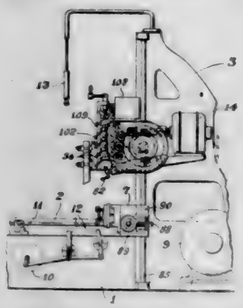
1,560,652. CONTROL SYSTEM. HAROLD L. BLOOD, North Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed May 24, 1923. Serial No. 641,164. 21 Claims. (Cl. 172—240.)



1. In a control system for a machine tool, the combination with a reciprocating member and a feed motor for feeding and traversing the tool on the machine, of means for operating said motor to effect traversing operation of the tool on the machine in either direction, means for operating the motor as a torque motor during the feeding movements of the tool in accordance with the operation of said reciprocating member, and means for stopping the motor mechanically before the end of each stroke of the reciprocating member.

---

1,560,653. MACHINE TOOL. HAROLD L. BLOOD, North Plainfield, and ROSWELL H. RAUSCH, CHARLES W. JENSEN, and HARRY LITTLE, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 9, 1923. Serial No. 650,421. 54 Claims. (Cl. 90—49.)

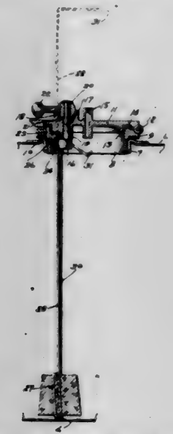


50. A tool operating mechanism for planers or the like comprising in combination, a pair of uprights, a cross rail thereon, an electric motor, means for moving the rail on the uprights from the motor, means for clamping the rail to the uprights, a tool support, means including clutch means for feeding and traversing the support from the motor, a switch for controlling the continuous opera-

tion of the motor for moving the rail and traversing the tool support, means preventing such operation of the switch when the motor is connected to the tool support for feeding, and means operative to disconnect the feeding connection to the motor and to render the switch so operative when either unclamping the rail from the uprights or engaging the clutch means for traversing the tool support.

---

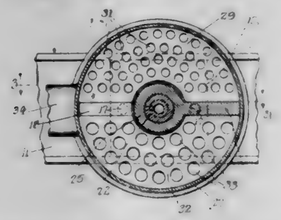
1,560,654. CLOSURE CAP AND LOCK FOR FILLER NECKS AND THE LIKE. MARTIN H. BREDE, Minneapolis, Minn. Filed June 28, 1923. Serial No. 648,259. 1 Claim. (Cl. 220—55.)



The combination with a filler cap having a sleeve-like body, and a cover hinged to said body, of a clamp-acting latch for holding the cover closed including a fixed internal latch member on said body, a shaft, said cover having a bore extending therethrough and in which the shaft is turnably mounted, the outer end of said bore being expanded to form a spherical seat in the top of the cover, said shaft having on its outer end a handle-equipped spherical head mounted in said seat, and an eccentric latch member on the inner end of the shaft arranged to be moved into and out of engagement with the fixed latch member by the turning movement of the shaft, one of said latch members being provided with a cam-acting surface.

---

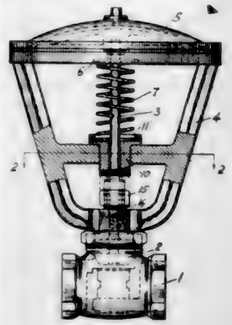
1,560,655. SHOCK ABSORBER. HERBERT M. BREWSTER, Chicago, Ill. Filed May 4, 1925. Serial No. 27,625. 6 Claims. (Cl. 267—8.)



1. A shock-absorber comprising in combination, an apertured block designed for application to the frame of a vehicle, a disc apertured in register therewith, a dowel-pin connection means between said disc and block to prevent turning of the disc relative to the block, an abutment rigid with and outstanding from said disc, a bolt holding said disc to said block, a shell member having a hub oscillatory on that part of the bolt outwardly beyond said disc, an abutment on and movable with said shell member, resilient cushions between opposite faces of said shell abutment and said disc abutment, said cushions being of different compressive capacities, and means to connect said shell member to an axle of the vehicle to turn such member when said frame and axle change relative positions.

---

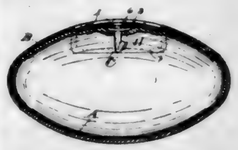
1,560,656. DIAPHRAGM VALVE. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 22, 1923. Serial No. 664,275. 1 Claim. (Cl. 137—139.)



A diaphragm valve construction comprising a valve casing, a diaphragm, a supporting spider for the diaphragm, a cross-bar on the spider intermediate said casing, and said diaphragm, said cross-bar having an aperture therein, a valve stem extending through the spider and said aperture, a spring surrounding the valve stem between said diaphragm and said cross-bar, a plug threaded in said aperture forming a seat for said spring and adapted to adjust the same, said cross-bar being split into said aperture to provide a clamp for securing said plug in an adjusted position.

---

1,560,657. FOOTBALL. FRANK A. BUECHNER, Battle Creek, Mich. Filed July 11, 1925. Serial No. 42,966. 7 Claims. (Cl. 273—65.)

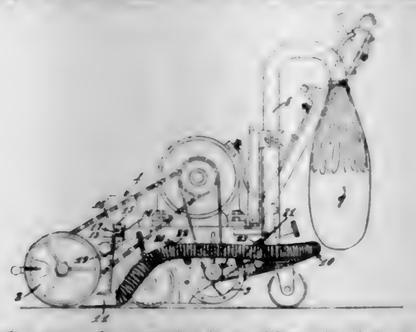


1. In an article of the class set forth, the combination with a casing having an opening capable of closure along contiguous edges, an inner closure flap attached to said casing adapted to cover said contiguous edges, an inflatable ball adapted to be received in said casing, said closure flap having a valve-stem hole with marginal slits, said ball having an internally-extending valve stem with an outer-extending neck portion having an end rim, said neck and rim adapted to pass through said valve-stem hole and marginal slits, with said end rim seating on said closure flap, and said casing adapted to be closed over said valve neck rim.

---

1,560,658. ATTACHMENT FOR FLOOR SURFACERS. WILLIAM S. BULL, Greentown, Ind. Filed Mar. 26, 1924. Serial No. 702,079. 3 Claims. (Cl. 51—176.)

1. The combination with a floor surfacing machine having a fan housing and an edge sanding roll; of a flexible pipe having a dust pan at one end to be positioned adjacent said roll, the other end of said pipe being detachably engaged with the fan housing, said pipe



having means for mounting it on either side of the machine to adapt it for connection with either end of the roller when at either end of the main drum.

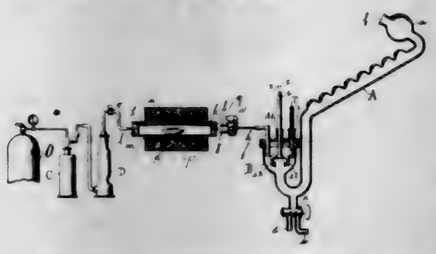
---

1,560,659. CLEANSING AND POLISHING COMPOUND. ETTA M. BURKET, Bangor, Me. Filed Mar. 7, 1925. Serial No. 13,913. 1 Claim. (Cl. 51—280.)

A cleansing and polishing compound comprising rouge, precipitated chalk, floated pumice, water, and whiting in the proportions specified.

---

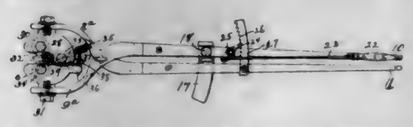
1,560,660. GAS ANALYZING METHOD AND APPARATUS. JOHN R. CAIN, Washington, D. C., dedicated to the People of the United States of America. Filed June 3, 1919. Serial No. 301,484. Renewed Apr. 1, 1925. 26 Claims. (Cl. 23—232.)



1. The method of determining the quantity of a material in a mixture which consists in determining the resistance of an electrolyte adapted to react with said material to produce a precipitate, introducing said mixture into the electrolyte and effecting a change in resistance thereof by reaction therewith, and determining the quantity of said material by said change in resistance.

---

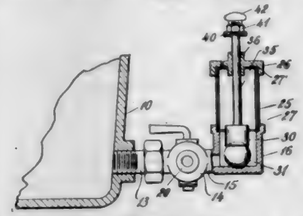
1,560,661. PUMP-ROD AND CASING HANDLING DEVICE. FRANK WILLIAM CARLSON, Oilfields, Calif. Filed June 8, 1925. Serial No. 35,815. 8 Claims. (Cl. 294—102.)



1. A device of the character described comprising a pair of members and means for moving them toward and from each other and a plurality of rollers mounted for rotation with respect to said members and mounted upon axes which are inclined with respect to each other.

---

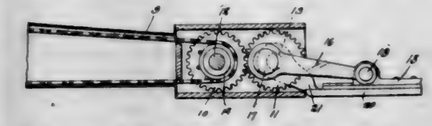
1,560,662. VISCOMETER. RICHARD G. CASEY, Melbourne, Victoria, Australia, assignor to Anthony G. M. Mitchell, Melbourne, Australia. Filed Nov. 13, 1923. Serial No. 674,438. 19 Claims. (Cl. 265—11.)



1. A device for testing the viscosity of liquids comprising a closed transparent receptacle, a conduit for conducting liquid thereto and a pair of separable elements in said receptacle having interfitting surfaces adapted to receive between them a film of liquid to be tested, and means extending through and to a position outside said receptacle for lifting one of said elements.

---

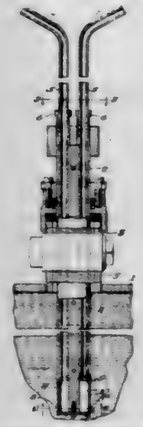
1,560,663. MOWING MACHINE. WILLIAM CASTANIE, Port Arthur, Tex. Filed Dec. 10, 1921. Serial No. 521,511. 1 Claim. (Cl. 56—264.)



In a device of the character described, a gear housing, a shaft extending through the gear housing, a gear mounted on the shaft, a sprocket on the shaft to move therewith, a shaft extending from one wall of the housing, a gear on the last mentioned shaft and meshing with the gear of the first mentioned shaft, a guard bar mounted to swing on the last mentioned shaft, a movable cutting member operating over the guard bar, a pin eccentrically mounted on the last mentioned gear, an operating rod connecting the pin and movable cutting member to transmit movement thereto, and a chain operating over the sprocket to transmit rotary movement to the gears and movable cutting member.

---

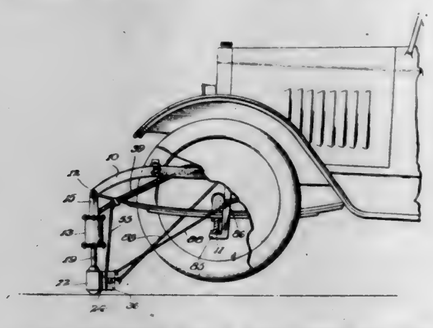
1,560,664. ROD METER. JOHN A. COLE, Chicago, Ill. Filed Dec. 20, 1923. Serial No. 681,898. 4 Claims. (Cl. 73—167.)



1. A rod meter having a sheath having its lower portion provided with up and down stream orifices, a parti-

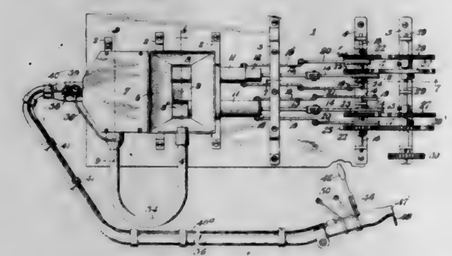
tion in the lower portion of said sheath dividing said lower portion into separate chambers communicating with said orifices, tubes insertable into said sheath, and stop devices for preventing the downward movement of said tubes below predetermined points.

1,560,665. AUXILIARY TURNING DEVICE FOR MOTOR VEHICLES. HAROLD H. COLLINS, Cincinnati, Ohio. Filed June 20, 1923. Serial No. 646,709. 5 Claims. (Cl. 180—1.)



1. The combination with a motor vehicle, of a traction unit pivotally connected with the forward end portion of the vehicle frame to swing downwardly to vertical position therebeneath and including traction wheels, means for shifting said wheels into engagement with the ground and elevating the forward end portion of the vehicle, means for turning said wheels, and means associated with the traction unit and movable to extend between the frame and the front axle of the vehicle rigidly coupling the frame therewith.

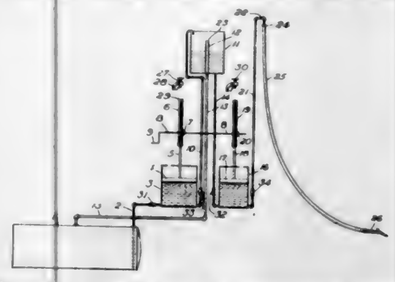
1,560,666. PLASTERING MACHINE. GEORGE J. CONRAD, Baltimore, Md. Filed May 11, 1925. Serial No. 29,595. 3 Claims. (Cl. 72—130.)



1. In a plastering machine, the combination of a hopper, a sealed chamber, a valved passage to permit plastic material to pass from the hopper to the sealed chamber and to prevent return of the plastic material from the sealed chamber, means to confine a quantity of plastic material in said passage, and means to push the thus confined plastic material from said passage into said sealed chamber, said sealed chamber having an outlet, and a feeding tube for receiving the plastic material from said outlet and conveying it to a point of delivery or application of the plastic material.

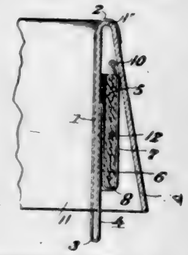
1,560,667. APPARATUS FOR MEASURING AND DISPENSING LIQUIDS. RAYMOND CROWDER, Raleigh, N. C. Filed July 31, 1923. Serial No. 654,927. 5 Claims. (Cl. 221—99.)

1. In a liquid measuring and dispensing apparatus the combination of a liquid supply: a measuring tank provided with an overflow pipe; a pump of a capacity sufficient to fill said tank until it overflows through said pipe; a drain pipe leading from said overflow pipe back to



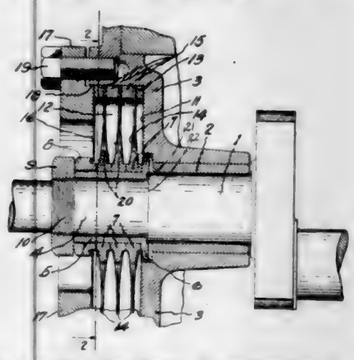
said supply; a second pump of a predetermined capacity; a pipe leading from said measuring tank to said second pump; and a pipe leading from said last named pump to the point of delivery.

1,560,668. RETAINER. ELDAD S. DELAMAR, Durham, N. C. Substitute for application Serial No. 89,976, filed Apr. 18, 1916. This application filed June 18, 1924. Serial No. 720,874. 5 Claims. (Cl. 2—156.)



1. A necktie retainer to be fitted to a collar to hold a necktie in place thereon during the knotting of the same and to be subsequently removed which retainer has a portion arranged to be received over the upper edge of the collar to aid in the holding action.

1,560,669. PACKING FOR SHAFTS. JAMES H. DENNEDY, Detroit, Mich. Filed Aug. 29, 1921. Serial No. 496,289. 7 Claims. (Cl. 286—11.)



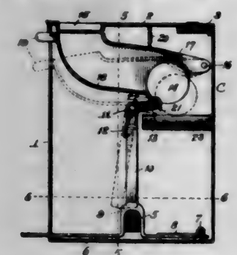
1. In a packing for shafts, in combination, a casing having a recess, a shaft extending through the said recess, a series of centrally apertured spring metal discs arranged in pairs and fitting within the said recess, a series of metal rings fitting within the recess and spacing

the pairs of discs at the periphery, a clamp member having an annular shoulder adapted to fit in the recess, means for drawing the shoulder into the recess to bind the rings and discs between the shoulder and bottom of the recess, a sleeve secured to the shaft within the recess and having an annular shoulder, a series of annular rib members seating on the said sleeve extending between and spreading each pair of discs at the center, a nut threaded on the sleeve adapted to bind the rib members between the annular shoulder of the sleeve and the said nut and a lock nut threaded on the shaft and adapted to bindingly engage the nut on the sleeve.

1,560,670. STRAIGHTENING AND STRETCHING MACHINE. GEORGE DE VRIES, Chicago, Ill., assignor to Mid-States Gummed Paper Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1922. Serial No. 579,943. 13 Claims. (Cl. 91—18.)

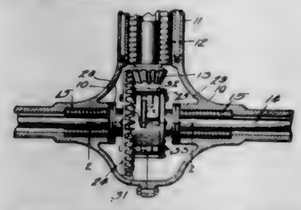
1. In a straightening and stretching machine for coated material, the combination of a breaker bar and a guide roller with means for varying the relation of said bar and roller whereby the angle of the bend produced in material drawn over said bar and roller may be varied.

1,560,671. COIN-CONTROLLED MECHANISM. AUGUST C. DITTRICH, Chicago, Ill. Filed May 14, 1920. Serial No. 381,249. 6 Claims. (Cl. 194—61.)



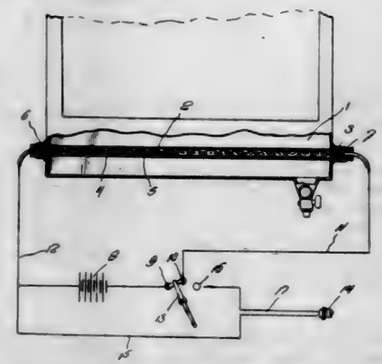
6. In a mechanism of the character described, a box carrying a lever provided with a brake extending outside the box, said box also carrying a lever provided with a coin receiving tube, and connections between the coin receiving tube and the first named lever such that when there is no coin in the tube the first named lever cannot be actuated upon the actuation of the second named lever, but when there is a coin in the tube such actuation can be caused.

1,560,672. DIFFERENTIAL. EGBERT O. DOAK, Canistota, S. Dak. Filed Sept. 17, 1924. Serial No. 738,124. 10 Claims. (Cl. 74—7.)



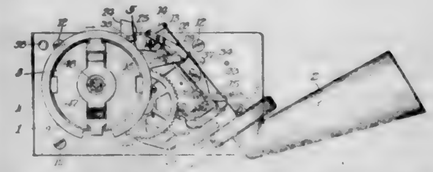
1. In a differential, driven elements and a driving element, the latter carrying two series, oppositely disposed, of power transmitting links movable alternately to positions for rotating the driven element in either direction, and means controlled by the retarding resistance to rotation of the driven elements, for simultaneously moving one series of links to operative, and the other series to inoperative position, said means including a single plate frictionally engaged between the driven elements, and projections carried by the plate engaged with the links the power transmitting links being arranged to resist disengagement from the driven element when in engagement therewith.

1,560,673. ELECTRIC HEATER FOR AUTOMOBILE RADIATORS. TIMOTHY DOLAN, Manchester, N. H. Filed June 15, 1925. Serial No. 37,286. 1 Claim. (Cl. 219—38.)



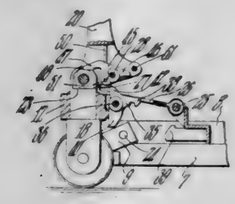
In combination with an automobile radiator, of an electric heater therefor comprising a tube extending longitudinally in the bottom header of the radiator, the ends of said tube extending through the respective sides of the radiator, and being threaded, bushings of insulated material fitted in the respective ends of the tube, a heating wire extending longitudinally through the tube and through the bushings, beads of insulated material strung on said wire for spacing the same from the inner wall of the tube, insulated closures for the respective ends of the tube, said closures being threaded on the threaded end of the tube, and means for energizing the heating wire.

1,560,674. PHONOGRAPH. EDWIN F. DRIVER, Chicago, Ill. Filed Nov. 30, 1923. Serial No. 677,735. 3 Claims. (Cl. 274—22.)



1. A phonograph comprising a support, a record holder rotatably mounted on said support, means for driving said holder, a pivoted stylus carrying arm adapted to rock laterally of said holder to permit the stylus to travel across the record in one direction and being movable toward and away from said holder for shifting the stylus into and out of engagement with the record, said arm being normally urged toward said holder, a control arm pivotally mounted on said support and adapted to coact with said stylus carrying arm for retracting the latter, said control arm being actuated by said driving means, and a restoring element slidably mounted on said support and arranged to coact with said stylus carrying arm for shifting it laterally across said holder in the opposite direction, said restoring element being actuated by said control arm.

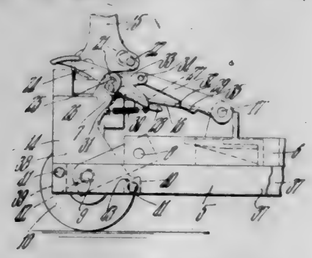
1,560,675. ELEVATING TRUCK. JAMES M. EATON, Holyoke, Mass., assignor to Edward N. White, J. Lewis Wyckoff, and James M. Eaton, all of Holyoke, Mass., trustees, doing business as Cowan Truck Company. Filed Aug. 10, 1922. Serial No. 580,909. 6 Claims. (Cl. 254—10.)



1. In an elevating truck, in combination, an elevating platform, steering and supporting wheels therefor, carrying portions for said wheels, a steering handle pivoted for vertical swinging movement, means for elevating said platform by vertical swinging movement of said handle comprising a detachable connection between the handle and the platform, separate means unconnected with the handle for locking the platform in raised position, and a dog pivoted to said handle and adapted to be rocked relatively to said handle to engage and release said locking means when said handle is swung into or is in upright position.

---

1,560,676. ELEVATING TRUCK. JAMES M. EATON, Holyoke, Mass., assignor to Edward N. White, J. Lewis Wyckoff, and James M. Eaton, all of Holyoke, Mass., trustees, doing business as Cowan Truck Company. Filed Aug. 10, 1922. Serial No. 580,910. 5 Claims. (Cl. 254—10.)

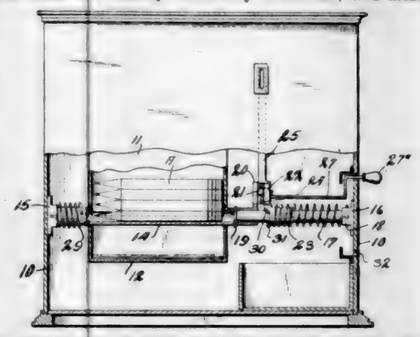


1. In an elevating truck, in combination, an elevating platform, steering and supporting wheels therefor, a steering handle pivoted for vertical swinging movement, means for elevating said platform by vertical swinging movement of said handle comprising a detachable connection between the handle and the platform, and separate means for locking the platform in raised position comprising toggle mechanism arranged to fold into toggle locking position when said platform is raised, and means for releasing said locking means comprising a pivoted treadle which is free of engagement with said toggle mechanism to actuate said detachable connection except when said platform is in raised locked position.

---

1,560,677. VENDING MACHINE. CHARLES E. ELKINS and THOMAS B. SMITH, Waco, Tex. Filed Oct. 23, 1924. Serial No. 745,438. 6 Claims. (Cl. 194—85.)

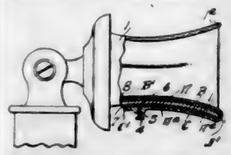
1. A coin controlled mechanism including an oscillatable member, an arm mounted upon said member, an oscillatable arm approximately confronting the first named arm, means for manually oscillating the second named arm, a coin chute, means carried by said first-named arm for receiving the coin from the chute, said coin acting as means for interlocking the two arms with each other for unitary oscillatory movement, and means



for causing the separation of the two arms when they have reached a predetermined point to thereby permit the dropping of the coin.

---

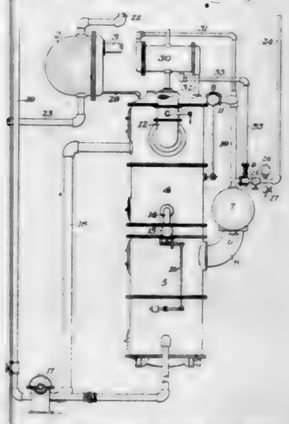
1,560,678. SANITARY ATTACHMENT FOR TELEPHONE MOUTHPIECES. CHARLES O. ELLERT, Brooklyn, N. Y. Filed July 5, 1922. Serial No. 572,954. 6 Claims. (Cl. 179—185.)



1. A sanitary attachment for telephone mouthpieces, comprising a member formed from a single piece of material or element, and having a main body portion, a resilient jaw member in engagement with said main body portion, said resilient jaw member being adapted to enlgage with a disinfectant holding means, and a screw actuated means engaging said main body portion and said mouthpiece in a manner whereby said body portion is detachably locked against displacement upon the periphery of said telephone mouthpiece.

---

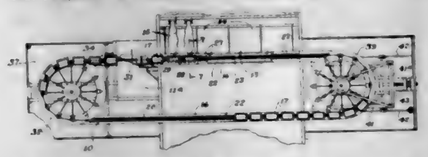
1,560,679. WATER HEATING AND CIRCULATING SYSTEM. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed July 2, 1921, Serial No. 482,279. Renewed Mar. 18, 1924. 26 Claims. (Cl. 137—79.)



25. The combination in a hot water heating and circulating system, of a steam-heated water heater, a condenser, an ejector connected to the condenser, an auxiliary condenser, and a connection between the auxiliary condenser and the discharge of the ejector, substantially as described.

---

1,560,680. STABLE CLEANER. JOSEPH SANTOS FERNANDES, Hartford, Conn. Filed Aug. 19, 1924. Serial No. 732,993. 8 Claims. (Cl. 198—149.)



2. In a stable cleaner, a stable having a trench, cars operated in said trench, flanges on said trench covering the spaces between the opposed sides of the trench and cars, a cover at one end of a car for bridging the space between said end and the adjacent car and provided with spring actuated means tending to open said cover, and said flanges cooperating with said cover to hold the same closed.

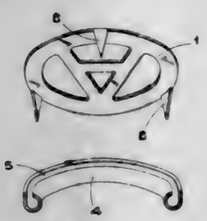
---

1,560,681. GREASE CONTAINER. ARTHUR COOK FISHER, North St. Paul, Minn. Filed Nov. 4, 1921. Serial No. 512,838. 3 Claims. (Cl. 206—56.)

1. A container comprising a plurality of sections yieldably secured together to form a tubular body portion, said sections being spirally wound and means for securing the ends of said sections to the body thereof across only a portion of the width thereof.

---

1,560,682. IDENTIFICATION DEVICE OR DISK TO BE ATTACHED TO HAND BAGS OR OTHER GOODS OF LEATHER OR LIKE MATERIAL. WILLIAM EDWARD FINEGAN FITZGERALD and THOMAS BOTTOM, Birmingham, England. Filed Feb. 10, 1925. Serial No. 8,252. 1 Claim. (Cl. 40—25.)

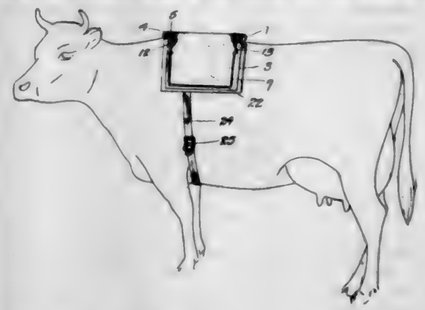


An identification device comprising a disk-shaped plate having prongs adapted to penetrate and project through a part of an article, for attachment thereto, and a ring-shaped securing member of trough-shaped section having a vertical outer wall and a substantially semicircular inner wall forming a continuation of the said outer wall and adapted to receive the projecting parts of said prongs and to bend the points thereof inwardly and into substantially semicircular form.

---

1,560,683. INSECT SHIELD FOR ANIMALS. JOEL Y. FOLEY, Linden, Mo. Filed May 15, 1924. Serial No. 713,448. 3 Claims. (Cl. 43—115.)

3. A device of the class described, comprising a center bar, two independently movable shields hinged to the center bar and located on opposite sides thereof, spring loops on opposite sides of the center bar for holding fly



paper upon the shields and a girth for securing the center bar to the animal.

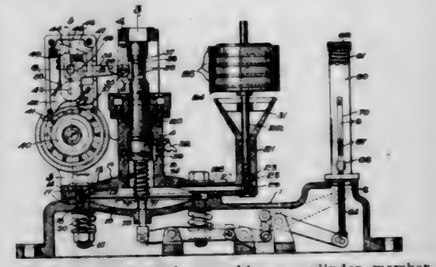
---

1,560,684. RADIO HORN. HUGO GERNSBACK, New York, N. Y. Filed Oct. 27, 1922. Serial No. 597,372. 1 Claim. (Cl. 181—27.)

An amplifying horn for radio receiving sets comprising a substantially semi-spherical body having its outlet end disposed in a vertical plane and having its upper half struck on a greater arc than its lower half, an outwardly directed flange formed on the edge thereof, an inwardly extending lip of arcuate form in cross section disposed in the lower portion of the body forming in connection therewith a volute passageway, the lip having formed directly therein a telephone receiver concavity for permitting the receiver to be disposed in a vertical plane for communication with the volute passageway, and a hollow base formed on the lower surface of the body to space the body from a support, the base having an opening therein communicating with said concavity, as and for the purpose specified.

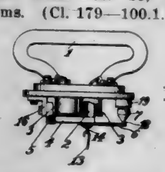
---

1,560,685. IMPACT-TESTING APPARATUS. GEORGE H. GILMAN, Boston, Mass. Filed Aug. 23, 1920. Serial No. 405,501. 42 Claims. (Cl. 265—13.)



1. In an impact testing machine, a cylinder member, a plunger in said cylinder member, a diaphragm, a base, means clamping said diaphragm to said base and supporting said cylinder member, a fluid body interposed between said plunger and diaphragm, and means responsive to motion of said diaphragm for registering a measure of the impact imparted to said plunger.

1,560,686. RECORDING PHONOGRAPH. RUDOLF HASE, Berlin, Germany, assignor, by mesne assignments, to Naamlooze Vennootschap Finanzieele Maatschapij "Driebergen," Amsterdam, Netherlands, a Company of The Netherlands. Filed Feb. 18, 1921. Serial No. 446,201. 6 Claims. (Cl. 179—100.1.)

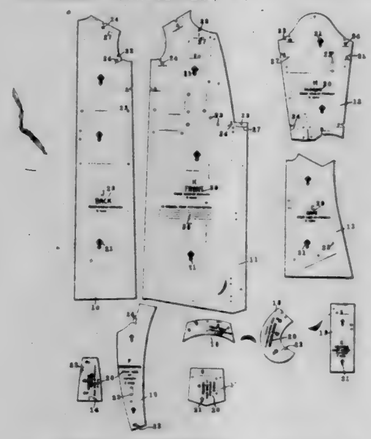


1. In sound recording apparatus the combination with a magnet core of windings to carry speaking current, a bar armature adjacent the poles of said magnet, a resilient tongue rigidly secured to said armature and forming a prolongation thereof, supports, one bearing upon said armature and one upon said resilient tongue-sustaining said armature against the attraction of said magnet, an inscribing lever mechanism and a connection between said lever mechanism and said armature.

1,560,687. UMBILICAL LIGATURE. ARTHUR H. HAUBER, Chicago, Ill. Filed Oct. 2, 1924. Serial No. 741,102. 1 Claim. (Cl. 128—346.)

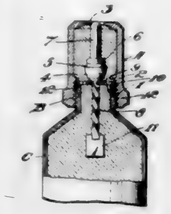
An umbilical ligature formed of a single piece of spring wire bent to provide two clamping sections tending to separate at their free ends, the end portion of one of said sections being bent up, rearwardly and then downwardly to form a loop handle at substantially right-angles to the plane of said sections, the end portion of the companion section being bent downwardly, then forwardly lengthwise the section, then upwardly and then laterally away from the loop of the other section in hook form, said hook in the closed condition of the ligature taking over the other section through said loop handle.

1,560,688. PATTERN AND PATTERN SET. MAX HERZBERG, New York, N. Y., assignor to Excella Pattern Company, Inc., New York, N. Y., a Corporation of New York. Filed July 18, 1924. Serial No. 726,695. 16 Claims. (Cl. 33—13.)



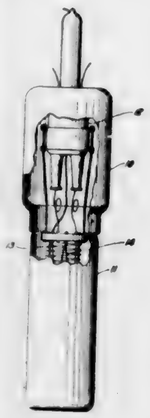
1. A pattern set, including a plurality of separate pattern sections having cut edges to be followed in cutting a finished garment portion and being provided with printed indicia at points adjacent which the garment portions are to be matched, the indicia upon different sections being of a similar character and referring to that section which is to be placed adjacent the same.

1,560,689. COMBINED OUTLET NOZZLE AND MEASURING VALVE. WILLIAM HOLT, Paterson, and RAYMOND B. HOLT, Bloomfield, N. J. Filed Apr. 4, 1924. Serial No. 704,122. 9 Claims. (Cl. 221—60.)



1. A device of the character described including a casing having an opening, a valve in said casing movable by material flowing through the casing to said opening to control said opening, and means for causing relative movement of said valve and the material toward said opening to permit a predetermined amount of said material to flow through said opening.

1,560,690. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,654. 1 Claim. (Cl. 250—27.)



An electron discharge device comprising a metallic cup-shaped anode, a cup-shaped glass member joined to said metallic member to form therewith a vacuum tight enclosing vessel, said glass member having a portion fused to the exterior of said andoe at a point removed from its endge, the diameter of said glass member being increased adjacent the edge of said anode whereby said edge is out of contact with said glass member, and an electrode supported by said glass member.

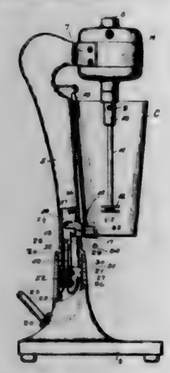
1,560,691. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1923. Serial No. 641,808. 4 Claims. (Cl. 250—27.)

6. In an electron discharge device, an insulating member, a supporting member comprising a single length of wire wound to form a resilient portion, a portion adapted to be supported by said insulating member, and a guide portion.

1,560,692. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1923. Serial No. 645,053. 4 Claims. (Cl. 250—27.)

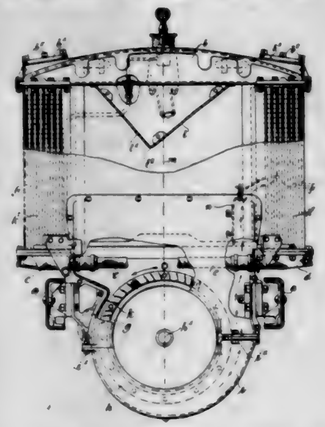
1. In an electron discharge device, a flattened cylindrical anode comprising a pair of plates, the main portions being parallel and their ends bent substantially at right angles to the main portions, the end portions of each plate being of unequal length and connected to dissimilar portions of the other plate, and a projection from each plate in alignment with the longer end and terminating in a semi-circular member, said members being joined together to form a collar.

1,560,693. DRINK MIXER. STANLEY J. JEMBRZYCKI, Chicago, Ill., assignor, by mesne assignments, to The Gilchrist Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 7, 1922. Serial No. 605,837. 16 Claims. (Cl. 259—135.)



1. In a drink mixer of the class described, the combination of a supporting standard, a motor supported at the upper end of said standard, a spindle connected with the motor armature and extending vertically downwardly in front of said standard, a mixing button at the end of said spindle, a lever structure pivoted at its inner end inside of said standard below said button and terminating in front of said standard in a shelf for receiving a container, a clip at the upper end of said standard for receiving the entrance edge of a container, an abutment on said lever structure, and circuit controlling springs inside of said standard in the path of said abutment to be controlled to close the motor circuit when a container is placed on said shelf.

1,560,694. COOLING SYSTEM. LYMAN C. JOSEPHS, Jr., and LEVERETTE H. CUTTEN, Allentown, Pa., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1922. Serial No. 573,339. 3 Claims. (Cl. 257—26.)



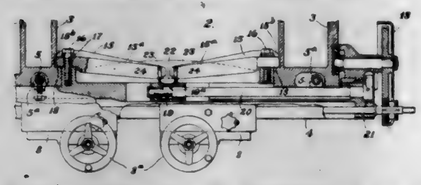
1. In a cooling system for motor vehicles in combination with a tank, radiator sections disposed vertically and connected with said tank adjacent opposite ends thereof, a multi-bladed fan mounted on the flywheel and disposed generally below and between the two sections, and means to deflect the air from the fan in substantially equal volumes over said two sections.

1,560,695. ELECTRIC WATER HEATER. WILLIAM KIGER, St. Louis, Mo. Filed Jan. 24, 1925. Serial No. 4,458. 1 Claim. (Cl. 219—41.)

An electric water heater comprising in combination, a ring like base, a metallic receptacle, upwardly converging arms secured at their lower ends to said ring and at their upper ends to the upper portion of the

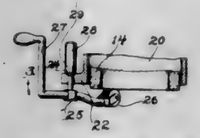
receptacle for securing the latter centrally above the ring, an electric heating unit disposed in the receptacle, and insulated therefrom, a cover detachably secured on the open upper end of the receptacle, a tubular member extending upwardly therefrom, an electric plug supported on the upper portion of the tubular member and connected to said heating element, and a handle associated with the upper end of the tubular member.

1,560,696. CLAMPING MECHANISM FOR PLANER RAILS. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1920. Serial No. 403,380. 8 Claims. (Cl. 90—37.)



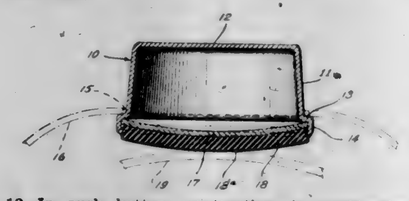
5. In a machine tool, the combination of two uprights, a cutter-supporting rail mounted for vertical sliding movement on the uprights, a clamping member mounted on the rail adjacent each upright, a rotary cam on the rail for operating the clamping members, and an equalizing member between the cam and the said clamping members whereby the clamping action of the cam is distributed equally to the clamping members against their respective uprights.

1,560,697. DRESSING ATTACHMENT FOR VERTICAL-SURFACE GRINDERS. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 24, 1922. Serial No. 596,664. 4 Claims. (Cl. 125—11.)



4. A dressing tool for grinding wheels comprising, a surfacing member adapted to engage and dress the work engaging surface of a wheel, a handle on said tool at the end of the tool opposite the surfacing member and offset therefrom, a second handle thereon positioned at an intermediate point of said tool, and means on said second handle adapted to engage supplementary means adjacent the wheel to suspend said tool whereby it may be moved about in all directions in contact with the wheel.

1,560,698. PUSH BUTTON AND ART OF MAKING THE SAME. KNUD KNUDSEN, Danbury, Conn. Filed Apr. 2, 1923. Serial No. 629,403. 21 Claims. (Cl. 200—172.)

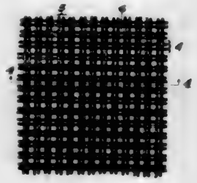


12. In push button construction, in combination, a sheet metal member formed to provide a substantially cylindrically shaped main body portion closed at one end adapted to be received within the opening of a switch casing for manual operation of a switch member therein, said member being formed to provide a laterally and circumferentially extending flange adjacent the open end of said main body portion for limiting the movement of said main body portion within said opening, a convex metallic disk member mounted upon said flange, a non-conductive convex disk member superimposed upon said metallic disk member, and means integrally formed with said flange for locking both said metallic and said non-conductive members in position.

1,560,699. WELDING MACHINE. ANDREW A. KRAMER and ALVAH M. GRIFFIN, Kansas City, Mo. Filed Nov. 9, 1923. Serial No. 673,746. 3 Claims. (Cl. 219—8.)

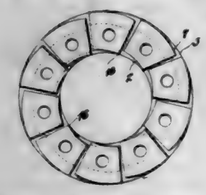
1. A welding machine comprising a main carriage, a second carriage movable across the first carriage, a drive mechanism and means for rendering the drive mechanism effective for either the first or second carriage.

1,560,700. TIRE AND TIRE FABRIC. HENRY LANGER, Middletown, Conn., assignor of one-half to The I. E. Palmer Company, Middletown, Conn., a Corporation of Connecticut. Filed Mar. 6, 1923. Serial No. 623,189. 2 Claims. (Cl. 139—426.)



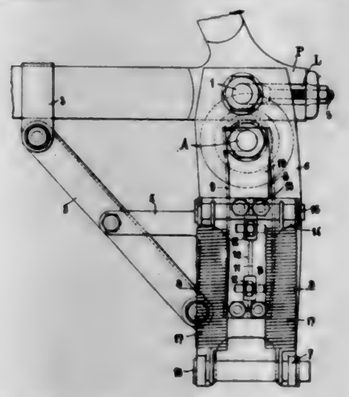
1. A woven fabric for vehicle tires comprising warp threads and weft threads substantially equal in strength and in number in any given square section of the fabric, said warp and weft threads being interwoven at right angles to each other in units of one or more threads, each warp or weft unit passing alternately over and under a like plurality of units of the thread at right angles thereto and with successive parallel units arranged to produce a diagonal or twill weave, each unit of warp or weft being spaced from the next adjacent like units to provide a multiplicity of interstices throughout the entire fabric permitting the passage of the rubber or rubber compound in forming the tire and thereby to bind the material on the opposite sides of the fabric at said multiplicity of points to produce a unified structure, said fabric being adapted to stretch uniformly in the direction of its twill, diagonally or on the bias as regards its warp and weft units, without wrinkling and whereby it may conform more readily to the circular form of the tire when applied thereto with its said line of twill extending circumferentially of the tire.

1,560,701. SLIP COLLAR FOR ROTARIES. LE ROY LAYTON, Philadelphia, Pa., assignor to Tioga Steel and Iron Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 27, 1922. Serial No. 539,554. 5 Claims. (Cl. 24—263.)



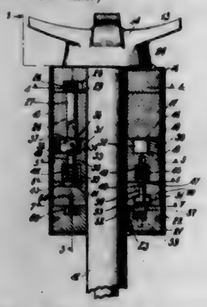
1. A multisection slip collar having slip sections mounted for independent rocking movement to present a portion of their pipe-gripping edges inwardly of their normal positions for pipe gripping purposes.

1,560,702. SPRING DEVICE FOR BICYCLES. CHARLES ALPHONSE LE CAMUS, Billancourt, France. Filed Feb. 1, 1924. Serial No. 689,989. 10 Claims. (Cl. 208—101.)



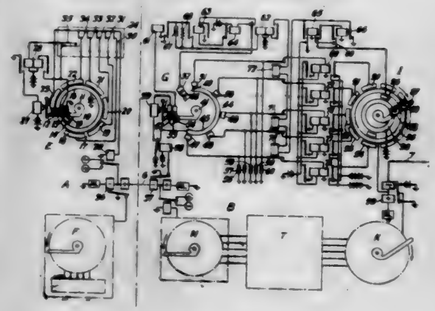
1. In spring devices for bicycles, a plate to be fixed to the fork prong, means in this plate to carry the axle of the wheel, and springs to permit adjustability of said means in said plate, in accordance with shocks due to the unevenness of the road, to absorb the same.

1,560,703. MOTION AND DIRECTION INDICATOR FOR MOTOR VEHICLES. CHARLES H. LIDDELL, Raymond, Wash. Filed Mar. 26, 1924. Serial No. 702,042. 6 Claims. (Cl. 116—36.)



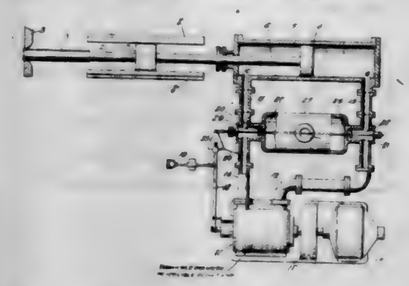
1. An operating mechanism for vehicle motion and direction indicators comprising an oscillatory disc, connected to said indicator; means whereby said disc may be moved to set said indicator; a second disc connected to the steering mechanism of the vehicle; and means for connecting said discs, whereby said second disc may move said first disc, and return said indicator to non-indicating position.

1,560,704. PRINTING TELEGRAPHY. GEORGE A. LOCKE, Maspeth, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1922. Serial No. 533,277. 7 Claims. (Cl. 178—71.)



1. In combination, a line, a distributing mechanism for distributing selecting units to said line, and electromagnetic means operatively energized operated in response to said selecting units and retained energized until the receipt of selecting units differing in character from those that caused initial operation thereof.

1,560,705. MEANS FOR CONTROLLING FLUID-OPERATED RECIPROCATING MACHINERY. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 27, 1919. Serial No. 307,163. 7 Claims. (Cl. 60—52.)

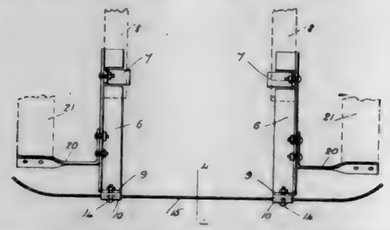


1. The combination with a member to be driven, including a piston and its cylinder, of a variable and reversible flow fluid delivery pump, fluid connections between the pump and both ends of the cylinder, and means including a reservoir having valved communications for controlling the variations in fluid volume on the low pressure side.

1,560,706. BUMPER FOR MOTOR CARS. WYETH C. MAZE, Wichita, Kans. Filed Feb. 10, 1925. Serial No. 8,255. 2 Claims. (Cl. 293—55.)

1. A bumper for a motor car comprising two stiff beams angle-shaped in cross-section and provided at one

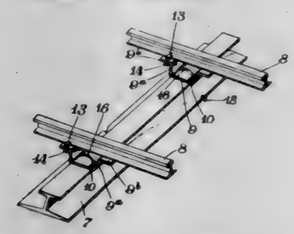
end with means for securing them to a car frame, said means having end plates at their other ends arranged



crosswise of them, and horizontal spring bumper bars secured to the said end plates.

---

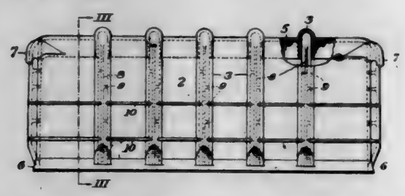
1,560,707. RAILROAD TIE. OLIVER P. MEGAHAN, New Castle, Pa., assignor of one-half to William H. Lewis, Pittsburgh, Pa. Filed June 29, 1925. Serial No. 40,170. 7 Claims. (Cl. 238—66.)



1. A chair for a railroad tie consisting of a pair of opposingly inclined resilient members and a resilient buffer member interposed between said inclined members.

---

1,560,708. ANNEALING BOX. FRÉDERICK E. MESTA, West Homestead, Pa., assignor to Mesta Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1925. Serial No. 2,142. 7 Claims. (Cl. 263—49.)

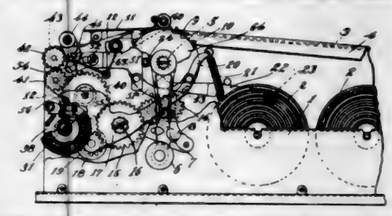


3. In an annealing box, a supporting wall having portions thereof swelled to form reinforcements, ribs extending lengthwise throughout a portion at least of some of said swells, and staggered means for tying opposite sides of said ribs to the walls on both sides of the swell, substantially as described.

---

1,560,709. MANIFOLDING MACHINE. ALBERT W. METZNER, Dayton, Ohio, assignor to John Q. Sherman, Dayton, Ohio. Filed Feb. 18, 1924. Serial No. 693,485. 11 Claims. (Cl. 282—16.)

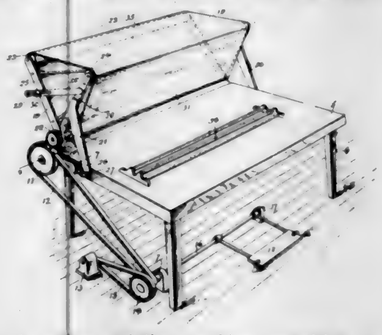
1. In a manifolding machine, the combination with a main paper feed adapted to feed a plurality of webs of paper, one of which is to be retained in the machine as a record, a rewind mechanism operated from the main feed to rewind the said retained web, a complementary feeding mechanism adapted to engage and feed said retained web after it has left the main feed, and means operated from the main feed, to inhibit operation



of the rewind mechanism and complementary feeding mechanism during a portion of each cycle of operation of the main feeding mechanism.

---

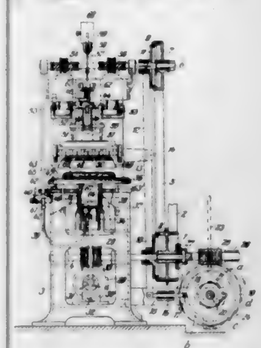
1,560,710. PATTERN-PRINTING MACHINE. HANS HENRY MEYER, New York, N. Y., assignor of one-half to Morris Katz, New York, N. Y. Filed Dec. 2, 1924. Serial No. 753,494. 3 Claims. (Cl. 101—122.)



1. A pattern printing machine comprising a table having a bed, means for moving a sheet of material to be printed upon over said bed, and printing mechanism for printing upon the moving sheet of material, said printing mechanism including an endless perforate pattern stencil, and a collapsible support for removably supporting said stencil.

---

1,560,711. DOUGH-DIVIDING MACHINE. WILHELM AUGUST HEINRICH MOHR, Halle-on-the-Saale, Germany, assignor to Herm. Bertram Hallesche Dampfbackofenfabrik Hallesche Misch- und Knetmaschinenfabrik, Halle, Germany. Filed Feb. 24, 1922. Serial No. 538,952. 12 Claims. (Cl. 107—20.)



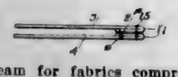
1. In a dough operating machine, the combination, with a pair of pressure members adapted to hold a batch

of dough between the same, and dough dividing means, of a crank mechanism, a pneumatic cylinder and plunger connected respectively to one of said plates and the crank mechanism, and means to operate the crank mechanism.

10. In a dough operating machine, the combination, with a pair of pressure members adapted to hold a batch of dough between the same, and dough dividing means, of a crank mechanism, a pneumatic cylinder and plunger connected respectively to one of said plates and the crank mechanism, means to operate the crank mechanism, and an automatically operated cam disk controlling the operation of said crank mechanism operating means.

---

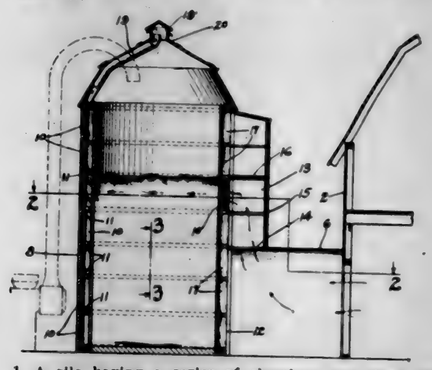
1,560,712. SEAM FOR GARMENTS. ROBERT C. NAYLOR, Dayton, Ohio, assignor to The Gem Shirt Company, Dayton, Ohio, a Corporation of Ohio. Filed July 21, 1921. Serial No., 486,559. 1 Claim. (Cl. 112—262.)



A waterproof seam for fabrics comprising a pair of fabric members and a narrow strip of waterproof material, the waterproof material being interposed between the fabric members at one edge of each, said fabric member edges and one edge of the waterproof strip being alined, a row of stitching extending through the fabric members and the waterproof strip at said alined edges, folds in said fabric members alined with the remaining edge of the waterproof strip, and a second row of stitching extending through the folds and the waterproof strip.

---

1,560,713. SILO. ERNEST NELSON, Barron, Wis. Filed Dec. 18, 1924. Serial No. 756,743. 8 Claims. (Cl. 20—1.4.)



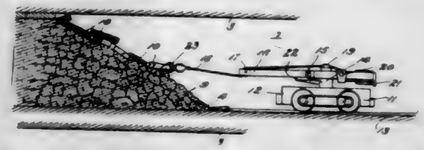
1. A silo having a series of chambers one above the other in its walls, and means for compelling currents of air to flow around the silo through any selected chamber of said series.

---

1,560,714. SECTIONAL TRACKWAY. NORTON A. NEWDICK, Columbus, Ohio, assignor to The Coloder Company, Columbus, Ohio, a Corporation of Delaware. Filed Feb. 23, 1922. Serial No. 538,700. 9 Claims. (Cl. 238—10.)

9. In a track-way, co-operating track sections, each comprising a tread portion and supporting means at the opposite edges of the tread portions, and means for movably connecting the sections at one of said supporting edge portions.

1,560,715. METHOD OF HANDLING SLATE. NORTON A. NEWDICK, Columbus, Ohio, assignor to The Coloder Company, Columbus, Ohio, a Corporation of Delaware. Filed Sept. 6, 1923. Serial No. 661,303. 4 Claims. (Cl. 262—1.)



1. The method of mining coal which consists in disrupting the natural coal vein along a working face, to produce the free pile of gatherable coal, in removing from the roof of the mine over said coal pile, the clinging stratum of draw slate which adheres to the mine roof following the disrupting of the coal vein, permitting said slate to drop down and deposit itself on the coal pile in relatively large slabs or pieces, and in removing the slate from the coal pile in the same condition as it falls, without preliminary reduction or breakage thereof on the coal pile.

---

1,560,716. CONVEYER. NORTON A. NEWDICK, Columbus, Ohio, assignor to The Coloder Company, Columbus, Ohio, a Corporation of Delaware. Filed Sept. 6, 1923. Serial No. 661,305. 2 Claims. (Cl. 198—175.)

1. In a conveyer, a chain formed to comprise a plurality of links, pivotal connections between the adjoining ends of said links permitting the chain to flex in a single plane, a pair of complemental brackets carried by a pair of adjoining pivotal connections between said links, and a material conveying flight rigidly connected with said brackets.

---

1,560,717. EYEGLASSES. ALANSON C. NOBLE, Chicago, Ill. Filed Feb. 21, 1923. Serial No. 620,325. 2 Claims. (Cl. 88—48.)

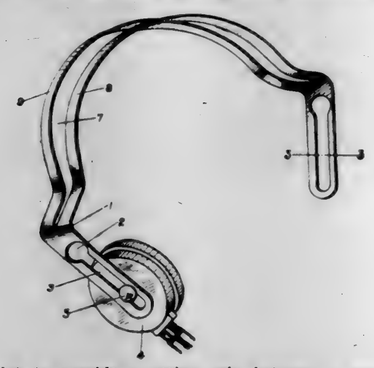
2. Eye glasses comprising lenses, a nose bar, standards and abutments on said standards in combination with pads secured on said abutments, means to yieldingly force said pads against the nose of a wearer of said eye glasses, said pads comprising faces of yielding rubber positioned to come in contact with the skin of the wearer and provided with contour lines corresponding with the face of the wearer of said eye glasses, and having an area sufficient to prevent indentations in the skin in contact therewith, and to form bases adapted to support said eye glasses.

---

1,560,718. RECEIVER HEADBAND. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Apr. 12, 1922. Serial No. 551,874. 1 Claim. (Cl. 179—156.)

In a device of the class described, a single piece head band having its ends bent inwardly and being split from a point near one bent end to the other bent end and the split portion being spread for the purpose described, said ends having means consisting of, a hole and an elongated

slot of less width than the diameter of the hole, leading from the hole, the material being bowed transversely of



the slot to provide a spring grip between a receiver back and a stud having an enlarged head fastened to the back of the receiver.

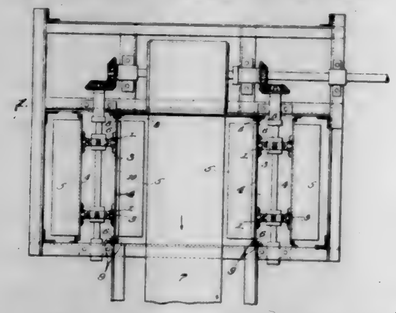
---

1,560,719. METHOD OF FORMING A CLOSED SPIRAL CHAMBER FROM SHEET METAL. JOHN OTTO OLSON, St. Paul, Minn., assignor to Spiral Radiator Company, St. Paul, Minn., a Corporation. Filed May 7, 1924. Serial No. 711,600. 5 Claims. (Cl. 113—116.)

1. The method of forming closed spiral chambers from sheet metal, which consists in cutting two sheets of the proper size to form the outer and inner walls of the chamber, placing said sheets in proper relative position one on the other, forming the same concurrently into spiral members, taking apart said spiral members, shaping the opposite edges of the outer member inwardly, shaping the opposite edges of the inner member outwardly, placing the shaped spiral members together, and securing the edges of the two members to make a tight joint.

---

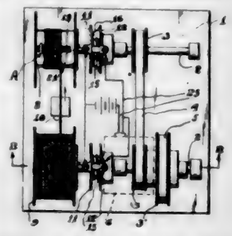
1,560,720. TRAY ELEVATOR. SAMUEL OLSON, Chicago, Ill., assignor to Samuel Olson & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1920. Serial No. 426,775. 2 Claims. (Cl. 198—163.)



1. An elevator comprising a pair of vertically traveling belts running parallel to each other and each including transversely disposed members with extending end portions extending in the plane of said members, vertical guideways engaging said end portions to steady the belts in their travel, parts on each belt projecting laterally from said plane of the transverse members toward the other belt and in horizontal registration with each other for supporting loads, and spacing blocks secured to the faces of the belts adjacent said horizontal projecting parts for the purpose indicated.

---

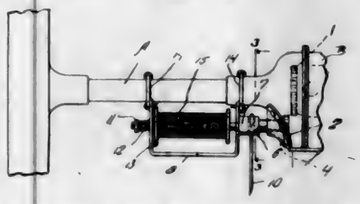
1,560,721. AUTOMATIC REEL-STOPPING DEVICE FOR RECORD-O-PHONES. HUGH P. O'REILLY, Washington, D. C., assignor to Record-O-Phone Company, a Corporation of Delaware. Filed Nov. 14, 1924. Serial No. 750,016. 7 Claims. (Cl. 242—54.)



1. In a device of the character described in combination, a reel, means for revolving the said reel when the said reel has wire thereon, and means for stopping the revolution of the said reel when the said wire is almost unwound from the said reel, the said means including a movable disk, a stationary disk, a spring pressed lever for moving the said movable disk towards the said stationary disk, a spring for normally keeping the said disks apart and means on the said disks for making and breaking an electric current.

---

1,560,722. AUTOMOBILE EXTRACTOR. RUDOLF M. PETERSON, HENRY W. SEARS, and EDGAR D. PETERSON, Kanorado, Kans. Filed Feb. 2, 1925. Serial No. 6,290. 3 Claims. (Cl. 254—166.)

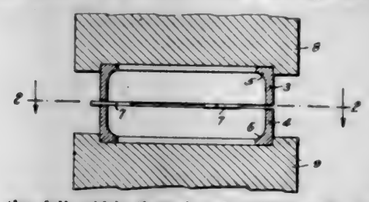


1. In a structure of the class described, a gear adapted to be fixedly mounted upon a driven axle section of a vehicle, a supporting frame, means for mounting said frame upon an axle housing of the vehicle, a shaft rotatably and slidably mounted upon said frame, spring means in association with the frame and shaft for sliding the shaft in a predetermined direction, a cable drum fixedly mounted on said shaft, manually operated cam coacting means in association with the frame and shaft for sliding the shaft in an opposite direction, the inner end of said shaft being adapted to extend through and into the differential gearing casing, and a pinion on the inner end of said shaft adapted to be moved into mesh with said gear.

---

1,560,723. PRODUCTION OF BALL RACES AND SIMILAR ARTICLES. GEORGE H. PHELPS, Warehouse Point, Conn., assignor to Thomas E. Murray, sr., Brooklyn, N. Y. Filed Sept. 9, 1920. Serial No. 409,198. 8 Claims. (Cl. 219—10.)

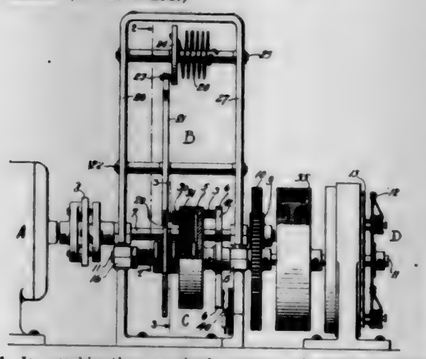
5. The method of forming a ball race which consists in forming two rings constituting component parts of the race, placing said rings with their inner edges toward each other and with metal inserts between them, said inserts arranged at intervals around said edges and cover-



ing the full width thereof and welding said rings together through said inserts, and removing projecting portions of said inserts.

---

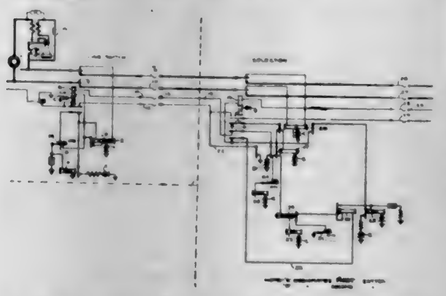
1,560,724. REGULATING SYSTEM. LOUIS M. POTTS, Highwood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1922. Serial No. 596,941. 7 Claims. (Cl. 172—293.)



1. In combination, a single source of motive power, means having a natural period of oscillation operated by power derived from said source of motive power, an element driven mechanically by power communicated thereto from said source of motive power, and means controlled jointly by said source of motive power and said first recited means for controlling the speed of the driven element.

---

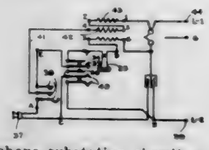
1,560,725. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,571. 16 Claims. (Cl. 179—18.)



1. In an automatic telephone system, an incoming circuit, a plurality of outgoing circuits, an automatic switch for extending said incoming circuit to any of said outgoing circuits, a motor magnet for operating said automatic switch, a plurality of separate batteries with connections therefor, means including said motor magnet, one of said batteries and one of said connections for operating said automatic switch, and means including both of said batteries and their connections for disabling said motor magnet.

---

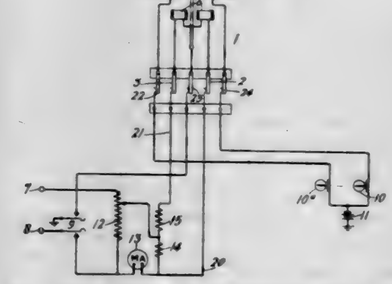
1,560,726. TELEPHONE SUBSTATION CIRCUIT. WINFRED T. POWELL, Rochester, New York, assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed July 24, 1923. Serial No. 653,466. 12 Claims. (Cl. 179—81.)



1. In a telephone substation circuit, a telephone transmitter, a receiver, a signal, a three-plate condenser, an impulse transmitter having impulse springs, a telephone line including two conductors, a signaling bridge across said conductors including said signal and two of said condenser plates, a second bridge across said line conductors including said telephone transmitter and said impulse springs, a third bridge including said receiver connected across said first and said second bridges, and a circuit including said impulse springs, said third plate and one of said first mentioned plates of said condenser.

---

1,560,727. TESTING SYSTEM. HAROLD M. PRUDEN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 23, 1923. Serial No. 614,375. 3 Claims. (Cl. 175—183.)



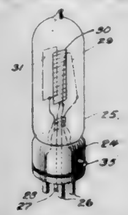
1. In a testing system, in combination with a relay to be tested having an armature adapted to vibrate between two stationary contacts in response to alternating current, a source of alternating current for causing the operation of said armature, a second source of current, a circuit including said armature, said second current source, an indicating lamp and one of said stationary contacts, and another circuit including the same said armature and second current source, another indicating lamp and said other stationary contact.

---

1,560,728. VACUUM-TUBE SOCKET. JOHN W. RADU, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 11, 1920. Serial No. 423,244. 1 Claim. (Cl. 173—328.)

A vacuum tube socket comprising a base of insulating material a tubular socket member arising therefrom, a

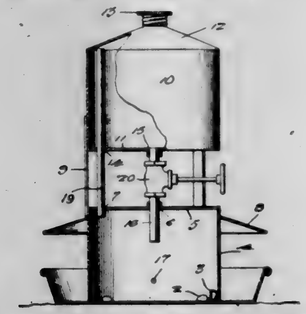
plurality of tubular members mounted in said base, a plurality of flat spring contact members, each of said contact members having one end projecting across one end of said socket member and the other end projecting beyond the edge of the base, a bolt extending through



each of said contact members and being threaded into one end of a tubular member to attach said contact member thereto, and a second bolt threaded in the opposite end of each of said tubular members to provide means for attaching an electrical conductor thereto.

---

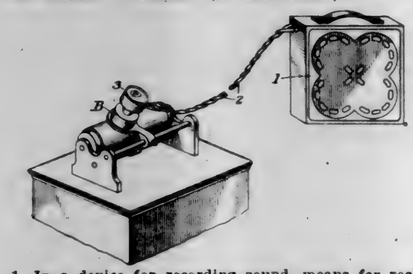
1,560,729. POULTRY DRINKING FOUNTAIN. CLARENCE W. RANDALL, Elk, Wash. Filed Feb. 24, 1925. Serial No. 11,306. 3 Claims (Cl. 119—77.)



1. In combination, a drinking pan having on its bottom a circular series of spacing elements embodying spring fingers, a cylindrical tank, provided with a bottom open end for resting on the bottom of the pan so that the spring fingers engage the interior thereof, said tank provided with a plurality of openings in its side disposed between the top and bottom of the pan, a supply tank mounted above the first mentioned tank, a pipe communicating the two tanks, and a valve in said pipe.

---

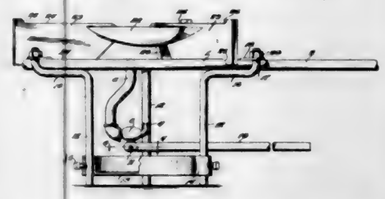
1,560,730. SOUND RECORDATION. MARSHALL H. RENO, Pittsburgh, Pa.; Ralph M. Reno and Annie W. Reno, executors of said Reno, assignors to Annie W. Reno, Pittsburgh, Pa. Filed Jan. 30, 1922. Serial No. 532,657. 4 Claims. (Cl. 179—100.1.)



1. In a device for recording sound, means for recording sound waves, means detachably connected to said recording means for mechanically transmitting sound waves thereto, means carried by said transmitting means for modulating the transmission of the sound waves, an electrical receiving instrument carried by said transmitting means in cooperative relation therewith, and means for electrically energizing said receiving instrument, substantially as described.

---

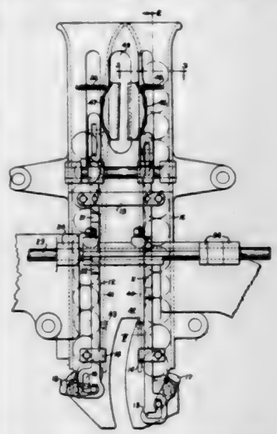
1,560,731. OIL BURNER. JOSHUA C. REYNOLDS, Owensboro, Ky., assignor to Woodford F. Axton and Edwin D. Axton, both of Louisville, Ky. Filed June 16, 1924. Serial No. 720,312. 4 Claim. (Cl. 158—79.)



1. A burner comprising a volute coil connected with a source of supply, a jet spout arranged below and in communication with the coil, supporting legs below the coil having their upper portions extending laterally outward whereby to bear against the under side of the coil and having their upper terminals upturned to abut the outermost turn of the coil, clamp plates mounted upon said upturned terminals and engaging over the outermost turn of the coil, and securing devices mounted upon said terminals and bearing upon said clamp plates.

---

1,560,732. DEVICE TO PREVENT VIBRATION OF BOBBINS. OSCAR W. RICHARDSON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1924. Serial No. 703,545. 11 Claims. (Cl. 139—245.)



1. In a weft replenishing mechanism for looms, a compartment to hold reserve bobbins as they await movement toward transfer position, a pivotally mounted wall forming one side of the compartment and extending adjacent the reserve bobbins, and means under control of the replenishing mechanism to move said wall about the pivot therefor to vary the width of the compartment.

---

1,560,733. AIR-PUMP GUN. ERNEST S. ROE, Plymouth, Mich. Filed May 2, 1925. Serial No. 27,391. 19 Claims. (Cl. 124—11.)

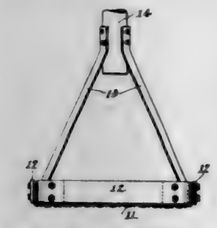
1. In a gun, the combination of a stationary frame, a power spring, a plunger engaging one extremity of

the spring, and means for compressing the spring including a lever having a rolling fulcrum on the frame, a

member carried by the lever and engaging the plunger stem, and means for rocking the lever.

---

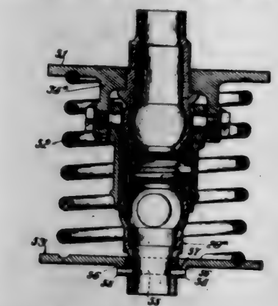
1,560,734. APPARATUS FOR LAYING CONCRETE. ROSS H. ROOK, Los Angeles, Calif., assignor of one-half to Leroy W. Reese, Los Angeles, Calif. Filed May 29, 1922. Serial No. 564,444. 3 Claims. (Cl. 94—48.)



1. A tamper of the kind described, that comprises a hollow horizontal frame, a vertically extending handle connected to the frame, a screen forming the bottom of the tamper extending across the bottom of the frame and having its edges bent up on the outside of the frame, and cleats outside the screen edges and secured to the frame to hold the screen edge between the cleats and the frame.

---

1,560,735. FLEXIBLE METALLIC PIPE CONNECTION. EDWARD A. RUSSELL, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 25, 1921. Serial No. 472,470. 24 Claims. (Cl. 285—92.)

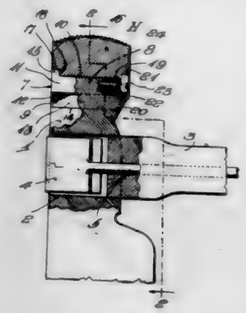


1. A flexible pipe connection comprising a pair of conduit members, one of which is formed with a ball adapted to project into the other member, a gasket arranged to bear against the inner end of the ball and freely slidable on said other member to maintain sealing contact with said members when the surface of the gasket against the ball wears and a connecting element having a direct pivotal non-swiveling connection with one of said members and rotatable on the other.

---

1,560,736. RENEWABLE-HEAD TOOL. JESS G. SALAZAR, Atwater, Calif. Filed Feb. 7, 1924. Serial No. 691,255. 3 Claims. (Cl. 145—29.)

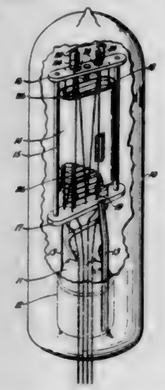
1. A nail driving tool comprising a handle-carried body extending laterally from the handle axis and having a rib on its outer end parallel with said axis, said rib having a relatively wide outer portion and a comparatively narrow central neck portion connecting said outer portion with the body, said outer portion having a flat outer side and parallel edges at right angles thereto, the front end of said flat outer side being formed with a transverse ridge extending throughout its width and flush with the front end of said rib; a removable head having a T-shaped slot opening through its front and rear sides and snugly receiving said rib, the front end of said slot being enlarged laterally to receive said ridge;



the aforesaid rib being formed with a longitudinal bore which is provided at its rear end with a countersink which opens through the outer side of said relatively wide outer portion of the rib, the rear end of said head being formed with a notch registering with said countersink, and a screw threaded into said bore and having an enlarged head received jointly in said countersink and notch, said ridge forming the sole means for preventing forward sliding of the tool head, said screw head forming the sole means for preventing rearward sliding of said tool head.

---

1,560,737. ELECTRON-DISCHARGE DEVICE. PAUL SCHWERIN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1923. Serial No. 640,660. 10 Claims. (Cl. 250—27.)



1. In an electron discharge device, a block of insulating material, a tubular member carried thereby, a filament supporting member passing through said member, a guide for said member carried by said eyelet, and means supported from said eyelet for maintaining said filament supporting member under tension.

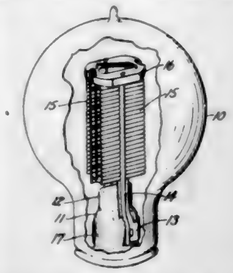
1,560,738. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1923. Serial No. 669,667. 22 Claims. (Cl. 197—130.)

1. A typewriting machine arranged to facilitate the passing of a succession of worksheets through the machine in the same sequence again and again, having, in combination, a traveling carriage, a revoluble platen journaled therein, a work-sheet hopper above the platen for storing the work-sheets preparatory to typing in the order in which they are to be typed, means for guiding the work-sheets from the hopper to the platen at the front thereof, and an accumulating receptacle on the carriage at the rear of the platen in which the work-sheets are automatically accumulated in the same order in which they were arranged in the hopper, wherefore they may be placed again in the hopper and typed in the same order without rearrangement.

1,560,739. DEVICE FOR SEPARATING THE INNER AND OUTER PARTS OF DOUBLE COLLARS FOR SHIRTS. FRANK ELPHINSTONE STARR, Sydney, New South Wales, Australia, assignor to Meakers Limited, London, England, and Arthur Robert Marks, London, England. Filed June 30, 1924. Serial No. 723,318. 2 Claims. (Cl. 68—11.)

1. A device for separating the inner and outer portions of shirt-collars of the folded or double kind consisting of a structure comprising a frame having a longitudinal opening intervening between two parallel side walls; a rigid member positioned centrally within said opening and parallel with the walls thereof, said member extending from one end of said frame towards, but stopping short of, the other end thereof, whereby a divided inverted U-slot obtains between the said two members and constitutes a closed space for the traverse of the folds and top of the collar with the rigid member interposed in separating relation between the folds; and a handle at an end of said frame.

1,560,740. ELECTRON-DISCHARGE DEVICE. JOHN L. STELLING, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1923. Serial No. 650,999. 2 Claims. (Cl. 250—27.)



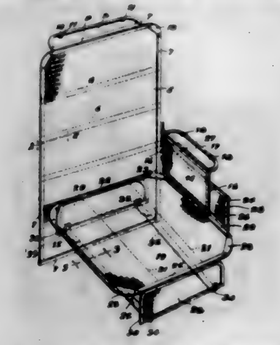
1. In an electron discharge device, a glass support, a collar surrounding said support, the surface of the support in contact with the collar being roughened and an electrode supported by said collar.

1,560,741. COFFEEPOT. WILBUR TOPPING and ANDREW W. NELSON, Terre Haute, Ind., assignors to Columbian Enameling & Stamping Co., Terre Haute, Ind., a Corporation of Indiana. Filed July 11, 1925. Serial No. 42,881. 5 Claims. (Cl. 53—8.)

1. A drip coffee pot comprising a receptacle for coffee and a coffee holding member super-incumbent thereon, a filter cup adjacent the bottom of said coffee chamber having horizontal perforations but having an imperforated top, the coffee being positioned over and around said filter cup and a water spreading plate positioned on top of said coffee chamber, said water spreading plate being provided with an air vent in the center thereof so as to permit the water over said plate to readily fall by gravity over the coffee in the coffee chamber.

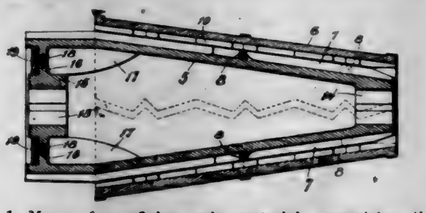
1,560,742. AUTOMOBILE SEAT COVER. RICHARD J. TRUMBULL, Chicago, Ill. Filed Sept. 1, 1923. Serial No. 660,511. 1 Claim. (Cl. 155—182.)

The combination of a back protective panel for seats the lower portion of the back being adapted to extend below the seat in the rear, a side wing extending forwardly therefrom intermediate the ends thereof, a seat cushion protective panel independent of said back panel having an upstanding side panel secured thereto along a side edge thereof, and movable therewith, said side



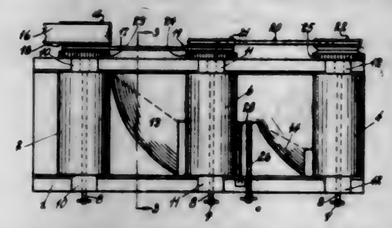
panel and side wing adapted to be disposed in sliding relation with each other the side panel being disposed between the side wing and the side of the seat.

1,560,743. MEANS FOR REFINING PAPER STOCK. LESHER W. VAN BUSKIRK, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Oct. 1, 1923. Serial No. 665,982. 4 Claims. (Cl. 92—27.)



1. Means for refining pulp material, comprising the combination with mated alloy steel plug and liner elements of the integral construction type, of provisions for establishing high frequency swells in the passage of the stock and including bridging members between alternate blades of the plug, and means on the liner and co-operating with said bridging members for diverting the stock from one element to the other.

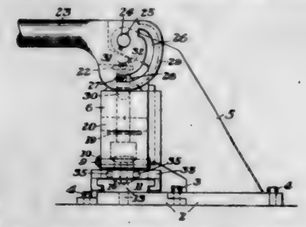
1,560,744. METHOD OF FORMING PADDING. ROBERT O. WALDMAN, Berkeley, Calif. Filed June 11, 1923. Serial No. 644,820. 4 Claims. (Cl. 154—29.)



1. The method of forming a seat padding strip which consists in combing a layer of fibers lengthwise in said strip, placing an adhesive upon said combed fibers, and folding said strip upon the adhesive.

1,560,745. COMBINATION PUNCH AND PRESS. JOHN S. WALKER, Pittsburgh, Pa. Filed Dec. 11, 1923. Serial No. 679,868. 5 Claims. (Cl. 153—21.)

1. In a metal working apparatus, a standard, a vertically movable plunger slidably mounted upon said standard, an upper die on the lower end of said plunger, a cooperating lower die, an operating lever pivoted to said standard and having eccentric grooves in one end thereof, an anti-friction ball seated in the upper end of the plunger and engaging in one of said grooves, a vertically movable punch plunger slidably mounted in said first mentioned plunger, an anti-friction ball seated in the upper end of said punch plunger and engaging an-

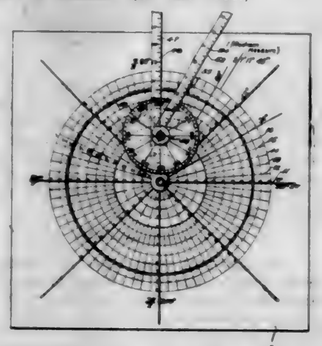


other of said grooves, whereby when said lever is swung in one direction said plungers are depressed, a pin carried by the upper end of said plunger and working in a cam slot in said lever, and a spring tending to raise said punch plunger, whereby when said lever is swung in the opposite direction said plungers are raised, substantially as described.

1,560,746. EGG TURNER FOR INCUBATORS. WILLIAM H. WALTER, Denver, Colo. Filed Feb. 19, 1925. Serial No. 10,268. 3 Claims. (Cl. 119—44.)

1. In an incubator, in combination, a housing, an egg supporting tray slidably secured thereto, a rack slidably secured to the tray, said rack having spaced parallel bars adapted to receive between them a row of eggs, a shaft rotatably mounted in the housing, said shaft having one end extending to the outside of the housing, means secured to the end of the shaft for rotating the same, upwardly extending projections on the rack and means comprising angularly related arms secured to the shaft, said arms being adapted to engage the projections to slide the rack when the shaft is rotated.

1,560,747. VECTOR CALCULATOR. MENDEL P. WEINBACH, Columbia, Mo. Filed Dec. 23, 1924. Serial No. 757,750. 4 Claims. (Cl. 235—161.)

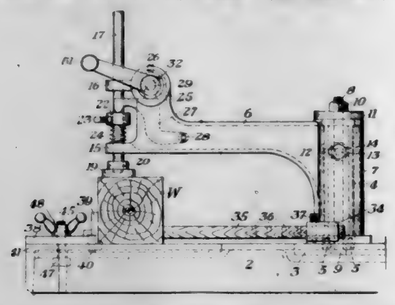


1. A vector calculator comprising a plate having a plurality of concentrically arranged circles spaced equal

distances apart, a graduated arm pivoted to the plate at the axis of said circles, a graduated disk slidably mounted upon the measuring arm, and a second graduated arm pivotally mounted to the disk at the axis thereof.

---

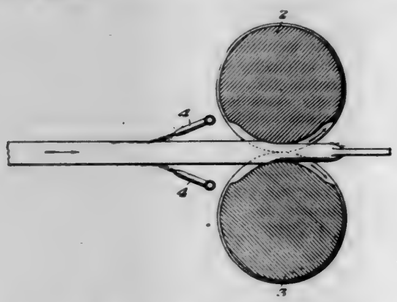
1,560,748. WORK CLAMP FOR WOODWORKING MACHINES. CLINTON G. WILDERSON, Leetonia, Ohio, assignor to The Crescent Machine Company, Leetonia, Ohio, a Corporation of Ohio. Filed May 29, 1924. Serial No. 716,629. 11 Claims. (Cl. 144—290.)



1. A work clamp, comprising a support, a vertical stem slidably mounted in said support, a clamping foot carried by the lower end of said stem, a coil spring surrounding said stem and engaging at its lower end a fixed portion of the support and at its upper end a collar adjustably mounted on said stem, and means engagable with said collar for moving said foot to and positively holding it in clamping engagement with the work, substantially as described.

---

1,560,749. DIE ROLLING. WILLIAM P. WITHEROW, Pittsburgh, Pa., assignor to Witherow Steel Company, Neville Island, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1923. Serial No. 655,061. 6 Claims. (Cl. 80—60.)

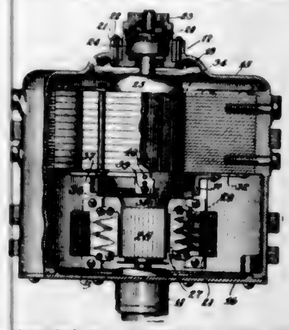


1. In the method of die rolling blanks of a desired length from leaders, the steps consisting in passing a leader through the die rolls and directing a cooling fluid thereagainst, and thereafter passing other leaders through said die rolls and varying the amount of cooling fluid directed thereagainst to produce blanks varying in length from those produced from the first mentioned leader, substantially as described.

---

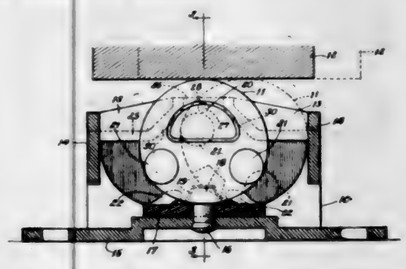
1,560,750. GENERATOR FOR USE IN SPEED-INDICATOR SYSTEMS. FRANK W. WOOD, Montclair, N. J., assignor to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1921. Serial No. 438,930. 1 Claim. (Cl. 171—227.)

A generator comprising an armature and its shaft, a permanent field magnet, and means for shunting the poles of the field magnet to vary the flux density across the armature, said means comprising a holder including a substantially semi-circular threaded member surrounding the shaft of the armature and attached to the field magnet and a threaded lug, a complementally threaded annular shunt member rotatable therein, and means carried by said lug for securing the shunt member in any adjusted position.



---

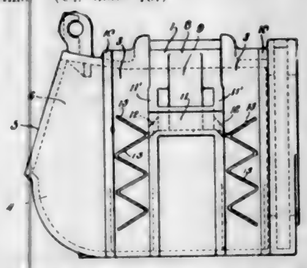
1,560,751. ROLLER SIDE BEARING FOR CARS. GEORGE A. WOODMAN, Chicago, Ill., assignor of one-half to Vincent J. Burry, one-fourth to Otto S. Flath, and one-fourth to Osborne E. Quinton, all of Chicago, Ill. Filed June 2, 1923. Serial No. 642,920. 7 Claims. (Cl. 308—226.)



1. In a side bearing for cars, the combination with a roller having lugs projecting from its ends and a recess in an arcuate surface thereof, of a cage comprising a single tooth engaging the recess in the roller, and stops adapted to engage the lugs of the roller to prevent rectilinear motion of the roller toward the tooth without accompanying rotation of the roller.

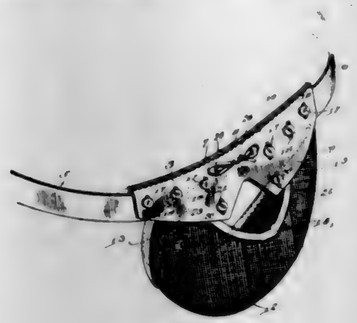
---

1,560,752. JOURNAL BOX. GEORGE A. WOODMAN, Chicago, Ill. Filed May 31, 1924. Serial No. 716,847. 4 Claims. (Cl. 308—79.)



1. A journal box comprising a stop for the bearing formed by a recess in the side of said box, and a wall closing said recess to form an oil pocket.

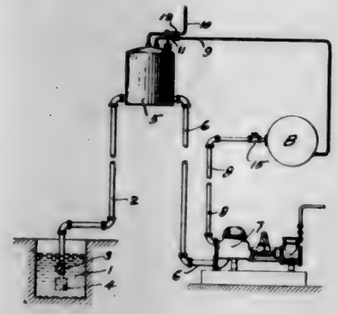
1,560,753. SUSPENSORY. WILLAMETTE JOAQUIN YOUNG, Miami, Fla. Filed Feb. 29, 1924. Serial No. 695,984. 1 Claim. (Cl. 128—161.)



A suspensory, including a supporting member made up of a front piece, and a back piece permanently secured together along their upper edges, a sack constructed of comparatively inexpensive fabric and being designed to be discarded and renewed when soiled and having tabs, each tab having a binding formed with a button hole, buttons secured to the front face of the back piece, and cooperable with said buttonholes whereby the sack is detachably secured to the supporting member, the front piece having button-holes cooperable with the buttons of the back piece to hold the front piece up against the back piece and overlying the tabs, the sack and the supporting member having complementary recesses defining the front opening of the suspensory, the recess of the supporting member defining points thereon and fastening devices on the front face of the back piece for holding the points together.

---

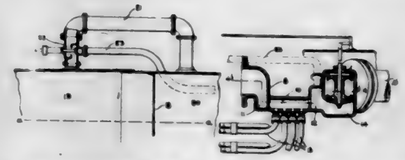
1,560,754. DEAERATING APPARATUS. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed July 28, 1920. Serial No. 399,621. 5 Claims. (Cl. 122—451.)



1. In apparatus of the class described, the combination of a source of water, a closed tank at a considerable elevation above the source, a pump, a pipe from the source to the tank, a pipe from the tank to the pump, a delivery pipe from the pump, a check-valve in the first pipe, a valved pipe from a source of water under pressure to the tank, a valved pipe from an elevated point of the tank to the atmosphere, and automatic means to operate the two valves in unison in response to the water level in the tank.

---

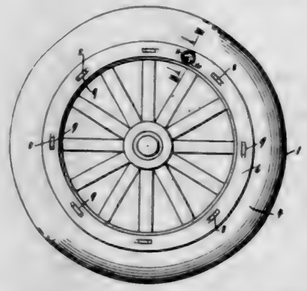
1,560,755. BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1920. Serial No. 427,861. 6 Claims. (Cl. 122—479.)



1. In apparatus of the class described, the combination of a boiler; means dividing the space above the water level into two parts to the first of which more of the steam is delivered upon its generation than to the second; means to put these two parts into direct communication; a superheater; a pipe connecting the second of said parts of the space with the inlet of the superheater; a valved pipe leading from the outlet of the superheater; and a pipe connecting the first part of the space with the outlet end of the superheater.

---

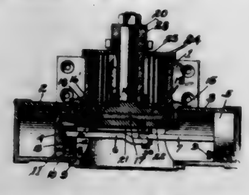
1,560,756. LOCKING RING FOR SEPARABLE RIMS. THOMAS D. BRYAN, Linden, Calif. Filed Aug. 8, 1922. Serial No. 580,461. 1 Claim. (Cl. 152—21.)



Locking means for an annular element separably disposed on a felloe, comprising a ring, slanting means associated with the felloe adapted to engage the ring and means for imparting rotary motion to the ring relative to the felloe, comprising a transverse pin rotatable in the felloe having a cam thereon engaging a slot in the ring and a nut threadedly engaging the pin adapted to bear on the margin defining the slot for holding the cam in its active position.

---

1,560,757. DOOR CHECK AND CLOSER. ALDEN J. BUSH, Columbus, Ohio. Filed Oct. 6, 1924. Serial No. 741,796. 5 Claims. (Cl. 16—70.)

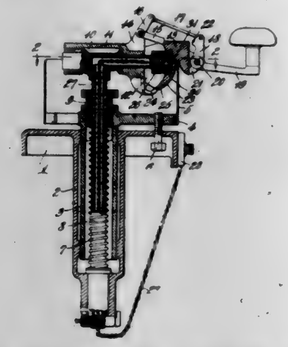


1. In a structure of the character described, the combination of a movable closure with a braking device for same, the combination of an oscillating member controlled by said closure, with a connector mounted on said oscillating member capable of having a limited movement relatively to said member, pneumatic means for retarding

the movement of said connector to cause it to have a relative movement to said oscillating member, a stop device for preventing the retardation of said connector during the movement of the movable device in one direction, while permitting a retardation during the movement of the movable device in the opposite direction.

---

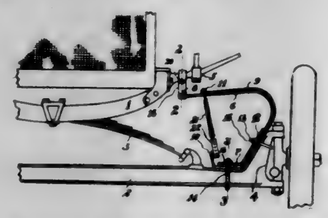
1,560,758. ELECTRICAL HEATING MEANS FOR COLLAR SHAPERS. EMIL J. CARROLL, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Nov. 10, 1919. Serial No. 336,938. 5 Claims. (Cl. 68—9.)



3. A collar shaper, comprising a collar mold member, a support, an ironing member movable with said support to traverse the mold member, and also movable relative to said support toward and away from the mold member, and heating means for said ironing member, comprising a primary coil carried by and stationary with respect to said support and connected to a source of current, and a movably mounted secondary member movable with said ironing member.

---

1,560,759. SPRING SUSPENSION FOR FORD CARS AND TRUCKS. PAUL DAVID CHAMBERLAIN, Fairbank, Ontario, Canada. Filed Nov. 28, 1924. Serial No. 752,820. 5 Claims. (Cl. 267—28.)

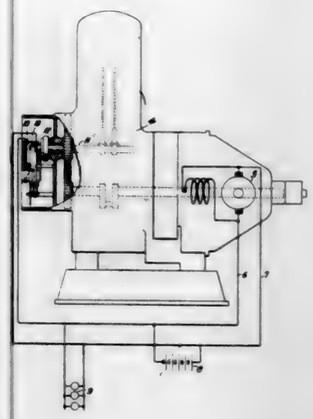


1. In a device of the class described, the combination with the frame and the axle of the chassis, of a pair of contiguously arranged leaf-springs, means for rigidly connecting one of their ends to said axle, means for connecting the other end of the lowermost leaf to the frame, and a coil spring for exerting downward pressure upon the free end of the uppermost spring.

---

1,560,760. ENGINE-CONTROL MEANS. MERLE PEABODY CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1922. Serial No. 596,938. 5 Claims. (Cl. 290—41.)

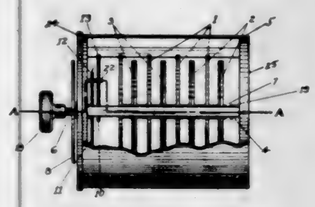
1. A prime mover, a dynamo electric machine driven thereby, a timer for the prime mover, means actuated by the shaft of the prime mover for imparting an advance or retard movement to said timer and an electro-



magnet for controlling the extent of movement of said timer, said electro magnet being controlled by the voltage generated.

---

1,560,761. VARIABLE CONDENSER. LOUIS COHEN, Washington, D. C. Filed June 5, 1922. Serial No. 565,920. 5 Claims. (Cl. 250—412.)



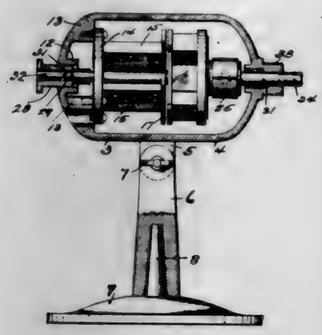
1. A variable condenser comprising a plurality of fixed plates, and a plurality of movable plates, said movable plates being mounted on an interiorly screw-threaded sleeve and engaging a threaded shaft, the rotation of said shaft being adapted to reciprocate vertically said movable plates, and thereby effect various desired degrees of separation between said movable and fixed plates of said variable condenser, said stationary plates being provided at their peripheries with spacing and supporting members.

---

1,560,762. ELECTRIC MOTOR. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Majik Electric Appliance Company, San Francisco, Calif., a Corporation of California. Filed July 2, 1921. Serial No. 482,096. 3 Claims. (Cl. 172—36.)

1. In a dynamo electric machine, a magnetic core structure comprising a plurality of laminations and a

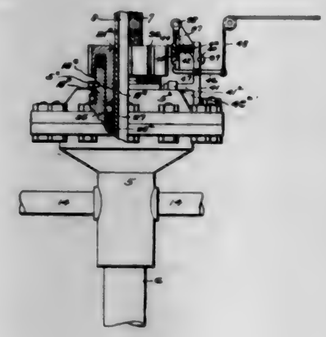
support for the laminations having an aperture through which the laminations extend, the extended portions of



the laminations being upset so that the edges of the laminations firmly engage the inner surface of the aperture and surfaces adjacent thereto.

---

1,560,763. PACKING HEAD AND BLOW-OUT PREVENTER FOR ROTARY-TYPE WELL-DRILLING APPARATUS. FRANK M. COLLINS, Oilfields, Calif. Filed Jan. 27, 1925. Serial No. 5,083. 8 Claims. (Cl. 166—14.)

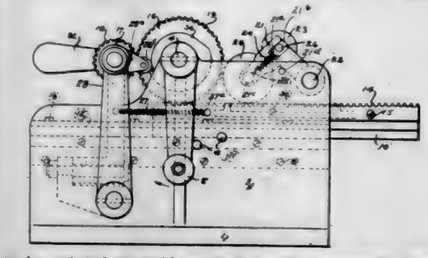


1. The combination with a swivel rotative head adapted to have a kelly passed therethrough, of a fixed body in which said swivel is mounted for rotation, a packing element engaged externally of the kelly, a packing gland having threaded engagement with the swivel and normally rotating therewith and means for holding said gland against rotation.

---

1,560,764. PRINTING MACHINE. JOHN G. COLLISON, WALTER N. FRANK, and HARRY M. FILBERT, Dayton, Ohio, assignors, by mesne assignments, to The Groian Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 30, 1922. Serial No. 548,201. 10 Claims. (Cl. 101—36.)

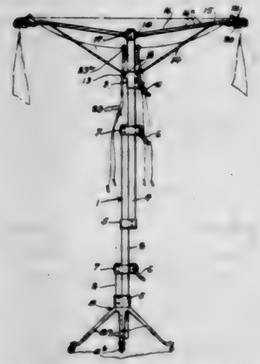
1. In combination, a type bed carrying type, means for inking said type, means for passing said type bed beneath a yielding impression roller, a support containing a member to be printed, means for holding said member



to be printed on said support, means constantly urging said holding means against the member to be printed, and a handle to operate said holding means.

---

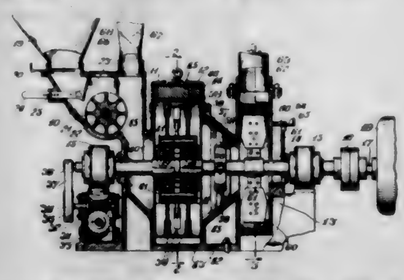
1,560,765. PAPER-HANGING DEVICE. JOHN COYLE, Everson, Pa., assignor of one-half to Abraham Cohen, Connellsville, Pa. Filed Feb. 20, 1925. Serial No. 10,630. 5 Claims. (Cl. 216—4.)



1. In a device for hanging wall paper, a standard, paper receiving and supporting rolls positioned at opposite sides of the standard, and means for supporting the rollers and for detachably securing the same to the standard independently of each other.

---

1,560,766. REVERSIBLE MILL. JOE CRITES, Evanston, Ill., assignor to Raymond Brothers Impact Pulverizer Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1924. Serial No. 697,893. 19 Claims. (Cl. 83—11.)



1. A pulverising mill of the impact type which is reversible without adjustment or replacement of any of the rotary parts, comprising a chamber, a shaft therein, and means operative by the shaft rotating in either di-

rection for positively feeding to the chamber the material to be pulverized, for pulverizing the material, and for delivering the material from the chamber.

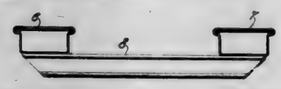
---

1,560,767. VANITY CASE. CECILE E. CROSWHITE, Kansas City, Mo. Filed May 22, 1925. Serial No. 32,038. 1 Claim. (Cl. 132—83.)

In a vanity case, two boxes hinged to each other, one being adapted to form a cover for the other, a mirror mounted in one of the boxes against the bottom thereof, and a plate disposed parallel with and against the mirror and having an observation opening registering with said mirror, and having at one edge two U-shaped arms adapted to receive between them and to hold releasably a comb, said plate being attached to the box in which it is located.

---

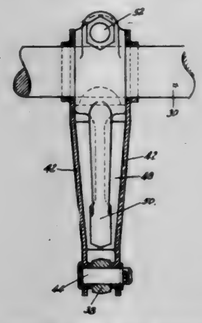
1,560,768. TELEPHONE SET. ALFRED S. CURTIS, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 433,008. 16 Claims. (Cl. 179—103.)



2. A unitary structure comprising transmitting and receiving members, and a support therefor, said support having a frequency of fundamental mode of vibration exceeding approximately 1000 cycles per second.

---

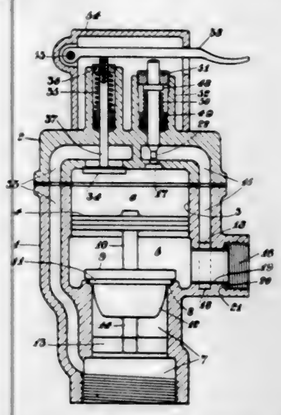
1,560,769. BRAKE-APPLYING CONNECTION. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 16, 1925. Serial No. 43,956. 12 Claims. (Cl. 74—5.)



1. A vehicle having brakes and operating connections including a rockshaft and an operating lever, and comprising, in combination therewith, an arm secured to and projecting from the rockshaft, a channel-shaped operating member having side parts pivotally mounted and arranged on opposite sides of the arm and having a part connecting the side parts and engageable with the arm to operate it, the side parts of the channel-shaped member embracing the arm between them, and a tension element connecting the operating member and the operating lever.

---

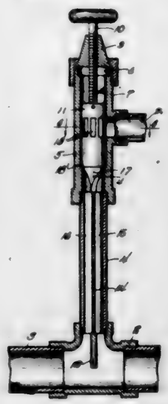
1,560,770. ADJUSTABLE SELF-CLOSING VALVE. JOHAN GUNNAR EVERSTAM, Sundsvall, Sweden. Filed Dec. 15, 1924. Serial No. 755,917. 7 Claims. (Cl. 137—139.)



1. A flush valve having a casing member, an inlet to said casing, an outlet from said casing, a valve body controlling the direct flow of fluid from the inlet to the outlet, two chambers in said casing, a movable partition separating said chambers and connected with said valve body, one of said chambers being in direct communication with said inlet, a passage for the supply of liquid from said inlet to the other of said chambers, a constriction in said passage, a needle valve adjustable from the outside of said casing for controlling said constriction, said needle valve being movable into said constriction, a spring tending to retract said needle valve from said constriction, a stop for said needle valve, and a normally closed valve controlled passage for the discharge of fluid from said second chamber to the outlet.

---

1,560,771. COMBINATION VALVE. JOHN FEICHTER, Chicago, Ill. Filed June 25, 1924. Serial No. 722,233. 16 Claims. (Cl. 251—75.)



1. In a valve of the type described adapted to be interposed in a pipe connection between a heat supply

line and a radiator comprising a casing, a valve gate movable in said casing and adapted to be in operable position when moved between the connecting points of said pipe connection, and means for establishing an independent two-way circulation of the heating fluid through said radiator and said valve gate.

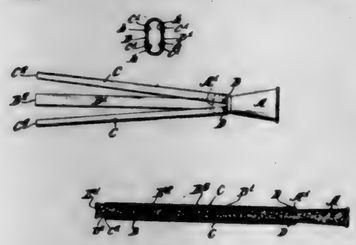
---

1,560,772. PACKING MATERIAL FOR UPHOLSTERY. DEL ROY F. FOWLER, Melrose Park, Pa. Filed Oct. 14, 1924. Serial No. 743,515. 2 Claims. (Cl. 154—54.)

1. A packing for use in stuffing upholstery consisting of a strip of paper in combination with a strip of fibrous batting folded around the paper strip and with one edge folded over the other and a layer of glue directly securing the outer edge of the folded bat to the underlying bat layer and permeating both bat layers.

---

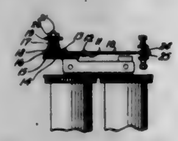
1,560,773. TOOL FOR FILLING UPHOLSTERY POCKETS. DEL ROY F. FOWLER, Melrose Park, Pa. Filed Apr. 28, 1925. Serial No. 26,394. 2 Claims. (Cl. 226—44.)



1. A tool for filling upholstery pockets comprising a tubular base, non-overlapping trough shaped sections pivotally attached to said base at one end so as to swing towards or away from each other and tongue sections attached to the base and extending below and between the edges of the trough shaped sections to form with said trough shaped sections an enclosure for the bat of stuffing material when the trough shaped sections are moved together.

---

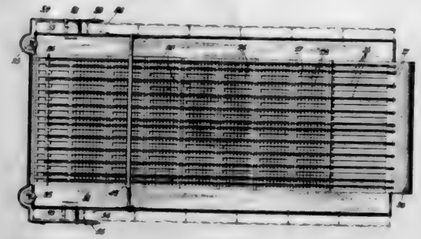
1,560,774. RELAY. JOHN S. GARVIN, Bogota, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1923. Serial No. 682,889. 9 Claims. (Cl. 200—90.)



1. In an electromagnetic device, a mounting plate, an armature having a knife edge pivot, a flexible conducting hinge for said armature secured thereto and to said mounting plate, and an armature adjusting spring co-operating with said mounting plate and said armature.

---

1,560,775. AERIAL LANDING AND LAUNCHING APPARATUS. RICHARD GIBBONS, Brooklyn, N. Y., assignor to Mary A. Kenney, Brooklyn, N. Y. Filed Jan. 30, 1924. Serial No. 689,444. 12 Claims. (Cl. 244—2.)

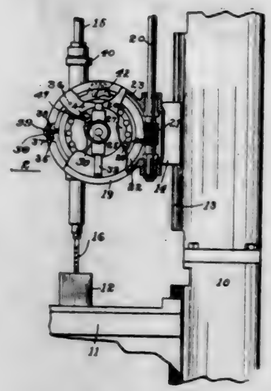


1. An apparatus for landing or launching aerial vehicles comprising a table-like platform honeycombed to permit air to pass substantially uniformly through different areas thereof, and air blowers acting upon the space beneath said platform to withdraw air from upper side of the platform to the lower.

5. An apparatus for landing or launching aerial vehicles comprising a platform providing a runway adapted to receive a vehicle, a barrier member disposed adjacent the far end of the runway, and normally held out of vehicle obstructing position, together with means actuated by the movement of the vehicle past a predetermined point on said runway for permitting said barrier member to move into vehicle obstructing position.

---

1,560,776. CLUTCH FOR POWER FEED. ALBERT J. GIFFORD, Shrewsbury, and BENJAMIN S. T. BISHOP, Worcester, Mass., assignors to Leland-Gifford Company, a Corporation of Massachusetts. Filed Oct. 30, 1922. Serial No. 597,717. 9 Claims. (Cl. 77—33.)

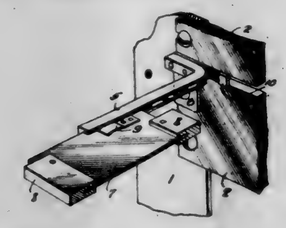


1. In a roller clutch having a spider for operating the rollers to set and release the clutch, the combination with the spider, rollers, clutch members and driving and driven elements, of yielding means for turning the driven element backwardly, a pin having an angular edge, a lever having a similar edge for co-operating with the pin, one of the last named elements being mounted to move with the driven element and the other with the spider, and yielding means for holding said two annular edges in contact at one side of the apex thereof but permitting them to be forced by each other upon the application of sufficient force.

1,560,777. ATTACHABLE INDICATOR FOR FUSES. JOHN B. GLOWACKI, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,254. 5 Claims. (Cl. 200—121.)

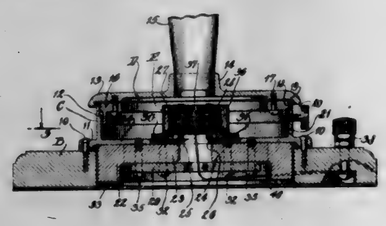
1. A fuse cartridge, a cylindrical tubular boss thereon, a tubular member seated on said boss, a dome-shaped closure at the end of said tubular member and having a perforation therein, a flange on said boss against which said tubular member abuts, and a shoulder on said boss, the portion of said boss at one side of said shoulder contacting with said tubular member and the portion of said boss on the other side of said shoulder being spaced away from said tubular member, said boss having openings into the interior of said tubular member and into the interior of said cartridge.

1,560,778. ANTIINDUCTION DEVICE. FREDERICK M. GODDARD, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,427. 5 Claims. (Cl. 175—298.)



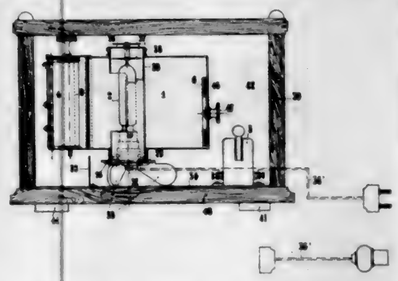
1. An apparatus rack comprising standards, apparatus mounting plates secured to said standards, rows of apparatus mounted on said plates, channels mounted on said standards between said plates, and shields arranged to slide in said channels so as to be interposed between adjacent rows of said apparatus.

1,560,779. RADIO LOUD-SPEAKING RECEIVER. PAUL S. GRIMASON, South Orange, N. J., assignor to Charles Cory & Son, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,456. 7 Claims. (Cl. 179—115.)



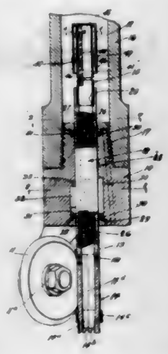
2. In a radio loud speaking receiver, a support, a weighting magnet member carried thereby and arranged thereon to provide a low center of gravity for the receiver, an electromagnet carried by said member, the said member providing magnet poles for the electromagnet, and a diaphragm associated with said electromagnet.

1,560,780. APPARATUS FOR EXAMINING KEENNESS OF VISION AND THE CHROMATIC OR COLOR SENSE. EMILE GUÉRIN, Paris, France. Filed Sept. 18, 1923. Serial No. 663,473. 5 Claims. (Cl. 88—20.)



1. Apparatus for testing the visual acuity and chromatic sense comprising, a luminous source consisting of a box movable around an electric lamp serving as a pivot and taking up two positions at 180°, according as to whether it is a question of proceeding to examine the visual acuity or the keenness of the chromatic sense, and an optometric translucent ribbon wound on a system of rollers located at one end of the said box.

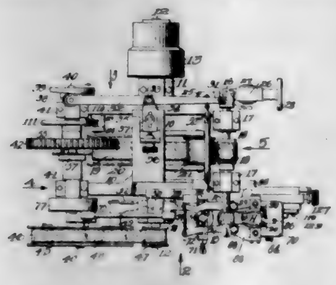
1,560,781. DEVICE FOR TAKING CORE SAMPLES IN ROTARY DRILLING. HARDY H. HAIR, Newport Beach, and CHASE E. SUTTON, Los Angeles, Calif. Filed Apr. 11, 1923. Serial No. 631,287. 8 Claims. (Cl. 255—71.)



1. In combination with a rotary drilling bit, a core taking barrel centrally mounted in the bit, the barrel including a section that extends vertically through the bit from its lower surface to its upper surface, and means for holding the barrel in place including nuts threaded on the barrel and bearing on the upper and lower surface of the bit.

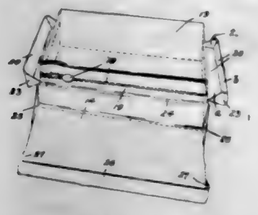
1,560,782. HEEL-SHAPING MACHINE. WALTER H. HALL, Winchendon, Mass., assignor to Goodspeed Machine Company, a Corporation of Massachusetts. Filed Oct. 23, 1922. Serial No. 596,194. 12 Claims. (Cl. 12—46.)

1. A heel seat shaping machine comprising a cutter shaft, a cutter thereon, means to rotate said shaft and cutter, a heel clamping device, means to reciprocate said clamping device, and means to reciprocate said



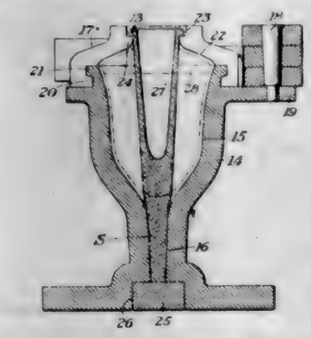
cutter shaft transversely to the path of movement of said clamping device and heel.

1,560,783. TRAVELING-CASE COVER. ABRAHAM HALPIN, New York, N. Y. Filed Oct. 24, 1924. Serial No. 745,546. 6 Claims. (Cl. 150—52.)



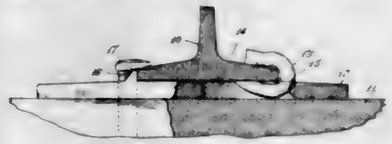
1. The herein described traveling case cover comprising a main body portion to receive the main body of the traveling case, a pair of end flaps of trough formation hingedly connected to the end portions of the main body of the cover and adapted to overlie the end corners of the traveling case lid, and a top panel hingedly connected to the main body along that portion thereof remote from the hinge line of the case lid and having at its free edge a self-holding locking flange having snug slidable holding fit against the bottom of the structure whereby the entire cover is held in place.

1,560,784. MANUFACTURE OF GLASSWARE. DE WITT C. HAMILTON, Sapulpa, Okla., assignor to The Bartlett-Collins Glass Company, Sapulpa, Okla., a Corporation of Oklahoma. Filed July 16, 1924. Serial No. 726,307. 4 Claims. (Cl. 49—80.)



1. The method of making a stemmed article of glassware, comprising placing a charge of molten glass in the cavity of a blank forming mold, inserting a plunger into said cavity to form the bowl portion of the blank having an integral stem depending therefrom, withdrawing the plunger, removing the blank from the forming mold and placing it in a one-pice blowing mold, and blowing the bowl portion of the blank into the desired form, substantially as described.

1,560,785. RAIL ANCHOR. PERRY H. HAMILTON, Mount Washington, Md., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed July 19, 1924. Serial No. 726,995. 3 Claims. (Cl. 238—304.)

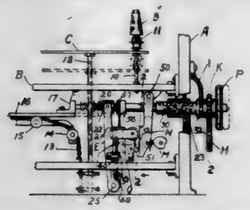


1. A rail anchor comprising a clip formed from a metal bar bent upon itself to provide spaced portions adapted to be driven into gripping engagement with the upper and lower surfaces of the base flange of a rail at one side of the rail, and a plate interposed between the rail and the cross tie and provided with a slot extending transversely of the rail for the reception of the lower end portion of the clip, the arrangement being such that the clip has a substantially snug fit in the slot longitudinally of the rail and that the outer face of the slot is adapted by engagement with the outer face of the clip to hold the clip in its operative gripping position on said flange.

1,560,786. BASKET-MOUNTING STONE-SETTING TOOL. EMBRIK HANSON, Appleton, Minn. Filed Aug. 18, 1924. Serial No. 731,745. 1 Claim. (Cl. 77—58.)

A jeweler's tool comprising a cylindrical member having a longitudinal slot extending for the major portion thereof, said cylindrical member having a longitudinal slot in the lower portion thereof disposed at substantially right angles to the aforementioned slot, a cutter blade removably supported in the first mentioned slot, means for limiting the longitudinal movement of the blade in said slot, a sleeve fitting over the lower portion of the cylindrical member, said sleeve having registering openings provided therein, one of the openings being threaded, a fastening screw extending through one pair of registering openings and through the longitudinal slot provided in the lower portion of the cylindrical member and the blade in the latter, and adjusting screws carried by the sleeve and adapted for cooperation with the opposite side edges of the cutter blade for adjusting the cutting edge of the blade laterally with respect to the cylindrical member.

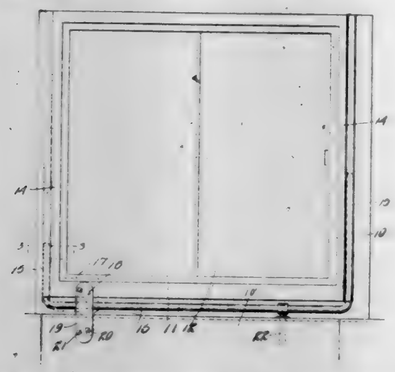
1,560,787. LIFTER MOTION FOR CAP-SPINNING FRAMES. JOSEPH HEAPS, Methuen, Mass., assignor to George M. Arragg, Lawrence, Mass. Filed Apr. 1, 1922. Serial No. 548,729. 2 Claims. (Cl. 242—43.7.)



1. In a Scaife builder motion for spinning frames: the combination with a motion screw having a shoulder beyond which its threads extend; of a long lever; a motion nut through which the motion screw threads pass, carried by the free end of said long lever; a monkey slidable on said long lever; a revoluble member loose on the threads of said motion screw and revoluble therewith, only when engaged by the shoulder; and a connecting member which at all times extends between said monkey and said revoluble member and which moves the monkey when the revoluble member revolves.

---

1,560,788. CONNECTING MEANS FOR TWO-PART AUTOMOBILE DOORS. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1924. Serial No. 702,956. 5 Claims. (Cl. 296—45.)

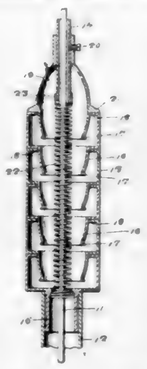


5. In a demountable door, a permanent lower section, a demountable upper section having sockets adjacent opposite sides, a connector having a resilient body with ends adapted to fit in said sockets said ends normally lying in diverging planes intersecting in said body and means for securing the upper section to the lower section whereby the free or closing side of the upper section is biased toward closing position, substantially as set forth.

---

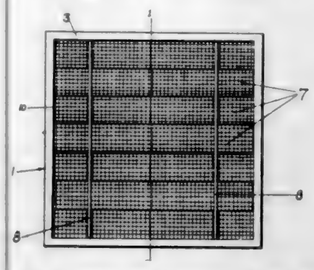
1,560,789. HOSE HOLDER. LEE H. JOHNSON, Luverne, Minn., and HERBERT E. RUPP, Mansfield, Ohio, assignors, by mesne assignments, to S. F. Bowser & Company, Inc., Fort Wayne, Ind. Filed Mar. 25, 1922. Serial No. 546,858. 10 Claims. (Cl. 299—77.)

1. In a hose holder, a standard including a series of cup-shaped members, and means connecting said members to permit their relative tensioned movement, said cup-shaped members being each formed with an upper inwardly extending plane flange, and with an intermediate inwardly extending plane flange, the cup-shaped members being arranged in superimposed relation with the intermediate flange of one resting directly on the upper flange of the immediately underlying member, the cooperation of such flanges supporting the members in normal position.



---

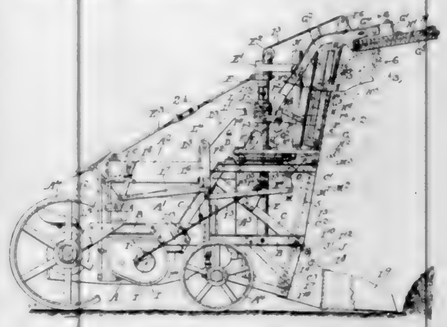
1,560,790. AIR FILTER. ANDERS JORDAHL, New York, N. Y. Filed May 10, 1924. Serial No. 712,280. 4 Claims. (Cl. 183—44.)



1. An air filter comprising a frame; a screen-like plate in said frame; a plurality of mats in said frame and against said plates; and a plurality of bars in said frame for securing said mats in place.

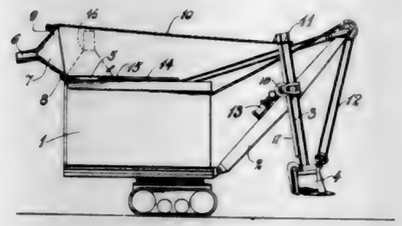
---

1,560,791. SHOVEL. WILLIAM C. ANTHONY, Streator, Ill., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Nov. 10, 1924. Serial No. 748,806. 19 Claims. (Cl. 37—126.)



1. In combination in a hoisting shovel, a shovel frame, a bucket adapted to move thereinlong, means for moving the bucket and means for swinging the frame laterally.

1,560,792. PORTABLE ENGINE. SVANTE R. W. M. BAGER, South Milwaukee, and MITCHELL L. FYKSE, Milwaukee, Wis., assignors to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 26, 1922. Serial No. 584,592. 10 Claims. (Cl. 214—1.)



1. In a portable engine, the combination of a boiler; a smoke box above said boiler; a smoke conveyor; a hinge connecting said smoke-conveyor to one side of said smoke-box; power-actuated means for raising and lowering said smoke-conveyor about said hinge, said power-actuated means including a flexible member; and a pivoted strut for changing the direction of pull in said flexible member.

---

1,560,793. HEADLIGHT LENS. JOHN M. DUNLEA, Los Angeles, Calif. Filed Aug. 13, 1923. Serial No. 657,056. 2 Claims. (Cl. 240—48.4.)

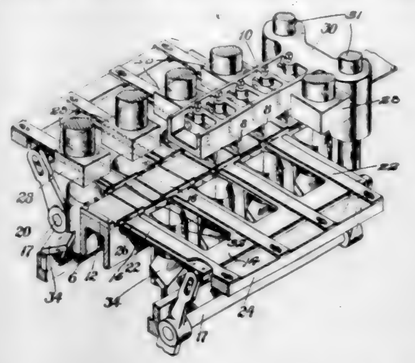
1. A headlight lens having a front plane surface, a rear surface comprising two groups of horizontal prisms, the lower group being disposed with their bases downwardly and having progressive refractive power downwardly, the upper group being disposed with their bases upwardly and having progressive refractive power upwardly and vertically disposed cylindrical prisms on said rear surface.

---

1,560,794. MACHINE AND METHOD APPLICABLE TO THE CUTTING OF SHEET MATERIAL. FREDERICK M. FURBER, Beachmont, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 10, 1919, Serial No. 281,848. Renewed Nov. 15, 1922. Serial No. 601,179. 46 Claims. (Cl. 164—17.)

1. In a cutting machine, a support for a pile of sheet material, means for cutting the sheets of material on the support to form sections from the sheet material, and means for feeding sections from the bottom of the pile between successive operations of said cutting means on material at the top of the same pile.

14. That improvement in methods of cutting blanks from sheet material which comprises cutting each sheet of material into sections or blanks in such manner as to leave the sections or blanks in the same plane as the original sheet, and simultaneously utilizing a sheet, cut or sectioned in the manner described during a preceding operation, as a cutting bed for a succeeding sheet undergoing cutting operations of the same character.



---

1,560,795. METHOD OF MAKING MOLDED ARTICLES. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 27, 1919. Serial No. 326,782. 15 Claims. (Cl. 12—146.)

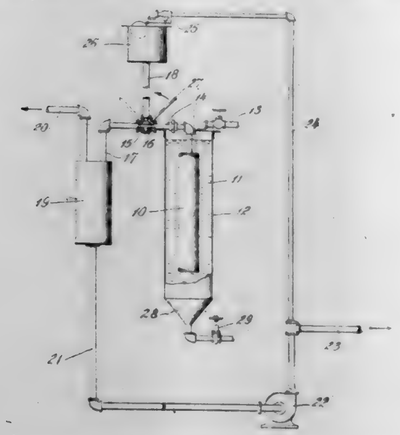
1. That improvement in methods of making soles which comprises positioning a molded sole in operative relation to a cutting die, flattening said sole and cutting it partly through, superposing a molded sole upon said first sole, flattening the second sole and performing a second cutting operation in such manner as to complete cutting through the first sole and to cut the second sole partly through whereby the partially cut sole serves as a support for the sole subsequently to be cut, flattening and cutting each sole in turn so that each sole is cut peripherally to a predetermined size and contour.

---

1,560,796. THICKENING PROCESS. ALBERT LEGRAND GENTER, Salt Lake City, Utah, assignor of one-half to General Engineering Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 2, 1924. Serial No. 683,890. 21 Claims. (Cl. 210—182.)

1. A continuous filtering and thickening process for hot liquid mixtures or liquid mixtures containing dissolved or absorbed gases and the like, wherein the mixture to be filtered and the filtrate are continuously in contact with opposite sides of a filter medium which comprises applying a reduced pressure to the filtrate side of the filter medium for a limited time only, that is, until the formation of a vapor or liberation of gas within the filtrate begins to appreciably reduce the space occupied by the liquid portion of the filtrate, and then applying a liquid countercurrent to the same side of the filter medium so as to reduce by consequent vapor condensa-

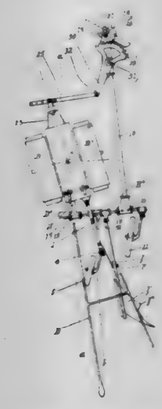
tion or gas reabsorption the vapor or gas space previously formed, and to exert a cleansing action on the other



side of the filter medium, said liquid countercurrent being applied in such manner that no air or the like enters the filtrate.

---

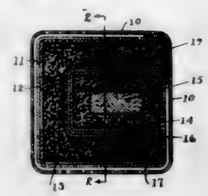
1,560,797. COMBINATION ANTISIDE DRAFT PLOW HITCH AND TRACTOR GUIDE. PAUL HANSMANN and HERMAN STRACK, Long Prairie, Minn., assignors, by mesne assignments, to said Paul Hansmann. Filed Dec. 21, 1920, Serial No. 432,241. Renewed Apr. 7, 1925. 12 Claims. (Cl. 97—49.)



1. In a plow hitch and tractor guide, the combination with a tractor, said tractor including oppositely disposed wheels mounted so as to be bodily revoluble about a central pivot point in a horizontal plane to steer the tractor; of a lever pivotally connected to the rear of the tractor and extending outwardly and forwardly along side of and a distance in advance of the tractor, a ground wheel support for said lever mounted at the forward end thereof so as to be revoluble bodily about a vertical axis in the plane of its axis of rotation, the plane of said ground wheel parallel with the planes of said tractor wheels when the tractor is traveling in a straight course, said ground wheel being positioned a distance outwardly away from the tractor, a plow positioned a distance to the rear of said lever and having pivotal connection with the latter at a position to enable the plow to cut a furrow adjacent the trail of said ground wheel, a caster wheel support for the rear of said lever, and mechanism operatively connected with the mounting of said bodily revoluble tractor wheels and of said ground wheel for communicating a revolving motion from one mounting to the other when either is bodily revolved.

---

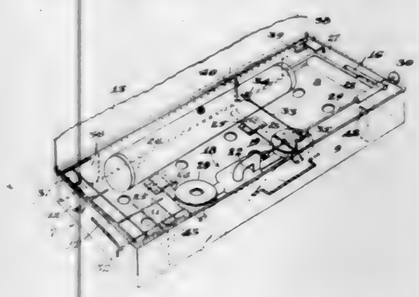
1,560,798. DRY-CELL BATTERY. JOHN HARRIS, Cleveland, Ohio, assignor to Charles M. Fulkerson, Cleveland, Ohio. Filed May 19, 1924. Serial No. 714,310. 1 Claim. (Cl. 136—38.)



In a single-cell dry battery, the combination of a cathode, an anode surrounding said cathode and consisting of a sheet of active material arranged in general spiral form, and a depolarizing mixture in which said cathode is embedded arranged in spiral form between the convolutions of the anode whereby the opposite sides of a portion of the anode are presented to said mixture and a continuous current path is provided between the cathode and all active surfaces of the anode.

---

1,560,799. FOLDING STOVE. JOHN HIGHAM, Los Angeles, Calif., assignor to Arthur C. Higham, Los Angeles, Calif. Filed Nov. 4, 1924. Serial No. 747,793. 7 Claims. (Cl. 126—38.)



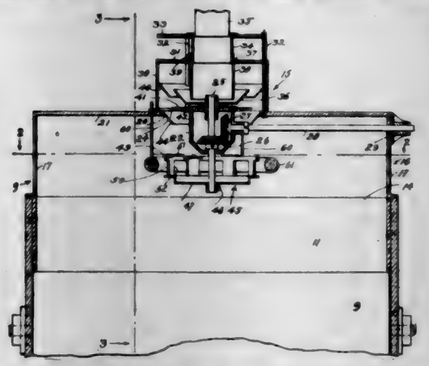
1. In a camp stove, a box-like housing, a fuel reservoir slidably carried by said housing and adapted to be positioned either interiorly or exteriorly thereof, a burner arranged in said housing connected to said reservoir, and a fuel feed conduit fixedly connected to said reservoir and burner.

---

1,560,800. FEEDING AND DISTRIBUTING APPARATUS FOR ROLLER MILLS. ALBERT HOBERECHT, Los Angeles, Calif., assignor of one-half to Edward McKain, Los Angeles, Calif. Filed Sept. 13, 1922. Serial No. 587,918. Renewed Feb. 4, 1925. 9 Claims. (Cl. 83—44.)

1. In a feeding and distributing mechanism for roller mills, a rectangular housing having an opening therein,

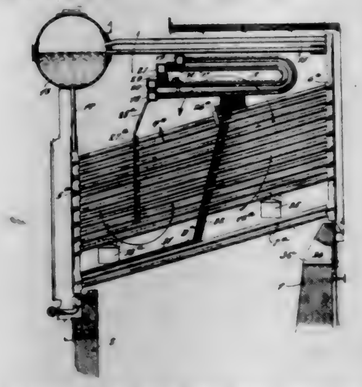
two of the oppositely disposed walls of said housing being adjustable, a casing mounted over said opening, a stock



delivery spout connected with said casing, and a rotary grain distributing member disposed within said rectangular housing and below said delivery spout.

---

1,560,801. STEAM BOILER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 19, 1919. Serial No. 324,817. 6 Claims. (Cl. 122—297.)

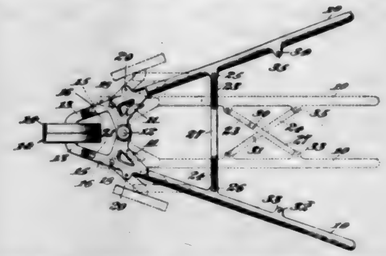


1. A boiler of the water tube type, comprising a bank of horizontally inclined tubes connected at their ends to water compartments, a steam and water drum above the bank connected to the end compartments, a lower group of tubes comprising a plurality of rows spaced apart from the main bank to give a chamber therebetween, the lower group of tubes being exposed to the furnace chamber beneath for substantially their entire length, a horizontally inclined roof baffle extending from the lower ends of the tubes above the lower group for a portion of the length of the tubes, a transverse baffle extending from the inner portion of said roof baffle forwardly and upwardly at an inclination to the vertical across the tubes of the main bank, the boiler having a down pass at the opposite side of said forwardly inclined transverse baffle.

---

1,560,802. CONVERTIBLE VEHICLE. CLAS J. JULSTEDT, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Oct. 23, 1923. Serial No. 670,263. 13 Claims. (Cl. 280—52.)

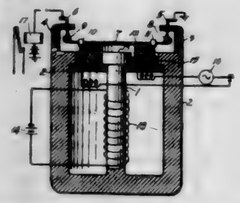
13. In a convertible vehicle, the combination of a pair of handle members pivotally connected together at one end, spacing means for obtaining two fixed relative positions of the handle members, swivel members pivotally connected to the handle members and having laterally-extending journal portions, wheels carried by the journal



portions, and means for fastening each swivel member in two positions with respect to its handle member spaced apart 180° minus the angle of movement of each handle member between the two positions thereof.

---

1,560,803. RELAY. DANIEL D. MILLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1924. Serial No. 736,381. 18 Claims. (Cl. 175—320.)

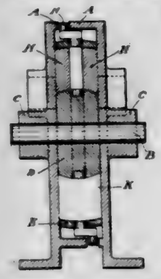


1. An electromagnet structure having a coil rigidly positioned in the polar field thereof, a second coil loosely positioned in the polar field thereof, and means comprising an alternating current source for energizing said first coil to cause said second coil to vibrate.

17. A relay comprising a closed magnetic core, an energizing winding interlinked with said core, a closed secondary winding interlinked with said core and contacts operated by said secondary winding.

---

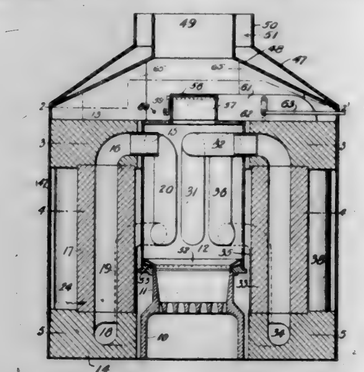
1,560,804. ROTARY PUMP OR MOTOR. GUSTAF FREDRIK KONRAD ROSÉN, Kalmar, Sweden. Filed July 12, 1923. Serial No. 651,116. 3 Claims. (Cl. 103—141.)



1. In a rotary pump or motor, the combination with an outer housing, of a rotor comprising a hub, an annular peripheral part and a central disk-shaped part connecting the hub and the annular part together, said peripheral part having an inner spherical surface and extending throughout the width of the interior of said housing, and working vanes carried by said rotor within said peripheral part and turnable about radially disposed

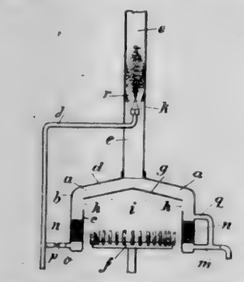
axes, the outer ends of said vanes being formed so as to correspond to the inner spherical surface of said peripheral part.

1,560,805. HEATING FURNACE. BROR MAX SCHAUMAN, Atlantic Highlands, N. J., assignor of one-fifth to Granden V. Johnson, one-fifth to Otto Gautschy, and one-fifth to Harry N. Johnson, all of Highlands, N. J., one-fifth to William Koch, of Long Branch, N. J., and one-fifth to Bror Max Schauman, Atlantic Highlands, N. J., an Association. Filed May 28, 1921, Serial No. 473,505. Renewed Feb. 5, 1925. 12 Claims. (Cl. 126—99.)



1. In a heating furnace, a combustion chamber, a heat exchanging body having a circuitous smoke passage therein connected with the combustion chamber, means for passing the medium to be heated about said heat exchanging body, and connections between different sections of the body reentrant into the combustion chamber.

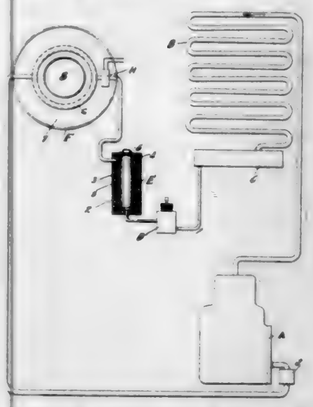
1,560,806. METHOD OF AND APPARATUS FOR HEATING WATER. ALBERT SCHÜCKHER, Vienna, Austria. Filed Nov. 13, 1922. Serial No. 600,734. 7 Claims. (Cl. 126—359.)



1. The method of heating water, which comprises causing hot combustion gases to flow upward through a mixing chamber having an elongated vertical portion of relatively small cross-section and discharging the water to be heated into said vertical portion of the mixing chamber in an upwardly directed spray, permitting the water to fall in counter-current to the combustion gases through said vertical portion of the mixing chamber, and collecting and drawing off the heating water, whereby heat of the combustion gases is transferred directly to the water and water vapor is condensed out of partially cooled gases by the water spray and the suction of the spray aids in the movement of the gases.

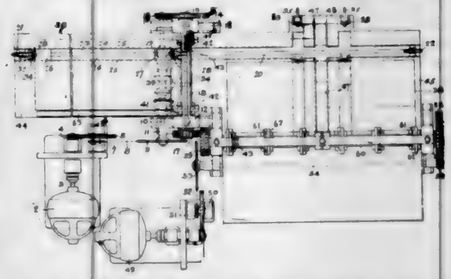
3. Apparatus for heating water, comprising means providing a combustion chamber, a lower mixing chamber extending about the sides of the combustion chamber and inward over the top thereof, said chambers being in communication through the side wall of the combustion chamber for the passage of combustion gases and the mixing chamber being extended downward to provide a hot water chamber, and a vertical passage of relatively great length and small cross-section extending upward from the lower mixing chamber and serving as a flue for the escape of the combustion gases and as an upper mixing chamber, an upwardly directed spray nozzle mounted within said passage, and a water connection for supplying water to said nozzle.

1,560,807. REFRIGERATOR SYSTEM. HAZOR J. SMITH, Springfield, Mass., assignor, by mesne assignments, of one-fourth to Willard Reid, Springfield, Mass., one-fourth to Alfred Buckley, jr., Providence R. I., and one-fourth to John W. Scott, Philadelphia, Pa. Filed June 5, 1920. Serial No. 386,884. Renewed Mar. 31, 1925. 2 Claims. (Cl. 62—4.)



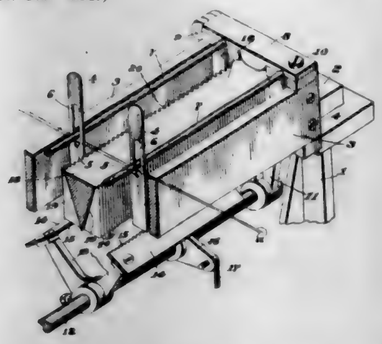
1. In a household refrigerating machine of the type described, the combination of a compressor, a condenser, an automatic expansion valve, a brine tank, a brine cooling expansion drum within said tank, a freezing container interposed in the expansion line behind the expansion valve and ahead of the expansion drum, and means for controlling the operation of the compressor by the temperature of the brine tank regardless of whether the freezing container is in use or not.

1,560,808. SHEARING MACHINE FOR METAL SHEETS. LAWRENCE C. STEELE, Pittsburgh, Pa. Filed Oct. 11, 1922. Serial No. 593,800. 8 Claims. (Cl. 164—62.)



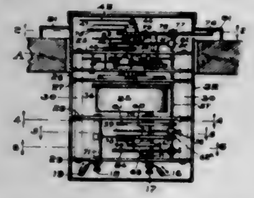
1. In a machine for shearing sheets, plates, etc., the combination with a suitable frame, of an endless chain, means for advancing said chain and reversing same, clamping devices carried by said chain for clamping the opposite ends of the sheet to said chain, and cutters in the path of said sheet.

1,560,809. WARP-STOP MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 21, 1925. Serial No. 44,988. 7 Claims. (Cl. 139—351.)



1. In a warp stop mechanism for looms, the combination of a series of drop wires normally supported by the warp threads during weaving, a drop wire indicating bar having a vertically inclined surface and outwardly extending portions to direct lateral movement of the drop wires, and a feeler adapted to engage an abnormally positioned drop wire on the occurrence of a warp fault and move it into contact with said vertically inclined surface to tilt the drop wire, and locate the warp fault.

1,560,810. TIME SWITCH. SELDEN L. STONE and ROY C. BRAENDLEIN, Indianapolis, Ind. Filed May 8, 1922. Serial No. 559,140. 7 Claims. (Cl. 200—35.)



1. In combination with a clock mechanism, means for indicating time, a contact finger mounted on support driven by the clock mechanism, a rotable cam for oscillating the contact finger, and means for changing the relative position of the cam and contact finger for varying the time of opening and closing a circuit, substantially as set forth.

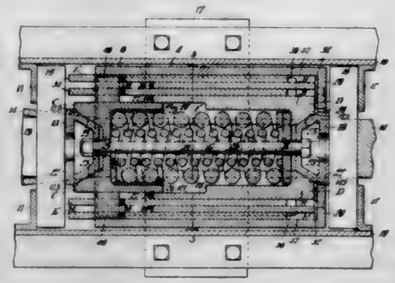
1,560,811. CONCRETE-CULVERT MOLD. THOMAS DE LA MARE, Tooele City, Utah. Filed Aug. 4, 1924. Serial No. 730,026. 8 Claims. (Cl. 25—131.5.)

1. A top mold for a culvert comprising inner and outer spaced walls to form a concrete receiving space between them, said walls being formed of detachably connected sections, the inner wall including three longitudinally extending inserts with uprights connected with the side edges thereof, the outer wall including transversely arranged sections connected at their lower ends by plates positioned on opposite faces thereof and bolted thereto.

1,560,812. HEADLIGHT ATTACHMENT. HARRY F. HANSEN, Washington, D. C. Filed Nov. 6, 1923. Serial No. 673,106. 3 Claims. (Cl. 240—48.4.)

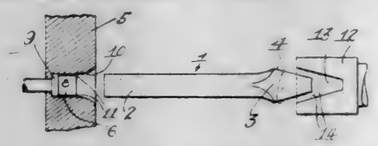
1. An attachment for vehicle headlights, comprising a pair of structurally-separate light-obstructing members, each in the form of a dihedral angle embodying a vertical wing and a horizontal wing and adapted to be removably positioned in the upper and lower portions of the reflector of a headlight in inverted relation, with their horizontal wings parallel and spaced apart to provide between them a diametral chamber into which the secure of light projects and the back and sides of which are formed by the wall of the reflector, the horizontal wings of the upper and lower members having light-reflecting and light-absorbing outer surfaces, respectively, substantially as described.

1,560,813. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 28, 1924. Serial No. 716,313. 5 Claims. (Cl. 213—33.)



1. In a friction shock absorbing mechanism, the combination with relatively movable front and rear followers; of a group of relatively movable, interrelated friction plates interposed between said followers, the corresponding ends of certain of said plates being normally spaced from one of said followers; a floating friction shell having a longitudinally disposed wall coacting with one side of said group of plates, said shell having one end normally slightly spaced from the other follower; front and rear friction wedge systems, disposed at the opposite side of said group of plates and coacting respectively with said followers, each system including a friction wedge shoe, said shoes having coacting friction surfaces; and a spring resistance interposed between said systems.

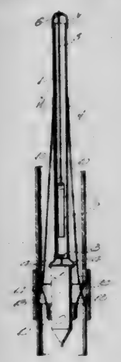
1,560,814. METHOD AND MEANS FOR FERRULING WOODEN SPOKES. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Baker Wheel and Rim Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1920. Serial No. 406,289. 10 Claims. (Cl. 29—88.2.)



4. An apparatus for operating upon wooden spokes having mitered butt ends, comprising in combination means for holding a ferrule, means for receiving and engaging the mitered butt end of a spoke, and means for producing a relative endwise movement between said ferrule holding means and said butt end receiving and engaging means, said two last mentioned means acting during said relative movement to compress the mitered butt end to size and to tightly secure a ferrule around the other end of the spoke.

---

1,560,815. WELL TORPEDO. WILLIS A. HILL, Tulsa, Okla. Filed Mar. 9, 1925. Serial No. 14,196. 9 Claims. (Cl. 102—4.)

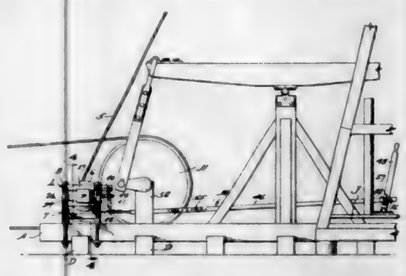


1. A device of the class described comprising a body provided with a line for lowering it into a well casing, self-projecting casing-engaging means for supporting said body in the well casing, and means for holding said supporting means against operation while lowering the device into the well casing, said holding means having a casing-engaging trip operative to release said holding means when an upward pull is exerted on the aforesaid line.

---

1,560,816. SAND-REEL, PEDESTAL AND CONTROL MECHANISM. THOMAS W. HOLLEY, Ranger, Tex. Filed Feb. 10, 1921. Serial No. 444,030. 3 Claims. (Cl. 308—59.)

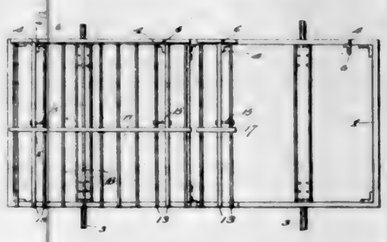
1. A pedestal for sand reel comprising in combination, a pair of base bars arranged in parallel spaced apart relation and each having a longitudinally and a vertically disposed flange, said horizontal flanges provided with perforations adjacent their ends and said vertical flanges each provided with a series of perforations arranged longitudinally of the flange, a clamp bar for each base bar, said clamp bars provided with perforations aligned with said perforations in the horizontal flanges of said base bars, adjustable take up devices accommodated in the said aligned perforations of said clamp bars and base bars for clamping the base bars to the main sill of the ring, a bearing block, a frame receiving and guiding said bearing block and permitting movement thereof longitudinally of the frame, and means securing said frame to said base bars in adjusted position longitudinally



thereof, said means including elements passing through selected perforations in said vertical flanges of said base bars.

---

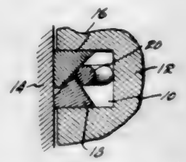
1,560,817. WOOD-DRYING APPARATUS. JOHN F. HOPE, Kansas City, Mo. Filed May 26, 1925. Serial No. 32,932. 7 Claims. (Cl. 105—160.5.)



2. The combination of a movable support, a set of standards rising from the rear part of the support and provided at their rear edges with spaced notches, and a series of superposed rectangular skeleton racks upon the movable support, each rack having parallel bars fitting at opposite sides of the standards, and its rear side adapted to fit in horizontally alined notches of the standards, and being slidable upwardly and back-and-forth on the standards and tiltable downwardly and rearwardly when slid back, to rest upon the underlying rack.

---

1,560,818. PISTON PACKING. WALLACE MATER HOULDSWORTH, Royal Oak, Mich. Filed May 19, 1924. Serial No. 714,281. 8 Claims. (Cl. 74—109.)



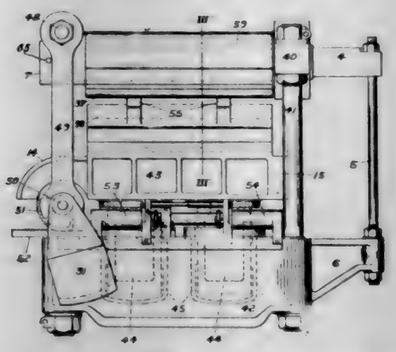
1. In piston packing, a piston having a groove for packing, a pair of expansible co-operating packing rings in said groove, said rings having conical meeting faces and conical inner faces, which conical inner faces form a groove on the inner periphery of the combined packing, said ring sections being of such cross-sectional area that when initially installed in the packing groove a slight annular gap exists between the conical meeting faces thereof, the ring sections adapted to wear within a limited period of use to close such gap.

1,560,819. SELF-BINDER KNOTTER. ELBERT ANSON HUFFMAN, Poncha Springs, Colo., assignor of one-half to Harry J. Beck, Salida, Colo. Filed Apr. 2, 1925. Serial No. 20,262. 2 Claims. (Cl. 289—11.)

1. In a knotter for self-binders of the type in which twine is looped around fingers of the knotter, and the twine ends then gripped by the fingers and drawn through the loop; a pair of fingers pivoted together and having longitudinal serrated-twine-gripping ribs on their inner sides, each of said fingers having edge portions projecting laterally from its rib, the inner sides of said laterally projecting edge portions of one finger being spaced from the corresponding portions of the other finger when said fingers are closed upon the twine ends, whereby to provide grooves in opposite sides of the knotter to receive said twine ends when the latter are pulled by the fingers through the twine loop around said fingers.

---

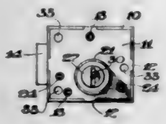
1,560,820. APPARATUS FOR WELDING METAL. PERCY E. HUNTER, Pittsburgh, Pa., assignor to Pittsburgh Annealing Box Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1923. Serial No. 629,257. 15 Claims. (Cl. 78—82.)



12. A welding machine consisting of a base provided with lifting mechanism, a cross-head thereon provided with a welding die, a superimposed anvil provided with a coacting die, means supporting one end of the anvil upwardly above the welding die, a pair of arms having an inner supporting and pivoting bolt journalled on the base and an outer cross bolt for engaging the other end of the anvil, a counterweight and a toothed segment secured on said bolt, a toothed rack bar engaging the segment, and fluid-actuated means for moving the rack bar back and forth.

---

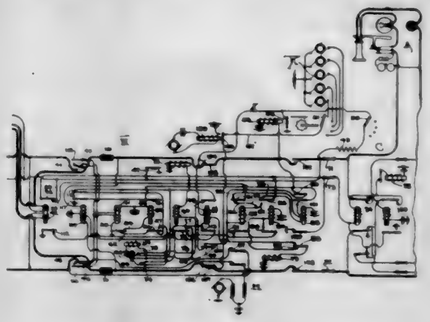
1,560,821. LOCK. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 9, 1920. Serial No. 415,741. 5 Claims. (Cl. 70—91.)



1. In a lock, a lock bolt, a rotatably mounted knob for moving the lock bolt, and a key-controlled lock barrel within the knob having a projection on its end eccentric thereto for blocking the movements of the lock bolt.

---

1,560,822. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1918. Serial No. 216,452. 19 Claims. (Cl. 179—27.)



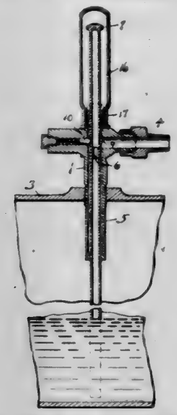
1. In a telephone system, a plurality of generators, each supplying current of different frequency, a party line, a plurality of stations on said party line each having a signal responsive to current from one of said generators, a switch for connecting with said party line, another switch individual to said first switch but having a separate wiper shaft, means for operating said other switch in response to one of the digits of the called number to select one of said generators, and for thereafter operating said first switch in response to a plurality of digits of said called number to connect said first switch with said party line and to apply the selected generator thereto for signaling one of the stations thereon.

---

1,560,823. CONTROL DEVICE FOR LIQUID RECEPTACLES. LOUIS JARNICHEN, Detroit, Mich. Filed Sept. 21, 1923. Serial No. 664,186. 2 Claims. (Cl. 158—46.5.)

1. In combination with a receptacle, a tubular suction connection attached thereto in vertical position, a suction tube slidable in said connection and having an aperture intermediate its ends communicating with the interior of the connection, said connection forming a sliding joint at its lower end around said tube, a cap closing

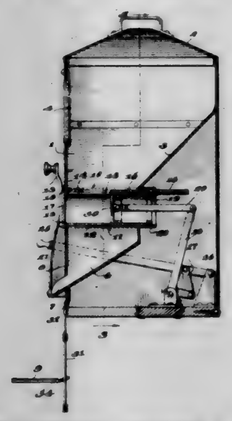
the upper end of said connection, spring pressed means for holding the tube in its normal position and adapted



to extend across the path of said tube when that is entirely withdrawn, and a key controlled device to withdraw the pin from said path.

---

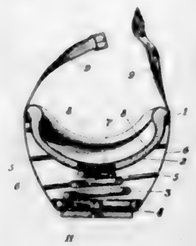
1,560,824. COMPUTING BIN. ISAAC S. KARRAZ and DOUGLAS V. BRIDWELL, Brinkley, Ark.; said Bridwell assignor to said Karraz. Filed Oct. 19, 1923. Serial No. 669,597. 8 Claims. (Cl. 221—107.)



1. Dispensing apparatus comprising a bin having a pair of openings in the front wall, a hopper situated within the bin, a chute in continuation thereof having a spout extending through the lowermost opening, a cylinder fixed within the bin having a pair of openings around which the hopper and chute are respectively joined, a measuring cylinder inserted through the other front wall opening and having bearing in said fixed cylinder, a disk forming part of said measuring cylinder having a rabbeted edge fitting said opening to prevent the escape of material, a handle fitted exteriorly of said disk in a position in alignment with an opening in the measuring cylinder thereby serving to indicate whether said opening is in a filling or discharging position in respect to either the hopper or chute, means carried by the measuring cylinder engaging the fixed cylinder preventing the withdrawal of the former, a plunger reciprocable in the measuring cylinder, a leaf carried by said plunger occupying the opening therein and causing the plunger to turn with the measuring cylinder and preventing material from falling thereinto in back of the plunger, and means for reciprocating the plunger including a lever, connecting means between the lever and plunger including a swivel connection, a marker carried by the lever, and a scale traversable by the marker.

---

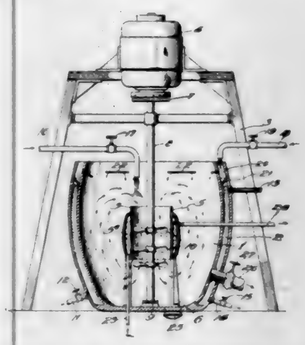
1,560,825. PROTECTIVE DEVICE FOR KNEES, ETC. LUDWIG KELTIČKA, Schles-Ostrau, Czechoslovakia. Filed Mar. 23, 1923. Serial No. 627,069. 3 Claims. (Cl. 2—24.)



1. A resilient protective device for the knee comprising an outer elastic covering, a support for the knee, a removable bottom plate, and a pair of spiral springs of conical convolutions within said body and between said support and said bottom plate, said springs being telescoped one within the other and each forming substantially a frusto-conical helix.

---

1,560,826. APPARATUS FOR MAKING BITUMINOUS EMULSION. LESTER KIRSCHBRAUN, Chicago, Ill. Filed Apr. 24, 1924. Serial No. 708,649. 3 Claims. (Cl. 259—7.)

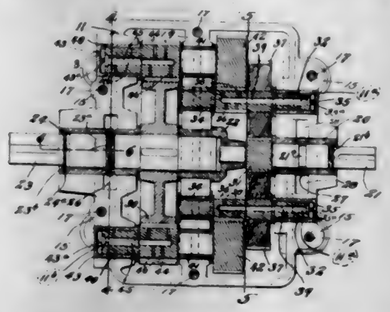


1. In an apparatus for forming emulsions, the combination with an enlarged mixing chamber, of an open ended smaller conduit therein, agitating elements, hollow jackets around the chamber and conduit adapted to contain heating or cooling mediums, a closed annular trough within the outer jacket, inlet means communicating with said trough for introducing ingredients to be emulsified and communications between the trough and enlarged chamber, and withdrawing means for the finished emulsion.

---

1,560,827. TRANSMISSION. GUSTAV KOMAREK, Chicago, Ill. Filed Mar. 14, 1922. Serial No. 543,709. 7 Claims. (Cl. 74—7.)

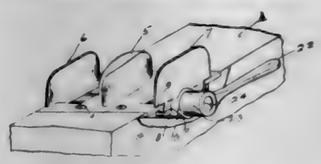
1. In a speed transmission, the combination of a closed housing substantially elliptical in cross section and having a plurality of oil compartments formed therein, a pair of axially aligned main shafts journaled in said housing, one of said shafts being provided with a gear and the other with a pinion, counter shafts journaled in said housing, a train of reduction gearing carried by said counter shafts and in driving engagement with said gear and said pinion, bearings for said counter shafts arranged in the end walls of said housing and having their outer ends closed, said counter shafts being pro-



vided with suitable passageways through which the oil is forced by means of said reduction gearings to said closed bearings, each of said closed bearings being provided with a discharge opening and the end walls of said housing being provided immediately below said discharge opening with inwardly disposed channels by means of which the oil is returned to the oil compartments.

---

1,560,828. CLAMP FOR SLIDING WINDOWS. ANTON J. KOPP, San Francisco, Calif. Filed Aug. 13, 1924. Serial No. 731,753. 2 Claims. (Cl. 292—256.)

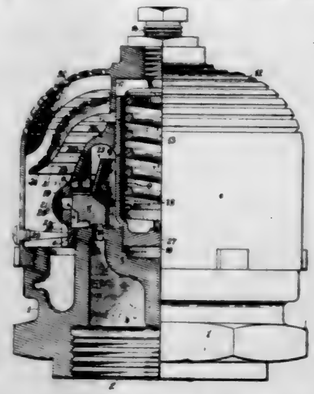


1. A clamp for sliding closures comprising a jaw plate to be attached to a member along which said closures are slidable, a fixed upright jaw carried by the body plate on opposite sides of which closures are adapted to engage, movable jaws slidable on opposite sides of and towards and away from the fixed jaw, said plate having recesses therein in which portions of the jaws are slidably engaged, laterally extending arcuate flanges on the lower portions of the jaws, having angularly directed upper ends, and track members on the under side of the plate slidably supporting said angular upper ends, ribs on the upper sides of said arcuate flanges, a rotatable member supported in the lower portions of the jaws and having right and left hand screw threads thereon engaging the said ribs, said member having its ends projecting outwardly beyond the outside of said movable jaws, an annular rib on said rotatable member separating said right and left hand screw threads, said plate having a depression in which said annular ribs engage and a handle attached to one end of said rotatable member.

---

1,560,829. SAFETY VALVE. CHARLES F. KRAUT, Bridgeport, Conn. Filed Feb. 2, 1924. Serial No. 690,159. 6 Claims. (Cl. 137—53.)

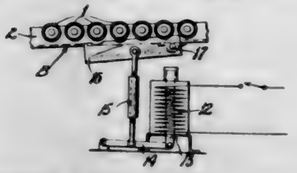
3. In a safety valve of the character described, comprising a base having steam ports, a valve disc therefor, a valve seating member having a base, a valve spring having its lower end in ball contact with the base of



the valve seating member, said valve seating member having a circumferentially arranged valve disc guide in ball contact with the disc valve.

---

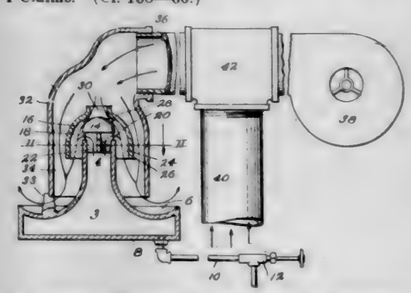
1,560,830. AUTOMATIC CONTROL FOR ROLLER CONVEYER SYSTEM. ALEXANDER S. LANGSDORF, St. Louis, Mo., assignor to Alvey Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 17, 1925. Serial No. 3,013. 3 Claims. (Cl. 193—35.)



1. A conveyer system comprising a main rollerway, a branch rollerway adapted to deliver articles to said main rollerway, a brake member adapted and arranged to be pressed against rollers of said branch rollerway adjacent to the main rollerway to prevent rotation thereof, electrical means for operating said brake and means controlled by an article on said main rollerway for actuating said brake operating means.

---

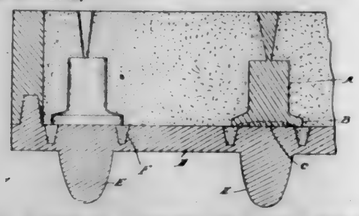
1,560,831. OIL BURNER. ROBERT E. LAUCK, Kansas City, Mo. Filed Nov. 6, 1924. Serial No. 748,167. 4 Claims. (Cl. 158—66.)



4. A burner consisting of a retort terminating at its upper end in a reduced neck, a deflector at the upper end of said neck, a dome extending over said deflector and provided with an air port, a hood extending over said dome, a primary air tube connected to said hood to supply the same with air, a blower connected to said

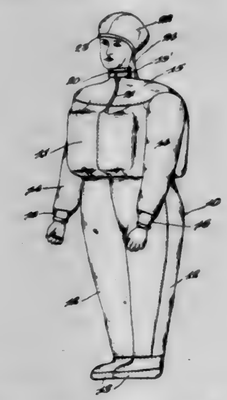
primary air tube, and a supplemental air tube connected to the primary air tube between the discharge end of the tube and the blower.

1,560,832. APPARATUS FOR FORMING VALVE TAPPETS AND THE LIKE. HARRY S. LEE, Plymouth, Mich., assignor to Merrill M. Wilcox, Saginaw, Mich. Filed Nov. 27, 1922. Serial No. 603,632. 4 Claims. (Cl. 22—174.)



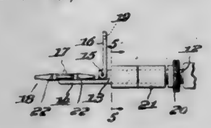
1. In a mold, an apparatus for forming disk-shaped tappets and the like having differentially hardened surfaces, comprising a flat chill plate forming one face of the mold cavity, said chill plate having a projection thereon, said projection greatest in depth opposite that portion of said tappet disk to which is imparted the greatest depth of chill, and of less depth opposite that part of said disk to which is imparted a lesser depth of chill.

1,560,833. LIFE-SAVING SUIT AND SUPPORT THEREFOR. PIERRE LEVESQUE, Chicago, Ill. Filed May 22, 1925. Serial No. 32,158. 5 Claims. (Cl. 9—20.)



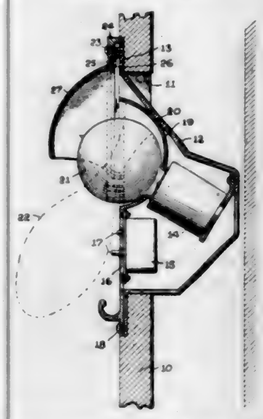
1. In combination, a garment of impervious elastic material and a supporting stand for suspending the same in upright position, comprising a frame, arm members movably mounted upon the frame, and means on said arm members engaging within a portion of the garment for holding the same distended.

1,560,834. TOOL HOLDER AND TOOL OR IMPLEMENT THEREFOR. GEORGE A. MCMENIMEN, Somerville, Mass. Filed Aug. 29, 1924. Serial No. 734,883. 4 Claims. (Cl. 7—16.)



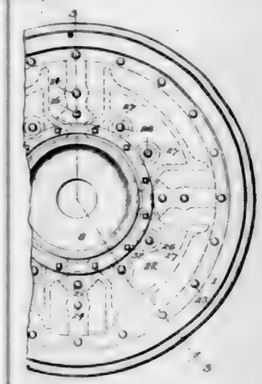
1. In a device of the class described, a shank having a threaded portion, a smooth portion, and a reduced end, said end having a pivot thereon to receive an implement; means coacting with said reduced end to retain an implement on said pivot, means to normally partially house said reduced end and said first means, and means to lock said second means in housing position.

1,560,835. BERTH-LIGHT CONSTRUCTION. EDWARD S. M. MACNAB, Montreal, Quebec, Canada, assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed May 13, 1920. Serial No. 380,971. 5 Claims. (Cl. 240—7.4.)



1. In the construction of berth lights and the like, in combination, a wall, an electric bulb formed to throw a maximum intensity of light in a predetermined direction and a lesser intensity of light in a direction substantially at right angles to said predetermined direction and mounted adjacent said wall, an inclined reflector adapted to reflect the light of maximum intensity from said bulb downwardly and outwardly with respect to said wall and a translucent diffusing member mounted to diffuse the light of lesser intensity from said bulb extending in an upwardly inclined direction from said bulb and out of the path of said downward light.

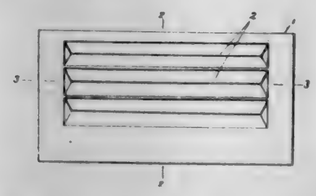
1,560,836. WHEEL. EDWIN C. MADDEN, New York, N. Y. Filed Jan. 4, 1924. Serial No. 684,390. 6 Claims. (Cl. 295—11.)



1. In a wheel in which transmission of vibrations is prevented and the tread of the wheel is cushioned, the combination of an inner wheel member provided with

a series of radially disposed U-shaped channels; an outer wheel member provided with a series of inwardly extending radial abutments, said latter members passing into the U-shaped members aforesaid and being free of contact with the walls thereof; and a plurality of cushioning elements positioned between the inner and outer elements, each of said elements comprising an arcuate section and inwardly extending elements which substantially fill the space between the side walls of the adjacent abutments while leaving a space between the inner end of the abutment and the bottom of the channel.

1,560,837. PALETTE. MICHAEL S. MASTRUKOFF, New York, N. Y. Filed Jan. 6, 1925. Serial No. 801. 1 Claim. (Cl. 41—5.)

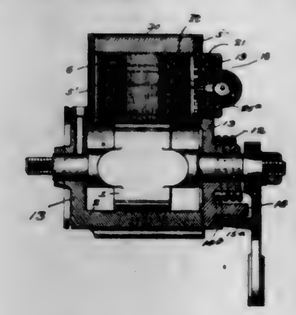


A palette of a substantially elongated rectangular form and provided with a plurality of parallel grooves extending lengthwise through said palette and terminating near its ends, each of said grooves forming a long and narrow trough from one end of said palette to the other and adapted to contain a coloring liquid.

1,560,838. COATING FOR METAL MOLDS. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Jan. 10, 1925. Serial No. 1,581. 3 Claims. (Cl. 22—180.)

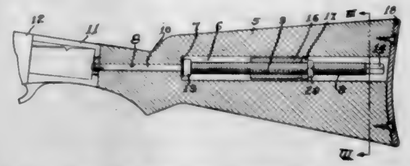
1. A wash for giving a protective coating to metal molds, comprising water containing a small quantity of "C" grade sodium silicate in solution and a relatively large quantity of a refractory powder in suspension.

1,560,839. MAGNETO. JOHN LEWIS MILTON, Louisville, Ky. Filed Jan. 12, 1921. Serial No. 436,740. 14 Claims. (Cl. 123—149.)



1. The combination of an electric generator provided with a stator and a rotor, and a mechanism for oscillating said rotor, in which a torsion spring constructed with free ends is supported by said stator, and the free ends engage a lug fixed on the stator; also, a lug on said oscillating mechanism so as to return said rotor to a predetermined position when moved away from same and released.

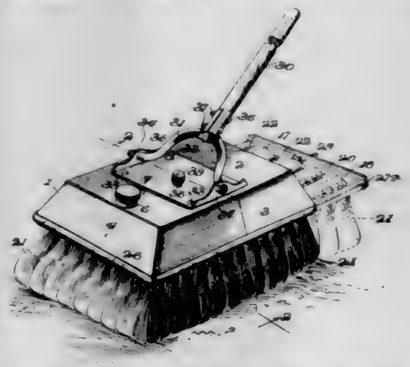
1,560,840. GUN. WILLIAM J. MOLLOY, Chicago, Ill. Filed Feb. 21, 1925. Serial No. 10,757. 5 Claims. (Cl. 42—71.)



1. A gun, of the character described, having a stock and a weighted body adjustable longitudinally of the stock while in said stock.

5. A gun, of the character described, having a barrel part provided with a tang projecting from the rear end thereof; a stock part having a longitudinal bore in line with said tang; a rod concentric with said bore and screwed into said tang to hold the parts together; a weight mounted on said rod and movable axially of said rod to adjustably balance the gun, and a butt plate covering said bore.

1,560,841. RESERVOIR MOP. LOIS H. NEARN, Tracy City, Tenn. Filed Nov. 1, 1924. Serial No. 747,345. 12 Claims. (Cl. 15—31.)



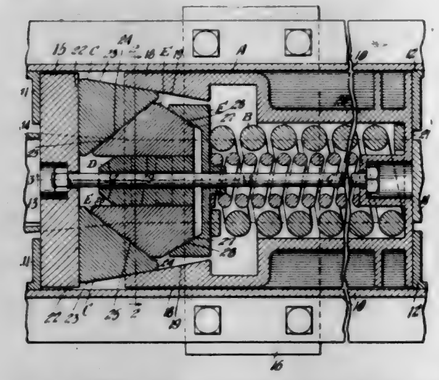
1. A device of the character described comprising a liquid reservoir, depending flanges carried thereby, a removable mop carrying tray supported by the flanges, a discharge orifice in the reservoir, means for controlling the same, and a distributor plate interposed between the discharge orifice and the mop tray whereby to distribute the liquid from the reservoir uniformly over the mop tray.

1,560,842. FROZEN CONFECTION AND METHOD OF MAKING THE SAME. WILLIAM L. NETTLESHIP, South Tacoma, Wash. Filed June 4, 1924. Serial No. 717,808. 6 Claims. (Cl. 99—16.)

1. The herein described method of producing a confection which consists in placing a flexible strip of material upon the bottom of a tray, covering the material with a partially frozen material to be formed into a confection, drawing one end of the flexible strip over the partially frozen material to roll said material into spiral form.

4. A frozen confection comprising a spirally wrapped layer of ice cream.

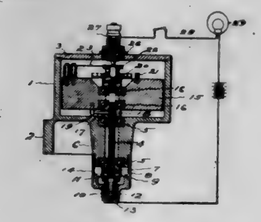
1,560,843. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 13, 1922. Serial No. 600,562. 5 Claims. (Cl. 213—26.)



1. In a friction shock absorbing mechanism, the combination with a friction shell having inwardly converged friction surfaces; of a spring resistance; an outer follower; a plurality of friction members cooperable with the shell, follower and each other, to produce a differential action of one character during a portion of the compression stroke; and means, operable during the balance of the compression stroke, for producing a differential action of a different character.

---

1,560,844. MEANS FOR OPERATING AUTOMOBILE SPEED SIGNALS. ALFRED W. OLDS, Windsor, Conn. Filed July 31, 1922. Serial No. 578,839. 3 Claims. (Cl. 200—52.)



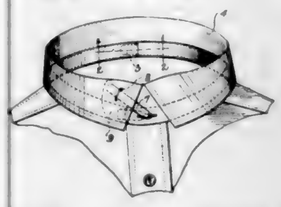
1. Means for operating an automobile speed signal comprising a rotatory spindle adapted to be driven from the vehicle, a weighted member rotatably mounted on and adapted to be driven forwardly by the spindle but free to rotate ahead of the spindle due to its momentum when the rotation of the spindle is retarded, a spring connecting the weighted member and the spindle and tensioned to rotate the weighted member backward after it has run ahead of the spindle and its excess momentum has been exhausted, a fixed circuit terminal, a circuit contact, and means on the end of the spindle adapted to press said contact into engagement with said terminal when the weighted member due to its momentum rotates faster than the spindle.

---

1,560,845. ALLOY. MELVIN E. PAGE, Muskegon, Mich. Filed Apr. 22, 1925. Serial No. 25,123. 2 Claims. (Cl. 75—1.)

1. An alloy composed of the following metals in substantially the following proportions: aluminum 93.20 per cent; gold 4.55 per cent; copper 2.25 per cent.

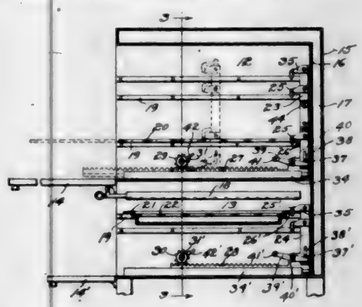
1,560,846. COLLAR-ATTACHING MEANS. JAMES J. PARIS, Chicago, Ill. Filed Mar. 24, 1924. Serial No. 701,280. 1 Claim. (Cl. 2—139.)



The combination with a shirt neckband, of a collar having an aperture in one of its flaps, and a securing tape sewed to the inside of said neckband and formed tubular intermediate its length and flattened at its ends, said tubular portion adapted to engage through the front collar button holes of said neckband and then through the front button holes of the collar, the free flattened end of said tape adapted to engage said collar flap aperture.

---

1,560,947. OVEN-RACK-HANDLING DEVICE. WILLIAM PARKE, New York, N. Y. Filed Feb. 5, 1925. Serial No. 7,052. 16 Claims. (Cl. 126—339.)



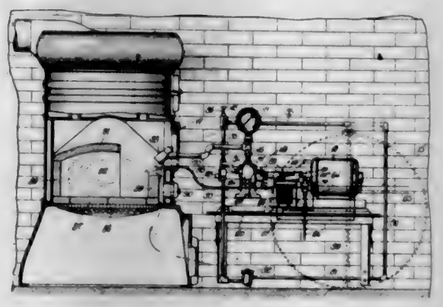
1. In a stove comprising an oven having a door opening, heating means for said oven, a door in said door opening, and a food support movable laterally within and from said oven, the combination of: food support moving means comprising a substantially vertical arm, movable by a rotatable element, for advancing or retracting said food support at will and independently of the movements of said door.

---

1,560,848. NUTMEG GRATER. NORRIS H. PAYSON, Newport News, Va. Filed Feb. 21, 1925. Serial No. 10,909. 6 Claims. (Cl. 146—177.)

1. A blank for a nutmeg grater comprising a flat metal plate, arms integral with said plate and extending from one edge and in the plane of said plate; said plate and its arms adapted to be bent to form a housing for a grating mechanism.

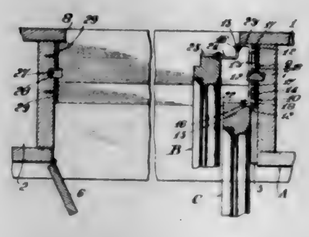
1,560,849. OIL-BURNING SYSTEM AND APPARATUS. CARL F. PEARSON, Chicago, Ill. Filed Nov. 13, 1923. Serial No. 674,473. 3 Claims. (Cl. 158—36.3.)



1. An oil burning system including an oil supply tank; an oil burner; a pilot burner; an oil supply pump between said tank and oil burner; an air pump connected to said oil pump; means for conveying oil from said tank to said oil burner thru said pumps; an electromagnetically controlled valve between said pumps for controlling the flow of oil to the burner; said electromagnetic means also controlling the supply of fuel to said pilot burner; and an oil return pipe between said pumps to return any excessive supply of oil to said tank.

---

1,560,850. WINDOW FRAME AND SASH THEREFOR. ISADORE J. POLACK, Chicago, Ill. Filed Feb. 4, 1924. Serial No. 690,424. 5 Claims. (Cl. 20—50.)

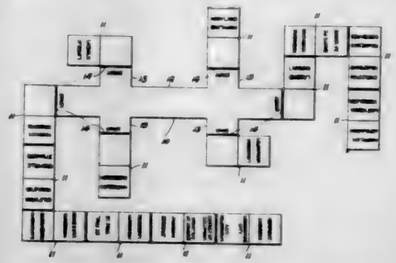


1. In a window, a frame, upper and lower sashes slidably mounted therein and pivotally mounted at one side to permit of the swinging thereof to open position, the other sides of said sashes being bevelled to permit close fitting of the sashes in the frame and to overcome binding thereof when the sashes are swung to open and closed positions, a set of superposed hinges secured to the non-bevelled side of each sash and providing pivots for the sashes, one set of the hinges provided with a pair of oppositely disposed L-shaped flanges, and means fixed to the frame and overlapping said flanges for slidably securing the hinges to the frame.

---

1,560,851. GAME APPARATUS. HAROLD M. PORTER, Hagerstown, Md., assignor to The Porter Chemical Company, a Corporation of Maryland. Filed Apr. 7, 1921. Serial No. 459,351. 10 Claims. (Cl. 273—137.)

1. A game apparatus comprising a starter game piece having a plurality of blank starting faces, and a series of game pieces each bearing one or more terms adapted to be matched with a game piece bearing a different, but geographically related term, some of the game pieces



of each series each having a blank face adapted to be matched with one of the blank starting faces of said starter game piece.

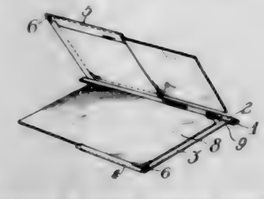
---

1,560,852. POCKET CASE. ISAAC F. POTTER, Johnstown, N. Y. Filed May 7, 1925. Serial No. 28,679. 1 Claim. (Cl. 40—16.)

An improvement in a pocket case of the type comprising a flat sheath open at one end, an article-holding strap passing slidably through the other end of the sheath and foldable around an end of one side wall of said sheath onto the outer side of said wall, and fastening means for releasably securing said strap against said side wall; said improvement comprising a strip of material extending longitudinally of the aforesaid side wall from said one end thereof to a point spaced from its other end to provide a name card pocket, said strip being secured at its side edges and its inner end against the outer side of said side wall but being free at its outer end to permit insertion of a name card into the pocket between the strip and side wall, said strip having a longitudinal name-displaying slot of less width than the aforesaid strap to be entirely covered by said strap when the latter is folded onto and secured against said side wall, the fold of the strap then extending across and closing the open end of the card pocket to retain the name card in said pocket.

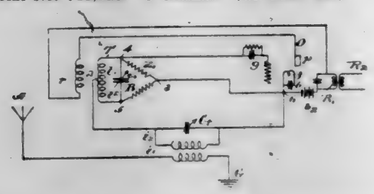
---

1,560,853. INDEXING SYSTEM. FRANK D. POWELL, Chicago, Ill., assignor, by mesne assignments, to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1922. Serial No. 597,714. 8 Claims. (Cl. 129—10.7.)



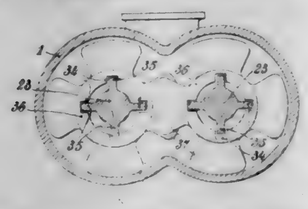
4. Card holders for visible indexing systems comprising support members, card-carriers hinged thereto and having card-supporting pockets extending partially across the lower edges of the cards.

1,560,854. RADIO RECEIVING APPARATUS. JACKSON H. PRESSLEY, Oceanport, N. J. Filed Oct. 16, 1924. Serial No. 743,929. 6 Claims. (Cl. 250—20.)



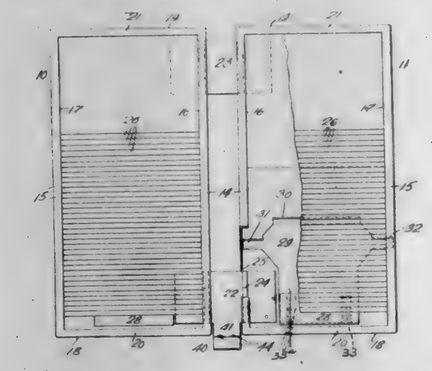
1. A circuit system comprising, in combination, an input circuit, an output circuit, a three element vacuum tube having a plate, a grid and a filament, a mesh circuit having a conjugate pair of neutral points, said input circuit being connected across said pair of conjugate points, said grid and filament being connected across nonconjugate points of said mesh, and said plate being electrically coupled to said mesh circuit and to said output circuit.

1,560,855. RETORT FOR THE CARBONIZATION OF SOLID FUELS. AUGUSTIN LÉON JEAN QUENEAU, Frejus, France, assignor to Edmund Heisch, Paris, France. Filed Nov. 27, 1923. Serial No. 677,248. 3 Claims. (Cl. 202—9.)



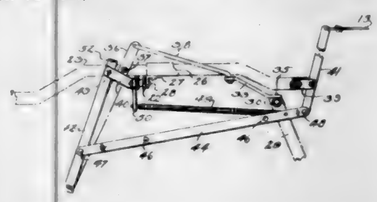
1. A retort comprising a casing, a rotary conveyor mounted therein, said conveyor constituted by a number of aligned noncircular shaft sections and rings encircling the shaft sections, and having non-circular openings loosely receiving the non-circular sections, some at least of said rings being provided with conveyor blades and at least some of said rings serving to couple said shaft sections.

1,560,856. PORTABLE INDEX BOOK OR DEVICE. JAMES H. RAND, Jr., Tonawanda, N. Y. Filed Oct. 8, 1923. Serial No. 667,132. 9 Claims. (Cl. 129—34.)



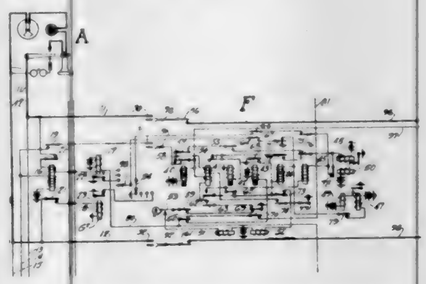
4. In a card index book, a plurality of one-piece metal leaves each having a body portion and integral sides provided with inwardly extending flanges adapted to contact with the flanges of the others of said leaves when the book is closed, the inner sides of said body and side portions being adapted to receive cards or index devices and providing protective covers for said cards, means connecting said leaves so that they may be moved relatively to one another to and from open and closed positions, a handle on said left-connecting means adapted to be grasped to permit the index book to be moved on a supporting surface, and means on said handle adapted to receive and display a data slip or other indicating device.

1,560,857. FOOT CONTROL DEVICE FOR TRACTOR CLUTCHES. EDMUND J. RICHARDSON, Moville, Iowa. Filed Aug. 14, 1925. Serial No. 50,193. 5 Claims. (Cl. 74—81.)



1. A foot actuated control device to be used in connection with an implement having longitudinal and spaced forward and rear transverse frame bars, comprising a bracket secured to the forward transverse bar, a forward vertically arranged lever fulcrumed on said bracket, a second bracket on the rear transverse bar, a depending foot lever swingingly fulcrumed on said second bracket, a link connecting the lower end of the forward lever and the foot lever, and a spring secured under tension between the lower end of the forward lever and the rear transverse frame.

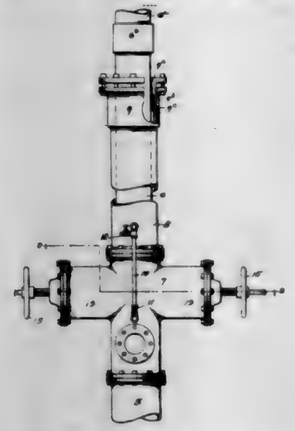
1,560,858. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., A Corporation of Illinois. Filed Nov. 23, 1920. Serial No. 426,011. 40 Claims. (Cl. 179—18.)



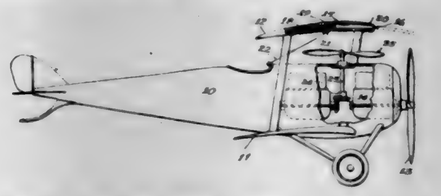
1. In a switching device for automatic telephone systems, the combination with a contact member adjustable and movable in only two directions, of two devices for controlling the adjustment of said member in said two directions, respectively, and means for operating said devices simultaneously.

1,560,859. OIL-WELL CONSTRUCTION. FRED RICHMOND, Oilfields, Calif. Filed Dec. 15, 1924. Serial No. 755,953. 6 Claims. (Cl. 166—14.)

1. The combination with a casing and a drill element movable therein, of a shut off device adapted to make a tight joint between the casing and the exterior of the tubing, a chamber of such size as to house a tubing coupling, located above the cut off device and a packing head carried by said casing.

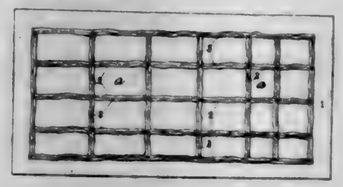


1,560,860. AIRPLANE. FREDERICK RIES, Compton, Calif. Filed Jan. 29, 1925. Serial No. 5,439. 8 Claims. (Cl. 244—12.)



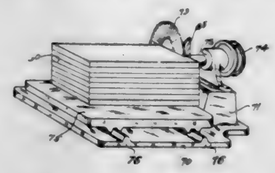
1. The combination with an airplane main wing provided in its forward portion with a pocket that extends practically the entire length of said wing; of an auxiliary wing normally contained within said pocket and compression springs arranged in the rear portion of said pocket and bearing against the rear edge of said auxiliary wing.

1,560,861. PRODUCTION OF PAPER AND CARDBOARD BLANKS AND SHEETS IN IMITATION OF HANDMADE PAPER AND CARDBOARD BLANKS AND SHEETS. CHARLES RIVAGE, Paris, France, assignor to United States Envelope & Co., Springfield, Mass. Filed Aug. 30, 1923. Serial No. 660,237. 9 Claims. (Cl. 93—1.)



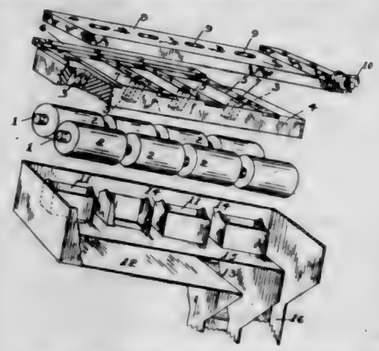
3. The herein described improvement in the production of deckle-edged sheets or blanks from manufactured paper or cardboard stock, which consists in subjecting said stock, in predetermined areas thereof, to a pressure sufficient to permanently compress it in said areas to less than normal thickness.

1,560,862. METHOD OF MAKING VARIEGATED RUBBER. FRED THOMAS ROBERTS, Cleveland, Ohio. Filed Sept. 13, 1920. Serial No. 409,846. 14 Claims. (Cl. 18—61.)



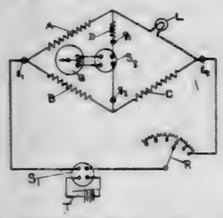
1. The method of making variegated rubber which comprises placing layers of different colors upon a member, causing a chamber to be formed about said member and layers, exhausting the air from the chamber, thereafter pressing the layers together and slicing the block so formed across the layers to form a sheet having portions of such layers as striations therein.

1,560,863. BEAN-SORTING MACHINE. ALPHONSO ROCHELEAU, Saginaw, Mich., assignor of one-half to Asa E. Walcott, Saginaw, Mich. Filed Apr. 5, 1922. Serial No. 549,838. 5 Claims. (Cl. 130—18.)



5. A bean sorting machine characterized by pairs of sorting rolls each comprising a plurality of short roll sections spaced apart lengthwise, and means for feeding material onto an end of each of said pairs of roll sections, for the purposes set forth.

1,560,864. OPTICAL PYROMETER OR SIMILAR INSTRUMENT. FRANCIS HAROLD SCHOFIELD, Teddington, England. Filed July 15, 1922. Serial No. 575,215. 5 Claims. (Cl. 88—14.)



1. An optical pyrometer making use of the variation in the intensity of radiation of an electric lamp due to changes in the current passing through the filament, comprising: a source of electric power variable at will arranged in the main circuit, a Wheatstone bridge, an electric incandescent filament lamp located in one arm of the bridge, three resistances constituting the two ratio

arms and the fourth arm of the bridge, a galvanometer connected to fixed points of the bridge, said resistances being such that for some particular current in the lamp the bridge is in balance while for other currents an out of balance deflection will be caused in the galvanometer, and a resistance associated with the galvanometer and fixing its sensitivity so that the limits of the out of balance deflections correspond to the whole length of the galvanometer scale.

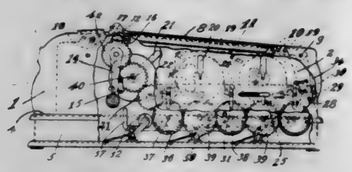
---

1,560,865. GRINDING MILL. JAMES BERNARD SEDBERRY, Utica, N. Y. Filed Nov. 28, 1923, Serial No. 677,481. Renewed Apr. 10, 1925. 1 Claim. (Cl. 83—11.)

In a grinding mill of the character described, a grinding element including a generally octagonal grinding head having its alternate surfaces provided with a plurality of cutting edges at and between the ends thereof.

---

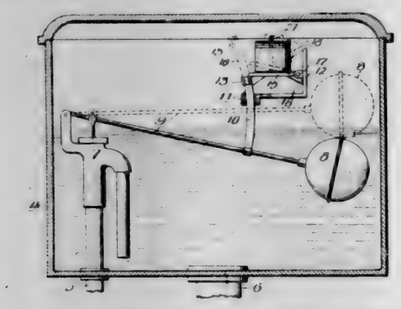
1,560,866. PRINTING AND MANIFOLDING MACHINE. JOHN Q. SHERMAN, Dayton, Ohio. Filed Feb. 19, 1924. Serial No. 693,873. 10 Claims. (Cl. 101—113.)



1. In a device of the character described, a common paper feeding mechanism for a plurality of webs of paper, a printing mechanism driven in synchronism therewith, means for maintaining an engagement of the printing mechanism with webs of paper, and means for enforcedly releasing the said engagement so as to permit of adjustment of the webs of paper with relation to the feed.

---

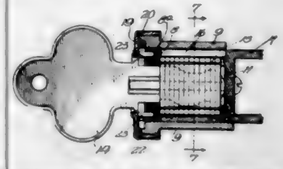
1,560,867. CONTROL FOR FLOAT VALVES. THOMAS SHETKA, St. Paul, Minn. Filed May 25, 1925. Serial No. 32,636. 6 Claims. (Cl. 137—104.)



5. The combination with a storage tank for liquid having an inlet pipe and a valve on said pipe adapted normally to maintain water at a predetermined level in said tank, said valve being provided with a float, an arm projecting above said float and operatively connected therewith, a member extending adjacent to said arm and pivotally supported at one end in said tank, the free end of said member being adapted to engage said arm when the float is in a depressed position and means adapted to exert downward pressure on said member sufficient to maintain said member in substantially horizontal position whereby said float is maintained in depressed position upon emptying of the tank until the water has risen therein substantially to said predetermined level.

---

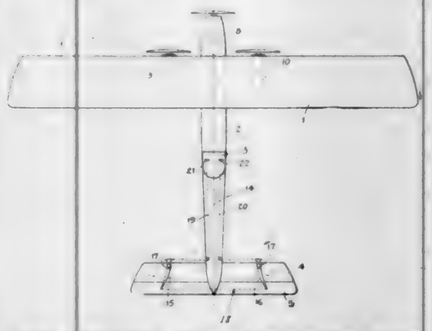
1,560,868. LOCK. LYLE B. SHINN, Chicago, Ill., assignor to Chicago Cabinet Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1923. Serial No. 678,085. 4 Claims. (Cl. 70—46.)



1. The combination with a lock comprising a casing having a bearing surface adjacent its front end, a cylinder in and rotatable relatively to the casing and provided with a key-slot, and tumblers for securing the cylinder and casing against relative movement, of a pair of members for closing the slot having meeting edges in front of the slot and provided with means by which they may be spread apart by the insertion of a key between them, and leaf springs for shifting the members to close the slot, said springs being secured to rotate with said members respectively and slidable on said bearing surface.

---

1,560,869. FLYING MACHINE. IGOR I. SIKORSKY, New York, N. Y. Filed Mar. 9, 1923. Serial No. 623,854. 7 Claims. (Cl. 244—29.)



1. The combination with a flying machine having a number of propellers arranged at opposite sides of the machine center line, of means providing surfaces to counteract the turning effort of unbalanced thrust of said propellers, said surfaces being located within air streams normally created by said propellers and each of said surfaces exerting a turning effort on the machine which opposes the turning effort of the propeller or propellers which create the air stream within which the respective surface is located.

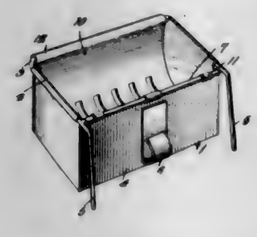
---

1,560,870. WALKING BEAM FOR OIL WELLS AND THE LIKE. GUY P. SLATER, Tulsa, Okla. Filed Aug. 7, 1924. Serial No. 730,742. 2 Claims. (Cl. 74—5.)

1. A walking beam for well drilling and pumping comprising side channel plates, a top plate and a bottom plate above and below the flanges secured thereto, I-beams extending transversely of the top plate on each side of the trunnion of the walking beam, truss rods supported on the I-beams and having their ends connected together between the I-beams, the top and bottom of the walking beam having diagonally disposed apertures through which the truss rods extend, and means on the outer ends of the truss rods for anchoring the same to the lower plate of the walking beam.

---

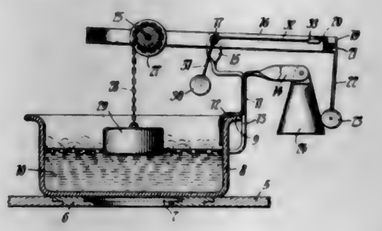
1,560,871. SOAP BOX OR HOLDER. DON L. SMITH, South Bend, Wash. Filed Sept. 11, 1924. Serial No. 737,137. 1 Claim. (Cl. 45—28.)



A soap holder comprising a substantially rectangular water tight container having its opposed ends rolled at their upper edges to form beads, a heavy wire inserted in said beads and extending around the front and rear edges of said container, arms depending from said wire at the rear thereof and cooperating with the rear wall of the container to form clamps for supporting the container on a support, and a soap holder U-shaped in cross section and hingedly connected along one side edge with the wire in the rear of the container and having a hook-shaped lip at its front end to engage the wire at the front end of the container, said soap holder having transversely arranged slots to permit water to pass therethrough.

---

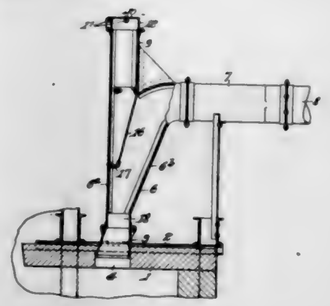
1,560,872. MILK BELL. ERNST STAHL, New York, N. Y. Filed Mar. 26, 1925. Serial No. 18,358. 3 Claims. (Cl. 116—110.)



3. An audible signal for vessels in which water may be boiled to indicate the boiling thereof, said signal comprising a support having arms to engage the wall of the vessel, arms on the upper part of said support, a bell carried by one of said arms, a tilting frame pivoted in the other pair of arms, a bell striker having an arm pivoted in the outer end of said frame, means to normally retain said arm in a raised position, means, including a float at the other end of said frame, said float resting on the surface of water in the vessel, and permitting the frame to tilt upon change in the surface of the water, to displace said striker, and means to retract said frame immediately contact is made between the striker and bell.

---

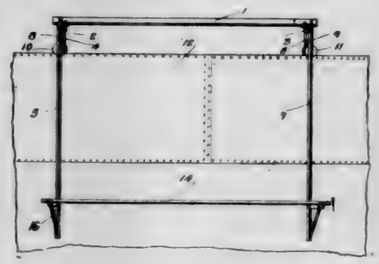
1,560,873. APPARATUS FOR FEEDING POWDERED COAL. WILLIAM J. STOOP, Wheeling, W. Va. Filed Dec. 5, 1923. Serial No. 678,774. 3 Claims. (Cl. 110—104.)



1. In apparatus for feeding powdered coal to furnaces and boiler fire-boxes, the combination with an overlying arch having alined feed passages therein, of a plurality of nozzles of inverted frusto-pyramidal form in communication with said passages, dividers located in intermediate overlying relation to said nozzles, a casing having its lower end embracing the upper ends of said nozzles, a fuel supply pipe opening into said casing, controllable means for introducing air through the top of the casing, and baffle means whereby the admitted air is delivered for mixing with the coal at a point intermediate the level of said supply opening and the level of said dividers.

---

1,560,874. TANK SCAFFOLD. JAY ALBERT STOUGH, Tulsa, Okla. Filed Oct. 6, 1924. Serial No. 741,920. 1 Claim. (Cl. 304—17.)



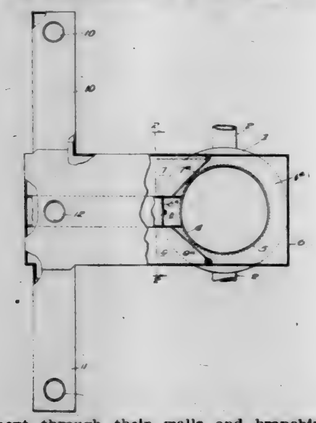
A scaffold adapted to be supported on a tank of circular cross section, comprising paired end bars for straddling the wall of the tank, a radial bracket connecting the bars of each pair, a top rail connecting the brackets, a hanger in each pair of end bars, grooved wheels carried in said hangers on radial axes and adapted for movably supporting the scaffold from the rim of the tank, radial platform brackets on the end bars, and platforms carried by the platform brackets.

---

1,560,875. PIPING SYSTEM FOR HOT-AIR FURNACES. JOSEF SUBERT, Oak Park, Ill. Filed Mar. 11, 1921. Serial No. 451,493. 7 Claims. (Cl. 126—99.)

1. In a heating system a heating source and a plurality of distributing conduits connected for delivery of heated air from the source to separated points of final discharge respectively, said conduits extending in substantially horizontal direction from the heating source

parallel and contiguous with each other for a limited distance to permit conduction of heat from one conduit



to the next through their walls and branching apart for connection with their respective discharge outlets.

---

1,560,876. WINDOW-FRAME CONSTRUCTION. JOSEPH SYLVAN, Cicero, Ill. Filed May 5, 1922. Serial No. 558,596. 6 Claims. (Cl. 98—31.)

1. In combination with a frame for window sash, said frame including upright side and mullion members and a top lintel member, one of said members being constructed to permit the passage of air therethrough and having an inlet opening and an outlet opening at a right angle thereto, means in said member between said openings for warming the air as it passes through said member, and a window sash hinged to one of said upright members to swing in a horizontal plane and adapted to close off said inlet opening from and to open the same to the outside atmosphere.

---

1,560,877. STUFFED TOY. EMMA R. H. TAGGART, Liberty, Mo. Filed Mar. 30, 1923. Serial No. 628,804. 1 Claim. (Cl. 46—40.)

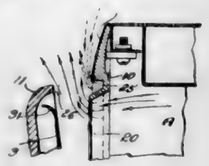
A stuffed toy, comprising an envelope consisting of two flexible body members conforming in outline to a toy shape, secured together at their edges, the envelope having lines of stitching passing through the two toy body members extending inwardly from the edge of the envelope to form pockets simulating the joints of the body, filling material in the pockets, and stiffening wires in the toy body stitched to the body members, said stiffening wires comprising straight intermediate portions and right-angularly bent eye portions.

1,560,878. SYSTEM FOR REPAIRING RAILROAD CARS. JOHN J. TATUM, Baltimore, Md. Filed Dec. 31, 1923. Serial No. 683,827. 4 Claims. (Cl. 104—26.)

1. A system for performing a series of operations on cars which consists in providing trackage space for the cars, a space adjacent to the cars divided into spots or zones of different colors designating the particular character of operations in each spot or zone, placing a bulletin board in each zone as the same color as its zone, indicating on said board repairs to be done in said zone, and then placing the necessary material in each zone.

---

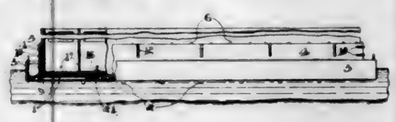
1,560,879. STOVE DOOR AND FRAME CONSTRUCTION. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Dec. 6, 1923. Serial No. 678,870. 6 Claims. (Cl. 126—190.)



1. In a stove construction, the combination of a front frame member having exposed surfaces of enamel, said frame having an upper and a lower oven door opening formed therein, doors mounted on said frame for closing the openings and grooves and flanges formed on the frame said flanges extending outwardly from said openings, a portion of the door seating into the groove and overlying the flanges when the doors are closed whereby when the doors are opened hot escaping gases from the oven may be guided away from the exposed surfaces of the frame.

---

1,560,880. METHOD OF CONSTRUCTING CONCRETE CRIBS. JESSE H. TROMANHAUSER, Toronto, Ontario, Canada. Filed Nov. 14, 1924. Serial No. 749,837. 14 Claims. (Cl. 61—81.)

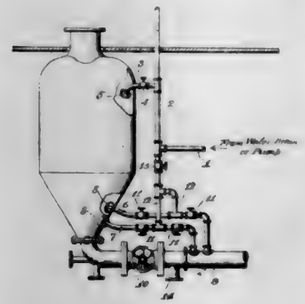


1. The method of constructing a concrete crib which consists in providing a pontoon bottom with removable side walls; building a floatable crib with concrete walls on said pontoon bottom within the pontoon walls and while the pontoon is afloat; disconnecting and stripping the pontoon sides; and finally stripping the pontoon bottom from below the crib.

---

1,560,881. QUICK-COOK SULPHITE PROCESS. PHILLIP C. ULMEN, River Rouge, and HERMAN H. BECKER and RUSSELL T. MANN, Detroit, Mich. Filed Apr. 14, 1924. Serial No. 706,542. 1 Claim. (Cl. 92—7.)

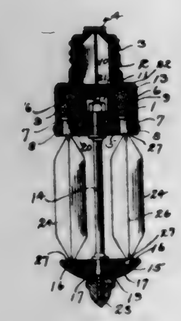
The method of discharging quick-cook sulphite digesters consisting in straining off the spent liquor and simultaneously injecting cold water to thus quickly reduce the temperature and pressure within the digester, and then,



after the temperature and pressure have been thus reduced, washing out the cooked chips.

---

1,560,882. INCANDESCENT LAMP. JOHN S. VAN HORNE, Franklin, Ohio. Filed July 25, 1922. Serial No. 577,453. 4 Claims. (Cl. 240—1.)

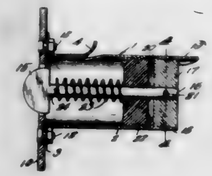


1. A cluster lamp comprising a plug member having an enlarged head, a second head located in parallel spaced relation with the first head, a rod fixedly connecting the heads one with the other, a plurality of contacts carried upon the adjacent faces of the said heads, the contacts of one of the heads being yieldingly mounted, and a plurality of independent lamp units located intermediate the heads and having terminal abutting engagement at their opposite ends upon the contacts carried by the reseptcive heads.

---

1,560,883. ELECTRIC SWITCH. ALBERT VOLLAND, Burlington, Kans., assignor of one-half to William C. Volland, Burlington, Kans. Filed Jan. 26, 1923. Serial No. 615,063. 1 Claim. (Cl. 200—54.)

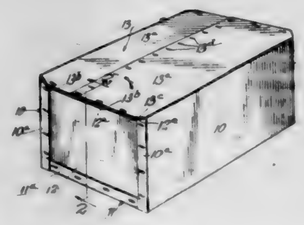
A switch of the class described comprising a cylindrical metal casing open at both ends with an instruck annular rib near one end on its inner face and at its other end with a laterally extending apertured attaching flange for connection with a support, said casing having an apertured tongue struck out of one side wall thereof designed to receive a current conducting wire, an insulating disk mounted in said casing and held engaged therein by said rib, a rod mounted to reciprocate in the insulating disk of said casing, and having a head at one end projecting beyond one end of the casing, an insulating disk carried by the other end of said rod, a metal shell encasing said disk and having a wire attaching lug and an inturned flange at its inner end



adapted to abut the outer end of the casing to close the circuit, a coiled spring mounted on the rod within the casing and adapted to normally project the head carried by the rod and to close the circuit, said head being designed to engage a cooperating member for holding the circuit open.

---

1,560,884. BOX. HARRISON B. WALTER, Chicago, Ill., assignor to Chicago Mill and Lumber Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1922. Serial No. 551,854. 3 Claims. (Cl. 229—23.)



1. A box of fibre, paper-board or the like having sides, bottom, ends and a top closure, the ends having top flap extensions adapted to be folded into the plane of the top of the box, and the top closure having extensions adapted to seat upon and to be secured to the flap extensions of said ends.

---

1,560,885. METHOD OF MAKING ALLOYS. RICHARD WALTER, Dusseldorf, Germany. Filed June 29, 1920. Serial No. 392,895. 4 Claims. (Cl. 75—1.)

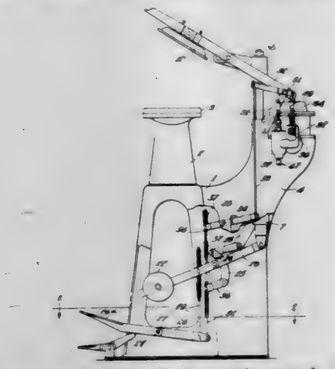
1. The hereinbefore described process of making alloys of silicon and heavy metals, which consists in mixing the components in proper proportion for the formation of a single homogeneous silicide, in then heating the mixture to a temperature at which exothermic reaction in initiated, and in then using this reaction to melt down the charge.

---

1,560,886. GARMENT PRESS. CHARLES E. WAREAM, Cincinnati, Ohio, assignor, by mesne assignments, of one-half to Metropolitan Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1920, Serial No. 359,127. Renewed July 31, 1923. 21 Claims. (Cl. 68—9.)

2. A pressing machine, comprising a garment support, a lever swinging in a vertical plane and carrying a

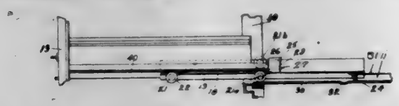
co-operating pressing head, a support for said lever, operator operated means for moving said lever support



vertically during pressing operation, and means for swinging said lever on its support.

---

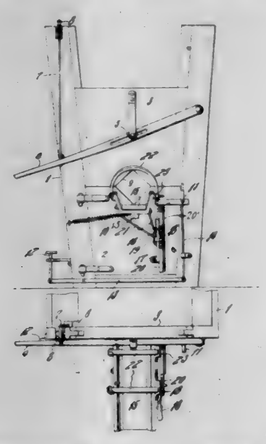
1,560,887. SUSPENSION. WILLIAM W. WATSON, Jamestown, N. Y. Filed Sept. 11, 1922. Serial No. 587,403. 3 Claims. (Cl. 45—77.)



1. In a cabinet having side rails provided with upper and lower flanges, a suspension mounted upon said rails, a drawer supported by said suspension, a pair of rollers on said suspension, other rollers on said suspension certain of which bearing normally against the lower faces of said upper flanges while a portion of said suspension extends above and out of contact with said flanges, depressions in the lower flanges of said side rails which said first named pair of rollers enters when the drawer is closed, whereby the extending part of said suspension will rest upon said upper flanges.

---

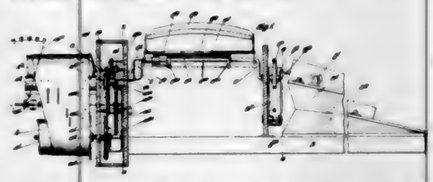
1,560,888. CHUTE. ROY WATT, Healy, Kans. Filed Nov. 21, 1924. Serial No. 751,357. 3 Claims. (Cl. 119—98.)



1. An apparatus of the class described comprising a stall, a hinged lower door and a vertically movable upper door at one end thereof, the abutting ends of the doors having recesses therein for forming an opening to receive the neck of an animal when the doors are closed, a trough hinged to the lower door under the opening for receiving the head of the animal, means for adjusting the trough and means for holding the head of the animal in the trough.

---

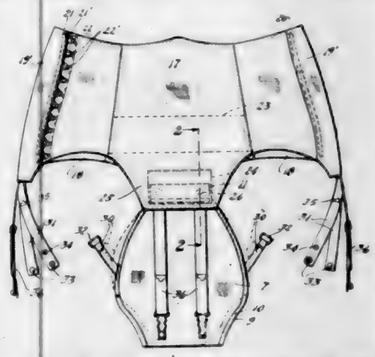
1,560,889. PNEUMATIC PIANO PLAYER. JOHN WEABHAM, Westminster, London, England, assignor to Vickers Limited, Westminster, London, England, a British Company. Filed July 6, 1922. Serial No. 573,124. 10 Claims. (Cl. 84—70.)



1. In a pneumatic piano player, the combination with a pumping device, of a crank for actuating said device and a plate on said crank upon which plate the operator's hand rests in actuating the crank.

---

1,560,890. CATAMENIAL BANDAGE AND SUPPORT. ELIZABETH C. WHITLOCK, Chicago, Ill. Filed June 8, 1923. Serial No. 644,095. 1 Claim. (Cl. 128—289.)



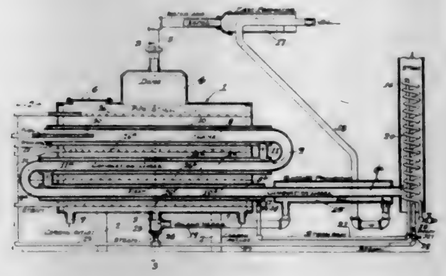
A device of the class described comprising in combination a supporting waist and a sanitary shield thereon, said shield including an inner layer of Japanese oil silk, an outer layer of silk, edge bands of silk stitched over said layers to bind them together, and said supporting waist including a tapered portion with a fixed attaching band at its front, longitudinal elastic strips in its back portion, a broad elastic band directly and releasably attached to its rear, elastic straps depending from the sides of said waist and having means for adjusting them for length, said shield having means on its ends for releasably attaching it to means on said bands, and separate elastic straps extending from the side edges of said shield for releasably engaging means on said first straps for drawing up the side edges of said shield and supporting it in sack formation.

---

1,560,891. CRACKING STILL FOR MINERAL OILS. WILLIAM L. BAGWILL, Long Beach, Calif. Filed Dec. 27, 1923. Serial No. 682,865. 13 Claims. (Cl. 196—115.)

9. A still for cracking oil having in combination a shell forming a still body of substantially ovate cross section with flat sides and the apex at the bottom, and

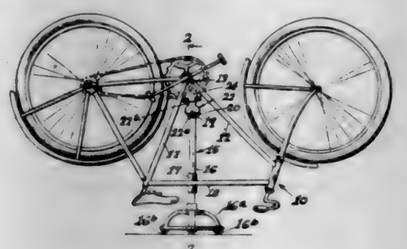
continuous combustion passages extending through the body lengthwise from end to end and the uppermost passage of the largest diameter, the other passages



progressively diminishing in diameter, said passages being mounted in the still so that the oil between the passage and the lateral walls of the still is substantially the same thickness for each successive passage.

---

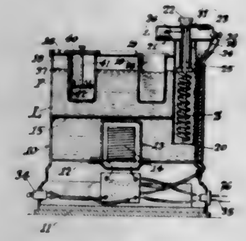
1,560,892. BICYCLE SUPPORT. JAMES I. BODINE, Seal Beach, Calif. Filed Feb. 11, 1924. Serial No. 692,052. 5 Claims. (Cl. 208—91.)



1. A bicycle supporter comprising a standard, a horizontally disposed cylindrical element mounted upon said standard, and a member adapted to support a bicycle by its frame in inverted position rotatably mounted upon said cylindrical element.

---

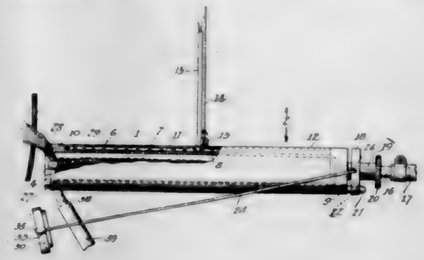
1,560,893. WAX AND COMPOUND ANNEALER. HARRY A. BONOFF, Los Angeles, Calif. Filed Nov. 20, 1924. Serial No. 751,095. 4 Claims. (Cl. 219—19.)



4. A device for annealing wax, waxy substances and compositions for dental purposes comprising a liquid container, a heating element for said container, automatically operated means for regulating the heating of a liquid in said container, a cover for said container, apertures formed in said cover, and cups suspended through said apertures into the liquid in said container, one of said cups being adapted to hold a liquid to be heated and the other cups being adapted to hold preparations to be heated.

---

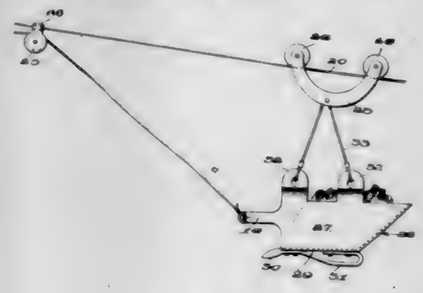
1,560,894. APPARATUS FOR PERMANENT WAVING AND CURLING HAIR. BENJAMIN BLUM, ALEXANDER COLE, and EDWARD COULSON, Los Angeles, Calif. Filed Apr. 17, 1924. Serial No. 707,115. 7 Claims. (Cl. 132—36.)



1. An apparatus for permanent waving and curling of hair, comprising in combination a receptacle having an open end in which hair may be inserted for curling, a notch at one side of the end of the receptacle, a cap adapted to close the receptacle, an upstanding annular gasket on the cap adapted to engage the end of the receptacle on the inside and to form a substantially gastight joint at the notch and means to introduce a heating medium into the receptacle.

---

1,560,895. EXCAVATING BUCKET. FRANCIS TRENHOLM CROWE, Denver, Colo. Filed Mar. 9, 1925. Serial No. 14,174. 6 Claims. (Cl. 37—115.)



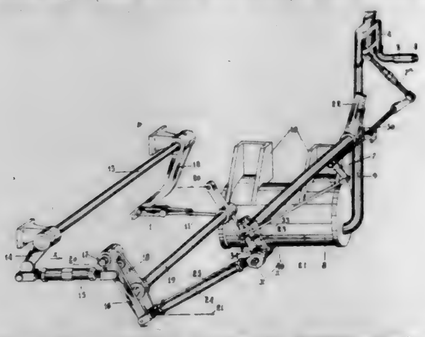
1. Apparatus of the character described comprising a cableway, a bucket which is capable of traveling along the cableway, means by which the bucket is suspended, and other means to which the suspension of the bucket is transferable to cause tilting of the bucket.

---

1,560,896. MOTOR BRAKE. ALBERT DEWANDRE, Liege, Belgium. Filed Aug. 26, 1924. Serial No. 734,299. 3 Claims. (Cl. 188—152.)

1. In a brake system for motors, the combination, with a suction pipe, a distributor therein, and rodding for the brakes, of a brake motor connected with the rodding to actuate the same and adapted to be placed in alternative communication with said pipe and with the atmosphere by the distributor; a controlling lever for operating said distributor; a pair of arms articulated together, one arm being positively connected to said lever and the

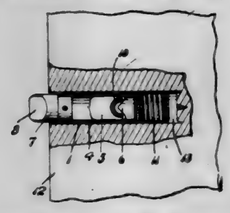
other arm having a lost-motion connection therewith; connecting means between one arm and the brake rod-



ding; and a connection between the distributor and one arm to operate the former consequent upon a variation in the relative positions of the two arms.

---

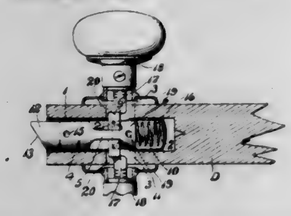
1,560,897. DOOR LATCH. LUCIEN A. DEXTER, Grand Rapids, Mich. Filed Sept. 15, 1924. Serial No. 737,689. 4 Claims. (Cl. 292—169.)



1. In a latch construction, an elongated housing of sheet metal open at its outer end and formed with openings in opposed sides thereof, said openings being of circular form and having stop members projecting thereinto at one side, a latch bolt slidably mounted within the housing, spring means located between the inner end of the bolt and the inner end of the housing tending to move the bolt outwardly, said bolt having openings in opposite sides thereof with triangular shaped projections extending thereinto at their inner ends, an operating bar passing transversely through the openings in the housing and latch bolt, said bar having an intermediate section of substantially semicircular form and adapted to be manually turned about its longitudinal axis to move the latch bolt inwardly on rotation of the bar in either direction, substantially as described.

---

1,560,898. LATCH. LUCIEN A. DEXTER, Grand Rapids, Mich. Filed July 8, 1925. Serial No. 42,280. 5 Claims. (Cl. 292—169.)



1. A latch comprising, a tubular housing having a closed end, a latch bolt slidably mounted in the housing provided with an opening therethrough, said bolt at the inner end of said opening being formed with a forwardly projecting portion, and at its inner end having a reduced extension projecting toward the closed end of the housing, a spring disposed between the closed end of the housing and the end of the latch bolt around said extension, and an operating member passing transversely through the housing and latch bolt formed with means to engage said forwardly projecting portion of the latch bolt and thereby move the bolt inwardly until said extension engages against the closed end of the housing.

---

1,560,899. FLYING MACHINE. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor to Dornier Metallbauten Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Mar. 8, 1924. Serial No. 697,862. 1 Claim. (Cl. 244—15.)

A flying machine comprising in combination a hull, a bearing plane, a traction propeller at the bow end of the hull, two pressure propellers at the rear edge of said bearing plane and two lifting screws arranged below said bearing plane, the diameter of said lifting screws being materially larger than the diameter of said pressure propellers.

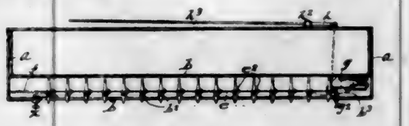
---

1,560,900. PROCESS OF TREATING WASTE SODIUM MONOSULPHITE LIQUORS. VIGGO DREWSEN, Larchmont, N. Y., assignor to West Virginia Pulp and Paper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1923. Serial No. 669,282. Renewed Apr. 4, 1925. 10 Claims. (Cl. 23—48.)

1. The process of treating the waste sodium monosulphite cooking liquor produced in the digestion of vegetable fibrous material, which comprises concentrating the waste liquor until it contains only about fifty per cent of water, thoroughly incorporating therewith nitre cake and between about ten to thirty per cent of hydrated lime to combine with and fix the organically combined sulphur and minimize its elimination, incinerating and melting the mixture to form sodium carbonate and calcium sulphide, leaching the sodium salts out of the melted material, treating the leached residue to form sulphur dioxide and combining the same with the sodium salts to form sodium monosulphite for the cooking liquor.

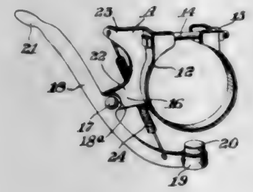
---

1,560,901. COOLING SYSTEM. CHARLES E. DURYEA, Philadelphia, Pa., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Jan. 13, 1919. Serial No. 270,850. 9 Claims. (Cl. 257—132.)



1. In an apparatus of the kind described, the combination of a fan, adapted to be driven by the engine at a speed proportional to that of the engine, a radiator, said fan being adapted to propel a current of air over the cooling surface of said radiator, a damper arrangement adapted to control the area of passage for the cooling air, a pivoted vane located in the current of air produced by said fan upon the same side of said damper as said fan, said vane being connected with said damper so that it shall actuate the same to vary the area of passage for the cooling air.

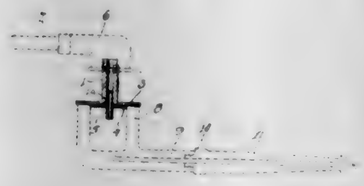
1,560,902. DRAIN PLUG FOR RADIATORS. CHARLES ECKERT and EDWARD HAND RUTLEDGE, Shaunavon, Canada. Filed Jan. 31, 1925. Serial No. 6,139. 1 Claim. (Cl. 251—10.)



A drain plug for automobile radiators and the like comprising, in combination, a radiator drainage opening in the water pipe, a bracket member provided with an adjustable pipe engaging portion on one side, upper and lower spaced arms formed on the other side of said bracket, a plug-carrying lever arm centrally and pivotally mounted on the lower bracket arm, means formed on one end of the lever arm adapted for carrying a plug, a handle formed on the other end of said arm, a plug in the lever arm, and a coil spring connecting the lever arm and the upper bracket arm whereby the plug is normally held in engaging position with the drainage opening in the water pipe.

---

1,560,903. DEVICE FOR CLEANING SMOKING PIPES. FREDERICK EICHE, Lincoln, Nebr. Filed Nov. 24, 1924. Serial No. 751,984. 2 Claims. (Cl. 131—13.)



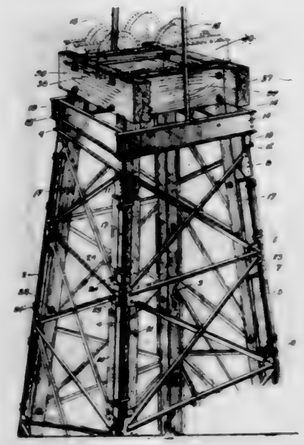
1. As an article of manufacture, a tube having an integral lateral flange at one end thereof, an auxiliary tube of smaller dimension carried by said first named tube and arranged to project on the opposite side of said flange, and an annular centering flange carried by said first named flange and surrounding said auxiliary tube, said auxiliary tube being adapted to enter the bore in the mouth piece of a pipe.

---

1,560,904. DENTAL DEVICE. JEFFERSON ELLARD, Texhoma, Okla. Filed Sept. 23, 1924. Serial No. 739,383. 4 Claims. (Cl. 32—16.)

1. A device of the character described comprising a pair of plates hingedly connected together, a lug projecting inwardly from one plate, a screw having one end mounted for rotation in the lug, a nut carried by the screw, and links pivotally connecting the nut with the inner free end of the plate.

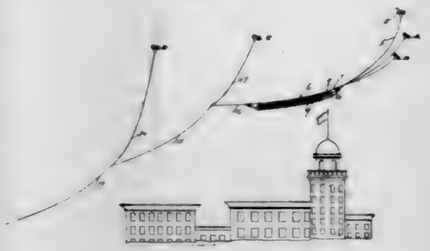
1,560,905. DERRICK. WALKER S. ESTES, Tulsa, Okla. Filed Jan. 22, 1924. Serial No. 687,684. 12 Claims. (Cl. 20—0.5.)



1. The combination with a steel derrick, of removable wooden load carrying reenforcing members for the legs of the derrick, having longitudinal movement independent of the derrick under load and means for removably securing the re-enforcing members to the legs of the derrick whereby the steel derrick can be left standing after the drilling operation to serve as a pumping derrick.

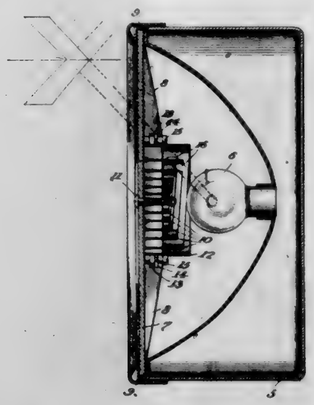
---

1,560,906. METHOD OF AND APPARATUS FOR AERIAL ADVERTISING. EDGAR G. FINLAY, Los Angeles, Calif. Filed Dec. 4, 1924. Serial No. 753,838. 6 Claims. (Cl. 40—127.)



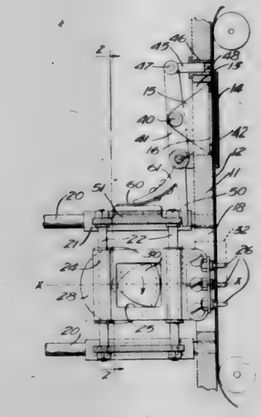
1. The method of displaying aerial advertising matter which consists in flying to a suitable elevation a kite to which a line is attached, attaching to the end of the line a comparatively long flexible display device, paying out the line on the display device to elevate one end thereof by the consequent increase in the elevation of the kite, then flying another kite and attaching the line of the said kite to the other end of the elongated display device, then attaching another line to the ends of the last named lines and paying out the last named line until the display device is in substantially horizontal position between the lines of the two kites.

1,560,907. AUTOMOBILE HEADLAMP. MELVIN A. FLAUTT, Waynesboro, Pa. Filed Oct. 11, 1924. Serial No. 742,971. 7 Claims. (Cl. 240—48.4.)



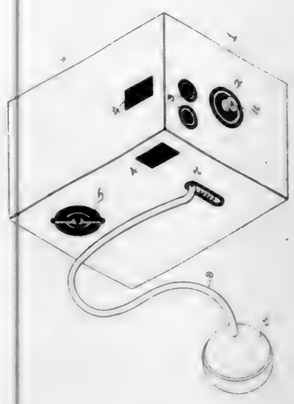
1. A light shield for head lamps, comprising a series of walls formed by a coiled strip, the convolutions of which are spaced apart, the inner portion of said strip and the inner convolutions formed thereby being narrower than the outer portion and outer convolution, forming a central lamp-receiving recess, and means for mounting the same on a head lamp.

1,560,908. INTERMITTENT MOVEMENT. FRANK E. GARBUTT and RALPH G. FEAR, Los Angeles, Calif., assignors to Famous Players-Lasky Corporation, a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,280. 12 Claims. (Cl. 88—18.4.)



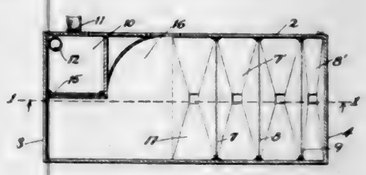
1. In an intermittent movement, the combination of: a forwardly movable member; an engagement element adapted to intermittently engage and advance said movable member; a clamp for holding said movable member immovable during the intermission between the intermittent advance of said movable member by said engagement element, a pivoted member adapted to be moved by unsecured contact of said engagement element therewith; stop pins pivotally disposed on said pivoted member, said stop pins being adapted to engage perforations in said movable member; and means for withdrawing said stop pins from said perforations.

1,560,909. TOY CAMERA. HARRY R. GILL, Ashland, Ohio, assignor to The Eagle Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1924. Serial No. 745,577. 4 Claims. (Cl. 272—27.)



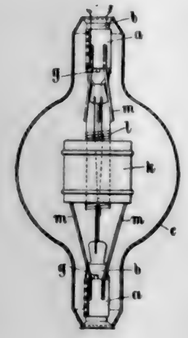
1. In a device of the character described, the combination of a box decorated to simulate a camera, said box having an opening in its front wall where the lens of a camera is normally located and another opening in a side wall; and a flexible tube provided with a bulb on one end, its other end being passed through such last mentioned opening and projecting through such first opening.

1,560,910. APPARATUS FOR PURIFYING TALC AND THE LIKE. GEORGE F. HANNAM, Los Angeles, Calif., assignor of two-thirds to Amos D. Kenworthy and one-third to George E. Frost, jr., both of Portland, Oreg. Filed June 9, 1922. Serial No. 567,062. 2 Claims. (Cl. 83—54.)



1. In an apparatus for the treatment of pulverized talc bearing material, a horizontal housing provided with a plurality of substantially vertical chambers whose walls are formed of screen material, means comprising a blower and a suction fan for establishing a circulation of air from one end of the housing to the other through the screens, said housing having an initial compartment provided with an adjustable gate or valve and in which the impurities fall and from which the pure particles of talc are carried in the moving stream of air.

1,560,911. VACUUM TUBE. CHARLES FREDERIC MARCHANT HAYES and LESLIE GRINSTEAD, London, England, assignors to The Mullard Radio Valve Company Limited, a British Company. Filed Feb. 10, 1925. Serial No. 8,222. 12 Claims. (Cl. 250—27.)



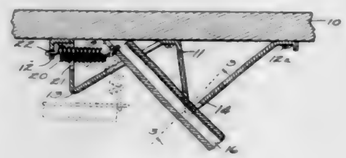
1. In a vacuum tube having an envelope and electrodes therein, the combination of a band loosely encircling a stem on said envelope and supporting one of the electrodes, and a wedge inserted between said band and said foot.

1,560,912. LEG-LOCKING STRUCTURE. ERNEST S. JOHNSON, Webster City, Iowa. Filed Dec. 9, 1922. Serial No. 605,986. 2 Claims. (Cl. 45—11.)

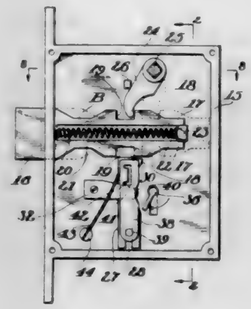
1. A leg locking structure for supports or the like including a supporting element, an inclined leg, a pivotal connection for securing the leg to the under side of said supporting element, a receiving member on the under side of the supporting element having a tapered opening therein, said leg being designed to have its upper end project into said tapered opening in said receiving element whereby it will be held in position by the pivotal connection and said receiving member, the structure being such that the greater the pressure upon the supporting element the tighter the leg will lock in position as specified.

1,560,913. LEG-LOCKING DEVICE. ERNEST S. JOHNSON, Webster City, Iowa. Filed Dec. 9, 1922. Serial No. 605,987. 5 Claims. (Cl. 45—11.)

5. A leg lock structure comprising a supporting plate or the like, a member rigidly secured to the under side thereof, and having parts spaced away therefrom, said member having elongated openings therein, a plurality of movable legs arranged to have their upper ends when in a certain position to be received in said openings and rest against the underside of said plate, a loose and pivotal connection for securing the upper ends of said legs to said member, said connection tending to draw the legs into said member, brace means for engaging said legs intermediate of their ends for preventing lateral movement thereof when in operative position, said legs being capable of being swung to position substantially parallel with said support and a clip for retaining each leg in inoperative position.



1,560,914. DOOR LOCK. PRESSLEY A. C. MOORE, Los Angeles, Calif. Filed Oct. 19, 1923. Serial No. 669,536. 3 Claims. (Cl. 70—29.)

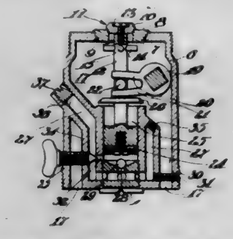


1. A combined lock and latch, comprising a latch bolt, manually operable means for moving the bolt to latching or non-latching position, and means for locking the latch bolt in latching position, comprising a bolt movable to engage or disengage the latch bolt, means formed on the bolt adapted to be engaged by a key for moving the bolt to either of said positions, a pivoted arm having a pin and slot connection with the bolt for maintaining the latter in either of said positions, said arm being urged to a predetermined position and arranged so as to be adapted to be engaged by a key for movement to a position in which the pin and slot connection will allow movement of said bolt, and a stationary plate positioned between the bolt and arm and adapted to offer resistance to any key head not recessed for passing said plate.

1,560,915. ADJUSTABLE SELF-CLOSING VALVE. ELIAS B. ROSE, Los Angeles, Calif., assignor of one-fourth to William J. Hollenbeck, one-twentieth to Genevieve R. Hollenbeck, and one-twentieth to Harry Helmeche, all of Los Angeles, Calif., and one-twentieth to Frank H. Martin, Los Angeles, Calif. Filed Jan. 15, 1924. Serial No. 686,249. 8 Claims. (Cl. 137—93.)

2. An adjustable self-closing valve comprising an outer tube having one end providing a valve seat and the other end open, a valve closure adapted to seat upon said seat, a tank disposed within said tube, a piston chamber disposed within said tank, a piston reciprocable in said

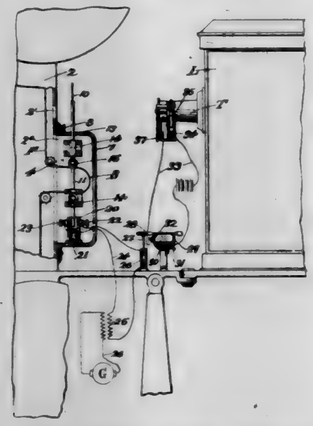
piston chamber and connected to the valve closure, means for lifting the piston and valve closure, a check valve



adapted to admit fluid from the tank to the piston chamber, and means permitting fluid to be expelled from the piston chamber into the tank.

---

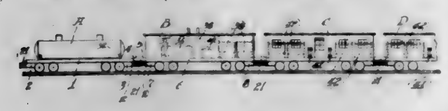
1,560,916. FIRE-PREVENTING DEVICE FOR MOTION-PICTURE-PROJECTION MACHINES. GEORGE J. SCHAFFER, Los Angeles, Calif. Filed June 29, 1922. Serial No. 571,607. 2 Claims. (Cl. 88—17.)



1. In a motion picture projecting apparatus having a light aperture adjacent which a motion picture film is designed to pass, means for intercepting a beam of light passing through the light aperture, said means including a vertically slidable rod, a presser member carried by said rod adapted to rest upon the upper portion of a bight continuously formed during the advance of the picture film, and a plate carried by said rod, said presser member, rod and plate being adapted to fall in the event of the breaking of the film, causing the destruction of said bight whereby said plate may cover said light aperture.

---

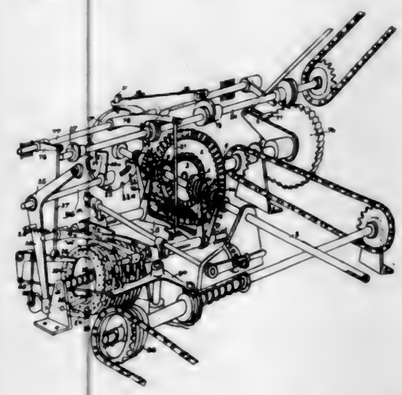
1,560,917. HOUSING UNIT FOR RAILWAY WORKERS. WARREN B. STUBBS, St. Louis, Mo. Filed Jan. 29, 1920. Serial No. 355,006. 5 Claims. (Cl. 105—1.)



3. A connecting element for a pair of coupled together cars comprising a single slidably mounted longitudinally arranged tubular member having its ends extend into portions of said cars, equalizing means mounted on said member for tending to hold said member in neutral position relative to its longitudinal movement between the cars and supply pipe passageways located in said member.

---

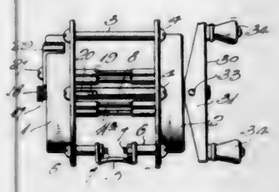
1,560,918. AUTOMATIC FEEDING OF METAL SHEETS AND THE LIKE. RUDOLF STÜBGEN, Erfurt, Germany. Filed Dec. 22, 1923. Serial No. 682,295. 15 Claims. (Cl. 164—117.)



1. Feeding mechanism for stamping and printing presses and the like comprising a main shaft, means for imparting to this shaft a step by step motion, a feed shaft, means associated with said two shafts for varying the angle of rotation of said feed shaft at each step motion of said main shaft and means for automatically controlling said varying means.

---

1,560,919. FISHING-LINE REEL. ALBERT A. UNRUH, Portland, Oreg., assignor of one-half to David O. Fisher, Portland, Oreg. Filed Oct. 23, 1924. Serial No. 745,435. 2 Claims. (Cl. 242—84.0.)



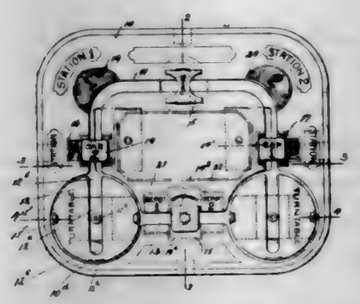
1. A fishing reel comprising a supporting structure including opposed end plates having central bearing openings, a hand-rotated shaft passing through said openings, a reel rotatable on said shaft, and having cup-shaped end members whose cupped sides are closed by said end plates, a ratchet wheel secured on the shaft within one of said end members, a releasable dog also within said one end member and co-operable with said ratchet wheel to hold the shaft against retrograde movement, a line-winding spiral spring around the shaft within the other end member of the reel, a direct connection between the outer end of said spring and said other end member, and a ratchet connection between the inner end of the spring and the shaft, said ratchet connection permitting free spinning of the reel on the shaft in line-winding direction when the line-winding power of the spring is expended.

1,560,920. CHAIR. MAX VIEK, New York, N. Y. Filed June 30, 1925. Serial No. 40,473. 6 Claims. (Cl. 155—142.)

6. A chair for bass violin players having a highly elevated collapsible seat whose front edge is horizontally slanting and horizontally movable collapsible lateral foot stools of different elevations.

---

1,560,921. PUZZLE GAME. BRUNO VON BÜLTZINGSLÖWEN, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,472. 4 Claims. (Cl. 273—132.)

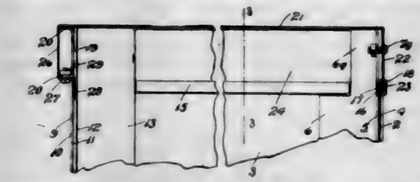


1. A puzzle game comprising a platform having a fixed main track, a fixed branch track and at least two movable tracks of which each one is capable of being brought into range alternately with the main track and branch track, at least three members capable of moving through said tracks and an obstruction at the main track preventing the passage of one of said members.

---

1,560,922. METAL CUPBOARD CONSTRUCTION. PETER M. WEGE, Grand Rapids, Mich., assignor to Metal Office Furniture Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Aug. 4, 1924. Serial No. 729,883. 2 Claims. (Cl. 45—71.)

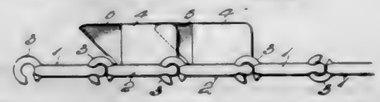
1. In a cabinet of the class described, a back and two spaced apart vertical sides formed of sheet metal, means for connecting the back and sides including two vertical angle members located at the junction of said back and sides, said angle members extending above the upper edges of the back and sides, two additional angle members positioned vertically at the front edges of said sides and likewise extending above the upper edges of the sides, two channel members attached one to each of the front angle members at the upper ends thereof, said channel



members extending inwardly toward each other, a bottom to the cabinet, and a top of sheet metal connected to said channel members and to the upwardly projecting ends of the rear angle members, said top having depending back and side flanges, and means carried by said back and sides into which the lower portions of said flanges seat, substantially as described.

---

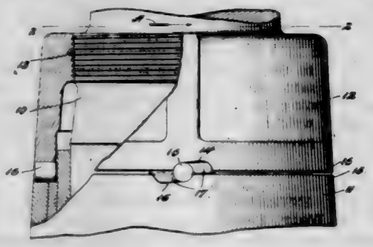
1,560,923. SPROCKET-CHAIN LINK. HARRY H. WEST, Kingston, Pa. Filed Dec. 22, 1924. Serial No. 757,572. 2 Claims. (Cl. 66—19.)



1. An improvement in a sprocket-guided pattern chain or analogous chain of a type including a pair of one-piece links each having parallel sprocket-straddling side bars and parallel sprocket-tooth-engaging end bars, one link having one of its side bars of less thickness than one of its end bars at its point of juncture with the latter, a hook on the adjacent end bar of the other link engageable with and disengageable from one said end bar only when the two links are angled to permit lateral passage of said one side bar past the hook bill, and lugs projecting from the sides of the links remote from their sprocket-engaging sides; said improvement consisting in disposing the aforesaid hook bill at the sprocket-engaging side of the chain, whereby angling of the links to connect or disconnect them will not move said lugs into such relation with each other as to interfere with relative lateral shifting of the two links.

---

1,560,924. LOCKING DEVICE FOR MANTLE NUTS. WILLIAM S. WESTON, Columbia, S. C. Filed Apr. 6, 1923. Serial No. 630,352. 3 Claims. (Cl. 85—10.)

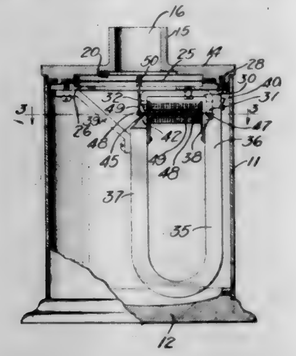


1. In a device of the class described, in combination, a shaft, a mantle member fixed thereon, a nut member threaded on the shaft, said members having their adjacent edges notched, and a pin in registering notches of

said members, said pin being of such thickness as to prevent contacting of the adjacent edges of said members whereby it transmits the thrust of the mantle to the nut without permitting said nut to become jammed against the mantle.

---

1,560,925. LOUD SPEAKER. DELMAR A. WHITSON, Los Angeles, Calif., assignor, by mesne assignments, to Stentorphone Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 30, 1922. Serial No. 585,159. 7 Claims. (Cl. 179—108.)



1. In a loud speaker, the combination of: a pair of depending magnets placed in substantially the same vertical plane and with the positive pole of each magnet adjacent to the negative pole of the other magnet, a positive pole of one of said magnets being directly in contact with a negative pole of the other of said magnets; an armature having one end secured to one of said magnets and the other end thereof extending between the negative pole of one of said magnets and the positive pole of the other of said magnets; an exciting coil surrounding said armature for creating a flow of magnetic flux therein having a density corresponding to the strength of current flowing through said coil; a diaphragm; a shell surrounding said magnets; link means for imparting the movement of said armature to said diaphragm; and means for supporting said diaphragm horizontally at the top of said shell.

---

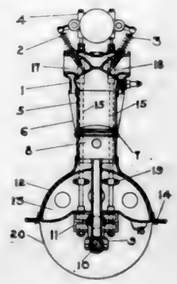
1,560,926. METHOD OF PRODUCING AN ALLOTROPIC FORM OF SULPHUR. HENRY H. WILKINSON, Brooklyn, N. Y., assignor to Union Sulphur Company, a Corporation of New Jersey. Filed Dec. 20, 1923. Serial No. 681,822. 7 Claims. (Cl. 23—227.)

1. A process for the production of an allotropic form of sulphur consisting in heating sulphur under a practical vacuum in a still until the sulphr has liqefied and gives off vapors, transferring said vapors still under vacuum and assisted by a current on non-oxidizing gas substantially inert to the sulphur, into a vacuum receiver, then condensing said vapors still under vacuum, the finished product forming finely divided, deep yellow, highly purified, light weight, allotropic sulphur of substantially equal sized particles, and free from sulphur dioxide.

---

1,560,927. INTERNAL-COMBUSTION ENGINE. AUSTIN M. WOLF, Plainfield, N. J., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 18, 1917, Serial No. 181,202. Renewed June 8, 1923. 14 Claims. (Cl. 123—195.)

1. In an internal combustion engine, the combination of a cylinder head and cylinder, a crank shaft, bearings for the crank shaft, stress rods connecting said head and bearings in fixed relation and supporting said head and cylinder, and a crank case secured to said bearings,



having a stiff arched upper portion, having a cylindrical opening therein, in which the lower end of said cylinder is mounted with a sliding fit.

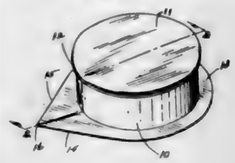
---

1,560,928. SCOOTER SLED. JOSEPH WOLPERT, New Brunswick, N. J. Filed Mar. 9, 1925. Serial No. 14,157. 1 Claim. (Cl. 280—16.)

A sled comprising a platform, a single rear runner rigidly secured beneath the platform along the longitudinal center thereof, a single front runner disposed in a line with the rear runner, a steering head including a platform engaging disk, spaced ears depending from the disk to receive the front runner, a standard extending upwardly from the disk through the platform, a tubular member extending through and rotatable in the platform and receiving the standard, a flanged bearing sleeve engaging the upper face of the platform and receiving the tubular member, means extending through the bearing sleeve, tubular member and standard to rigidly connect the same and a handle for the tubular member.

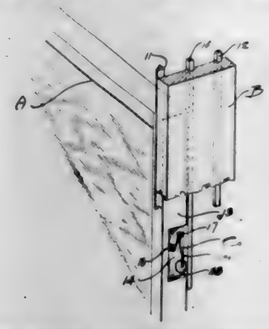
---

1,560,929. KITCHEN UTENSIL. ROBERT G. WOODS, Newton, Iowa. Filed Feb. 2, 1925. Serial No. 6,814. 2 Claims. (Cl. 15—236.)



1. In a pot and pan scraper, a circular wall portion, a cap portion over said wall portion, and an outward and downwardly extending peripheral flange portion from said wall portion, said flange having a point on its periphery and so designed that the edges of said flange leading from said point extend for considerable distances in straight lines substantially at right angles to each other, said flange being beveled on its lower face.

1,560,930. AUTOMATIC WINDOW ADJUSTER. EDWARD A. WRIGHT, Wichita, Kans. Filed Jan. 3, 1922. Serial No. 526,681. 4 Claims. (Cl. 292—77.)



1. A sash retainer comprising a resilient wire element bent to provide a pair of arms extending at acute angles to each other, said arms having an attaching loop at their juncture point, one of said arms having its free end looped to provide a slot substantially concentric with the attaching loop, and a roller element mounted for rotation upon the free end of the second arm.

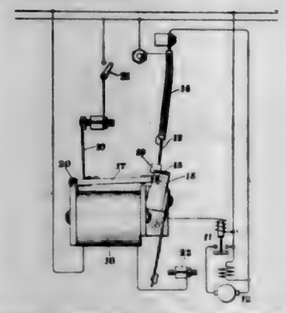
---

1,560,931. CONCRETE PIPE JOINT, MEANS AND METHOD OF FORMING THE SAME. PHIL EASTERDAY, Portland, Oreg., assignor to Concrete Pipe Company, Portland, Oreg., a Corporation of Oregon. Filed Apr. 17, 1923. Serial No. 632,764. 21 Claims. (Cl. 25—127.)

8. The process of forming a concrete pipe, consisting in laying pipe sections in end-to-end relation, filling the joint between said sections with plastic cement material, securing a mold containing an annular channel about said pipe to cover said joint, introducing a stream of plastic cement material into said channel under pressure, and causing said stream to flow about said channel in a unitary circular direction to completely fill the channel.

---

1,560,932. THERMAL RESPONSIVE CIRCUIT CONTROLLER. JOHN EATON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,426. 18 Claims. (Cl. 175—294.)



5. A thermal responsive circuit controller comprising a switch member biased to the open position, a thermostatic latch arranged to hold the switch member in the closed position, and arranged to flex when heated and release the switch member to move to the open position, and electroresponsive means energized responsively to the cooling of the said thermostat for returning the said switch member to the closed position.

---

1,560,933. GALVANIZING FLUX. UMEJIRO EMURA, Tokyo, Japan, assignor to Teiji Yamanouchi, Tokyo, Japan. Filed May 26, 1922. Serial No. 563,964. 3 Claims. (Cl. 91—70.)

1. A galvanizing flux comprising ammonium chloride, a strontium bearing material, sulphur, a bismuth bearing material, and alkali metal compounds, substantially as set forth.

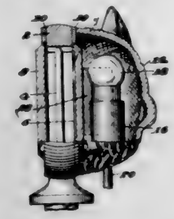
---

1,560,934. ALTERNATING-ELECTRIC-CURRENT PROTECTIVE APPARATUS. ALAN STEWART FITZ GERALD, Finchley, England, assignor to General Electric Company, a Corporation of New York. Filed July 18, 1923. Serial No. 652,276. 15 Claims. (Cl. 175—294.)

1. A protective arrangement for parallel alternating electric current circuits comprising biasing transformers associated with the individual circuits and having their windings so connected and arranged that current in the secondary winding of the biasing transformer of one circuit is restrained by current proportional to the current in another circuit.

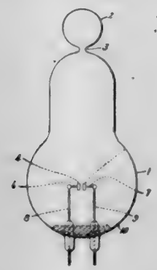
---

1,560,935. ATTACHMENT FOR TEMPERATURE-INDICATING DEVICES. IRVING FLORMAN, New York, N. Y. Filed Jan. 30, 1925. Serial No. 5,822. 2 Claims. (Cl. 240—8.28.)



1. In combination with a temperature indicating device for an automobile radiator, a casing adapted to fit against the front face of said indicating device, the said casing being provided with an opening in each side thereof, ribs within said casing adjacent the sides of said opening, the said ribs being undercut to provide a guideway, transparent windows for covering said openings and adapted to fit within said guideways, means within the casing for projecting rays of light through said windows and for illuminating the said indicating device, and means for securing said casing to said device.

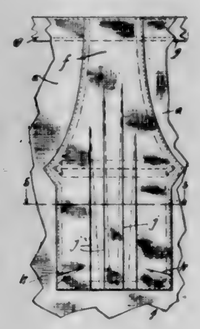
**1,560,936. MERCURY-VAPOR DEVICE.** JONATHAN FORCE, Livingston, N. J., assignor to General Electric Company, a Corporation of New York. Filed July 11, 1922. Serial No. 574,239. 4 Claims. (Cl. 176—16.)



4. An electric lamp comprising the combination of a sealed glass bulb, a refractory body therein constructed to operate at incandescence, a quantity of mercury and means for producing on the inner surface of said bulb a layer of oxygenous material so thin as to be without appreciable effect on the transparency of said bulb but effective to prevent a deposit of mercury thereon.

---

**1,560,937. POCKET FOR APRONS OR OTHER GARMENTS.** ADDIE JENKINS, Portland, Oreg., assignor to C. L. Du Bois, Portland, Oreg. Filed Apr. 27, 1922. Serial No. 556,936. 5 Claims. (Cl. 2—247.)

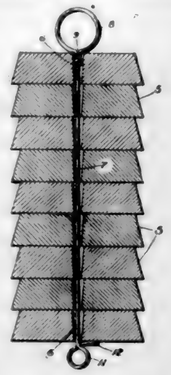


1. An apron-like garment provided with a tying band and formed with an elongate slit constituting the mouth of a pocket, and a lining secured to the material of the garment and extending above and below the elongate slit, the upper end of the lining being secured substantially in line with the tying band and materially above the elongate slit, said lining being formed with vertical plaits or folds extending materially above and below the elongate slit, whereby to provide a pocket having an article receiving portion above and below the entrance to the pocket with the wall of the pocket of extra fullness both above and below the pocket entrance.

---

**1,560,938. INGOT CARRIER.** JOHN T. LUND, Seattle, Wash. Filed Mar. 8, 1924. Serial No. 697,778. 1 Claim. (Cl. 206—65.)

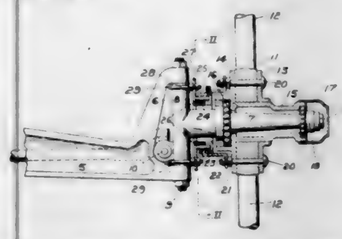
The combination with a plurality of ingots respectively provided with centrally disposed apertures, of a rod extending through said apertures, said rod being formed at one end with a ring shaped loop, and a coiled neck portion extending into the adjacent aperture, the



other end of the rod being bent to provide a stop to prevent the accidental displacement of the ingots from the rod.

---

**1,560,939. SAFETY APPLIANCE FOR VEHICLE WHEELS.** BURTON MCPHILLIAMY, Vandergrift, Pa. Filed Nov. 13, 1923. Serial No. 674,508. 4 Claims. (Cl. 301—122.)



1. The combination with a wheel hub and spindle assembly, of a centrally apertured member secured to the hub, a bushing passed through the aperture of said member and secured to a part of the spindle assembly, means extending into the aperture of said member providing an anti-friction bearing between said member and bushing, and means on the bushing for limiting the lateral movement of said apertured member relatively thereto.

---

**1,560,940. GOLF ACCESSORY.** WILLIAM A. F. MACCALLUM, Philadelphia, Pa. Filed Oct. 31, 1924. Serial No. 746,949. 7 Claims. (Cl. 273—35.)

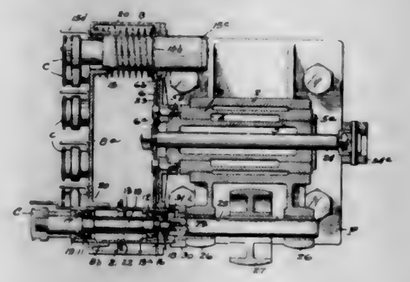
1. A device of the character stated comprising a base having an elevated open-top, forward portion and a rear portion, a member symbolic of a golf ball pivotally mounted in the opening at the base front said member being formed of strips of relatively yielding material glued together and a spring connecting the bottom of said member and the base rear for normally maintaining said member in a vertical postion with the major portion thereof projected above said elevated base part.

**1,560,941. ORNAMENTED SURFACE AND METHOD OF FORMING THE SAME.** HERMAN C. MILLER, Canton, Ohio, assignor to The United Metal Products Company, Canton, Ohio, a Corporation of Ohio. Filed July 13, 1925. Serial No. 43,214. 7 Claims. (Cl. 41—24.)

1. The ornamenting process which consists in applying a plastic coating to a surface to be ornamented, forming ribs and valleys in said coating, hardening the coating and cutting away the high points of the ribs.

---

**1,560,942. SHOE-SOLE-TRIMMING MACHINE.** SAMUEL PLAWKER, San Francisco, Calif. Filed Mar. 3, 1922. Serial No. 540,734. Renewed May 2, 1925. 24 Claims. (Cl. 12—84.)



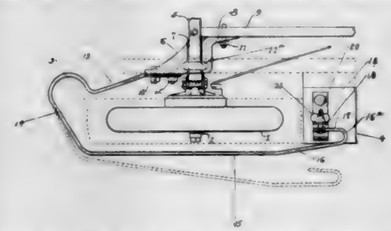
1. In a sole trimming machine, a main bearing, a turret head shaft, a turret head on said shaft, a set of cutter shafts in said head and extending at one end therethrough, a drive shaft spaced laterally from the axis of the turret: all the shafts being parallel, and means within the head for concurrently shifting all the cutter shafts axially in the head while maintaining their parallelism so that any one of them may be operatively connected to the drive shaft.

24. In a sole trimming machine, a main shaft, a cutter, a cutter drive shaft, transmission means connecting the shafts, and means for raising and lowering the drive shaft to present the driven cutter at a convenient position according to the height of the individual working at the machine; said raising and lowering means including a bearing, for the drive shaft, oscillating on the main shaft.

---

**1,560,943. FENDER.** JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1924. Serial No. 742,239. 6 Claims. (Cl. 293—57.)

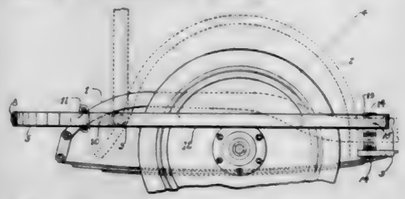
1. In combination with a vehicle frame having a longitudinally extending bar and a rear transversely extending bar projecting beyond said longitudinally extending bar, a wheel supporting said frame, a mud guard above the wheel, a step connected at one end of the mud guard, a bracket formed with a socket in its upper face receiving the projecting end of the transversely extending bar, a U-shaped bolt passing above said projecting end of the transversely extending bar and through said bracket, and a mud guard fender extending rearwardly from the bracket, outwardly through the vertical



plane of the mud guard, and forwardly across the outer face of the edge of the mud guard, and secured to said step.

---

**1,560,944. MUD-GUARD FENDER FOR MOTOR VEHICLES.** JAMES H. SAGER, Rochester, N. Y., assignor to J. H. Sager Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 7, 1924. Serial No. 742,240. 2 Claims. (Cl. 293—57.)



1. The combination with a vehicle frame, a wheel supporting said frame, a mud guard associated with said wheel, and a step secured at one end to the mud guard, of a bracket secured to said step, and a fender for the mud guard secured to said bracket having a portion extending to one side of the bracket to protect the latter against blows, said fender also extending across the outer edge of the mud guard and the outer face of the wheel and being secured to the frame at the opposite end of the mud guard.

---

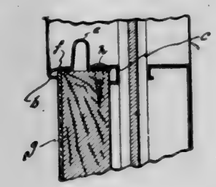
**1,560,945. CLIMBING FIGURE TOY.** GEORGE R. SECREST, McRae, Mont., assignor of one-half to Hubert Nicholls, McRae, Mont. Filed June 19, 1924. Serial No. 721,079. 4 Claims. (Cl. 46—37.)

1. A toy of the class described including a hollow pole, a pulley rotatably mounted in the upper end of the pole,

a weight on one end of the cable, a figure movable exterior of the pole and connected with the other end of the cable, a receptacle carried by the figure, said receptacle being pivotally mounted, a hopper positioned on the upper end of the pole and provided with a depending spout having a valve associated therewith, means on the receptacle for engaging the valve to open the same in order that material may flow from the hopper into the receptacle to overcome said weight and to cause said figure to move downwardly, and means at the bottom of the pole for tripping the receptacle to empty the same in order that the weight may again lift the figure all in the manner and for the purpose specified.

---

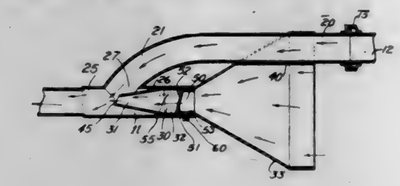
1,560,946. DOOR PULL HANDLE. EMORY GLENN SIMPSON, Highland Park, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 15, 1923. Serial No. 2,595. 5 Claims. (Cl. 16—110.)



1. A piece of automobile door hardware, comprising a garnish moulding provided with a slot, and a pull-to fixture comprising a separate member having a base secured to the under side of the garnish moulding and having a pull-to rib passing through the slot in the garnish moulding.

---

1,560,947. EXHAUST MUFFLER FOR INTERNAL-COMBUSTION ENGINES. DOROTHY M. SKELTON, Los Angeles, Calif., assignor to Willis A. Skelton, Los Angeles, Calif. Filed Apr. 28, 1921. Serial No. 465,146. 3 Claims. (Cl. 137—160.)



1. In a muffler, the combination of: a discharge pipe; a delivery pipe to deliver exhaust gases from the motor into said discharge pipe; a nozzle in said discharge pipe through which a flow of air is interspersed between the impulses of exhaust gases by the passage of said exhaust gases across the mouth of said nozzle; a check valve located centrally within said nozzle for preventing a reverse flow therethrough; and a collector to direct a flow of air through said nozzle, said delivery pipe extending through a sleeve in said collector.

---

1,560,948. HEADLIGHT. RALPH L. SMOTHERS, Salina, Colo., assignor of one-half to Ralph L. Chrisman, Salina, Colo. Filed Mar. 22, 1924. Serial No. 701,107. 2 Claims. (Cl. 240—45.6.)

1. The combination with a headlight, of a shutter adjustable to a position in which it covers the lower portion of the normally unobstructed front of the headlight, a shade adjustable to a position in which it slants downwardly over the upper portion of said front, and mechanism for moving the shutter and the shade in unison to their said adjusted positions.

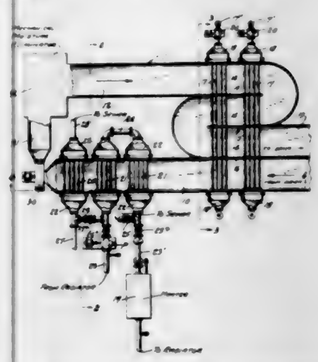
---

1,560,949. AZODYESTUFF. RICHARD STÜSSER, Köln-Deutz, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Apr. 15, 1924. Serial No. 706,755. 2 Claims. (Cl. 260—77.)

1. The herein described new azodystuffs, which are after being dried and pulverized in the shape of their alkali metal salts yellowish to black powders soluble in water and in concentrated sulfuric acid generally with from yellow to violet coloration, yielding upon reduction with stannous chloride and hydrochloric acid 4.4'-diaminodiphenylurea-3.3'-dicarboxylic acid and aromatic amines; dyeing cotton generally from yellow to violet to green shades, which when aftertreated with metal salts yield shades very fast to light and to washing, substantially as described.

---

1,560,950. AIR-TREATING APPARATUS FOR DRIERS. WILLIAM FRED THIELE, Wisconsin Rapids, Wis. Filed Sept. 9, 1922. Serial No. 587,251. 15 Claims. (Cl. 34—18.)

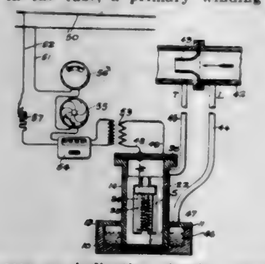


1. An air drying system for driers comprising a feed duct, a separate discharge duct, and heat transfer means thermally related to the said ducts for receiving heat from the air in the discharge duct and communicating this heat to air in the feed duct.

---

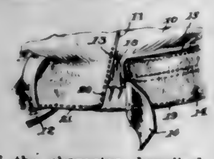
1,560,951. FLOW METER AND THE LIKE. LOUIS W. THOMPSON and JACOB W. MCNAIRY, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Apr. 17, 1923. Serial No. 632,759. 18 Claims. (Cl. 177—351.)

17. In an instrument of the character described, the combination of a tube having a conducting liquid therein, the level of which may be raised and lowered in the tube, a transformer core which provides a closed magnetic circuit in the tube, a primary winding inside the tube on the core, an indicating circuit connected to the primary winding, and a source of potential in said indicating circuit.



---

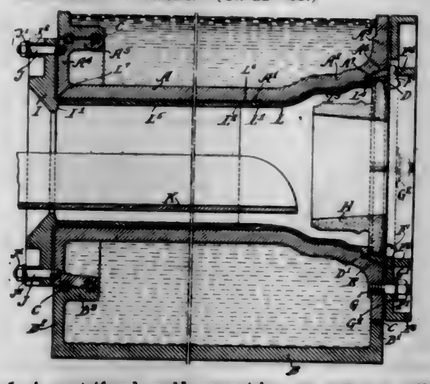
1,560,952. ADJUSTABLE CAP. ISIDOR K. TRAU, Louisville, Ky. Filed Apr. 24, 1922. Serial No. 556,200. 2 Claims. (Cl. 2—197.)



1. A cap of the character described, having a body provided with slits extending upward from its bottom edge, the bottom edge portion of said body in front of said slits depending below the bottom edge portion of the body at the rear, a band having its middle portion stitched at its upper edge to the bottom edge of the rear portion of said body, a visor stitched to the bottom edge of the front portion of the body, said band having its ends extending forwardly over said slits, adjustable connecting means for the forward ends of said band, and a lining having its bottom edge stitched at the rear to the bottom edge of the band and at the front to the bottom edge of he body, said lining being further stitched to the material at the front edge of each slit in a line extending substantially parallel with said front edge, said lining extending continuous from front to back across the slits within the cap.

---

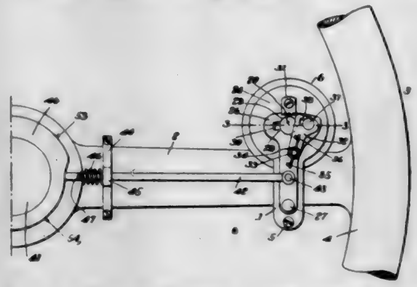
1,560,953. CENTRIFUGAL MOLD. JOHN H. UHRIG, Beverly, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Feb. 21, 1923. Serial No. 620,330. 7 Claims. (Cl. 22—65.)



1. A centrifugal mold comprising an outer metallic tubular member with comparatively thick walls and an inner thin walled metallic tubular member the external diameter of which is less than the inner diameter of the outer member when both members are cold and so proportioned that the inner member will contact with the outer member when said inner member is expended by the heat of a charge of molten metal.

---

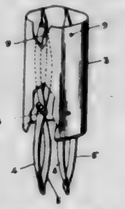
1,560,954. AUTOMATIC RELEASE SWITCH. WARREN A. UPRIGHT, Highland, and JAMES F. SHERRILL, San Bernardino, Calif. Filed Nov. 4, 1924. Serial No. 747,742. 4 Claims. (Cl. 200—59.)



1. In a switch as disclosed, a push button plunger, a pair of contacts, means whereby said contacts are brought into engagement by said plunger when depressed, a latch for engaging said plunger and holding it depressed with said contacts in engagement, an arm, automatic means for swinging said arm in one direction to disengage said latch from said plunger and to cause the arm to engage the plunger and to hold it depressed and to hold said contacts in engagement, and means for swinging said arm in the other direction to release said plunger to allow it to return to its initial position and said contacts to separate and open the switch.

---

1,560,955. PEN AND PENCIL HOLDER. WILLIAM W. WALTERS, Rochester, N. Y. Filed Feb. 6, 1925. Serial No. 7,283. 4 Claims. (Cl. 24—11.)



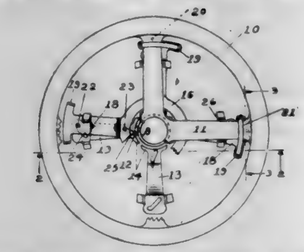
1. In a pencil and pen holder, the combination of a casing, a sleeve adapted to telescope into said casing, a pair of spring fingers mounted transversely within said sleeve forming a partition within said sleeve, said pair of spring fingers being locked together and bulging out in either direction to form yielding friction members that decrease the space of the sections formed by the partitions.

---

1,560,956. SIGNAL SWITCH DEVICE FOR STEERING WHEELS. BLISS B. WELLS, Saginaw, Mich., assignor of one-half to Herbert C. Remer, Saginaw, Mich. Filed Sept. 27, 1921. Serial No. 503,512. 4 Claims. (Cl. 200—59.)

1. In a motor vehicle, a steering wheel, a make-and-break switch, a switch-operating mechanism comprising a switch operating lever, a plurality of longitudinally movable, radially disposed bars carried by the arms of said steering wheel, the inner ends of said bars formed to comprise together an expansible ring surrounding the hub of said steering wheel and said switch-operating lever, a spider capable of limited rotation on said wheel,

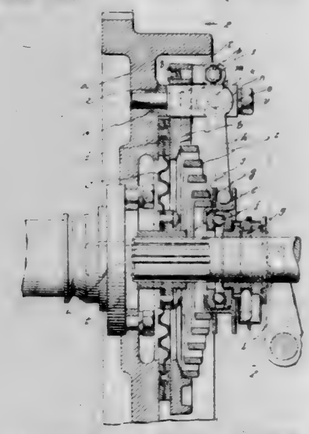
arms on said spider, lugs on the outer ends of said arms, and means operatively connecting the arms of said spider with the respective longitudinally movable bars, whereby limited rotary movement of any spider arm produces



simultaneous advancement or retraction of all of said longitudinally movable bars to actuate said switch-operating lever regardless of the rotated position of the steering wheel.

---

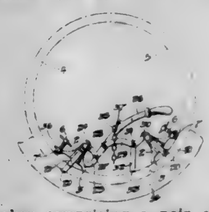
1,560,957. CLUTCH. ERNEST E. WEMP, Detroit, Mich. Filed Dec. 24, 1923. Serial No. 682,446. 15 Claims. (Cl. 192—68.)



4. In a clutch, the combination of driving and driven members provided with faces arranged to engage and including a thrust ring, studs supported on the thrust ring, posts having a fixed relation, levers for multiplying the pressure fulcrumed on said posts and having lost motion connections with said studs, and a clutch spring thrusting between the power ends of the levers and the thrust ring whereby in declutching the indirect and multiplied pressure is first relieved and then the direct pressure of the spring, and in engaging the clutch the converse action takes place.

---

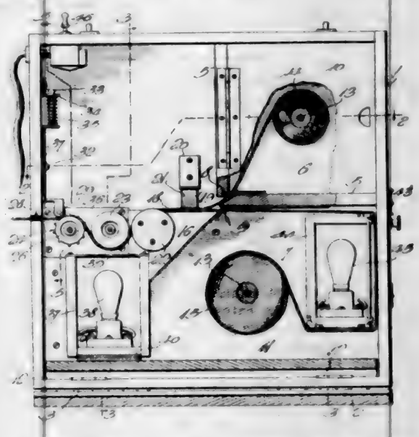
1,560,958. RIM BREAKER. WALTER JAMES WILKINSON, Caulfield, and BERNARD ANDREW HAMILL, East Melbourne, Australia. Filed May 8, 1925. Serial No. 28,877. 6 Claims. (Cl. 157—1.)



1. A rim breaker comprising a pair of rim gripping elements, each comprising a body member, a pair of claws pivoted at their inner ends to said body member and adapted at their outer ends to engage opposite sides of the wheel rim, a clamping screw carried by said body member and adapted to clamp the rim between said body member and the outer ends of said pivoted claws, screw adjustment means associated with said claws whereby the pivoted inner ends of the latter may be moved towards or from the wheel rim, a hand lever pivotally connected with one of said gripping elements, and a link pivotally connected between said hand lever and the other rim gripping element.

---

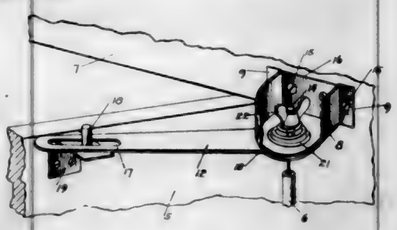
1,560,959. PHOTOGRAPHIC-PRINTING DEVICE. THOMAS CARROLL WILLSON, Philadelphia, Pa. Filed May 23, 1924. Serial No. 715,412. 5 Claims. (Cl. 95—75.)



1. A photographic printer comprising a hollow casing provided on the inside with merging partitions dividing it into compartments, strip guiding means mounted in said casing and extending from the point where said partitions merge to one end of said casing, the partition structure at said point being provided with passages leading from two of said compartments, said passages merging into the adjacent inner end of said guiding means, the last mentioned compartments being adapted to receive a supply of developed negative and sensitized photographic strips, and a light mounted in one of said compartments other than the last mentioned to shine upon said strips as they pass along said guiding means.

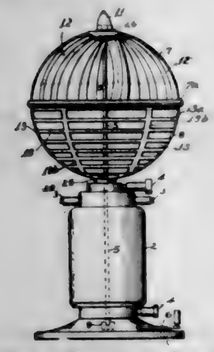
---

1,560,960. DOORSTOP. FREDERICK YOST, Golden, Colo. Filed Aug. 4, 1924. Serial No. 729,942. 6 Claims. (Cl. 292—275.)



1. A door-stop comprising a support fixed upon the door frame, an arm having a hub-portion pivoted on the support, a spring holding the hub-portion in sliding contact with the support, and means to pivotally connect the outer end of the arm with a door hinged in the frame.

1,560,961. ELECTRIC FAN. SOCRATES A. XIPPAS, Pittsburgh Pa. Filed Aug. 14, 1924. Serial No. 731,991. 13 Claims. (Cl. 230—1.)



1. An electric fan or blower, comprising a motor shaft, and a disc mounted axially and obliquely thereon for rotation having wings or impellers, bent at right angles to each other.

---

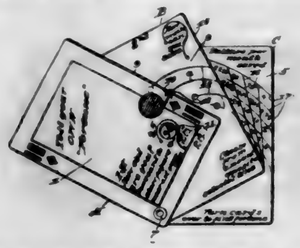
1,560,962. CABINET IRONING BOARD. CHARLEY D. AGEE, Dallas, Tex. Filed Oct. 17, 1922. Serial No. 595,043. 7 Claims. (Cl. 68—10.)

1. In an ironing board cabinet, a casing having a horizontal support at the front, an ironing board movably mounted therein, a sliding door, a flexible looped connection secured at one end to the casing above said support and at its opposite end to the door, and bearings upon the inner end of the board and the upper portion of the casing for the oppositely looped portions of said connection, whereby the board and door are operated conjointly.

---

1,560,963. CALCULATOR. CARL W. ANT, Spokane, Wash. Filed Nov. 26, 1924. Serial No. 752,487. 2 Claims. (Cl. 235—185.)

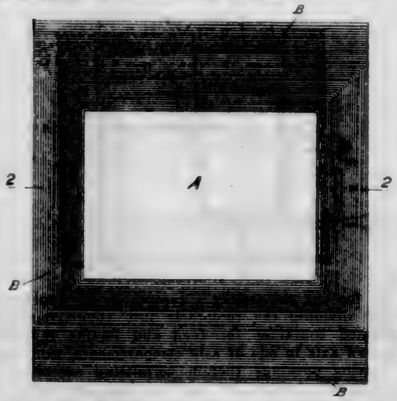
1. A calculator comprising an outer selector card, an intermediate indicating card, an outer periodic card, said cards being movably united for selective adjustment of the cards with respect to each other, said selector card having an age number disclosing opening and a periodic index device on its obverse face, said indicating card having a series of age indicative numbers arranged for disclosive registry through said opening and also a series of continuity lines on its obverse face for registry with said index device, said periodic card having on its obverse face a series of columnar arranged periodic numbers adapted for registry with said continuity lines in transverse relation to the columnar division of said numbers, whereby the selected age may be brought into selected registry with a series of periodic numbers, and



the reverse face of said indicating card having totalizing amounts for registry with the reverse side of said periodic card thereby totaling the aggregate amount of the selected transverse periodic numbers on the obverse face of said periodic card.

---

1,560,964. SCREEN FOR MOTION PICTURES. SAMUEL BARDY, Philadelphia, Pa., assignor, by mesne assignments, to Bardy Projector Co., Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 14, 1922. Serial No. 552,476. 3 Claims. (Cl. 88—24.)



1. A screen of the character described having an exhibiting surface, and a glossy reflecting border surrounding said surface, the surface of the border being at a sufficiently great angle to the exhibting surface to deflect the rays of light directed on the border away from the eyes of the observer.

---

1,560,965. PROCESS OF SPINNING ARTIFICIAL SILK AND OTHER FILAMENTS FROM CELLULOSE MATERIALS. HARRY P. BASSETT, Cynthiana, Ky., and THOMAS F. BANIGAN, Philadelphia, Pa., assignors to Meigs, Bassett & Slaughter, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 17, 1923. Serial No. 639,655. 2 Claims. (Cl. 18—54.)

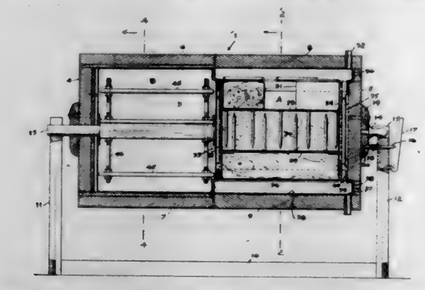
1. The process of spinning acetyl nitro cellulose which comprises delivering a solution of acetyl nitro cellulose in acetone from a spinneret through a shallow body of acetone and water, and then delivering the thread formed through a body of air of appreciable depth.

---

1,560,966. ICE BOX. LAUREN M. BOWLUS, San Luis Obispo, Calif. Filed Aug. 23, 1923. Serial No. 658,891. 3 Claims. (Cl. 62—31.)

3. An ice box comprising a receptacle, a partition dividing the receptacle into two compartments, an ice

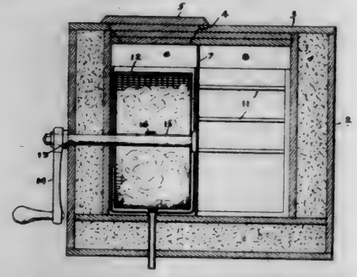
chamber in one of said compartments, said compartment having openings in opposite sides thereof, closures for said openings, a support on which said receptacle is reversibly mounted, which support includes a stationary



member extending into the other compartment, said other compartment having an opening therein, a closure for said opening and a plurality of horizontal shelves fixed to said member and relative to which said receptacle is movable.

---

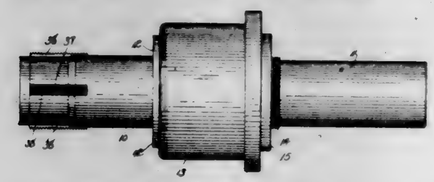
1,560,967. ICE BOX. LAUREN M. BOWLUS, San Luis Obispo, Calif. Filed Aug. 27, 1923. Serial No. 659,562. 6 Claims. (Cl. 62—31.)



1. An ice box comprising a receptacle, an imperforate partition dividing the receptacle into compartments, a foraminated container for food and liquids revolvable on its own axis in one of said compartments, said receptacle having openings therein permitting access to its compartments, closures for said openings and means for moving the revolvable container into different positions with respect to one of said openings to provide for the storing and removing of food and liquids relative to said container.

---

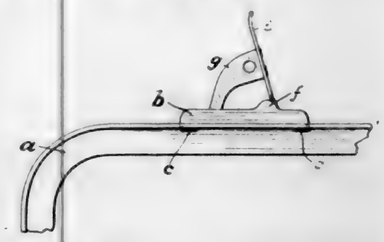
1,560,968. COLLAPSING TAP. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn. Filed Feb. 9, 1924. Serial No. 691,584. 2 Claims. (Cl. 10—145.)



1. In a collapsing tap, the combination with the body, chasers, plunger and collapsing-spring thereof; of a ring having sliding movement upon the said body and formed with a transverse slot, a segmental detent located in the said transverse slot and having movement therein in a plane transverse to the axis of the tap, an operating-sleeve having sliding movement upon the said ring and co-acting with the said detent to force the same into its retired position in the said slot, and a detent-abutment ring having an annular flange entering the said sleeve into position to co-act with the said detent when in its operating position for holding the cutters in their projected positions and against the power of the said spring.

---

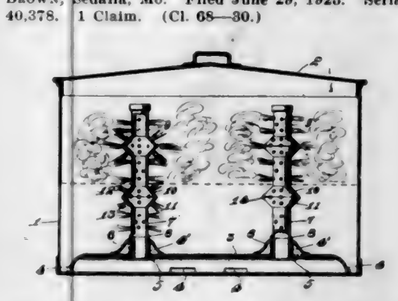
1,560,969. BAG FASTENER. JOSEPH BREZIN, Philadelphia, Pa., assignor, by direct and mesne assignments, to National Metal Stamping Company, a Corporation of Pennsylvania. Filed Oct. 24, 1923. Serial No 670,411. 6 Claims. (Cl. 292—228.)



1. A bag fastener comprising a casing having openings therethrough, a locking bolt extending through one of the openings in the casing and a pivotal member also extending into the casing, a retainer plate in the casing, there being a pivotal connection between the bolt and retainer plate, and a spring plate interlocked at both ends with the retainer plate and engaging the pivotal member of the bolts intermediate its ends for retaining the parts in their assembled relation.

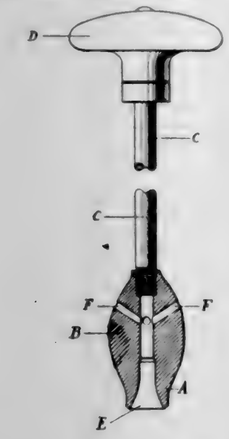
---

1,560,970. WASH BOILER PERCOLATOR. CLYDE M. BROWN, Sedalia, Mo. Filed June 29, 1925. Serial No. 40,378. 1 Claim. (Cl. 68—30.)



The combination with a boiler having clothes therein to be washed and a fluid for washing said clothes also therein, of a means for circulating the fluid around the clothes in all directions for cleaning said clothes, said means comprising a hollow base resting on the bottom of the boiler and having notches providing fluid inlets therethrough, the top of the base having openings therethrough, a sleeve received in each of the openings having its lower end flanged outwardly to contact with the inner face of the top of the base, the outer edge of each sleeve being rounded downwardly and outwardly for contacting engagement with the top of the base, a perforated pipe having an outer closed end received in each of the sleeves, each of said pipes having an outstanding flange to rest on the sleeve and each of said pipes having spaced outwardly bulged portions defining walls which are arranged at opposite angles to each other, and which walls are perforated, as are the apexes of said bulged portions.

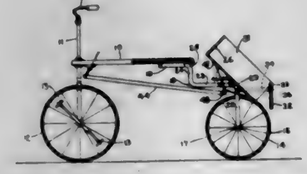
1,560,971. INSTRUMENT FOR DISHORNING CALVES BY CAUTERIZATION. FLORENCIO MARTINEZ BULA, La Plata, Argentina. Filed May 2, 1923. Serial No. 636,257. 2 Claims. (Cl. 128—303.)



1. In a cauterizing instrument a metal member having a bore extending longitudinally therethrough and having branch channels extending from the bore through said member, one end of said bore being flared and the intermediate portion of said member having a greater diameter than either of the ends.

---

1,560,972. THREE-WHEEL DUMP CART. ANDROV H. CARLSON, Bridgeport, Conn. Filed June 12, 1924. Serial No. 719,531. 2 Claims. (Cl. 298—19.)

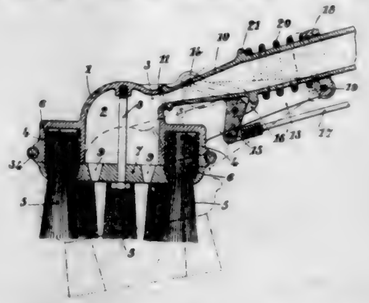


1. In a dump cart of the character described, a frame, a cart body pivotally mounted thereon, a tail gate pivoted to said cart body, a link pivoted to the frame and to the tail gate, means consisting of a tension member on said body, a control lever, a connecting bar between the control lever and tension member for swinging the cart body on its pivot to tilt said body and thus swing the tail gate on its pivot away from the cart body, and means consisting of said connecting bar when moved against the resiliency of said tension member beyond a dead center position of said control lever and a fixed part upon said dump cart limiting movement of said connecting bar beyond said dead center position for locking the cart body in normal, untilted position.

---

1,560,973. FOUNTAIN BRUSH. JULES JEAN CHÉRON, Paris, France. Filed Nov. 21, 1922. Serial No. 602,438. 3 Claims. (Cl. 15—128.)

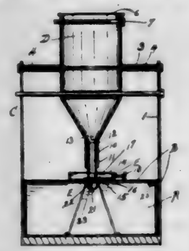
1. A fountain brush comprising a hollow head, a hollow handle through which water may be supplied and adapted to communicate with the hollow head, brushing elements secured to the hollow head, a ring member slidably mounted on the handle and upon which the hollow head is pivotally mounted, a spring acting on said ring member, for pressing the hollow head against the discharge end of the handle, an operating rod and a bell



crank lever which is pivoted on the handle and pivotally connected to the operating rod and hollow head.

---

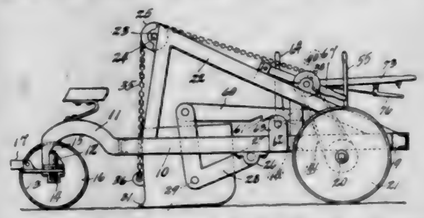
1,560,974. BALL-COUPON DISTRIBUTOR. ERNEST E. CLAYS, Salt Lake City, Utah. Filed Apr. 6, 1925. Serial No. 21,155. 2 Claims. (Cl. 273—144.)



2. In a device of the class described the combination of ball coupons marked to indicate the different values; a container adapted for lateral rotation to mix said coupons; a normally depending neck portion having a sight opening means to open and close the said neck whereby a single coupon will fall from the said neck, a box beneath said neck having a glazed cover, with a hole in the said cover in alinement with the bore of said neck.

---

1,560,975. EXCAVATING AND SCRAPING MACHINE. MICHAEL COLLINS, Joplin, Mo. Filed Apr. 11, 1925. Serial No. 22,342. 12 Claims. (Cl. 37—132.)

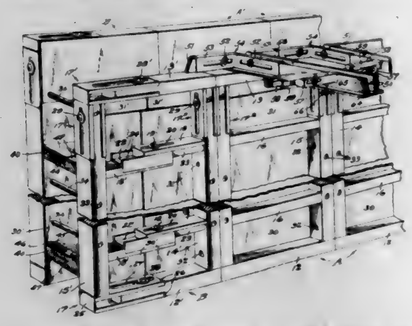


1. In an excavating and scraping machine, a wheeled supporting frame, a transverse shaft journaled on said frame and provided with retaining notches, a pan disposed in advance of said shaft, bell-crank levers arranged on opposite sides of the pan, each lever having an arm extending rearwardly from the pan and fixed to said shaft and an arm extending upwardly alongside the pan, the pan being eccentrically pivoted to each lever at the angle of intersection of the arms thereof, means coupled to the pan for raising and lowering the pan and the levers and tilting the pan upwardly and rearwardly above

the horizontal when elevated to a predetermined position, retaining lugs at the rear of the pan adapted when so elevated and tilted to engage the retaining notches in the transverse shaft, a transverse latch bar of angular form in cross-section eccentrically journaled on the frame in rear of the pan, means for holding said bar from rotation and releasing it for rotation, and latch dogs pivoted at one end to the upwardly extending arms of the bell-crank levers and notched at their free ends for engagement with said latch bar.

---

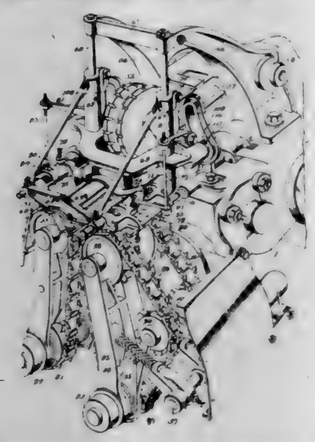
1,560,976. ADJUSTABLE BUILDING FORM FOR CONCRETE CONSTRUCTION. WILLIAM R. C. COOK, Seattle, Wash. Filed Mar. 19, 1925. Serial No. 16,664. 9 Claims. (Cl. 25—131.)



1. In a concrete building form, a form member including a rectangular frame with two-part side and end elements, one part of each such element being provided with two parallel arms of channel shapes in transverse section to receive therein the complementary part of the respective element, and coupling means for adjustably connecting the parts of each element.

---

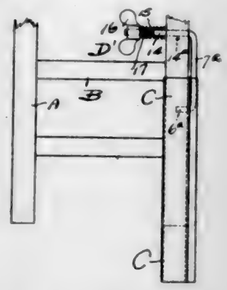
1,560,977. MACHINE FOR DEBUTTING CORN. RALPH COVER, Westminster, Md., assignor to The United Machinery Company, Westminster, Md., a Corporation of Maryland. Filed Sept. 20, 1918. Serial No. 254,989. 49 Claims. (Cl. 146—84.)



49. In apparatus of the character described, the combination with butt-severing means, of a pair of horizontally alined-frusto-conical fluted alinement rolls revolubly mounted with their smaller ends adjacent, said rolls being movable axially to vary the distance between said ends, a pivotally mounted shifting lever for each roll, a cam lever pivoted adjacent each shifting lever, each said cam lever having a cam slot and being provided with a projection arranged to engage the shifting lever upon outward movement of said cam lever, spring means tending to move each shifting lever inward when its cooperating cam lever moves inward, a supporting member pivoted on a fixed horizontal axis parallel to that of said alinement rolls and up to the rear or feeding-in side thereof, a concave fluted lifting roll revoluble upon a horizontal axle carried by said supporting member, said axle being parallel with the axis of said alinement rolls and substantially vertically above the same, said concave roll being arranged to rest upon an ear passing over said alinement rolls on its way to said butt-severing means, a pair of spaced vertical guides arranged closely adjacent said axle, a carriage having tubular portions embracing said guides for vertical sliding movement thereon, links each pivoted at one end on said axle and at the other on one of said tubular portions at a point overhanging said axle, a downwardly concave guide plate horizontally mounted on said carriage at a level somewhat higher than the upper peripheries of said alinement rolls and extending forward from a point adjacent said rolls, said plate having a narrow portion extending rearwardly and lying within the concave periphery of said lifting roll between it and said alinement rolls, two pairs of depending wings pivoted to said carriage adjacent to but on opposite sides of said guide plate, the wings on each side being spaced apart, springs tending to swing the opposed wings inward toward each other and up toward said guide plate, an abutment lug on each wing, stop means adapted to engage the wing lugs when the carriage is in its lowermost position and thereby to limit the inward swing of the wings, wing spreaders each pivoted adjacent a pair of said wing lugs and operable to engage the same to spread the wings, arms fixed to the opposite ends of the lifting roll axle and extending forward therefrom, and connected to said wing spreaders to actuate the same when the carriage rises, cam rollers mounted on said carriage and respectively cooperating with the cam slots in said cam levers to move the same outward when the carriage rises and thereby to move said alinement rolls farther apart, means for feeding ears of corn endwise and point first to said alinement rolls, chain conveyor means arranged to transfer an alined ear of corn sidewise from said wings into engagement with said butt-severing means, and means for driving the ear-feeding means, said rolls, and said conveyor means.

---

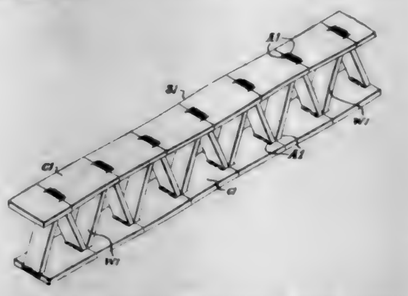
1,560,978. LADDER. CHARLES W. CRUMP, Altoona, Pa. Filed Jan. 4, 1922. Serial No. 527,038. 1 Claim. (Cl. 228—63.)



An extension foot for ladders comprising in combination with a locking hook adapted to be carried by the ladder rail to swing parallel to the outer face thereof, a metal body of channel shaped cross section comprising a bottom wall, side walls and inturned flanges adapted to fit over a ladder rail, said bottom wall being formed with offset parallel stiffening ribs adapted to limit the pivotal movement of the locking hook, and adjustment openings formed in the portion of the said body of the foot lying between the ribs, and said openings being adapted to be engaged by said locking hook.

---

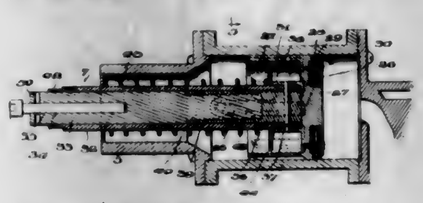
1,560,979. TRUSSED STRUCTURE. GEORGE HIVES DAWSON and HURXTHAL FIELD FREASE, Boston, Mass. Filed July 17, 1924. Serial No. 726,489. 5 Claims. (Cl. 189—37.)



1. A trussed structure formed from a single continuous strip, including chord members and web members, there being junction angles between the chord and web members and means fastening the chord and web members to each other at the junction angles, some of the chord members having a different cross-sectional area than the web members.

---

1,560,980. AUTOMATIC SLACK ADJUSTER FOR AIR BRAKES. WILLIAM S. DE CAMP, Chillicothe, Ohio. Filed Apr. 10, 1925. Serial No. 22,203. 9 Claims. (Cl. 188—203.)



1. An air brake system comprising a cylinder, brake shoes, articulated connections, a plunger, a common pivot joining the plunger to said articulated connections; in combination, a piston in the cylinder carrying the plunger, and means operatively associated with the cylinder and piston for progressively advancing said common pivot in respect to the plunger upon application stroke of the piston to compensate for wear of the brake shoes.

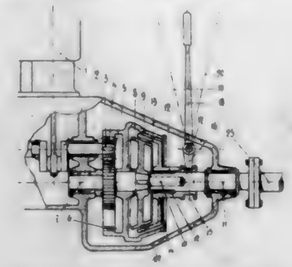
---

1,560,981. MANUFACTURE OF INCANDESCENT LAMPS. ANTONIUS DE GRAAFF and DIRK LELY, Jr., Eindhoven, Netherlands, assignors, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Nov. 17, 1920. Serial No. 424,671. 3 Claims. (Cl. 176—2.)

2. A step in the process of the manufacture of devices comprising an envelope having a filament adapted to be heated which consists in placing within the envelope a non-hygroscopic substance adapted to be decomposed upon being heated to a given temperature to form a hydroscopic material, exhausting said envelope after the substance is introduced and while maintaining the temperature of the envelope below the point at which the substance decomposes, thereafter sealing off the envelope and then heating the envelope to a temperature sufficiently high to cause the substance to decompose to form a hygroscopic material within the sealed envelope.

---

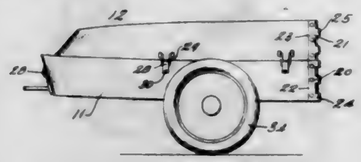
1,560,982. SPEED REDUCER AND REVERSE GEAR FOR INTERNAL-COMBUSTION ENGINES. GUIDO FORNACA, Turin, Italy. Filed Sept. 25, 1924. Serial No. 739,887. 3 Claims. (Cl. 74—59.)



1. The combination with a crank shaft, of a driven shaft, an internally toothed gear loose on the latter, a pinion fixed on the crank shaft in mesh with the internally toothed gear, a pinion fixed on the driven shaft in mesh with the pinion on the crank shaft, a conical clutch-member fixed on the driven shaft, a conical clutch member forming an integral extension of the internally toothed gear and surrounding the clutch member fixed on the driven shaft, a counter shaft arranged axially of the driven shaft, and an intermediate clutch member keyed to and movable axially on the counter shaft and having a conical portion interposed between the aforesaid clutch members adapted to be moved alternately into frictional engagement with the latter.

---

1,560,983. TRAILER BOAT. BENJAMIN H. GIBBS and CHARLES V. STEWART, Phoenix, Ariz. Filed May 12, 1924. Serial No. 712,668. 2 Claims. (Cl. 115—1.)



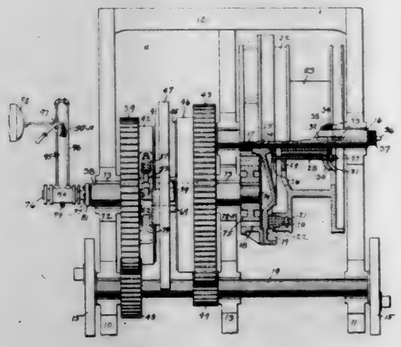
1. A combined trailer and boat comprising a boat shaped body composed of a pair of sections, partitions mounted within the extremities of the said sections, hinge means secured to the upper extremities of the partitions to permit folding of the sections, securing means secured to the said sections and retaining same at open position, an extension rack formed in one of the sections to receive the swinging section, strips mounted upon the engaging edges of the sections, means for fastening the sections in the folded position, an axle transversely mounted upon the lower portion of one of the sections, and a pair of wheels rotatably mounted upon the extremities of the said axle.

---

1,560,984. LOGGING ENGINE. SIDNEY B. GORDUTT, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed Dec. 20, 1923. Serial No. 681,692. 6 Claims. (Cl. 254—187.)

1. In a logging engine, the combination of a driving shaft; a main drum shaft; a drum on said drum shaft; an internal gear driving said drum; an intermediate shaft; a pinion on said intermediate shaft meshing with said internal gear; a pair of unequal gears rotatably mounted on said intermediate shaft; pinions on said drive shaft meshing with said unequal gears; friction flanges formed on both of said unequal gears; friction bands around said flanges; a driver secured on said intermediate

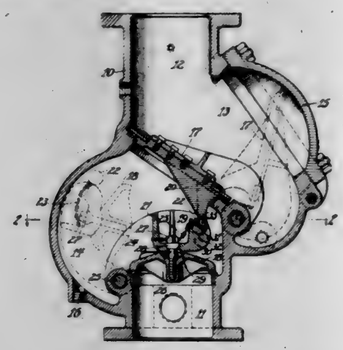
shaft between said unequal gears supporting the ends of said bands; and means for actuating both of said bands



in a manner that one of said bands can remain partially applied while the other band is commencing its application.

---

1,560,985. DRY-PIPE VALVE. ALLAN J. GROSS, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 489,965. 5 Claims. (Cl. 169—21.)

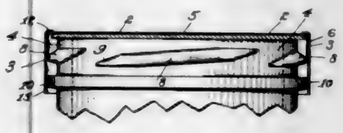


1. In a valve the combination of a casing, a pair of valves pivotally arranged within the casing, means cooperating with said valves when said valves are arranged in closed relation whereby one valve cooperates to maintain the other upon its seat, said means including an element secured to one of said valves adapted to be arranged upon a seat provided upon said valve to support said element and allow it to be engaged by the other valve, said element being movable upon the initial opening of said valves to destroy cooperation between said valves in the event of their return to seating position.

---

1,560,986. BAND-LUG CLOSURE. CHARLES HAMMER, Queens, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 18, 1922. Serial No. 530,082. 28 Claims. (Cl. 215—44.)

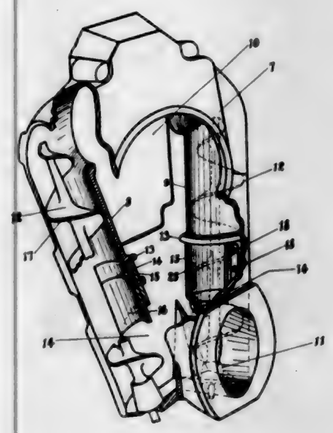
1. A combined rotatable and reuseable metal cap and sealing band, said cap comprising a top having a depending flange or skirt provided with inwardly extending locking projections, said skirt having its lower edge terminating an appreciable distance above the line of contact of said band with the neck of the receptacle to be closed and said sealing band extending an appreciable distance below said flange with its lower portion in position to be bent inwardly to directly engage under a



shoulder of the receptacle, said sealing band and cap so cooperating that the sealing band forms the first locking means for the cap without the rotation thereof while the projections of the cap form the second locking means on the removal of the band.

---

1,560,987. REGULATING MEANS FOR CONVEYERS. WILLIAM T. HANNA, Cincinnati, Ohio. Filed Dec. 1, 1924. Serial No. 753,240. 6 Claims. (Cl. 198—15.)

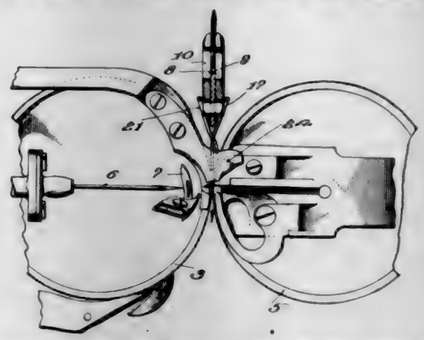


1. In a feed regulating device for conveyers the combination with an upright conveyer tube having a feed opening in the wall thereof and a conveyer screw extending revolubly through the tube and adapted to receive a substance to be moved, which substance passes through the feed opening in the tube, of a slidable plate mounted on the tube for adjustment over the feed opening therein, whereby the substance to be conveyed may be retained between the conveyer screw and the walls of the tube, and may be permitted to drop from the screw through the feed opening accordingly as the slidable plate is lowered and raised for decreasing and increasing the feed opening in the tube.

---

1,560,988. OVERSEAMING MACHINE. JESSE J. HEAP, Nyack, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1922. Serial No. 558,363. 10 Claims. (Cl. 112—20.)

1. The combination of over-seaming mechanism, means for supporting and feeding fabric sections placed side by side in a vertical position, and means for turning over the edge portions of the fabric sections on to the face of one of the fabric sections prior to the stitching of



the same whereby said over-turned edge portions are surrounded and secured by the over-seaming stitches.

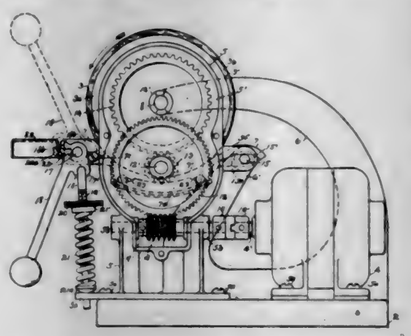
---

1,560,989. PORTABLE IRONING MACHINE. MEAD HEDGLON, Syracuse, N. Y. Filed Sept. 25, 1924. Serial No. 739,938. 1 Claim. (Cl. 68—9.)

The combination with a frame, and a padded press roll operatively mounted in said frame, of a longitudinally fluted concave heated shoe supported by said frame below said roll, the flutes of said shoe increasing in breadth and depth in the direction of travel of the articles while the latter are being ironed, the weight of the roll tending to press the padding and the articles deeper into the said flutes as they are moved over the shoe, and means for heating the shoe throughout.

---

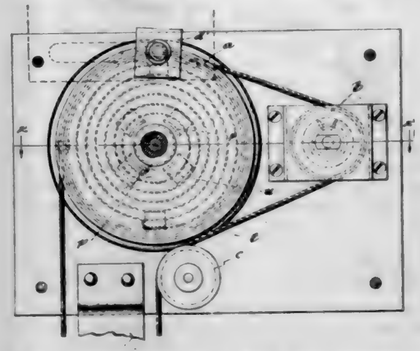
1,560,990. PORTABLE IRONING MACHINE. MEAD HEDGLON, Syracuse, N. Y. Filed Jan. 23, 1925. Serial No. 4,262. 15 Claims. (Cl. 68—9.)



1. In an ironing machine, the combination with a padded ironing roll, and means for driving said roll, of a heated trough-like shoe mounted horizontally below said roll adapted for horizontal movements in different directions by means of horizontal slots formed adjacent its rear edge, tension devices supporting the forward side of said shoe, and an eccentric mechanism adapted to cooperate with said tension devices for moving said shoe upwardly and downwardly relatively to the roll.

---

1,560,991. WINDOW-REGULATOR DRUM. ERNEST E. HEINTS, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 5, 1923. Serial No. 672,792. 6 Claims. (Cl. 185—45.)



1. In a window regulator, a cable drum comprising a member formed of relatively thin sheet metal folded upon itself at one side to form a flange, and having a continuous thread rolled in its periphery.

---

1,560,992. THERMOSTATIC CONTROL. RICHARD KONRAD HERTEL, Los Angeles, Calif. Filed Nov. 26, 1923. Serial No. 677,193. 4 Claims. (Cl. 236—103.)

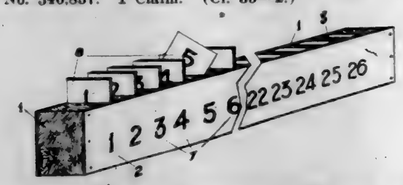
1. A cantilever movement comprising a plurality of plies forming a beam, means securing said plies together against longitudinal movement at one end, a thermally expansible member secured to one of said plies so as to apply stresses longitudinally thereof, the other of said plies being held against longitudinal movement.

---

1,560,993. PACKING FOR X-RAY FILMS. WILHELM HOHMANN, Delitzsch, near Halle-on-the-Saale, Germany, assignor to Actien-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Filed Feb. 2, 1924. Serial No. 690,290. 7 Claims. (Cl. 250—34.)

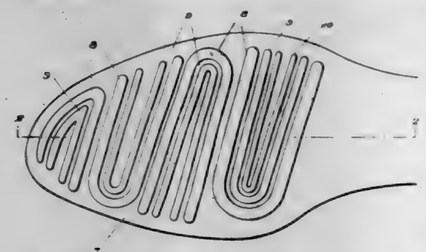
1. A packing of the class described, comprising a frame of pliable material, a sensitive film disposed within the confines of the frame, covers of thin flexible material impervious to visible light rays and moisture extending across the frame on both sides thereof and enclosing the film and a strip of thin, flexible, opaque material extending around the edges of the frame and adhesively attached to the marginal portions of the said covers.

1,560,994. EDUCATIONAL DEVICE. FREDERICK D. JONES, Alhambra, Calif. Filed Mar. 25, 1922. Serial No. 546,837. 1 Claim. (Cl. 35—2.)



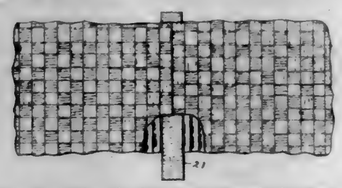
In combination with educational drill cards bearing letters printed thereon, an oblong, rectangular body, of wood, and provided with relatively narrow transverse saw cuts therein spaced to leave standing partitions separating the same, adapted to form receptacles to receive said cards; said body being provided with sides of suitable material to close the ends of said saw-cuts, and having printed thereon opposite each of said receptacles letters corresponding to the letters on said cards normally contained within said receptacles; and numerals printed on said sides to indicate the number of each of said printed cards normally contained in each receptacle.

1,560,995. SOLE. LOUIS KAPLAN, New York, N. Y. Filed June 11, 1924. Serial No. 719,357. 4 Claims. (Cl. 36—59.)



1. A sole having sets of U-shaped ribs on its tread surface with the ribs of each set located one within the other, said ribs being arranged with their ends and bends presented toward opposite sides of the sole, and the sets of ribs being in reversed positions so that the bends of the ribs of some of the sets are at one side while the bends of the ribs of the other sets are at the opposite side.

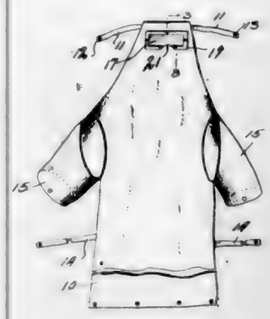
1,560,996. AIRCRAFT CONSTRUCTION. LEWIS M. KELLOGG, Los Angeles, Calif. Filed Mar. 19, 1925. Serial No. 16,739. 4 Claims. (Cl. 244—3.)



1. An air craft of the type named, having a body member composed of a plurality of tubular members formed of the woven ply wood and brace elements disposed so as to stiffen and support the tubular members.

1,560,997. MEDICAL AND SURGICAL APRON. JAMES F. KELLY, Monessen, Pa. Filed Jan. 8, 1925. Serial No. 1,225. 1 Claim. (Cl. 2—48.)

An article of the character described comprising a backless apron of textile fabric, the apron below its upper end being formed with sleeve sections through which the arms of the wearer may be disposed, the apron above the upper ends of these sleeve sections being gradually reduced in width and being formed to fit over the



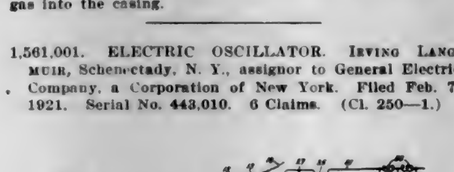
forehead and having a band at its upper end whereby it may be held upon the head, the apron immediately in front of that portion extending over the eyes of the wearer being formed with an observation opening, and a glass pane covering said opening.

1,560,998. HIGH-TENSION SWITCH MECHANISM. CARL G. KOPPITZ, Greensburg, Pa., assignor to Railway and Industrial Engineering Company, Greensburg, Pa., a Corporation of Pennsylvania. Filed July 24, 1924. Serial No. 728,021. 10 Claims. (Cl. 200—48.)

1. In switch mechanism, the combination of a switch blade comprising a portion supported for angular movement in a plane through the jaws and a portion including the contact end revoluble about the axis of the blade, and means for operating the switch, said means being operative to effect an angular movement of the blade as a whole and a rotary movement of the revoluble portion at the end of the closing movement and at the beginning of the opening movement, respectively.

1,560,999. TILE-FORMING MACHINE. JOHN KORIZON, Atlanta, Ga. Filed July 21, 1924. Serial No. 727,871. 7 Claims. (Cl. 25—21.)

1. In a tile molding machine, a platen, a knocker mechanism beneath said platen and operative to strike a series of blows on the under side thereof, a roller for transversing the platen above the same, and means for



actuating said knocker mechanism and cause the roller to traverse said platen.

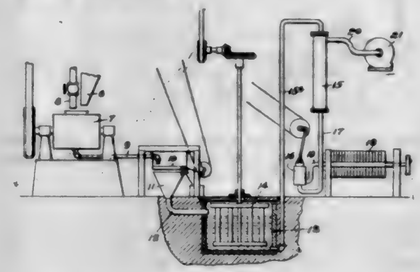
1,561,000. GASEOUS-LIQUID CONTACT APPARATUS. PAUL M. KUHN, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 10, 1924. Serial No. 685,391. 22 Claims. (Cl. 183—26.)

1. In an apparatus of the character specified, the combination of a suitable casing; a pan-like receptacle mounted therein with its edge in spaced relation to the casing; a baffle extending inwardly from the wall of the casing above and in spaced relation to the pan; means for withdrawing liquid from the pan and throwing it outwardly above the baffle; means for returning a portion of the liquid so thrown directly to the pan without traveling over the baffle; and means for introducing a gas into the casing.

1,561,001. ELECTRIC OSCILLATOR. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,010. 6 Claims. (Cl. 250—1.)

1. In combination, an electron discharge device comprising a sealed container, a cathode of substantially rectilinear form, means for heating said cathode independently of a discharge in said device, a surrounding substantially cylindrical anode, and a filling of helium gas having a pressure of about 5 to 75 microns of mercury, and a condenser connected in shunt with said device.

1,561,002. METHOD OF PRODUCING CLAY BODIES AND APPARATUS USED. GROVER W. LAPP, Le Roy, N. Y., assignor to Lapp Insulator Company, Inc., a Corporation of New York. Original application filed Aug. 27, 1919, Serial No. 320,163. Divided and this application filed June 9, 1922. Serial No. 567,027. 24 Claims. (Cl. 25—156.)



1. That step in the art of preparing clay for use in producing ceramic ware, which consists in subjecting a moving mass of clay in plastic state to a mixing action in which portions of the mass are moved across the longitudinal axis thereof.

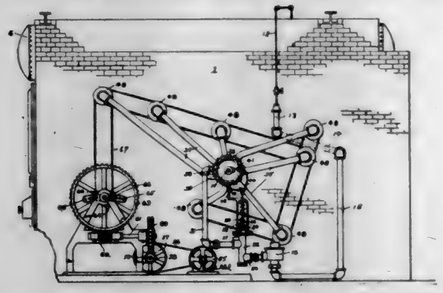
1,561,003. RAILWAY SCREW. EMILE LELOUP, Seraing-sur-Meuse, Belgium. Filed Aug. 17, 1922. Serial No. 582,479. 2 Claims. (Cl. 85—45.)

1. A screw including a threaded shank, a conical head carried by said shank and right and left hand screw threads formed on said head, the respective threads being adapted to cooperate with different types of wrenches to facilitate application and removal of the screw.

1,561,004. FLUE-CLEANING APPARATUS FOR BOILERS. JOHN T. LEMON, Columbus, Ohio. Filed Sept. 1, 1920. Serial No. 407,384. 11 Claims. (Cl. 122—392.)

1. In a flue cleaning apparatus for boilers, a plurality of blower units mounted for rotation in connection with the setting of a boiler, said units being capable of receiving steam under pressure and to direct such steam into engagement with the exterior surfaces of said water tubes, a source of steam supply, pipe connections governed by steam controlled valve means leading from said steam supply and in communication with said blower

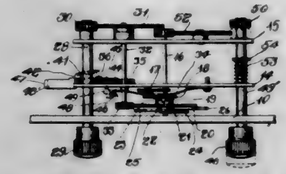
units to supply the latter successively at regulated intervals with steam under pressure, sheave wheels con-



nected with said blower units, and a cable construction cooperative with said wheels for effecting simultaneously the rotation of said blower units.

---

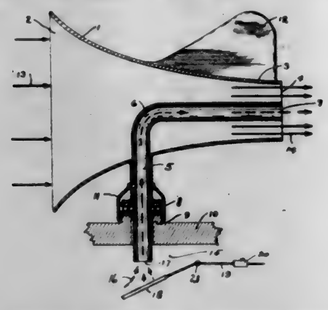
1,561,005. RADIO TIME SWITCH. ISRAEL LEVENSTEIN, Brooklyn, N. Y. Filed Apr. 28, 1924. Serial No. 709,619. 3 Claims. (Cl. (200—35.)



1. In a switch of the class described, a fixed contact, a pivoted switch lever spring urged into engagement with the fixed contact, a spring latch mechanism including a spring latch bar and a swinging latch finger yielding to movement in one direction and resisting movement in the other direction and engaging under tension of the mechanism with the lever to hold it away from the fixed contact and moving when released from tension to free the lever and permit it to close on the contact, and clock work controlled means engaging he latch mechanism to hold it normally under tension, said means being arranged to release the latch bar at a predetermined time.

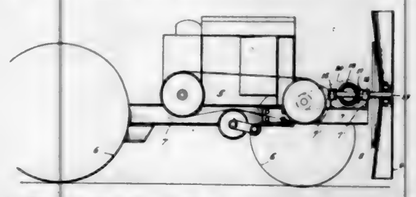
---

1,561,006. VENTILATOR. MAXWELL MCNUTT, San Francisco, Calif. Filed Mar. 3, 1923. Serial No. 622,555. 12 Claims. (Cl. 98—3.)



1. A ventilator comprising a converging member having a discharge throat and adapted to receive air flow in its large end, a tube having its outlet flush with the outlet of the said throat, said tube passing through the wall of said member and having an inlet adapted to receive air from a space to be ventilated.

1,561,007. SNOW REMOVER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Apr. 20, 1925. Serial No. 24,315. 3 Claims. (Cl. 37—43.)



1. The combination, with a vehicle, of a snow impeller comprising a detachable frame, a rotatable snow remover embodying a disk, an open-ended trough-shaped impeller thereon embodying a cutting-edge, and means connected to said frame for rotating said snow remover to impel snow laterally therefrom.

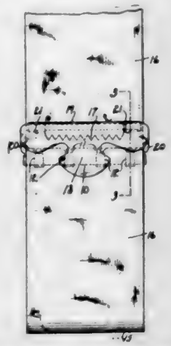
---

1,561,008. HOOD CLAMP AND THE LIKE. WILLIAMS G. MILLIGAN, Akron, Ohio. Filed Nov. 7, 1924. Serial No. 748,361. 3 Claims. (Cl. 292—60.)

1. The combination with an automobile hood having a bead on its lower edge, of a clamp for securing said hood in place by engagement with said beaded edge, said clamp comprising a metallic member formed with an eye and a hook-like, bead-engaging portion, said portion being covered with a layer of noise-deadening material, the material being so formed as to engage through said eye whereby it is held in place on said metallic member.

---

1,561,009. BUCKLE. ROSWELL A. MOORE, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Feb. 25, 1925. Serial No. 11,437. 2 Claims. (Cl. 24—184.)

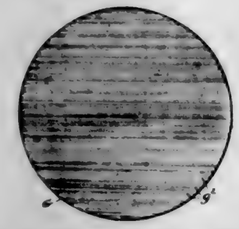


1. A buckle, comprising a frame having a body-portion and a pintle bar, with a space between them, the upper edge of the said body-portion formed with spaced notches,

and the lower edge formed with corresponding, aligned, web-gripping fingers, which are bent upward, alongside the said body-portion, and turned into the said notches, for deflecting localized portions of the webbing thereinto, and beyond one face of the body-portion, and a lever pivotally mounted on the said pintle bar, in position to deflect the running-reach of the webbing over the upper edge of the body-portion of the frame, and against the surface of the webbing passing over the upper edge of the body-portion.

---

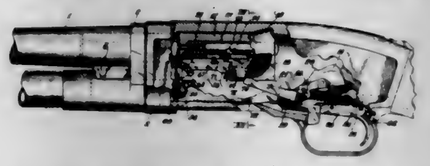
1,561,010. HEADLIGHT. CHARLES H. MUCKENHIRN, Detroit, Mich. Filed Aug. 4, 1921. Serial No. 489,705. 2 Claims. (Cl. 240—48.4.)



1. A front for lights comprising a thin film-like body having a surface at one side thereof formed of parallel scratches functioning as light refracting lines.

---

1,561,011. FIREARM. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, Utica, N. Y., a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,501. 28 Claims. (Cl. 42—17.)



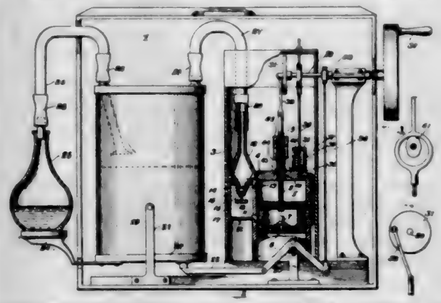
1. A take-down, repeating firearm, comprising in combination; a breech-bolt, an action bar removably engaged with the breech-bolt, a cartridge magazine and a member serving the double function of locking the action bar to the breech-bolt and controlling the delivery of cartridges from the magazine.

3. A repeating firearm comprising a receiver, a magazine adapted to feed cartridges rearwardly into the receiver through its forward end, the receiver being open at the bottom to allow the charge and discharge of the magazine therethrough, a breech-bolt, a carrier pivoted in the receiver to the rear of said opening and normally closing the same, a cartridge cut-off to hold the cartridges in the magazine when the breech-bolt is open, and a movable cartridge stop on and depending from the breech-bolt, the said carrier being adapted to engage the cartridge stop to displace the same out of cartridge stopping position when the carrier is moved inwardly and the breech-bolt is closed.

---

1,561,012. REFRIGERATING MACHINE. MARCELINO LUQUE NESTAL, New York, N. Y. Filed Dec. 11, 1924. Serial No. 755,267. 2 Claims. (Cl. 62—153.)

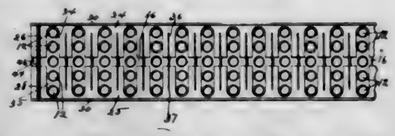
1. A refrigerating machine, comprising a case-like receptacle, a base arranged therein, a vacuum pump carried by the base, an operating shaft for the pump extending through and beyond one wall of the case, a container base arranged in the case, a lever connection extending from the container base, means operated by the shaft for operating the lever, a container on the container base, a bracket secured to the container base and extending through and beyond one wall of the receptacle to provide for the reception of a material receptacle, a



pipe connection between the air pump and container, and a pipe connection leading from the container for cooperation with a material receptacle.

---

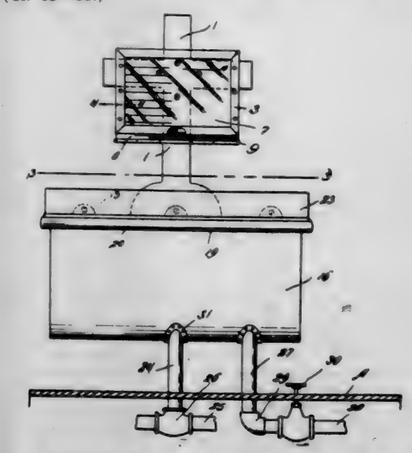
1,561,013. COOLING RADIATOR. WILLIAM A. ODENDAHL, Denver, Colo. Filed Dec. 17, 1923. Serial No. 681,159. 4 Claims. (Cl. 257—129.)



1. In a radiator having upper and lower tanks and open-ended tubes connecting and communicating between said tanks, the combination therewith of banks or series of fins for the front and rear of said radiator, said fins being notched to admit said tubes and substantially meeting on the median line of the bank of tubes, end bars notched on their inner margins to receive said fins, said fins being notched on their outer margins to receive said end bars, said end bars being arranged transversely of said fins and removable and replaceable in series therewith relative to said tubes, and means for detachably connecting said end bars.

---

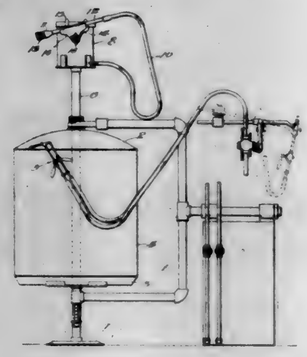
1,561,014. CARD HOLDER AND UMBRELLA RECEPTACLE. AMBROSE E. O'ROURKE, Millbrook, N. Y. Filed May 6, 1924. Serial No. 711,416. 2 Claims. (Cl. 45—33.)



1. A device of the class described comprising an umbrella receptacle having a lateral marginal flange extend-

ing around the top thereof, said receptacle being substantially rectangular in design, a supporting strip, a bracket on said supporting strip and adapted to support the flange formed on the rear wall of the receptacle, the ends of said strip being slotted, a supporting frame including front and side members, said side members having their free ends adapted to be received in the slots in said strips and supported thereby, the upper edges of said frame adapted to support the flanges formed on the front and end walls of the receptacle, and an outlet pipe extending from said receptacle.

1,561,015. FLUX BRUSH. WILLIAM A. PAINTER, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Oct. 20, 1924. Serial No. 744,698. 8 Claims. (Cl. 113—95.)

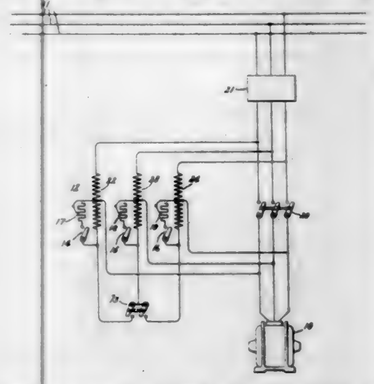


1. The combination with a soldering stand for a radiator core and tank assembly, of a flux container supported above said stand, a fountain brush, a flexible tube connecting the brush with the container for supplying flux by gravity to the brush while wiping flux on the parts of the radiator to be soldered, and means for holding the brush when not in use in a position to check the flux flow thereto.

1,561,016. SCRAPER. HARRY A. PALLADY, Seattle, Wash., assignor to Pal-Weld Manufacturing Company, Seattle, Wash. Filed Dec. 4, 1924. Serial No. 753,826. 1 Claim. (Cl. 145—97.)

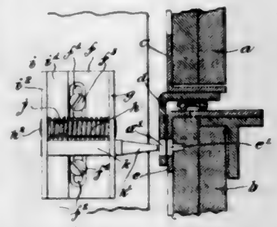
A scraper for scraping the inner walls of a cylinder embodying a head block, a handle on said block, a scraper knife projecting from said block, and two guard members held rigidly in said block and having bearing surfaces extending both forwardly and to the rear of the line of the scraping edge so as to govern the angle of the front face of the knife to the work and disposed on opposite sides of said knife and arranged to bear upon the cylinder wall on both sides of the plane of said knife whereby said knife may engage said cylinder only when said guard members rest squarely against said cylinder wall.

1,561,017. METHOD OF STARTING ALTERNATING-CURRENT MOTORS. WILLIAM E. PAUL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 23, 1922. Serial No. 563,154. 7 Claims. (Cl. 172—274.)



2. The method of starting an alternating current motor from a source of supply, which comprises interposing an auto-transformer between the source of supply and the motor, then loading the transformer while connected in the motor circuit to reduce the impedance of the transformer when the transformer is subsequently caused to act as a reactor, then causing the transformer to act as a loaded reactance in the motor circuit and then connecting the motor directly to the source of supply without opening the motor circuit during the starting of the motor.

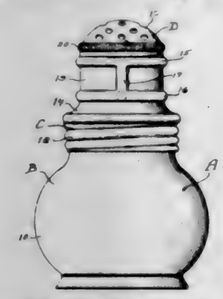
1,561,018. LOCK FOR ELEVATOR DOORS. CHARLES W. PEELLE, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 12, 1924. Serial No. 755,442. 6 Claims. (Cl. 292—177.)



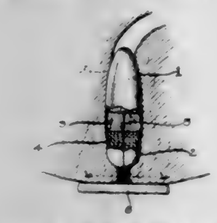
1. A lock for elevator doors consisting of a base plate permanently secured to the building wall adjacent an elevator door, a plate slidably mounted upon said base plate, a bolt carried by said plate, and adapted to enter a socket formed in an elevator door, means acting to normally retract said bolt from the path of movement of the door, and means whereby said last named means may be made inoperative, said slide carrying the bolt having a flange adapted to prevent access to the means securing the lock to the building wall structure when said bolt engages a door, whereby removal of said lock is prevented except by the release of the means acting upon the retracting mechanism.

1,561,019. CONDIMENT HOLDER. EMIL R. PETERSON, Orin, Wash., assignor of one-half to Gunnard Stone, Island Park, Idaho. Filed May 12, 1924. Serial No. 712,765. 5 Claims. (Cl. 65—57.)

1. A condiment holder comprising a container, a cover portion detachably connected to said container and including an annular sleeve being open at its upper end, and an agitator rotatably and reciprocably mounted in said sleeve and joined thereto by said mounting, including a perforated cap and a depending portion extending into the container for engagement with the contents thereof whereby the material within the container may be readily broken up.

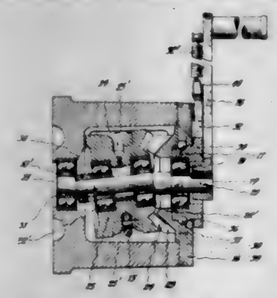


1,561,020. RECTAL TAMPON. EDMUND M. POND, Rutland, Vt., assignor to Arthur H. Smith and Esme Smith, Rutland, Vt. Filed July 25, 1922. Serial No. 577,291. 4 Claims. (Cl. 128—270.)



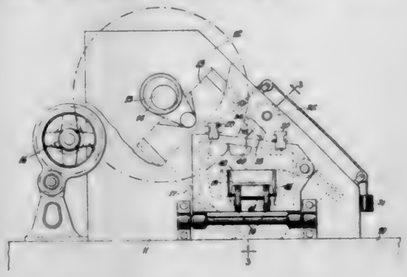
1. As an article of manufacture a tampon adapted for medication of the rectal regions, which tampon comprises a shell of soluble material, a body of medicated material supported by said shell and occupying the entire lower portion thereof when it is in operative position and a body of fibrous material supported in said shell above said medication together with a protective pad of dry absorbent material connected to the tampon proper at a distance which locates it outside the anus when the tampon is in operative position.

1,561,021. CHAIN HOIST. ALFRED ARTHUR QUICK, Thornbury, Victoria, Australia. Filed Sept. 12, 1922. Serial No. 587,800. 8 Claims. (Cl. 254—169.)



1. In a chain hoist embodying an angularly disposed nutating or oscillating load chain wheel furnished with bevel gear teeth intermeshing with a ring of external bevel teeth, an axle passing axially through the ring of teeth and having an angularly disposed central portion passing axially through the nutating load chain wheel, ball bearings on the angularly disposed portion of the axle carrying the said load chain wheel, ball bearings for the co-axial end portions of the said axle, and means on one end of the axle for imparting rotation thereto, a reduced portion on the axle between one of the co-axial end portions and the central portion, and a locking ring and filling piece for retaining the ball bearings for the nutating or oscillating load chain wheel correctly in position on the angularly disposed portion of the axle.

1,561,022. SHEARING APPARATUS. CHARLES RAPP, New York, N. Y. Filed Mar. 20, 1925. Serial No. 16,879. 6 Claims. (Cl. 164—49.)



1. In shearing apparatus provided with a set of shaped movable blades and a set of cooperating shaped stationary blades; means to effect a relative movement between a portion of the blades of the movable set of blades; and means to effect a relative movement between a portion of the said stationary set of blades.

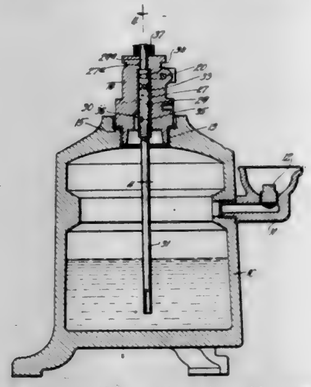
1,561,023. RAILROAD-CROSSING SIGNAL. HENRY B. RAYNES, Buffalo, W. Va. Filed Mar. 10, 1924. Serial No. 698,164. 4 Claims. (Cl. 246—293.)

2. The combination with a semaphore stand and its blade; of railroad track, and track supported means for repeatedly oscillating said blade including a rock shaft having operative connection to said blade and having a rock arm at one end, a rod having a pin and slot connection to said rock arm and supported adjacent a track rail, a plurality of levers each pivotally connected to said rail and projecting thereabove for engagement by the wheels of a train, said levers each being connected intermediate its ends to the rod, and spring means normally holding said rod in position to elevate the wheel engaged ends of the levers.

1,561,024. CARBURETED-AIR-GAS APPARATUS FOR BLOWPIPES. ZERNE O. RARRICK, Toledo, Ohio, assignor to The Ransome & Randolph Company, Toledo, Ohio, a Corporation of Ohio. Filed July 22, 1921. Serial No. 486,687. 9 Claims. (Cl. 48—144.)

1. A carbureted air gas apparatus for blowpipes comprising a stationary receptacle for liquid fuel, a passage through which uncarbureted air is introduced into the liquid fuel below the level thereof, said passage comprising two parallel portions, an annular chamber around said parallel portions, means for conducting a portion

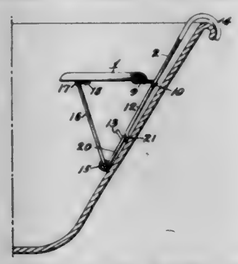
of the carbureted air from above the level of liquid fuel directly to said annular chamber to sustain a flame



which heats the parallel portions in said passage, and means for conducting carbureted air gas from the top of said receptacle.

---

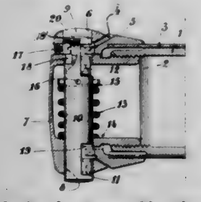
1,561,025. COLLAPSIBLE HANGING SEAT. LEROY REIMER, Brooklyn, N. Y., assignor of one-half to John M. Lehman, Brooklyn, N. Y. Filed July 25, 1924. Serial No. 728,106. 4 Claims. (Cl. 155—36.5.)



1. In a device of the character described, the combination with a seat of a hanger support therefor, including a pair of spaced members hooked at their outer ends for suspending the device and pivotally connected with the seat, securing devices on the members, an adjustable brace pivotally secured to the seat, and a second brace pivotally secured to the first brace, both of said braces being provided with means for detachably connecting either of them to the securing devices on the supporting members.

---

1,561,026. LOCKING DEVICE FOR REMOVABLE WHEELS. LOUIS ROUANET, Ivry-Port, France, assignor to The Compagnie d'Applications Mecaniques, Paris, France. Filed Apr. 11, 1922. Serial No. 551,681. 3 Claims. (Cl. 301—9.)



1. A locking device for removable wheels comprising in combination an inner permanent hub, an outer removable hub, a central nut screwed into the inner hub and securing the outer hub on the inner hub, a rod adapted to slide in a direction at right angles to the axis of the hubs in diametrically opposite holes provided in the nut, a spring controlling said rod, a set of teeth provided on the outer hub and teeth on said rod adapted to engage with said set of teeth at two diametrically opposite points.

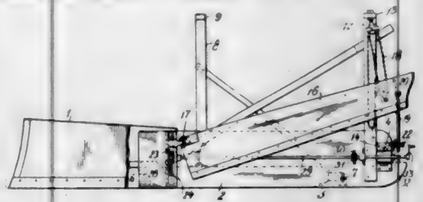
---

1,561,027. CASKET HANDLE. EDWARD R. SARGENT, New Haven, and MICHAEL J. KELLY, Wallingford, Conn., assignors to Sargent & Company, New Haven, Conn. Filed Aug. 17, 1923. Serial No. 657,954. 13 Claims. (Cl. 16—112.)

1. In a casket handle, an escutcheon plate having an opening, and an arm swingably connected thereto, said arm having side tongues projecting through said opening and adapted to bear upon the lower edge thereof and an upper lip between said tongues adapted to be inserted in said opening and thereafter bent to engage an edge of the opening to prevent the removal of the arm therefrom.

---

1,561,028. SNOWPLOW. DON A. SARGENT, Bangor, Me., assignor to Northern Trailer Company, Bangor, Me., a Corporation of Maine. Filed Apr. 12, 1924. Serial No. 706,011. 2 Claims. (Cl. 37—44.)



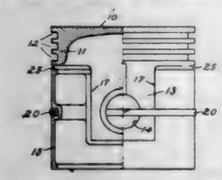
1. A snow plow comprising the combination of a nose, a wing pivotally mounted behind the nose, means for raising and lowering the pivot point and holding it in fixed position, and means operable from the rear of the plow for operating the raising and lowering means.

---

1,561,029. GRAIN DOOR FOR FREIGHT CARS. JOSEPH A. SCHMITZ, Chicago, and ADYN E. SCHUYLER, Evanston, Ill. Filed July 13, 1923. Serial No. 651,236. 7 Claims. (Cl. 20—30.)

1. A car closure comprising horizontal door sections, a lower destructible closure member, and an exterior bar member, said bar member being secured to an upper door section and equipped at its lower end with a strap member anchored to the car floor inside said closure.

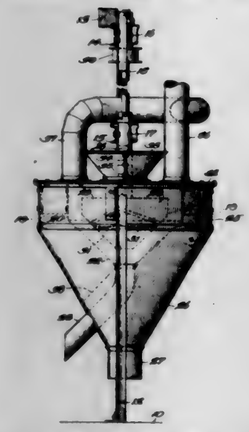
1,561,030. PISTON. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 29, 1923. Serial No. 660,047. 5 Claims. (Cl. 74—108.)



1. A piston for an internal combustion engine comprising, a head portion having a packing ring groove therein and two diametrically opposed projections integral therewith serving as wrist pin bosses, and a skirt portion having recesses therein within which said projections lie, and a ring encircling the skirt portion and embedded in grooves in said skirt and said projections whereby said skirt and head portions are secured together.

---

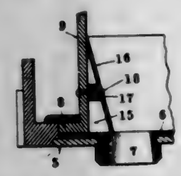
1,561,031. SCREENING AND SEPARATING MACHINE. JOSEPH T. SIMPSON, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,539. 3 Claims. (Cl. 83—40.)



1. In a machine of the class described, a fan and means for driving it, a fan chamber having its lower portion consisting of a conical screen, a conical casing surrounding the fan chamber, and removed a short distance therefrom, discharge spouts for the chamber and the casing at the apexes thereof, and an exhaust pipe connected to the upper part of the annular space between chamber and casing.

---

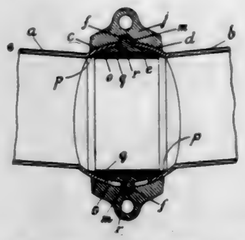
1,561,032. AIR EXHAUST FOR FILLING MACHINES. CHESLEY T. SMALL, St. Louis, Mo. Filed Sept. 27, 1920, Serial No. 413,188. Renewed Apr. 22, 1925. 2 Claims. (Cl. 226—72.)



1. In a device of the class described, the combination with a rotary member having a discharge aperture, of a supply chamber arranged above said rotary member for feeding material to a receptacle through the discharge aperture, agitating means in said supply chamber, an air conduit extending along the wall of said supply chamber and opening below said agitating means, and an open bottom conduit communicating with and extending laterally from said first named conduit.

---

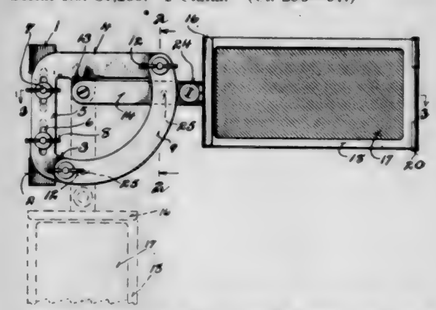
1,561,033. PIPE JOINT. REGINALD WILLIAM SPENCER, South Kirkby, near Pontefract, England. Filed July 23, 1925. Serial No. 45,520. 10 Claims. (Cl. 285—92.)



1. Means for connecting two pipes together comprising an outer member and an inner member having concentrically adjacent interior and exterior spherical surfaces, spherical ends to the pipes located in opposed relation to one another between said spherical surfaces, a flange and groove engagement between the outer member and the inner member located between the meeting ends of the pipes, means associated with the inner member for resiliently effecting a fluid tight joint within the pipe ends.

---

1,561,034. ADJUSTABLE ANTIGLARE SHIELD. GUSTAV R. SPERL, Milwaukee, Wis. Filed May 14, 1925. Serial No. 30,259. 1 Claim. (Cl. 296—97.)



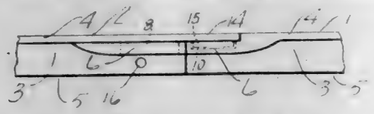
An anti-glare device for automobiles comprising an attaching clip, a bracket adjustably secured to said clip and having an arcuate portion, an arm pivoted to said bracket and adapted to swing over said arcuate portion, a second arcuate member positioned in front of said arm and clamping said arm against said first arcuate portion, and springs for urging said arcuate portions towards each other, said arm having a manipulating handle and an anti-glare shield carried by the outer end of said arm.

---

1,561,035. RAIL JOINT. JOSEPH ELIAS STEWARD, Prince George, British Columbia, Canada. Filed Mar. 14, 1923, Serial No. 625,021. Renewed Oct. 29, 1924. 3 Claims. (Cl. 238—235.)

1. A rail joint for two abutting rails, comprising thickened webs at the ends of the rails, the extremity of one rail being fashioned wedge-like with a central key upstanding thereon, the rail being cut away to a flat surface below the ball of the rail and back of the said

wedge portion and diagonally at the ball of the rail, and a key slot being formed in the said flat surface;



and the extremity of the other rail being formed to exactly meet the formations at the end of the first mentioned rail and so as to fit thereto complementarily.

---

1,561,036. APPARATUS FOR CHARGING LIQUIDS WITH CARBON-DIOXIDE GAS. GEORGE FRANCIS SUGDEN, Manchester, England. Filed Dec. 17, 1924. Serial No. 756,501. 4 Claims. (Cl. 226—28.)

1. In a charging apparatus, a valve provided with a stationary plug and a casing pivoted thereon, and having inlet and charging ports for compressed gas, a receiving chamber secured to the valve casing at one end and provided with packing at its other end, and a support for a bottle pivoted to the said chamber and provided with means for holding the bottle neck in engagement with the said packing.

---

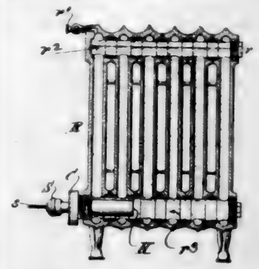
1,561,037. SPRING-AXLE CONSTRUCTION. JESSE D. TUCKER, Sacramento, Calif., assignor to Tucker Brothers Manufacturing Company, Sacramento, Calif. Filed Oct. 29, 1923. Serial No. 671,402. 3 Claims. (Cl. 280—124.)

1. A spring axle structure comprising vertically spaced spring elements, pivoted spindle supports connected with the free ends of the spring elements, steering connections between the supports, and means whereby when the flexing of the spring elements move the spindle supports apart, the steering connections will not move such spindle supports on their pivotal points.

---

1,561,038. HEATING MEANS. GEORGE WADE, Newark, N. J. Filed May 25, 1925. Serial No. 32,597. 1 Claim. (Cl. 219—38.)

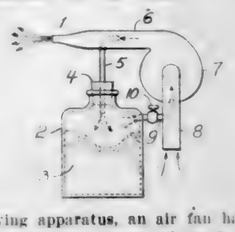
In combination with a sealed radiator containing a liquid heat vehicle, a one piece heating chamber positioned therein and formed with a head protuberant therefrom, a cap fitting the said head of the heating chamber and constituting a seat for a removable electric socket, said electric socket, an electric heating coil incorporated with said electric socket and frictionally engaging said



cap, and means for connecting said socket and heating element with an electric circuit, substantially in the manner and for the purpose set forth.

---

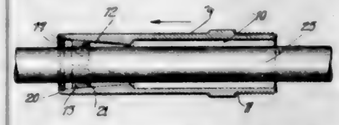
1,561,039. SPRAYING APPARATUS. EDWARD WALKER, Grantwood, N. J. Filed Nov. 11, 1924. Serial No. 749,185. 2 Claims. (Cl. 43—148.)



1. In a spraying apparatus, an air fan having a casing, a duct into which a current of air is injected by said fan, means for deviating a part of said current from said duct into a container to create a pressure therein and to agitate a substance within said container, a suction conduit connected to the center of said fan casing and in alignment with the axis of the fan rotor, and means for establishing communication between said container and said conduit so that the substance in said container may be conveyed to said conduit under the influence of the suction in the latter to cause the passage of said substance into the center of the fan rotor and from thence outwardly into said duct.

---

1,561,040. FEED COLLET OR PUSHER. EARL H. WHEELER, Windsor, Vt., assignor to The National Acme Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 13, 1923. Serial No. 657,246. 5 Claims. (Cl. 29—62.)

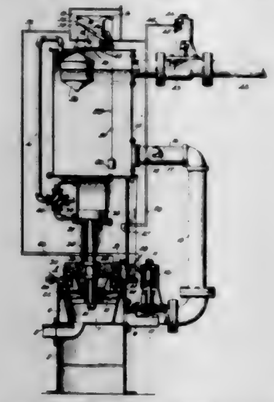


1. A feed collet comprising a hollow body having an inner lengthwise tapered bore, an annular split gripping ring located in said bore and having the outer surface tapered to conform to the taper of said bore, said ring when shifted lengthwise within said bore expanding or contracting to conform to the size of said bore.

---

1,561,041. HEAT TREATMENT OF GEARS OR THE LIKE. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1920. Serial No. 427,600. 10 Claims. (Cl. 266—6.)

1. The process of treating toothed gears by the application of a quenching fluid thereto comprising the confining of the gear in a fixed clamping structure adapted to prevent warping and exposing only the toothed por-



tions of the gear, and causing a definite and predetermined quantity of fluid to flow over the exposed portions.

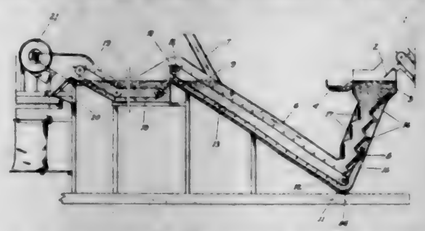
---

1,561,042. PROCESS FOR RECOVERING DIATOMACEOUS EARTH FROM WASTE MATERIAL. RICHARD C. WILLIAMS, Baltimore, Md. Filed July 15, 1925. Serial No. 43,871. 3 Claims. (Cl. 25—156.)

1. That step in the process of preparing plastic material for molding from mud-cake which consists in treating the mud-cake before molding to prevent disruptive fermentation in the molded article.

---

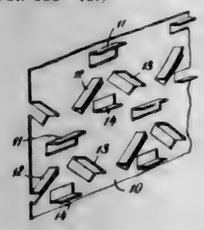
1,561,043. POTATO CLEANER AND STERILIZER. ROSCOE C. ZUCKERMAN, Stockton, Calif. Filed Oct. 8, 1924. Serial No. 742,384. 10 Claims. (Cl. 146—199.)



1. An apparatus for the purpose described including an inclined and enclosed conduit, scrubbing elements therein, a second enclosed conduit connected therewith at the reverse inclination, and a conveyor in the second conduit discharging from the upper end thereof.

---

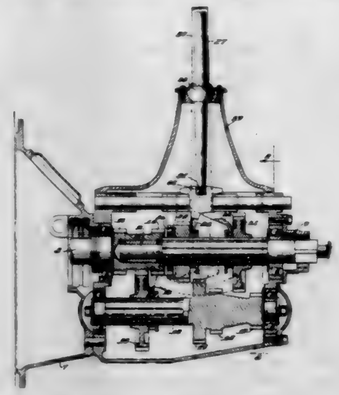
1,561,044. BAFFLE TOWER. CLIVE M. ALEXANDER, Tulsa, Okla. Filed Feb. 20, 1925. Serial No. 10,523. 9 Claims. (Cl. 183—75.)



1. An improved baffle for promoting gas and liquid contact, comprising a series of sheets or plates supported in spaced substantially parallel relation with a plurality of projections trapezoidal in configuration arranged in the spaces between the sheets or plates with the shorter parallel trapezoidal faces of the projections disposed toward one face of the baffle, said projections being formed of flanges integral with the sheets or plates.

---

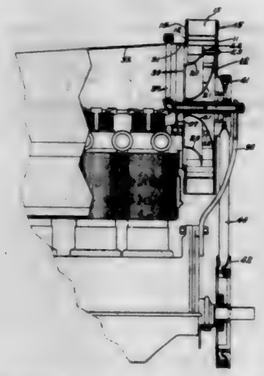
1,561,045. CHANGE-SPEED TRANSMISSION. CARL L. ANDERSON, Rockford, Ill., assignor, by direct and mesne assignments, to Mechanics Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,390. 10 Claims. (Cl. 74—58.)



3. In a change speed transmission, the combination of a driving shaft having a pair of fixed axially spaced gears, a driven shaft, a counter shaft, means operable between said shafts for effecting changes in speed including a gear splined on the counter-shaft between said driving gears movable into mesh with said gears respectively for certain speeds and held out of mesh during neutral and the direct speed.

---

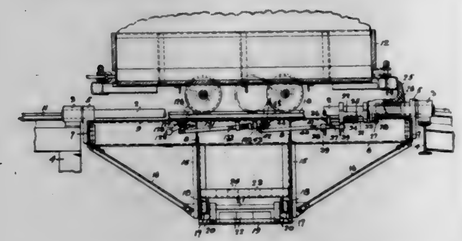
1,561,046. EXHAUST FAN. HORACE W. ASIRE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 11, 1923. Serial No. 638,402. 6 Claims. (Cl. 230—11.)



1. A centrifugal fan of the class described comprising a side plate; a driving pulley carried by said side plate; a second side plate spaced apart from said first mentioned plate and having an opening through which air may enter the fan; a series of impelling blades arranged between said side plates; a deflecting cone having an edge lying substantially in the plane of the opening afore-

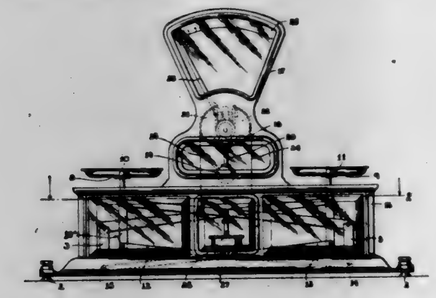
said and adapted to divide the air entering the fan into two streams; a plurality of spacers arranged between the outer edge of said deflecting cone and first mentioned side plate and fastening bolts for securing said cone in engagement with said spacers and to said first mentioned side plate.

1,561,047. CAR DUMP. VERNOR T. BARKLEY, Pittsburgh, Pa. Filed Apr. 10, 1922. Serial No. 551,158. 26 Claims. (Cl. 214—52.)



1. Car-dumping apparatus comprising a support rotatably movable by gravity, car tracks carried by said support and unsymmetrical with respect to axis of rotation of said support, means for locking said support in car-receiving position, means for releasing said locking means, means operable after the release of said locking means for engaging said car to hold it upon said support, and automatically operable gravity actuated means for rocking said support from its car-dumping position back to its car receiving position.

1,561,048. WEIGHING SCALE. HARRY S. BERGEN, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 25, 1920. Serial No. 361,157. 5 Claims. (Cl. 265—62.)



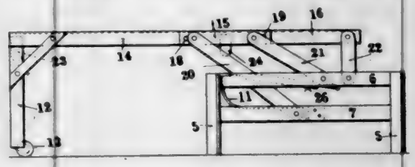
1. In a scale, in combination, a pair of oppositely-extending levers lying substantially side by side, each of said levers being fulcrumed at one end and provided at its other end with load pivots, force-transmitting means connected to each of said levers intermediate its fulcrum and load pivots whereby a load on one lever may be counterbalanced by an equal load on the other lever, and means connected to and connecting said force-transmitting means to offset an excess of load on one of said levers.

1,561,049. PUMP. JOHN H. STAYTON BONNER and MARTIN TOWNSEND CHAMBERLIN, Wichita Falls, Tex. Filed Apr. 3, 1925. Serial No. 20,475. 3 Claims. (Cl. 103—220.)

1. In an oil well pump having a working barrel provided with a standing valve, a casing enclosing the working barrel, said casing having a section dividing the casing into an upper inlet chamber and a lower sand trap chamber, a tube mounted on the section and communicating at its lower end with the sand trap chamber, the upper end of the tube being closed, a stand pipe

extending up into the tube and communicating with the upper part of the tube at its upper end, and a cylinder connected to the working barrel and communicating with the lower end of the stand pipe at its lower end.

1,561,050. FOLDING BED. JOHN J. BRAZNELL, St. Louis, Mo., assignor to American Bed Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 9, 1924. Serial No. 731,174. 4 Claims. (Cl. 5—23.)



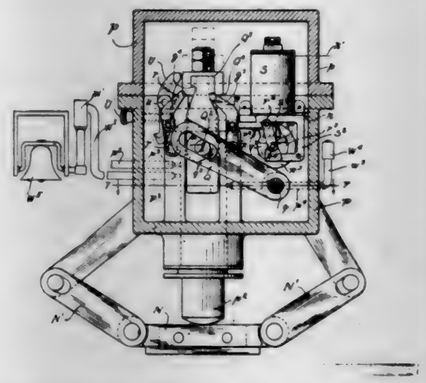
1. In a device of the class described, the combination with a pair of end frames, of a spring frame comprising three sections, the outer section being provided at its outer side with supporting legs and pivoted at its inner side to the intermediate section, the inner section being pivotally connected to the end frame and to the intermediate section, whereby it is reversed when in folded position, and a pair of links at each end connecting the intermediate section to the end frame, said links being so proportioned and positioned as to hold the intermediate section in horizontal position when extended and approximately vertical position when folded.

4. In a device of the class described, the combination with a pair of end frames, of a partial receptacle bottom carried between said frames, and a sectional spring frame having link connection to said end frames, one section of said spring frame when in folded position aligning with said partial receptacle bottom to complete the same.

1,561,051. AUTOMATIC TRAIN CONTROL. ANDREW J. BROOKINS, Chicago, Ill. Filed May 22, 1922. Serial No. 562,594. 22 Claims. (Cl. 246—49.)

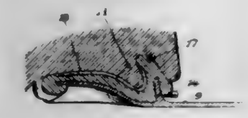
10. A movably mounted arm having a head provided with recesses, on the free end thereof, a movably mounted plunger and a connection between said plunger and said arm, in combination with pawls arranged to be selectively engageable with said recesses, an electromagnet, a polarized armature to said magnet arranged to

control said pawls, said free end of said arm arranged to mechanically force said pawls from said engagement,



and electroresponsive means, arranged to co-act with said magnet, to lock said polarized armature in neutral position when said magnet is not energized.

1,561,052. METHOD OF MAKING DENTAL IMPRESSIONS. ARTHUR H. BROWN, Denver, Colo. Filed Jan. 8, 1923. Serial No. 611,398. 9 Claims. (Cl. 32—6.)



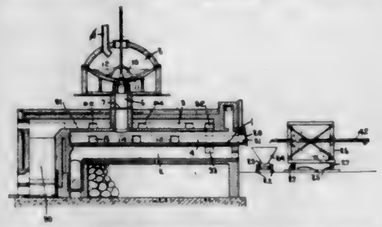
1. In the manufacture of artificial dentures, the method of producing an impression of the surface of a maxilla or mandible to be fitted by the denture, consisting in making a snap impression of the surface, making a cast of said impression, forming a base over the cast, producing a second impression of the surface with the base in place thereon whereby to obtain a depression of a depth corresponding with the thickness of the base after the latter is removed, making a third impression of the surface in a plastic substance confined in the depression, and connecting the depression with a source of fluid under pressure.

1,561,053. METHOD OF AND COMPOSITION FOR CLEANING METALS. BRUCE K. BROWN and EMIL G. SCHMIDT, Terre Haute, Ind., assignors to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed Jan. 28, 1925. Serial No. 5,371. 9 Claims. (Cl. 148—8.)

8. A composition of matter for cleaning and preserving iron surfaces, comprises an admixture of mesityl oxide, acetone, phosphoric acid, and water.

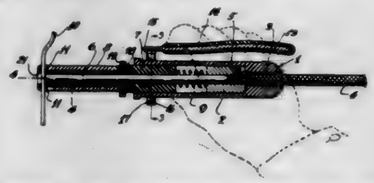
1,561,054. MECHANICAL FURNACE. OTTO H. BUSE, Shaker Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 5, 1922. Serial No. 573,026. 10 Claims. (Cl. 214—18.)

1. In mechanism of the character described, the combination of a furnace chamber having a substantially horizontal floor and a door at the level of said floor, a carriage movable in front of said furnace in a plane parallel with the plane of said door, driven rollers mounted on said carriage, a tool engaged between said rollers, said rollers being mounted to position said tool at right



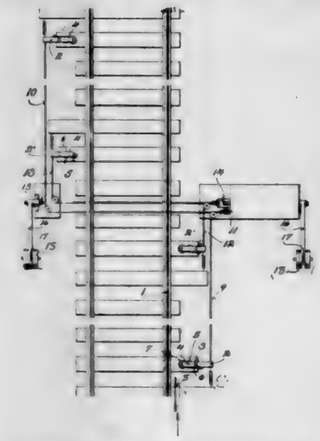
angles to the plane of said door, and said rollers being also adapted to actuate said tool into and out of said furnace.

1,561,055. ELECTROWELDING GRIP. RICHARD J. CALLAHAN, Newark, N. J. Filed Nov. 8, 1924. Serial No. 748,534. 7 Claims. (Cl. 219—8.)



2. A device of the character described embodying a handle, relatively fixed and movable gripping members mounted on the handle and with one of which a current feed wire is adapted to be electrically connected, automatic means normally maintaining said gripping members in non-gripping relation, and manually operable means also mounted on the handle for shifting the movable member relatively to the fixed member to grip a strip of welding metal between said members and simultaneously establish electrical connection between said strip and the current feed wire.

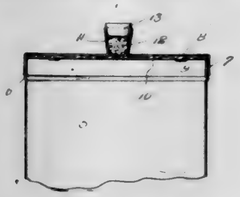
1,561,056. RAILROAD GATE. WILLIAM J. H. CHARLTON, Wabeno, Wis. Filed Apr. 27, 1925. Serial No. 26,119. 4 Claims. (Cl. 246—125.)



1. In a railroad crossing the combination of railroad tracks, a lever mounted adjacent said tracks and adapted to be moved by a passing train, a plunger connected with said lever, a switch operated by said plunger, an electric

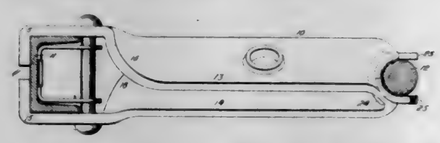
motor controlled by said switch, mechanism driven from said electric motor, a gate, a clutch adapted to connect said gate with said driven mechanism, a second lever mounted adjacent said tracks and spaced from said first lever a material distance, and a slide connecting said clutch and said second lever.

1,561,057. TOBACCO CAN. EMERY B. COLSON and HOSEA CLINTON GREEN, Hutchinson, Kans. Filed Nov. 21, 1923. Serial No. 676,107. 1 Claim. (Cl. 131—30.)



In a tobacco can, a cover having an absorbent sheet secured against and covering substantially the entire under surface thereof, said cover having a top wall provided with a neck through which a portion of the absorbent sheet is exposed, a compressible moisture retaining element within the neck upon the exposed portion of the absorbent sheet, a removable closure for the neck positioned above said moisture retaining element, the means for securing the absorbent sheet against the under surface of the cover comprising a plurality of marginal downwardly directed tongues struck from the top of the cover and projecting through and clinched against the under surface of the absorbent sheet.

1,561,058. RAILWAY BRAKE BEAM. SETH A. CRONE, East Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a Corporation of New York. Filed Feb. 12, 1925. Serial No. 8,620. 14 Claims. (Cl. 188—231.)



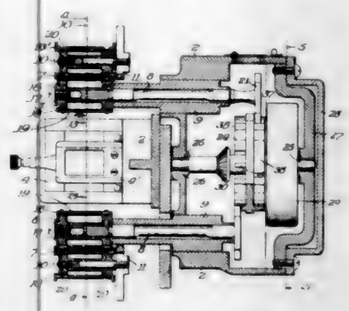
1. A breake-beam strut comprising a folded forged metal bar having sides to receive between them a brake-lever, means at the free ends of said side for engagement with a compression member, a fold or bend at its forward end to receive a tension member and a forged metal insert applied to said fold and having forwardly projecting arms to extend above and below, and retain the tension member.

1,561,059. VALVE LOCK. GOTFRED DANKO, Chicago, Ill. Filed May 6, 1925. Serial No. 28,487. 4 Claims. (Cl. 251—166.)

1. In a valve lock cooperating with a valve casing and a valve-plug therewithin, a plate fitted upon said valve-plug, an extension upon said plate, a lever pivoted in said extension, said lever normally engaging the valve casing to hold the valve closed, and means cooperating with said plate and said lever for preventing bending of said lever on its pivot point in attempting to operate the valve-plug without first releasing the engagment of said lever with the valve casing.

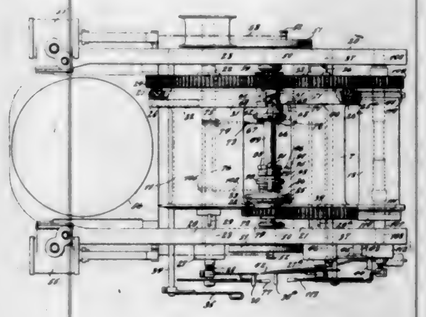
4. In a valve casing and a valve-plug cooperating therewith, said casing having a notch, the combination of a plate upon said valve-plug, an extension upon said plate, a lever pivoted within said extension, said lever normally engaging the valve casing to hold the valve closed, another extension upon said plate, a flange upon said last named extension, said flange abutting said lever for preventing bending of said lever on its pivot point in attempting to operate said valve-plug without first releasing the engagement of said lever with the valve casing, and an extensible sheath upon said lever fitting within said notch.

1,561,060. MOTION-PICTURE APPARATUS. RALPH PULLEAM DE VAULT, Chicago, Ill., assignor to Harley L. Clarke, Chicago, Ill. Filed July 18, 1922. Serial No. 575,794. 8 Claims. (Cl. 74—31.)



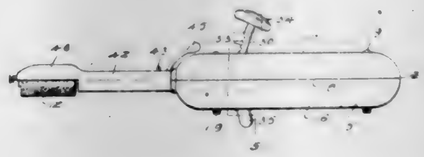
3. In a device of the character described, a roller comprising a spindle, a non-metallic drum carried thereby, and a metallic casing encompassing said drum and spaced from the medial portion thereof.

1,561,061. HOISTING AND CONVEYING DEVICE. JOSEPH H. DICKINSON, Montclair, N. J., assignor to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York. Filed Jan. 3, 1921. Serial No. 434,517. 2 Claims. (Cl. 254—185.)



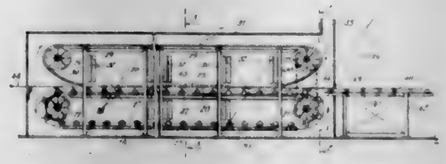
1. In a hoisting engine, a first drum shaft, a second drum shaft, drums on said shafts, a drum-driving gear on each shaft, said gears being connected to be driven in opposite directions, a second drum-driving gear on said second shaft, a power shaft, a gear loose on said power shaft and meshing with the drum-driving gear on said first shaft, means for connecting said loose gear to the power shaft, a second gear loose on the power shaft and meshing with the second drum-driving gear on said second shaft, and means for connecting said second loose gear to the power shaft.

1,561,062. ROTARY TOOTHBRUSH. SMITH W. DOUGLAS, Eudora, Ark. Filed Mar. 13, 1923. Serial No. 624,754. 3 Claims. (Cl. 74—14.)



1. A motive apparatus having a casing in sections separable on a plane extending substantially longitudinally thereof, an operating shaft journaled in said casing, split bearings comprising flanges carried by both sections, transverse shafts journaled in said flanges, intermeshing gear wheels on said shafts and on the first mentioned shaft, a depressible operating member engaging one of said gear wheels, and a spring within the casing to return the operating member to normal position having one end fastened to one of the sections and the other end fastened to said operating member.

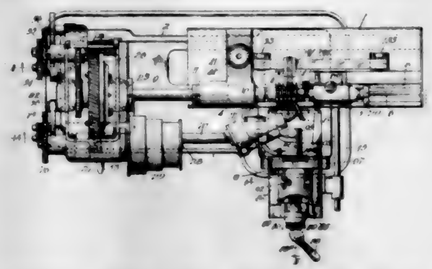
1,561,063. METHOD AND APPARATUS FOR MAKING PLYWOOD. MATTHEW ELDRIDGE DUNLAP, Madison, Wis. Filed Feb. 8, 1924. Serial No. 691,391. 29 Claims. (Cl. 144—279.)



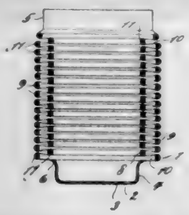
1. A machine for pressing layers of wood or the like into panels comprising cooperating platens adapted to receive the layers of wood between them, and means for magnetically urging the platens toward each other to exert gluing pressure upon the layers.

1,561,064. HOB-GRINDING MACHINE. JOHN EDGAR, Rockford, Ill., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed June 28, 1916. Serial No. 106,389. 32 Claims. (Cl. 51—225.)

1. A hob-grinding machine having in combination, a grinding wheel, a rotatably-mounted spindle for supporting a hob, means for causing relative movement between the wheel and the hob longitudinally of the hob, a drive wheel concentric with the spindle for rotating the same, and adjustable means connecting the spindle and drive wheel to permit of relative rotation between the same including an intermediate member, said intermediate member being adjustable with respect to both spindle and driving wheel and rigidly secured to each in the adjusted position.

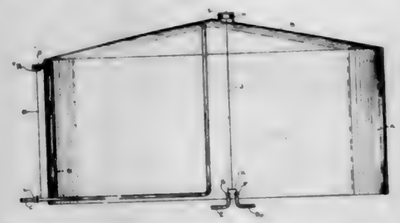


1,561,065. EXPANSIBLE COLLAPSIBLE ELEMENT. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1923. Serial No. 656,446. 10 Claims. (Cl. 137—157.)



8. An expansible-collapsible element for pressure and thermostatic purposes, comprising a tubular metallic shell having circumferential corrugations formed of inward and outward bends connected by intermediate transverse wall portions, and means located in certain of said bends to prevent collapse thereof in a direction longitudinally of the shell, said means comprising a resilient split-ring held by its resilience in engagement with the inner face of the bend.

1,561,066. HYDRAULIC OIL-DELIVERING SYSTEM. FREDERICK G. FARR, New York, N. Y. Filed Feb. 9, 1922. Serial No. 535,425. 5 Claims. (Cl. 221—67.)

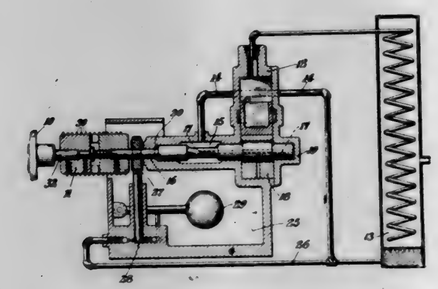


1. In a hydraulic oil storage system, the combination with a storage tank, an oil conduit for filling and emptying said tank, water inlet and outlet connections, and mechanism for automatically controlling said inlet and outlet connections by the inflow or outflow through said oil conduit to permit the displacement of water by the oil and of the oil by the water, of means operated by an abnormal change in the water level for closing said oil inlet and outlet conduit.

1,561,067. PHOTOTELEGRAPHIC TRANSMITTING PLATE. MARVIN FERBEE, New York, N. Y., and JOSEPH WISSMAR, Cleveland, Ohio, assignors to Pacific and Atlantic Photos, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1925. Serial No. 5,954. 4 Claims. (Cl. 95—5.6.)

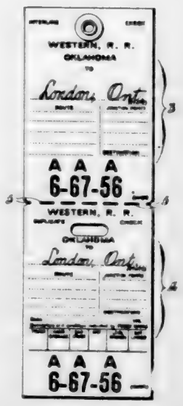
1. A phototelegraphic transmission plate made of metal, said metal plate having thereon a broken tone reproduction of the picture to be electrically transmitted, the said broken tone reproduction comprising a series of parallel lines of varying thickness, the said lines being composed of hard insulating material, that portion of the copper plate intermediate the said lines of insulating material being free from the said insulating material.

1,561,068. ROTARY FLUID-PRESSURE APPARATUS. BERNARD M. FINE, East Orange, N. J. Filed Mar. 18, 1920. Serial No. 367,026. 11 Claims. (Cl. 286—19.)



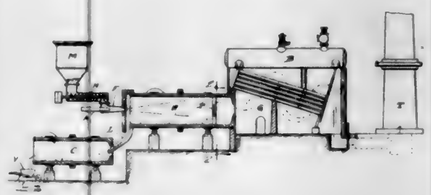
1. In rotary fluid pressure apparatus: sealing medium, a power shaft axially movable by said medium, a bearing cooperating with said shaft adapted to receive the sealing medium and sealing thereby the contained portion of the shaft, and means to supply said medium under pressure to said bearing.

1,561,069. CHECK. WILLIAM J. FITTALL, Lanham, Md. Filed Aug. 21, 1924. Serial No. 733,299. 8 Claims. (Cl. 283—20.)



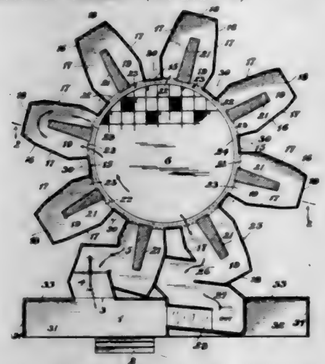
1. A baggage check comprising initially integral but separable sections having thereon identical sequences of digit groups and also identical symbols prominently displayed in association with corresponding groups, such groups and their associated symbols being arranged laterally with reference to the sequence of groups.

1,561,070. PROCESS OF AND APPARATUS FOR PRODUCING CEMENT. TSUNEICHI FUJIYAMA, Tokyo, Japan. Filed May 25, 1920. Serial No. 384,114. 2 Claims. (Cl. 222—7.)



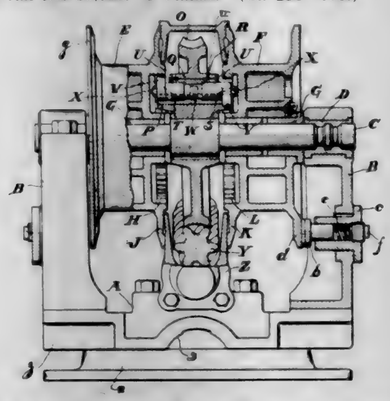
2. An apparatus for effecting combustion of finely pulverized fuels whereby a high temperature is obtained and a cement clinker is formed from the resulting ashy content of said fuel and a mineral, comprising a cooling chamber, a rotating combustion chamber open at both ends and having a baffle near one end thereof, a fuel feed associated with a mineral supplying hopper for mixing said fuel and mineral, and means for forcibly injecting said mixture into the combustion chamber whereby the heat units are caused to pass out beyond said baffle for heating purposes while the solid products are caused to pass in a direction opposite to that of the course of the gases into said cooling chamber.

1,561,071. AMUSEMENT DEVICE. FREDERICK R. GLASS, New York, N. Y. Filed Feb. 11, 1925. Serial No. 8,378. 10 Claims. (Cl. 272—2.)



1. A device of the class described comprising a rotary table, an enclosing wall therefor, a plurality of chambers extending from said table, each of said chambers having a continuous passage way extending from said table and leading back upon it.

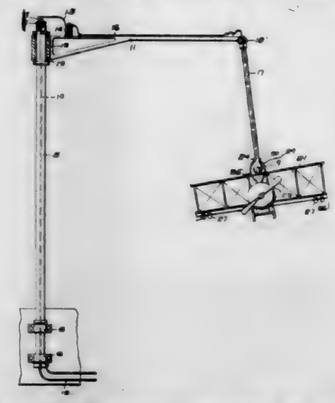
1,561,072. HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 16, 1925. Serial No. 30,756. 9 Claims. (Cl. 254—185.)



1. A hoist comprising a pair of drums each provided with a ratchet ring having teeth extending in opposite directions, a driver between the drums, a pawl mounted on said driver having teeth for selectively engaging with the ratchet rings, said pawl comprising a central bearing portion and oppositely extending teeth adjacent the ratchet rings, and means to receive the thrust at the heel of the pawl teeth.

1,561,073. ADVERTISING DEVICE. WILLIAM HANSON, Niagara, N. Dak. Filed July 18, 1924. Serial No. 726,733. 1 Claim. (Cl. 272—31.)

A device of the character described comprising a tubular supporting standard, an insulating block on the upper end thereof, a vertical contact point carried by said block and having its upper end projecting thereabove, a conductor leading through the standard and connected to the contact point and constituting one of the leads of an electric circuit, a second conductor constituting the other lead of said electric circuit, and electrically connected to said standard, an arm mounted to swing in a horizontal plane about said standard, a conductor extending along said arm, a contact spring to which said conductor is connected, said spring extending horizontally along said arm and having a free end which overlies and bears resiliently upon said upstanding point, a tubular member hingedly connected to the outer end of said arm, through which the last named conductor extends, an aeroplane hung from the lower end of said tubular member and a motor for driving said aeroplane, said motor being supplied with current through the circuit completed from the contact point, spring and the conductor extending along said arm and through the tubular member, the return circuit being through the material of the tubular member and the material of the arm and the standard to the second named conductor.



1,561,074. BUMPER. EDWARD J. HARVEY, Racine, Wis. Filed Mar. 24, 1924. Serial No. 701,436. 5 Claims. (Cl. 293—55.)

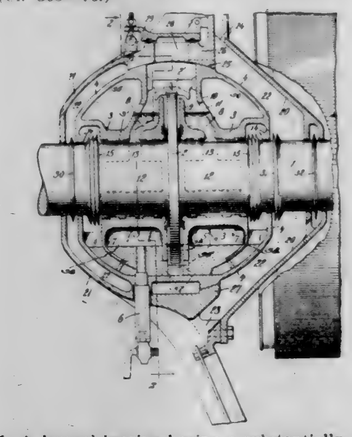
1. A bumper, comprising brackets, spaced rear rods connected to the brackets and projecting outwardly therefrom, resilient front rods having return bend end portions which are connected to the ends of the rear rods and are spaced forwardly of said rear rods, and spacing clips connecting the front rods together in spaced relation.

1,561,075. PROCESS OF FORMING DUSTLESS CRAYONS. JOHN A. HAUFF, Valparaiso, Ind., assignor to Lewis E. Myers and Company, Valparaiso, Ind., a Corporation of Indiana. Filed Apr. 7, 1923. Serial No. 630,597. 12 Claims. (Cl. 18—47.5.)

1. The process of producing dustless crayons, which consists in combining hydrated silicate of alumina and magnesia, in adding a binder thereto, in thoroughly mixing these ingredients, in applying moisture to form a thin putty-like mixture, in allowing the same to season, in moulding the material into the desired shape, and in subjecting the moulded product to spontaneous air dry-

ing so that the resulting physical properties of the product make it available for direct marking in a dry state and when moistened with water to the desired degree it becomes available as a water color and also serves as a painting medium in plastic form.

1,561,076. JOURNAL BEARING AND HOUSING. EDWARD HEITMAN, Jersey City, and JOHN F. TRUDEAU, Bayonne, N. J., assignors to Electro Dynamic Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 23, 1921. Serial No. 494,620. 8 Claims. (Cl. 308—76.)

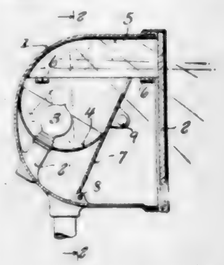


1. A journal bearing having a substantially cylindrical longitudinal inner wall extending therethrough for supporting the journal, an outer shell spaced from said cylindrical inner wall, a main oil reservoir between the inner wall and the outer shell, an auxiliary reservoir formed between the upper part of said inner wall and the outer shell adapted to distribute oil by gravity to the bearing surfaces, means for lifting from the main to the auxiliary reservoir an amount of oil in excess of that distributed to the bearing surfaces, and means for causing the excess oil to flow over the exterior surface of the inner wall so as to carry away the heat developed at the journal surfaces.

1,561,077. TOY. FRANK HIRSCH, New York, N. Y. Filed Nov. 6, 1924. Serial No. 748,005. 22 Claims. (Cl. 46—37.)

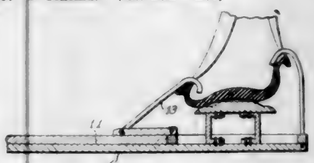
1. A toy vacuum cleaner including traction means, a housing member supported on said means and simulating a cleaning head, a handle member secured to said housing and a magnet in the housing having its poles disposed in operative position to pick up paramagnetic material from a surface over which the housing is moved by the handle member.

1,561,078. HEADLIGHT. OSCAR R. HOCKS, Janesville, Wis. Filed Feb. 9, 1924. Serial No. 691,623. 1 Claim. (Cl. 240—41.)



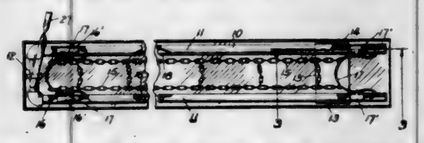
A headlight comprising a bell shaped hood, a baffle extending upwardly and forwardly from the bottom portion of said hood and ending a spaced distance from the upper portion of said hood, a lamp secured within said hood rearwardly of said baffle plate and projecting upwardly and forwardly, and a deflector mounted within said hood above said baffle plate and having a cylindrical forward portion whose elements approximately parallel the axis of said hood, said cylindrical forward portion gradually merging into a downwardly curved substantially spherical rear portion.

1,561,079. TIRE SPREADER. GEORGE WALLIS HUMFREY, Flint, Mich. Filed Nov. 3, 1924. Serial No. 747,570. 8 Claims. (Cl. 152—27.)



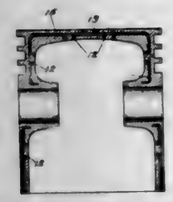
7. In combination, a lever, a frame pivotally mounted on the lever, a block carried by the lever movable through the frame, hooks carried by the frame for engaging one side of the tire, and a second lever pivotally mounted on the frame and provided with hooks for engaging another side of the tire, the hooks adapted to spread the tire upon the levers being drawn together.

1,561,080. ANTISKID-CHAIN CARRIER AND APPLIER FOR MOTOR VEHICLES. JOHN T. JINKENS, Broomfield, Colo., assignor, by direct and mesne assignments, to C. S. Molhohn and Fred Harvey, both of Broomfield, Colo., and Kensma Company, Longmont, Colo., a Corporation of Colorado. Filed Feb. 23, 1923. Serial No. 620,692. 5 Claims. (Cl. 152—14.)



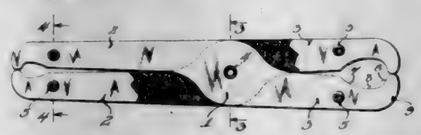
2. An anti-skid chain applying device comprising a pair of hollow rods supported upon one side of a vehicle, heads slidable in the rods, resilient U-shaped elements carried by the heads and adapted to engage a tire shoe, an anti-skid chain carried by the U-shaped elements, and means for moving the hollow rods longitudinally.

1,561,081. PISTON. WILLIAM E. JOHN, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 15, 1922. Serial No. 553,106. 5 Claims. (Cl. 74—108.)



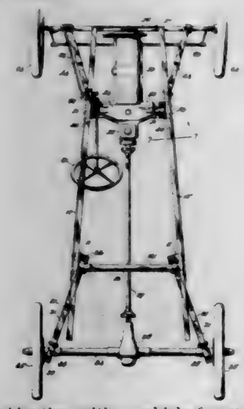
1. A cast metal piston having embedded within its head a continuous insert of metal extending throughout said head and of higher heat conductivity than said cast metal.

1,561,082. PLIERS. OSCAR HENRY JUNG, Milwaukee, Wis. Filed Aug. 9, 1924. Serial No. 731,145. 1 Claim. (Cl. 81—3.)



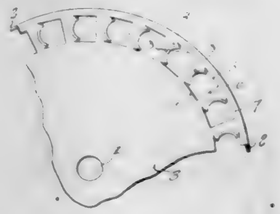
A pair of pliers having jaws provided with manipulating portions, each of said jaws comprising a plurality of distinct and separate sheets of insulating material, the sheets of one jaw alternating with the sheets of another jaw, a pivot pin passing through the overlapping portion of said sheets, and securing means passing through the sheets of each jaw adjacent its ends.

1,561,083. VEHICLE FRAME. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 24, 1921. Serial No. 472,225. 4 Claims. (Cl. 280—106.5.)



1. In combination with a vehicle frame comprising two longitudinally extending side members, two spring brackets secured one to each of said side members upon the inner side thereof; two springs fixedly secured at one end one to each of the brackets aforesaid, and which springs extend from said brackets across said side members and diverge from one another; and a cross member extending between said side members and diverge from one another; and a cross member extending between said side members, and the two ends of which are fastened one to each of said brackets.

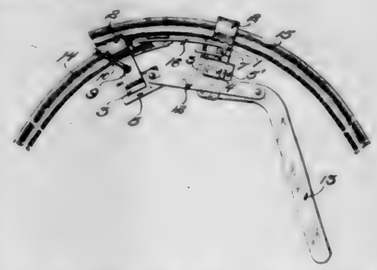
1,561,084. TURBINE-ENGINE ROTOR AND METHOD OF MAKING THE SAME. JOSEPH KOENIG, Manitowoc, Wis. Filed Apr. 14, 1924. Serial No. 706,502. 3 Claims. (Cl. 29—156.4.)



1. The method of forming turbine rotors comprising forming a circular disk from sheet metal, cutting a plurality of tongues from adjacent the marginal portions of said disk by means of slits defining the three free edges of said tongues, whereby an unbroken marginal ring is left integrally joined to the main body of said disk, bending said tongues out of the plane of such disk, and curving such tongues.

3. A turbine rotor formed from an integral disk of metal having a plurality of tongues spaced inwardly from the marginal edge and joined to the body of said disk by a portion extending laterally of said disk, all of said tongues extending outwardly from the same side of said disk, and an integral continuous peripheral ring surrounding said tongues.

1,561,085. RIM SPREADER. MICHAEL KOHL, North Milwaukee, Wis. Filed Sept. 17, 1923. Serial No. 663,175. 2 Claims. (Cl. 157—1.)

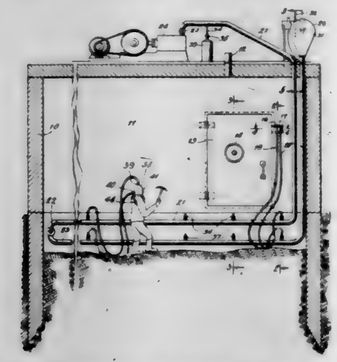


1. In a rim spreading device, the combination of pairs of jaws adapted to engage opposite sides of a rim, spindles having reversely threaded ends screwed into said jaws, cranks for rotating said spindle, a plate associated with each pair of jaws, said plates being folded and cut away to receive said jaws, means carried by each of said plates for locking the plates to one of each of said jaws, a toggle link element pivoted to each of said plates and pivoted to each other intermediate the ends of one of said elements, said last mentioned element having a manipulating extension projecting outwardly at an angle to the remaining portion of said element.

1,561,086. APPARATUS FOR SUPPLYING AIR TO WORKMEN. VICTOR K. KORJIBSKI, Brooklyn, N. Y. Filed Mar. 24, 1923. Serial No. 627,254. 6 Claims. (Cl. 128—143.)

1. An apparatus for supplying air to workmen when working within a compartment, comprising a helmet hav-

ing intake and discharge passages, an air supply and discharge element comprising means for supplying air under pressure and involving air supply and discharge pipes haivng a plurality of nozzles spaced longitudinally thereof, said pipes being coupled together and provided with a valve for controlling the communication there-



between and for regulating pressure in the discharge pipe, flexible tubings mounted in connection with the intake and discharge passages of the helmet and adapted to be detachably connected with the nozzles of said supply and discharge pipes and the free end of said discharge pipe opening to atmosphere.

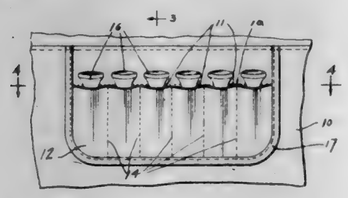
---

1,561,087. POURING FRAME FOR CASTING MOLDS. WILLIAM J. KORTEN, Jr., St. Louis, Mo., assignor to Carondelet Foundry Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 23, 1924. Serial No. 694,602. 5 Claims. (Cl. 22—112.)

1. A casting frame for molds comprising four duplicate and interchangeable plates each of which has a number of longitudinal slots near one end, a flange extending at right angles from the opposite end of each plate and having a number of slots therein spaced equally with the first named slots, each of said plates having a number of openings therethrough, and means passing through said slots for securing the plates together.

---

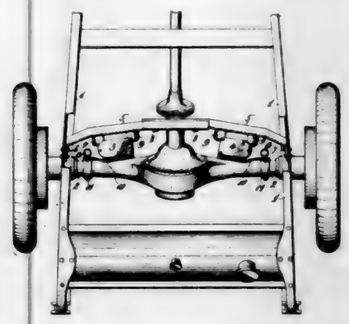
1,561,088. TEE HOLDER FOR GARMENTS. RALPH E. LADUE, Brooklyn, N. Y., assignor to John David, New York, N. Y., a Corporation of New York. Filed Aug. 24, 1925. Serial No. 51,926. 3 Claims. (Cl. 2—250.)



1. In a tee holder for garments and golf accessories, the combination of a flexible front member, a flexible rear member engaging the same to form a plurality of pockets therebetween to receive a plurality of tees, and a substantially flat supporting member for said tee holder arranged to retain the same taut transversely of said pockets, said rear member extending above the openings of said pockets and being secured to said supporting member immediately adjacent to the openings of said pockets whereby the heads of said tees are brought into direct frictional abutment wth said rear member, the latter being retained substantially straight along the line along which it is secured to said supporting member.

---

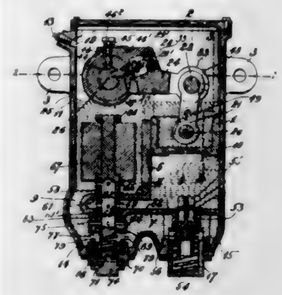
1,561,089. MEANS FOR ATTACHING SHOCK ABSORBERS TO MOTOR OR OTHER VEHICLES. JAMES S. LANG, Watertown, Mass. Filed Apr. 21, 1923. Serial No. 633,778. 2 Claims. (Cl. 267—8.)



1. The combination with the frame and axle of a vehicle, of a shock absorber having an external rocker arm, means connecting the rocker arm to the axle of the vehicle, an attaching member for the shock absorber to which it is secured, said member being formed and arranged whereby it will extend between and be attached to the frame at separate points so located that the locus of force exerted by the shock absorber during the functioning thereof will lie substantially within a plane passing through said points, and means for attaching said member to the frame at said respective points.

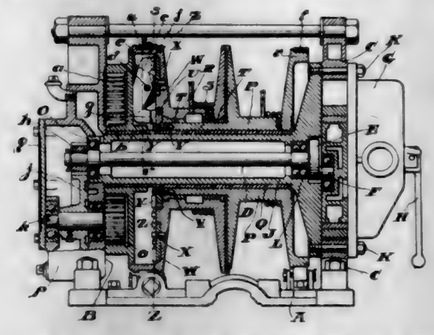
---

1,561,090. SHOCK ABSORBER. JAMES S. LANG, Watertown, Mass. Filed Dec. 31, 1923. Serial No. 683,603. 18 Claims. (Cl. 188—88.)



1. In a fluid check shock absorber, a casing, a rock shaft mounted thereon, a rocker arm with hub embracing said shaft, means for keying the hub to the shaft comprising a member having a conical head, and a tightening plug threaded to turn in said hub and bear when tightened against said member, said plug having a hollow end into which the conical head of said member fits.

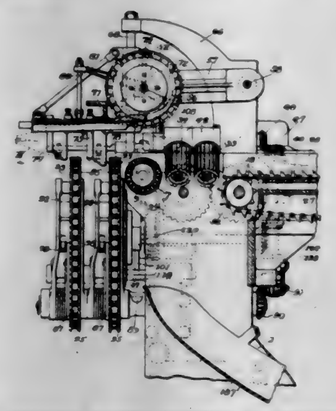
1,561,091. DOUBLE-DRUM HOIST. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 30, 1925. Serial No. 40,482. 2 Claims. (Cl. 254—185.)



1. In a double drum hoist, the combination of a main driving shaft, two drums mounted side by side and rotatable relatively to the driving shaft, a reversible motor, a main driver connected to be rotated by the driving shaft at one end of the drums, drum drivers mounted at one end of the drums, and a double ended rocking pawl carried by the main driver on an axis transverse to the longitudinal axis of the hoist and automatically adjustable into engagement with one drum driver or the other in accordance with the direction of rotation of the main driver.

---

1,461,092. MACHINE FOR DEBUTTING CORN. WILLIAM HAMMOND LEISTER, Westminster, Md., assignor to The United Machinery Company, Westminster, Md., a Corporation of Maryland. Filed July 18, 1918, Serial No. 304,728. Renewed June 16, 1919. 41 Claims. (Cl. 146—84.)

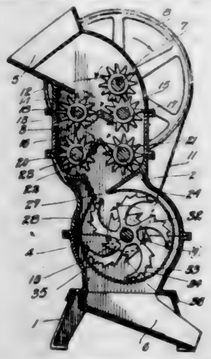


1. A debutting machine including in combination cutting devices, alining means for positioning the article for debutting and devices operated upon by the article for varying the capacity of the alining means to correspond to the size of the article debutted.

---

1,561,093. FEED MILL. LORREN B. MCCARGAR, Kansas City, Mo. Filed Apr. 14, 1924. Serial No. 706,344. 4 Claims. (Cl. 83—6.)

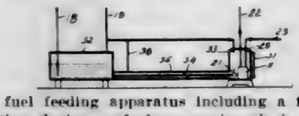
1. In a mill, a casing comprising upper and lower chambers, a cylindrical screen in the lower chamber, having a receiving opening at its upper portion, a plurality of arms rotatable within the screen and adapted for forcing material therethrough, cutting means in the upper chamber, and a partition separating the upper and lower chambers having a throat at one side of the



arm axis and inclined to deliver material into the screen tangentially to the arms and in the direction of the arms rotation.

---

1,561,094. FUEL-FEEDING APPARATUS. JOHN AMBROSE MALONE, Brooklyn, N. Y. Filed Aug. 25, 1924. Serial No. 733,889. 1 Claim. (Cl. 158—36.)



In a fuel feeding apparatus including a fuel tank, a carburetion device, a fuel consuming device, a conduit for conveying liquid fuel by gravity from the tank to the carburetion device, and a second conduit for conveying a fuel and air mixture from the carburetion device to the consuming device, the combination of a chamber adjacent said fuel tank and enclosing the carburetion device and the liquid fuel conduit to collect liquid fuel leaking therefrom, said chamber having a portion extending upwardly above the highest elevation of liquid in the tank to prevent the escape of liquid from said chamber, and an air inlet for admitting air to the carburetion device from the exterior of said chamber.

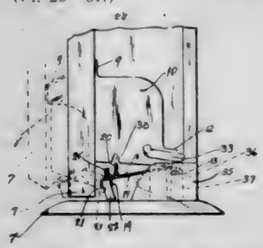
---

1,561,095. CEMENT. WILLIAM W. MARLETT, Glendale, Calif. Filed Sept. 12, 1924. Serial No. 737,422. 2 Claims. (Cl. 87—17.)

1. A cement composed of resin, coal tar pitch, linseed oil, vulcanized rubber, and a sufficient quantity of gasoline to bring the mixture to the consistency of heavy molasses.

---

1,561,096. WEATHER STRIP. FRANK MAROVICH, Detroit, Mich. Filed Apr. 28, 1924. Serial No. 709,400. 2 Claims. (Cl. 20—67.)



1. A weather strip comprising a housing, the lower edge of said housing being angularly turned and doubled

upon itself; a plate extending longitudinally of said housing and having one edge angularly turned and interlocking with said angularly turned edge of said housing, to provide a hinged connection, said plate being buckled intermediate its edges, the buckled portion projecting upwardly, the free edge of said plate being angularly turned; an engagement strip; and means cooperating with said angularly turned free edge of said plate for retaining said engagement strip mounted thereon, said buckled portion of said plate providing a reinforcement therefor; a rockably mounted rod projected into said housing and having an angularly turned end; an abutment block adapted for engaging said angularly turned end of said rod for rocking the same; an arm secured to the opposite end of said rod; and a coiled spring positioned between the end of said arm and said plate for effecting a downward movement of said plate, relatively to said housing upon the rocking of said rod.

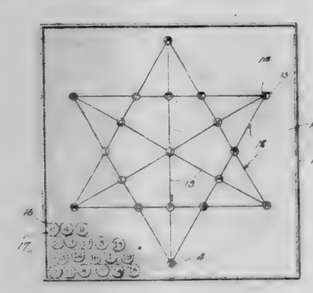
---

1,561,097. PACKING CONTAINER. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed June 9, 1924. Serial No. 719,014. 2 Claims. (Cl. 220—73.)

1. A container comprising a substantially cylindrical wall and dished ends, said ends comprising a substantially cylindrical flange bent back outwards so as to form a double flange, the outer part of said double flange forming a prolongation of the cylindrical wall of the container and the edge of the outer part of said flange being united to the edge of said cylindrical wall by an external welded seam, and an abutment arranged behind the welded seam to support said seam.

---

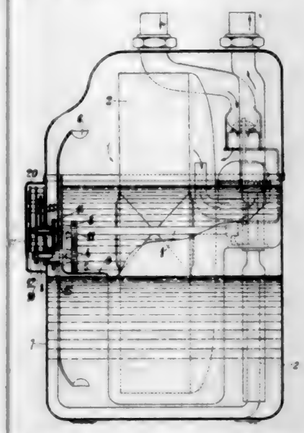
1,561,098. PUZZLE. CORNELIUS J. MEEHAN, Baltimore, Md. Filed Apr. 22, 1925. Serial No. 24,958. 1 Claim. (Cl. 273—132.)



In a puzzle of the class described, a board having the representation of a six pointed star formed by a plurality of interlaced equilateral triangles and provided with diagonals between the points of the star intersecting at a common point constituting the center of the star, such representation having station spots indicated at each point of the star, the center of the star and each intersection of the triangles with each other and with the diagonals whereby five station points are formed on each line, and a series of pieces consecutively numbered and equal in number to the station spots, said station spots having key indicia shown thereon.

---

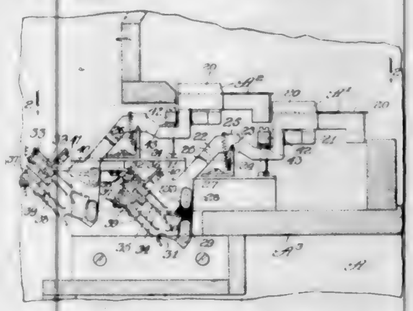
1,561,099. MECHANISM OF GAS METERS. LAURENT MILLET, Montrouge, Seine, France, assignor to Compagnie pour la Fabrication des Compteurs et Materiel d' Usines à Gaz, Montrouge, France, a French Company. Filed Apr. 9, 1924. Serial No. 705,386. 1 Claim. (Cl. 73—1.)



In a gas meter of the liquid type, a casing, a rotary measuring drum in the same, a bearing passing through the casing and secured to said casing in a fluid-tight manner, a shaft mounted in this bearing, means for transmitting rotary motion of the measuring drum to said shaft, an indicating mechanism arranged exteriorly of the casing, means for transmitting rotary motion of the shaft to the indicating mechanism, an elevating apparatus journalled on the bearing within the casing, and means for transmitting rotary motion of the measuring drum to the said elevating apparatus.

---

1,561,100. KEY MANUAL FOR ELECTRIC MUSICAL INSTRUMENTS. BERTIE E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 14, 1922, Serial No. 568,248. Divided and this application filed Mar. 31, 1924. Serial No. 703,177. 6 Claims. (Cl. 84—326.)

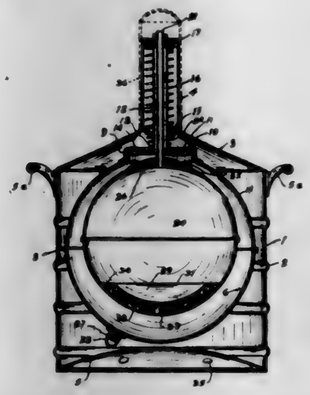


4. A console for controlling the playing of stringed instruments, comprising two parallel horizontal metallic bars, each carrying a plurality of circuit jacks, one contact member of each circuit jack being mounted directly on the corresponding metallic bar and the other contact member being separated from the companion contact member by an insulating strip, whereby each of said metallic bars serves as a common conductor for the attached contact members of the jacks, a fulcrum-bar extending parallel with said first-mentioned bars, a plurality of key-levers fulcrumed on said fulcrum-bar,

each of said key-levers being equipped at one end with a pair of contact members adapted to close the circuits through one of the jacks mounted on each of said metallic bars, and a key mounted upon the other end of each key-lever.

---

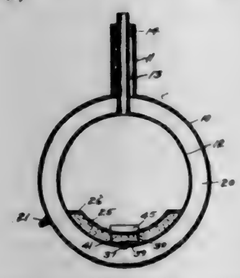
1,561,101. LIQUID-OXYGEN CONTAINER. CHESTER MOTT and WILLIAM H. MARSHALL, Denver, Colo., assignors, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 28, 1924. Serial No. 688,972. 3 Claims. (Cl. 220—10.)



1. A vessel for storing and shipping liquefied gases comprising, in combination, an inner container having a long, narrow neck rigidly attached thereto, an outer container surrounding said inner container, said outer container having an opening, a flexible diaphragm secured in said opening, said diaphragm having an opening, a tubular member extending through said diaphragm and rigidly secured thereto, the neck of the inner container extending through the tubular member, a ferrule spacing the tubular member from the neck, said ferrule being connected to said member and neck by an airtight joint, a casing surrounding said containers, said casing having a cylindrical neck portion for the reception of the tubular members secured to the outer containers, a universal joint between said cylindrical neck and the tubular member, resilient means for supporting said universal joint, and resilient means opposed to said resilient supporting means.

---

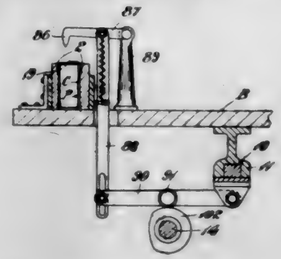
1,561,102. VACUUM CONTAINER. CHESTER MOTT, Denver, Colo., assignor, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Apr. 30, 1924. Serial No. 710,011. 10 Claims. (Cl. 220—9.)



1. A vacuum producing device comprising: walls forming an evacuating chamber; gas absorbent material whose absorbing capacity varies with temperature, said gas absorbent material being situated in said evacuating chamber; means for connecting said evacuating chamber with the space to be evacuated when the temperature of said material is such as to give it a high adsorptive value; and means for closing the connection between said evacuating chamber and the space to be evacuated when said adsorption value is reduced by a change in temperature.

---

1,561,103. MACHINE FOR CLOSING CARTONS. ANDREW FRANCIS NEY, East Kew, Australia. Original application filed June 20, 1923, Serial No. 648,549. Divided and this application filed Sept. 22, 1924. Serial No. 739,226. 4 Claims. (Cl. 93—6.)



1. In machines for closing cartons provided with flaps, one formed with a slit and another with a peak, an intermittingly traveling carrier provided with carton receiving pockets formed with flared mouths, means to fold the flaps with the peaked one overlying the slit, a pivoted arm formed with a downwardly bent finger above the flaps and means to reciprocate said arm in contact with the flaps whereby the peak of one flap is inserted in the slit of the other flap.

---

1,561,104. NAIL. FRED OLDFIELD, Portsmouth, N. H., assignor to Morley Button Manufacturing Company, Portsmouth, N. H., a Corporation of Maine. Filed Nov. 12, 1924. Serial No. 749,418. 5 Claims. (Cl. 85—28.)

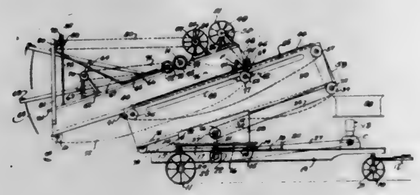
1. A nail comprising, in combination, a shank, a disk in which said shank is mounted, and a metallic casing enclosing said disk and having portions penetrating the latter for a substantial distance in an annulus spaced materially from the periphery of the disk.

---

1,561,105. MANURE LOADER. WILLIAM OTTO, Algoma, Wis. Filed May 25, 1922. Serial No. 563,497. 5 Claims. (Cl. 198—10.)

1. A machine of the character described comprising a wheeled truck, a turn table supported thereon, a rearwardly inclined stationary conveyor constructed and arranged upon the turn table, an extensibly slidable conveyor constructed and arranged upon the stationary conveyor, a tilting section on said slidable conveyor, means for adjusting the section, and loading mechanism on said section.

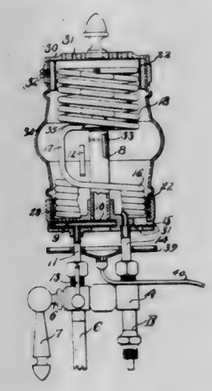
3. A machine of the character described comprising a wheeled truck, a turn table supported thereon, a rearwardly inclined stationary conveyor constructed and arranged upon the turn table, an extensibly slidable conveyor constructed and arranged upon the stationary means for adjusting the section, slotted guides on the



section, bearings on said section, a cranked shaft journaled in the bearings, fork arms connected with the cranks of the shaft and having crossheads slidable in the slotted guides, tine forks on the outer ends of the fork arms and means for simultaneously driving the conveyors and operating the cranked shaft.

---

1,561,106. DENTIST'S WATER HEATER. CHARLES E. PARKHURST, Somerville, Mass. Filed May 20, 1922. Serial No. 562,491. 5 Claims. (Cl. 122—250.)

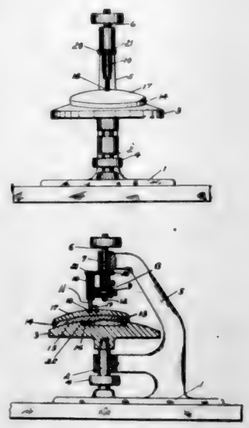


2. A water-heater comprising a casing having air openings at its upper and lower ends and a central enlargement, a water coil disposed in said casing below said enlargement, a second water coil substantially filling the space above said enlargement but providing longitudinal openings therethrough, means for catching and carrying away the water of condensation which drips from said coils, and a burner arranged in said casing to direct the flame downwardly into the space provided by said enlargement between the coils and not into direct initial contact therewith.

---

1,561,107. LENS-GRINDING MACHINE. HAROLD K. PARSONS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 1, 1921. Serial No. 481,812. 2 Claims. (Cl. 51—133.)

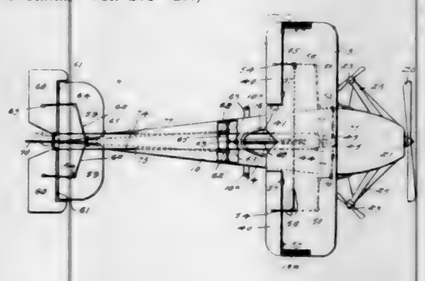
1. A machine for grinding multifocal lenses comprising a tool provided with a central recess on its surfacing face, a spindle concentrically mounted for rotation above the tool, a sun gear secured adjacent the lower end of the spindle, an adjustable bracket arm secured to the lower end of the spindle, the length of said bracket arm being less than the radius of the recess in the tool, a work



holder mounted for rotation in the bracket arm, and a pinion secured to the work holder shaft and meshing with the sun gear.

---

1,561,108. AEROPLANE. CLAUDIUS M. PETTY, Wilkesboro, N. C. Filed Jan. 12, 1923. Serial No. 612,269. 1 Claim. (Cl. 244—29.)



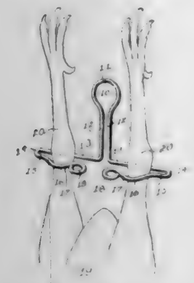
An airship having a fuselage, a plane carried thereby, an aileron associated with said plane, a substantially tubular bearing arranged longitudinally within the fuselage and at an inclination, said bearing being open intermediate its ends, a rock shaft journaled in said bearing against movement longitudinally of the bearing, means to actuate said aileron through rocking movement of said shaft, an auxiliary plane, a control element for said plane movable on an axis at substantially a right angle to the rock shaft, a lever by means of which said shaft is rocked extending therefrom through the opening of the bearing, means connecting said lever to said shaft for movement independently thereof on an axis substantially parallel to the axis of the control means, and a rod connection between said lever and control means.

---

1,561,109. FOWL-DISPLAY HANGER. JOHN W. PLATT and ARTHUR E. KRAMER, Waterville, Conn. Filed Feb. 21, 1925. Serial No. 10,829. 5 Claims. (Cl. 17—44.)

1. In a poultry display hanger, an upper loop adapted to be hung upon a wall-hook or other support in a meat market, a vertical section connected to said loop and a

pair of lower laterally extending loops directly connected to said vertical section for supporting the legs of a fowl



in spaced-apart position, said lower loops being oppositely disposed and having their centre lines in alinement

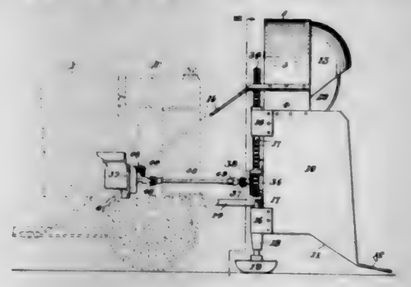
---

1,561,110. SHADE HOLDER. THEODORE REMINGER, Tiffin, Ohio. Filed Mar. 10, 1924. Serial No. 698,294. 2 Claims. (Cl. 156—24.)

1. A holder of the class described including a body provided with an upwardly turned bottom flange and a downwardly turned upper flange, a curtain bracket including a plate and an arm, said arm provided with a slot, the ends of said plate being slidable in the ways formed by the flanges on the body, a rod rotatably mounted on the body and adapted to extend through the slot of the arm of the bracket, and teeth extending from the rod and adapted to be brought in registry with the slot of the arm in order that the bracket may be moved longitudinally of the body or to be disposed out of alinement therewith for holding the bracket in a fixed adjusted position.

---

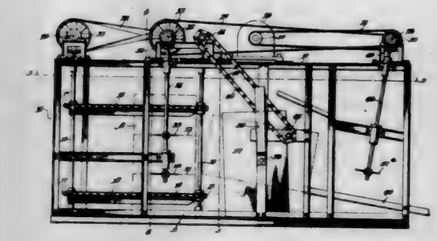
1,561,111. SNOWPLOW. LEON W. RITTENHOUSE, Rochester, N. Y. Filed Apr. 17, 1924. Serial No. 707,175. 1 Claim. (Cl. 37—43.)



The combination with a tractor and its motive power unit, of a snow gathering, bladed wheel carried by and located forwardly of the tractor, a gear connected to said wheel to rotate therewith, a pinion meshing with the gear, a casing carried by the tractor, a stub shaft journaled in the casing and projecting therefrom, a sprocket wheel on the projecting portion of the stub shaft, a sprocket wheel on the front end of the crank shaft of the motive power unit for the tractor, a chain connection for said sprocket wheels, a gear on the stub shaft within the casing, a clutch controlled connection between the stub shaft and the gear within the casing, and a drive connection between the last mentioned gear and the pinion.

---

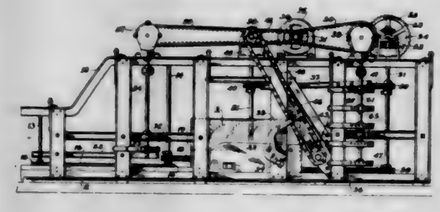
1,561,112. METHOD OF AND MEANS FOR SCORING ICE. ROBERT H. ROARK, Waco, Tex., assignor to Perfection Ice Scoring Machine Company, Waco, Tex., a Corporation of Texas. Filed Aug. 24, 1922, Serial No. 584,075. Renewed Sept. 28, 1925. 7 Claims. (Cl. 125—13.)



1. The herein described method which consists in moving a block of ice in one direction and simultaneously scoring the sides thereof, tilting the block to an inclined position through an arc of substantially 90°, and while in the inclined position causing the block to move by gravity in the same direction and simultaneously causing the scoring of the block in a direction transverse to the first scoring.

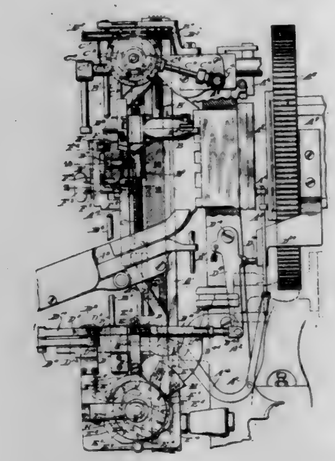
---

1,561,113. METHOD OF AND MEANS FOR SCORING ICE. ROBERT H. ROARK, Waco, Tex., assignor to Perfection Ice Scoring Machine Company, Waco, Tex., a Corporation of Texas. Filed Feb. 9, 1924. Serial No. 691,751. 19 Claims. (Cl. 125—13.)



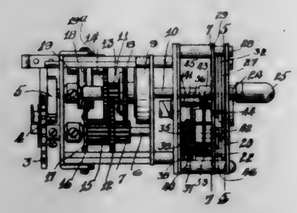
1. The herein described method which consists in moving a block of ice and simultaneously scoring the sides thereof in one direction, tilting the block in a vertical plane through an arc of substantially 90°, and subsequently moving the block and simultaneously scoring the sides thereof in a direction transverse to the first scoring, without changing the course of direction of movement of said block.

1,561,114. TYPOGRAPHICAL MACHINE. JOHN R. ROGERS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,467. 40 Claims. (Cl. 199—59.)



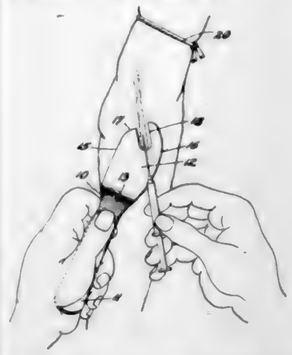
1. In a typographical machine, the combination of slug producing mechanism adjustable to vary the length of the slugs, and automatic means for effecting such adjustment at every other slug producing operation.

1,561,115. IMPULSE TRANSMITTER. JOHN J. RUDDICK, West Newton, Mass., assignor to General Street Signal Corporation, Rochester, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,544. 12 Claims. (Cl. 177—378.)



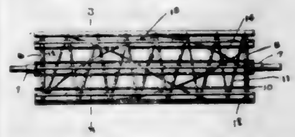
1. The combination with an impulse transmitting mechanism and a motor for operating the same, of a signal arranged to indicate the operation of the impulse transmitting mechanism and having connection with the impulse transmitting mechanism to be set away from normal position upon the operation of the impulse transmitting mechanism, and a motor for effecting the movement of the signal toward its normal position, including means controlled by the impulse transmitting mechanism for effecting the movement of the second mentioned motor to effect the movement of the signal toward its normal position.

1,561,116. VEIN STABILIZER. JOHN C. SILLIMAN, Palo Alto, Calif. Filed Apr. 1, 1925. Serial No. 19,926. 8 Claims. (Cl. 128—214.)



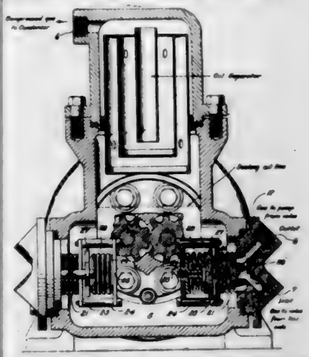
1. A venous stabilizer for use in vein puncture, including a handle and a substantially flat blade portion having a notch therein, said blade portion being adapted to be pressed over a distended vein to close on end thereof with the vein projecting through said notch.

1,561,117. PAPER-CYLINDER MOLD. JOHN R. SINCLAIR, Holyoke, Mass. Filed Apr. 9, 1921. Serial No. 460,130. 1 Claim. (Cl. 92—48.)



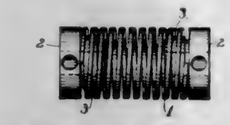
A paper cylinder mold consisting of end spiders having circular rims and hubs, trunnions mounted in the hubs, a flat helix having end coils parallel to each other, united to the rims in parallel relation thereto and holding the spiders in spaced relation, said helix having external notches therein, flat bars in said notches flush with the external edge of the helix, a series of rods mounted on the turns of the helix and on the rims and end coils, and a helix extending in an opposite direction to and secured on the first helix.

1,561,118. PRESSURE TEMPERATURE VALVE. HAZOR JUDSON SMITH, Springfield, Mass., assignor, by mesne assignments, of one-fourth to Willard Reid, Springfield, Mass; one-fourth to Alfred Buckley, jr., Providence, R. I.; and one-fourth to John W. Scott, Philadelphia, Pa. Filed Feb. 5, 1921, Serial No. 442,894. Renewed Mar. 31, 1925. 10 Claims. (Cl. 236—92.)



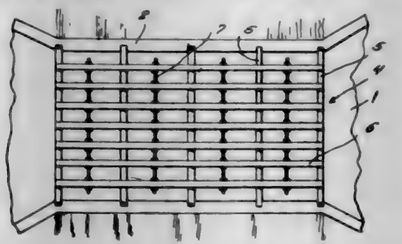
6. A device of the character described, including an expansible body having an inlet and outlet, a valve having a seat within said body and a sealed expansible chamber operatively connected to said valve to actuate the valve.

1,561,119. FLEXIBLE COUPLING. HAZOR JUDSON SMITH, Springfield, Mass., assignor, by mesne assignments, of one-fourth to Willard Reid, Springfield, Mass.; one-fourth to Alfred Buckley, jr., Providence, R. I.; and one-fourth to John W. Scott, Philadelphia, Pa. Filed May 23, 1922, Serial No. 563,105. Renewed Mar. 31, 1925. 3 Claims. (Cl. 64—96.)



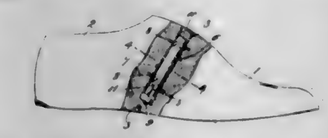
1. A flexible coupling in combination, a coiled spring wound opposite to the direction of the applied torque, shanks adapted to screw into each end of the spring provided with a collar against which the ends of the spring compress axially whereby tension is given to the spring to prevent its being unscrewed before radial compression takes place due to the application of the torque.

1,561,120. CROSSING GRATE FOR GUTTERS. LEON SMITH, Hammondsport, N. Y. Filed June 26, 1925. Serial No. 39,783. 1 Claim. (Cl. 94—30.)



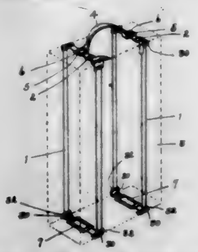
In a structure of the class described, a concrete trough, the side walls of which are provided at their upper ends with ledges, an open work grate resting upon said ledges, said grate comprising longitudinal transversely spaced stringers having bolt holes at their opposite ends, there being bolts embedded in said trough walls, and said bolts extending through said holes to anchor said stringers in place, and a plurality of longitudinally spaced cross bars fastened to said stringers, together with tie rods connecting said bars together.

1,561,121. LAST. EDMUND S. SPINNEY, Abington, Mass., assignor to Jeremiah Fitzpatrick, Brockton, Mass., and Charles H. Fitzpatrick, North Abington, Mass. Filed Nov. 17, 1922. Serial No. 601,540. 3 Claims. (Cl. 12—135.)



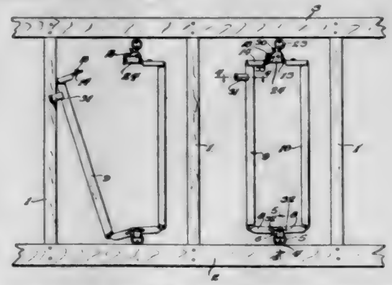
1. A last comprising a fore-part section and a heel-part section having a boring therein along the line of cut between said sections when in aligned position, interlocking bars slidable on one another contained within said boring and secured respectively to said last sections whereby said sections will be maintained by the bars in aligned position and be movable into and out of aligned position, said bars being so arranged that the line on which they slide is at an angle with relation to the line of cut between the sections whereby the sections will move relatively toward one another when moved into aligned position and outwardly away from one another when moved out of aligned position, and means for securing the bars to said sections.

1,561,122. LUGGAGE CARRIER. SARAH M. STAHL, Utica, N. Y. Filed Jan. 23, 1925. Serial No. 4,329. 2 Claims. (Cl. 190—38.)



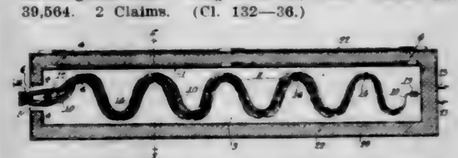
2. In a luggage carrier, a harness comprising adjustable straps, a handle mounted on said harness, members having rollers swiveled thereto, elongated slots formed in said members, bolts projecting through said elongated slots, whereby to hold said members in given relation to each other and accommodate the same to the size of the luggage, and corner pieces slidingly mounted on said harness to aid in protecting said luggage.

1,561,123. STANCHION. FRED STAUFFER, Mount Vernon, Mo. Filed May 9, 1925. Serial No. 29,119. 2 Claims. (Cl. 119—147.)



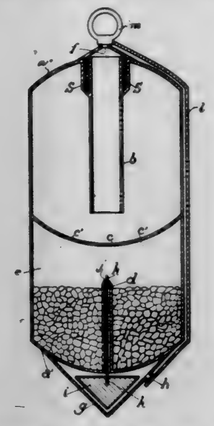
1. A stanchion comprising a relatively stationary member, a relatively movable member, a spring tongue at the upper end of the stationary member adapted to project under the extremity of the movable member, an upstanding tongue on the movable member at the upper extremity thereof, and a latch carried by the stationary member and having a hooked free extremity to engage under said tongue.

1,561,124. MARCEL WAVER. BENJAMIN F. STEWART, Birmingham, Ala. Filed June 25, 1925. Serial No. 39,564. 2 Claims. (Cl. 132—36.)



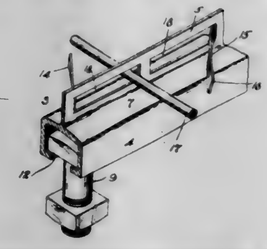
1. A permanent Marcel waver comprising a metal casing composed of a top and bottom section hingedly connected along one side edge, a serpentine metal strip removably mounted in said casing, clips carried by said casing for securing the ends of said strip in operative position, and means for heating the casing.

1,561,125. SELF-IGNITING MARINE TORCH. HERMANN THEM, Dinglingen, Germany. Filed Mar. 6, 1925. Serial No. 13,662. 3 Claims. (Cl. 9—83.)



1. In a self-igniting marine torch, the combination of a casing, a body of ballast for weighting said casing, and means for producing a dropwise supply of water to said casing, said means comprising a narrow upward tube opening into said casing and a needle extending into said tube and connected to said body of ballast.

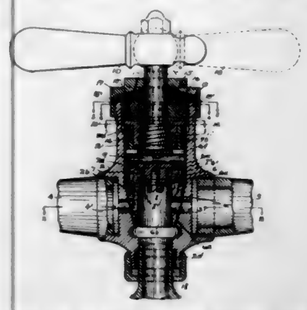
1,561,126. CONCRETE-REENFORCING MEMBER. JOHN C. TIMM, Youngstown, Ohio. Filed July 5, 1921. Serial No. 482,301. 1 Claim. (Cl. 72—105.)



A combined reenforcing and protecting metallic insert for concrete structures comprising a face portion adapted to be exposed as a part of the outer surface of such structure, a web member with a T-shaped head adapted to be imbedded in said concrete forming substantially an I-beam with said face portion and elongated integral anchoring members inclined downwardly and outwardly from said web member to maintain said reenforcing member in immovable relation to the adjacent concrete, said anchoring members leaving elongated openings in said web members.

1,561,127. WATER-MIXING VALVE. ORVIS W. VALLIER, Watertown, N. Y., assignor to J. B. Wise Incorporated, Watertown, N. Y., a Corporation of New York. Filed Apr. 6, 1925. Serial No. 21,066. 7 Claims. (Cl. 251—154.)

7. In a mixing valve for dispensing water at different temperatures, the combination with a hollow body formed with a valve chamber and with a threaded portion beyond said chamber and having cold and hot water inlet ducts communicating with said chamber, of a valve rotatable in said chamber and having radial ports adapted to respectively control the flow of the cold and hot water into said chamber, a stem for rotating said valve said stem passing axially through said threaded portion, means for reciprocating said stem when the latter is rotating the valve and for stopping the rotary movements of the stem immediately the valve is closed, a disc adjustably supported in said threaded portion adapted to control the operative seating of the valve, a cap for closing the open end of said threaded portion, a packing member partially filling the hollow side of said cap concentric to and in contact with the stem and also over-



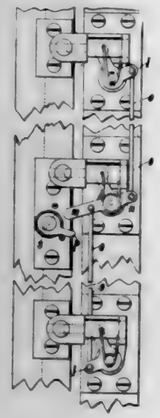
lying the open end of said threaded portion, said packing adapted to be compressed by said cap against said stem and also against said threaded portion for preventing leakage in case the water wells upwardly in said portion, and means interposed between said disc and said packing for preventing the packing from disturbing the adjustment of the valve in case the packing rotates with the cap.

1,561,128. EAR-ORNAMENT SUPPORT AND METHOD OF FORMING SAME. ANTHONY E. WALLER, Edgewood, R. I. Filed Aug. 25, 1923. Serial No. 659,355. 2 Claims. (Cl. 29—160.6.)

1. A one-piece sheet metal ear-ornament support formed of a narrow elongated strip cut and formed from sheet stock with a concave convex enlargement intermediate its ends presenting a broad gem-supporting face, an integral pierced ear below said enlargement and set in a plane at a right angle to that of said enlargement and to which a pendant may be attached, a rearwardly-extending hook-shaped arm below said ear, and a loop-shaped portion circular in cross-section extending upwardly and rearwardly from the upper edge of said enlargement and adapted to pierce the ear of the wearer, the free end of said loop portion being engaged by the hook of said arm when in closed or operative position, and an ornament supporting pin extending from said enlargement.

2. An improved method of forming an ear ornament support, which consists in cutting a narrow elongated strip from sheet stock having a hook at one end, an enlarged disk-shaped portion intermediate its end and a laterally-extending ear thereon, piercing said ear, relatively twisting the strip about the longitudinal axis thereof to set said ear in a plane at a right angle to that of said enlargement, swaging said enlargement into cocavo convex shape and the opposite ear-engaging portion of the strip circular in cross section, and bending both the hook and the opposite ear engaging end portion back for engagement with each other.

1,561,129. DOOR LATCH. CHARLES TORRES WEYMANN, Paris, France. Filed Sept. 14, 1923. Serial No. 662,784. 5 Claims. (Cl. 292—36.)

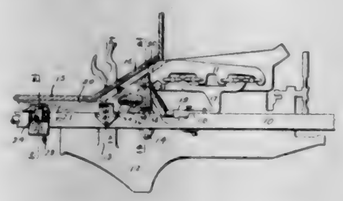


1. In a system for locking hinged vehicle doors, a door member and a door frame member, catches mounted on one of said members and including cylindrical bores having their axes perpendicular to the plane of the door, cylindro-conical bolts mounted on the other member and adapted to enter said bores, and means for locking the bolts in the cylindrical bores.

1,561,130. ANÆSTHETIC. HERMANN WIELAND, Konigsberg, Germany, assignor to the Firm C. H. Boehringer Sohn, Chemische Fabrik, Nieder-Ingelheim-on-the-Rhine, Germany, a Society of Germany. Original application filed Mar. 22, 1923, Serial No. 626,974. Divided and this application filed Jan. 27, 1925. Serial No. 5,125. 2 Claims. (Cl. 167—7.)

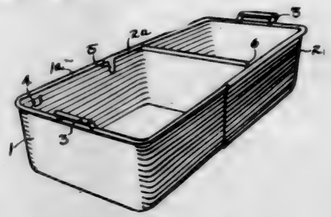
2. A composition of matter suitable for use as an anæsthetic, containing in major proportion acetylene irresponsive to physiological toxic tests, and a cyclic fragrant alcohol.

1,561,131. ATTACHMENT FOR CARBURETORS. WILTON M. WILKIE and WILLIAM WESTEDT, New Hampton, Iowa. Filed Feb. 7, 1924. Serial No. 691,324. 1 Claim. (Cl. 183—12.)



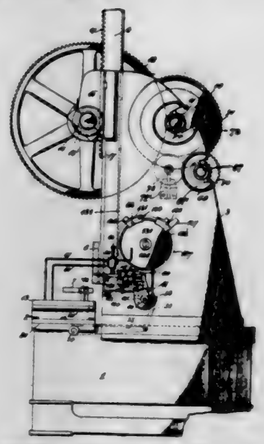
An attachment for carburetors comprising a main body portion formed rectangular in cross section having an enlarged portion at one end and a downwardly extending tank at its opposite end, a tube extending from the exterior of said body portion to the bottom of said tank and terminating near the bottom thereof, a screen at the upper end of said tank, a screen between the main body portion and the enlarged body portion, a pipe leading from the upper portion of the enlarged body portion and adapted to be attached to the intake of a carburetor.

1,561,132. COMBINATION PAN. CORA B. WISE, Dallas, Tex. Filed June 4, 1923. Serial No. 643,194. 2 Claims. (Cl. 141—11.)



1. The combination with a dish pan and a drainer telescopically connected thereto, a lug projecting inwardly from said dish pan, a resilient finger carried by said drainer, said finger adapted to engage said lug for retaining said drainer in one position and contact with a wall of the dish pan for limiting the outward movement of said drainer.

1,561,133. METAL-FINISHING MACHINE. DANIEL C. WOODWARD, Boston, Mass., assignor to Walworth Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1922. Serial No. 585,536. 24 Claims. (Cl. 90—33.)



24. In a machine of the type specified, the combination comprising a movable work table, a tool-carrying ram, mechanism for positioning the table, a work-holding clamp, mechanism for operating the clamp to occupy engaging or disengaging positions, a power-driven mechanism for operating the tool-carrying ram in reverse directions, mechanism for controlling said power-driven mechanism and consisting in part of a starting lever adapted and arranged to occupy normally a locked position, mechanism assisting in the retention and control of said lever and permitting of the release thereof only after said clamp-controlling mechanism has been rendered active to move the clamp into an engaging position, and means operated by said ram during the operation thereof assisting in the control of said various mechanisms to position said table, to move said clamp into a disengaging position, to control said lever including the restoration of said lever to its normal position and its retention in such position.

1,561,134. FOLDING SOLDERING IRON. ARTHUR A. WOOLMAN. Deer Lodge, Mont. Filed Oct. 7, 1924. Serial No. 742,169. 1 Claim. (Cl. 113—105.)

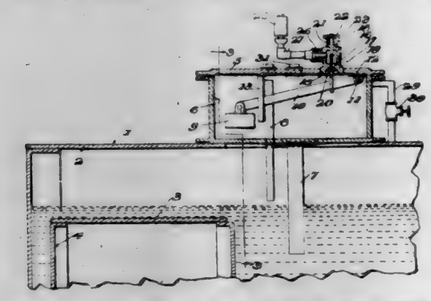
A soldering iron including a shank formed in two elongated sections having their inner ends provided with

lateral extensions, means for pivoting the terminals of the lateral extensions together, a soldering head on the end of one section, a handle on the end of the other section, and a sleeve slidable and rotatable on the section

having the handle and provided with a bayonet slot for receiving the lateral extensions when the sections are in alinement so that a portion of the sleeve is extended over the section having the soldering head thereon thereby holding the two sections extended in alinement with each other.

---

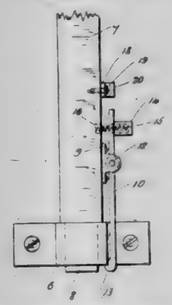
1,561,135. LOW-WATER ALARM FOR BOILERS. WILLIAM MACALLASTER BARBOUR, Roanoke, Va. Filed Apr. 16, 1924. Serial No. 707,011. 1 Claim. (Cl. 137—102.)



The combination with a boiler, of a casing superimposed on the boiler, said casing having an outlet adapted for connection with a whistle, a downwardly opening valve controlling said outlet and spring-pressed toward closed position, a float, means adapted to be actuated on downward movement of said float to move said valve from closed position, a pipe establishing communication between the water chamber of the boiler and the interior of said casing, said pipe terminating at its upper end at a considerable distance above the level of the bottom of the casing and terminating at its lower end slightly above the level of the crown sheet of the boiler, a second pipe opening at its upper end through the bottom of the casing and depending within the water chamber to terminate at its lower end below the level of the crown sheet of the boiler, and a valved by-pass conduit connecting the upper part of said casing with the upper part of said boiler.

---

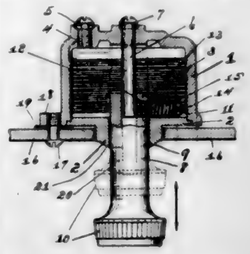
1,561,136. AUTO TRUCK STAKE HOLDER. JAMES BELL, West Medway, Mass. Filed Jan. 22, 1925. Serial No. 3,990. 1 Claim. (Cl. 296—43.)



The combination with a stake socket, and a stake slidable therein; of a catch lever pivotally supported by the stake and having a lug on its lower end for engaging with the stake socket, said lever having also a cup projecting laterally from its upper end portion on the opposite side thereof from the stake, a locking spring inclosed in the said cup and having a projecting end portion which bears on the stake, and a retaining plate pivoted to the stake above the upper end of the lever and having an offset portion for holding the lever when its lug is disengaged from the stake socket.

---

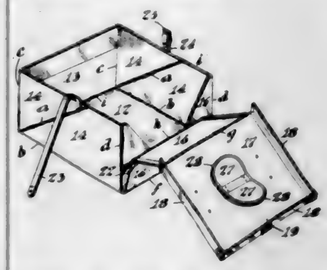
1,561,137. RHEOSTAT. FRANK H. BURNS, Hoosick Falls, N. Y., assignor to Hoosick Falls Radio Parts Manufacturing Company, Inc., Hoosick Falls, N. Y., a Corporation of New York. Filed May 20, 1922. Serial No. 562,541. 6 Claims. (Cl. 201—56.)



1. A rheostat having a hollow cylindrical body, an exposed coil spiral surface within and secured to the inner cylindrical surface of said hollow body, and a contact member rotatively and longitudinally movable with respect to the axis of said body and in contact with the exposed spiral surface of the coil.

---

1,561,138. COLLAPSIBLE BOX. OLGA L. CHARTERS, Los Angeles, Calif. Filed Sept. 3, 1924. Serial No. 735,720. 3 Claims. (Cl. 206—8.)



1. A collapsible box having one of its walls formed to provide an open space when the box is set up to receptacle condition, said box having a cover and a foldable section connecting it with the bottom of the box, said foldable section being formed to extend over said open space when the box is set up and closed.

---

1,561,139. ROAD CONSTRUCTION. RAYMOND W. COBURN, Weston, Mass. Filed July 29, 1925. Serial No. 46,888. 6 Claims. (Cl. 94—23.)

1. The method of road construction which consists in preparing a suitable subgrade, depositing thereon crushed stone and dry mortar, and placing bituminous material on the same before said mortar has set.

---

1,561,140. TOOTHBRUSH. ALOYSIUS J. COLEMAN, Chicago, Ill. Filed Sept. 13, 1923. Serial No. 662,437. 4 Claims. (Cl. 15—135.)

1. A tooth brush structure comprising a hollow brush head having ducts establishing communication between the bristles and the interior of said head and one end

open for the reception of a handle, a tubular handle having one end slidably received within said head, the

free end of said handle being provided with a socket, and a compressible bulb having a rigid nozzle frictionally and detachably secured in the handle socket.

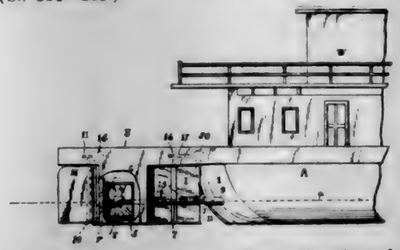
---

1,561,141. SHIPPING CAN. JAMES M. COUGHLIN, Kingston, Pa. Filed Feb. 24, 1925. Serial No. 11,245. 1 Claim. (Cl. 220—24.)

The combination with a container having a head opening and a continuous flange extending inwardly from the edge of the opening, of a closure insertible edgewise through the opening and including an annular flange of substantially the same diameter as the opening for frictional engagement with the inner surface of the head flange, an annular channel upon the closure flange, and elastic sealing material in the channel for the reception of the free edge portion of the head flange, a handle upon the closure, and means movably mounted on the closure for engaging the head.

---

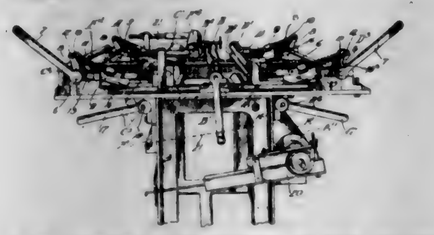
1,561,142. VESSEL. PHILIP C. ELSEY, Pittsburgh, Pa. Filed July 1, 1925. Serial No. 40,786. 17 Claims. (Cl. 114—163.)



1. In a power-driven vessel, the combination of propelling means, rudder-mechanism for flanking positioned in advance of said propelling means, and laterally extending flank passages for the escape of the forwardly driven water after its impingement against said rudder-mechanism.

---

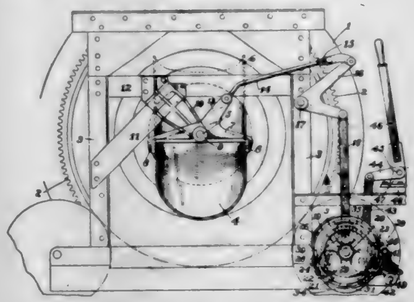
1,561,143. TUBE-FORMING MACHINE. HERBERT A. FABER, Cincinnati, Ohio, assignor to The Formica Insulation Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 7, 1921. Serial No. 443,137. 6 Claims. (Cl. 93—81.)



1. In a machine of the character set forth, the combination of a mandrel, carriages mounted on opposite sides thereof, pressure-rolls mounted on said carriages, carriage shifting mechanisms, and means for adjusting the fulcrums from which said carriage shifting mechanisms operate.

---

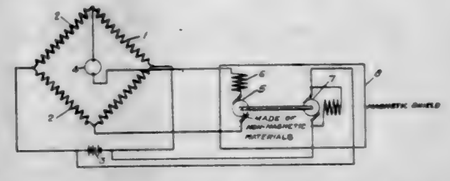
1,561,144. DISCHARGE MECHANISM FOR CONCRETE PAVERS. CHARLES E. FOOTE, Nunda, N. Y., assignor to The Foote Company, Inc., Nunda, N. Y., a Corporation of New York. Filed Jan. 24, 1925. Serial No. 4,525. 12 Claims. (Cl. 193—10.)



1. A discharge mechanism for concrete pavers comprising a chute movable from a charging to discharging position, a planetary gear, a crank arm, said crank arm connected to said chute and to a portion of said planetary gear, and means for operating the said planetary gear to thereby operate the chute.

---

1,561,145. ELECTRICAL DEVICE. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1917. Serial No. 198,278. Renewed Aug. 13, 1921. Serial No. 492,158. 13 Claims. (Cl. 179—171.)



1. The combination with an electric circuit, of means connected to the circuit for permitting only currents having certain characteristics differing from the characteristics of the main currents to traverse the same and means responsive to the said currents for supplying energy to the circuit in accordance therewith.

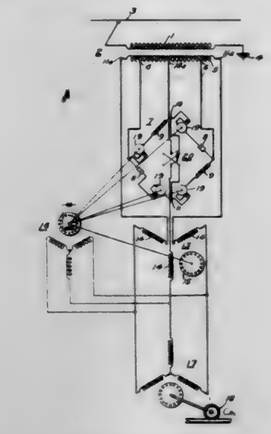
---

1,561,146. BALANCED ELECTROSTATIC PHASE CONVERTER. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 5, 1921. Serial No. 442,765. 8 Claims. (Cl. 172—246.)

2. The combination with a single-phase system, and a polyphase system, of a static network comprising fixed reactances interconnecting said systems for interchange of energy, and means for opposing the flow of unbalancing polyphase component currents through said static network, whereby the polyphase currents flowing therethrough are substantially balanced under all conditions, and means for reversing the static network connections.

6. The combination with a single-phase system and a polyphase system, of a static network interconnecting said systems for interchange of power, said static net-

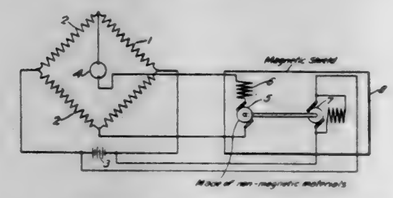
work including reactance elements and means associated with said elements for supplying the ohmic resistance



losses thereof, and a series balancer for automatically equalizing the polyphase currents flowing between said static network and said polyphase system.

---

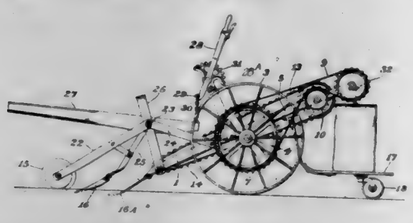
1,561,147. ELECTRICAL MEASURING DEVICE. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Original application filed Oct. 24, 1917, Serial No. 492,158. Divided and this application filed July 24, 1925. Serial No. 45,743. 3 Claims. (Cl. 171—95.)



1. In a measuring system, the combination with a null-reading instrument, of independently-actuated means connected in series with the instrument for supplying energy to the instrument circuit in proportion to the energy dissipated in the instrument.

---

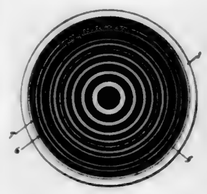
1,561,148. POTATO DIGGER. TOBIAS FOX, Toronto, Ontario, Canada. Filed Apr. 30, 1925. Serial No. 27,027. 2 Claims. (Cl. 55—137.)



1. The combination, in a potato digging machine, of an inclined tiltable elevator frame having a digging blade at its lower forward end, an upright yoke on the forward end of the frame, a pair of inverted V-shaped bars connected at their ends to the frame and midway of their lengths to the yokes, a concave gauging roller and cutting disc mounted on the free ends of the bars, downward inclined arms mounted on the yoke and bars, a jointer mounted on the lower end of the arms between the disc and digging blade and means to tilt the frame.

---

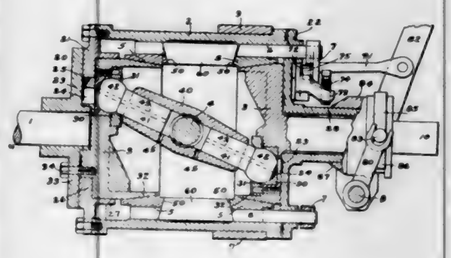
1,561,149. LIGHT-PROJECTING LENS. HAROLD L. GAGE, Salem, Oreg., assignor of one-third to Frederick Franklin Burya, Woodburn, Oreg. Filed Feb. 9, 1923. Serial No. 618,009. 3 Claims. (Cl. 240—48.4.)



1. A lamp comprising a case, an illuminating device within the case, a reflector, and a zone plate attached to the case and provided with alternating opaque and transparent light diffraction zones, the relative widths of which increase and diminish substantially in accordance with a specified law, as described.

---

1,561,150. REVERSING GEAR. RALPH GERBER, Raymond, Wash., assignor to American Manufacturing & Sales Co., Raymond, Wash., a Corporation of Washington. Filed June 11, 1924. Serial No. 719,311. 10 Claims. (Cl. 74—14.)

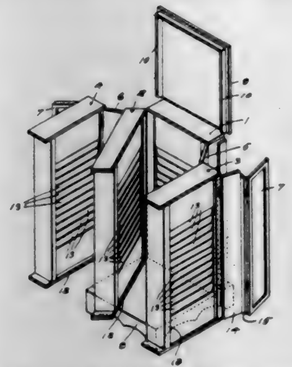


1. A reversing gear comprising two axially separated cranks rotatable about a common axis, a shaft positioned to perpendicularly bisect the axis extensions between said cranks, a sleeve mounted to slide and rock upon said shaft and having guide sockets extending at right angles to the axis of said shaft and in opposite directions, plungers slidable in said sockets, said plungers and the cranks having ball-and-socket connections, and the plungers each having an axial bore whereby they may act as pumps for the circulation of oil to the bearing surfaces.

---

1,561,151. SHEET-MUSIC CABINET. OTIS W. GHARRING, Kingman, Ariz. Filed May 8, 1923. Serial No. 637,561. 6 Claims. (Cl. 45—2.)

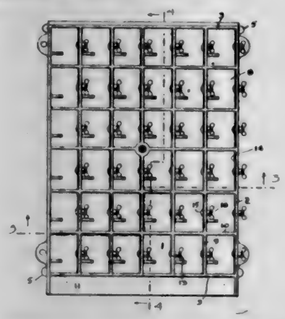
1. A cabinet having a back section, a series of hingedly connected leaves having an end leaf of each series hingedly connected to each side wall of the back section, and cabinet sections carried by alternate leaves



of said series and in staggered relation relatively to the two series.

---

1,561,152. IMPACT AMALGAMATOR. WILLIAM W. GIBSON, Alameda, Calif. Filed Apr. 2, 1923. Serial No. 629,493. 2 Claims. (Cl. 83—68.)

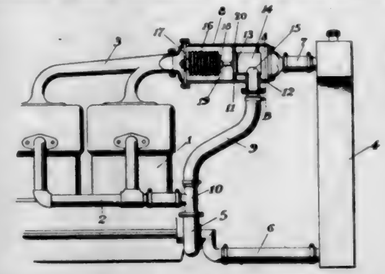


1. An amalgamator comprising a receptacle adapted to be moved to agitate the pulp, a plurality of partitions extending across the receptacle, a plurality of partitions extending substantially at right angles to and joined with the first named partitions, said partitions defining a plurality of compartments each of which has an opening in one wall thereof providing for intercommunication with the several compartments and an upright amalgamator plate mounted against one wall of each compartment to one side of the openings, which amalgamator plates extend to the bottoms of said compartments.

---

1,561,153. ENGINE-COOLING SYSTEM. JEAN V. GIESLER, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Aug. 19, 1916. Serial No. 115,865. 3 Claims. (Cl. 123—174.)

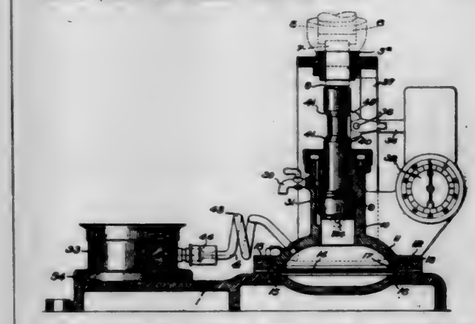
1. In a cooling system for an internal combustion engine, in combination with the engine jacket or jackets, a radiator, a conduit leading from the outlet of said jacket or jackets to the inlet of said radiator, a circulating pump, a conduit leading from the outlet of said radiator to the inlet of said pump, a conduit leading from the outlet of said pump to said first-named conduit, connections from the outlet of said pump to the inlet of said jacket or jackets, valve mechanism for respectively controlling the flow of cooling medium through said last-named conduit and said jacket or jackets, and thermosensitive means for actuating said valve mechanism to permit circulation of said cooling medium through said jacket or jackets only when said medium has attained a predetermined temperature, said thermosensitive means comprising an expansible and collapsible vessel normally contracted against an elastic force and charged with a



thermosensitive fluid at a pressure below that to which it is normally subjected exteriorly to that upon leakage of said vessel it will expand and move said valve mechanism to a position permitting circulation of the cooling medium through said jacket or jackets.

---

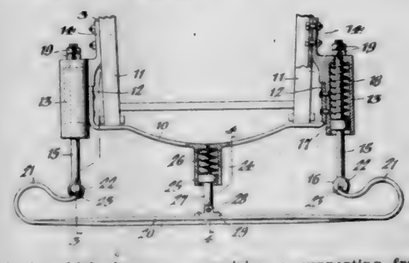
1,561,154. IMPACT-TESTING APPARATUS. GEORGE H. GILMAN, Boston, Mass. Filed Aug. 31, 1920. Serial No. 407,185. 66 Claims. (Cl. 265—47.)



1. In a device for testing impact tools, a movable impact receiving member, means resisting such movement comprising a body of liquid under initial pressure contained in a substantially closed chamber with a resilient wall of relatively large area, a counter, an impact register, means responsive to movement of said member for operating said counter, and fluid operated means responsive to the degree of the force of the impact for operating said register.

---

1,561,155. VEHICLE BUMPER. MORRIS GOLDSTEIN, Buffalo, N. Y. Filed Apr. 7, 1925. Serial No. 21,296. 5 Claims. (Cl. 293—55.)

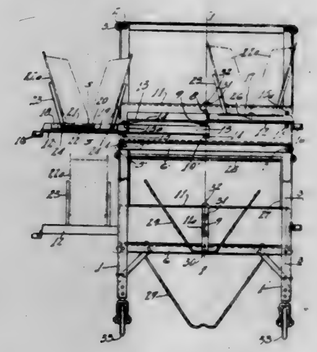


1. A vehicle bumper, comprising a supporting frame adapted for attachment to the vehicle, an impact bar

disposed forwardly of said frame, and terminating at its ends in resilient portions, and yieldable members mounted on and extending forwardly from said frame and pivotally connected at their front ends to the resilient portions of the impact bar.

---

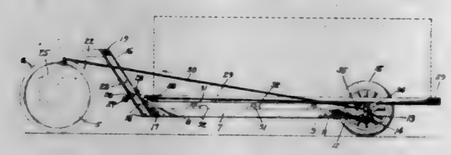
1,561,156. PORTABLE BOOKRACK. EDWARD D. GREEDY, Cedar Rapids, Iowa, assignor to Le Febure Ledger Company, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Apr. 10, 1923. Serial No. 631,227. 5 Claims. (Cl. 45—56.)



1. In a portable book rack, the combination of a frame; rollers arranged centrally of the frame; shelves movably mounted between said rollers; bars at the end of the frame preventing the removal of the rollers; a folding shelf at the end of the frame; a brace for the folding shelf; and a hook on one of the bars on which the brace may rest when the shelf is raised to a horizontal position.

---

1,561,157. TRAILER UNLOADING MECHANISM. EDWARD R. GREER, Minneapolis, Minn., assignor to W. O. Winston, jr., Minneapolis, Minn. Filed Jan. 10, 1925. Serial No. 1,653. 10 Claims. (Cl. 214—65.)



1. The combination with forward draft wheels, of a trailer having a draft connection therewith, and means having peripheral connections with said wheels and adapted to apply a backward movement to the load to discharge it from the trailer upon the forward movement of said wheels.

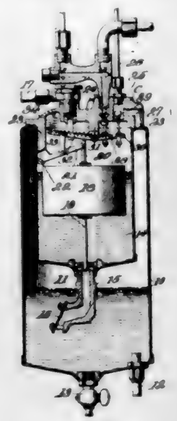
---

1,561,158. SEMISOLID STOCK FOOD AND PROCESS FOR MAKING THE SAME. WILLIAM P. M. GRELCK, St. Paul, Minn. Filed Sept. 27, 1923. Serial No. 665,226. 12 Claims. (Cl. 99—11.)

1. The process of preparing a grain food which consists in adding water to the starchy part of a quantity of whole grain and heating the same to render the said constituents soluble,, then adding a quantity of malt grain and steeping to produce maltose, subsequently converting the maltose into lactic acid, and adding a quantity of grain.

10. A food product containing ground grain, wort formed from malted grain, and a preservative quantity of lactic acid.

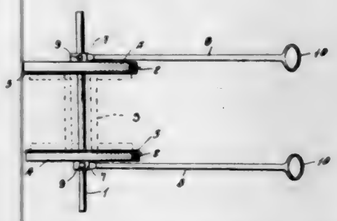
1,561,159. LIQUID-LEVEL-MAINTAINING DEVICE. JAMES HURST, San Francisco, Calif. Filed Aug. 12, 1921. Serial No. 491,711. 8 Claims. (Cl. 103—236.)



1. A liquid level maintaining device comprising a float chamber, an actuator of approximately the same weight as the liquid to be delivered to said chamber, said actuator being positioned to be partially or wholly submerged in said liquid, valve mechanism connected to said actuator and controlling the supply of liquid entering the chamber, and counterbalancing means within the chamber, and connected with the valve mechanism whereby operation of said valve mechanism is governed by the effective weight of the actuator.

---

1,561,160. WIRE-REEL TRUCK. GEORGE INGENTHRON, Hermosa, S. Dak. Filed Mar. 19, 1925. Serial No. 16,744. 4 Claims. (Cl. 242—94.)

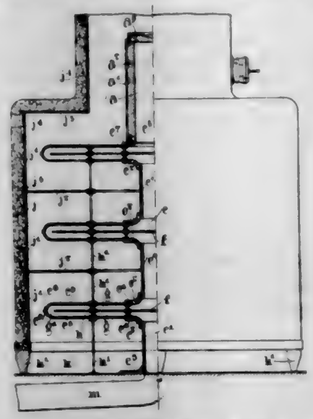


1. A wire reel truck comprising an axle, wheels mounted upon the axle for rotation with respect thereto and for adjustment with respect to each other, and handle bars adjustably secured to the axle outwardly beyond the wheels.

---

1,561,161. AIR OR OTHER GASEOUS FLUID HEATING FURNACE. ALEXANDER CONSTANTINE IONIDES, Jr., London, England. Filed Mar. 19, 1923. Serial No. 626,190. 5 Claims. (Cl. 126—116.)

1. An air or other gaseous fluid heating furnace having in combination a plurality of hollow flat chambers having opposite apertures in their two larger sides, a partition in each of said chambers between said apertures terminating shortly before reaching the perimeter of said larger sides, conduits connecting the apertures of the series of chambers with one another to form a column-like structure of alternating conduits and chambers, a combustion chamber connected to the upper aperture of the top flat chamber, an outlet flue connected to the lower aperture of the bottom flat chamber, a casing surrounding said column with space around the perimeter of said chambers, and centrally apertured baffle plates in said casing between said chambers leaving spaces around said conduits.



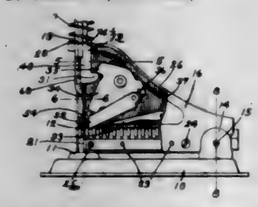
---

1,561,162. SOCKET TERMINAL. LOUIS E. ISELE, Glenridge, N. J., assignor to Beaver Machine & Tool Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 4, 1922. Serial No. 534,017. 3 Claims. (Cl. 173—332.)

1. A socket terminal comprising a fixed leaf, lugs at the sides thereof, adjacent the ends and terminating in inturned fingers, substantially parallel to the body of the fixed leaf, a resilient member maintained in position by the said lugs and fingers, and a movable leaf pivotally connected centrally to the said resilient member.

---

1,561,163. STAPLE BINDER. BERTHOLD JAHN and ERNEST EMIL KAHL, New Britain, Conn., assignors, by mesne assignments, to Gertrude H. Heyn, Compo Cove, Westport, Conn. Filed May 9, 1921. Serial No. 467,936. 17 Claims. (Cl. 1—2.3)



1. A staple binder comprising a base, a member pivoted thereto comprising a casing composed of a pair of opposed sheet metal side plates, a filler piece positioned between the lower portions of the side plates, a die at one end of said filler piece, the upper portion of said filler piece being reduced in width so as to serve as guide for a staple strip, feed devices in said casing, a plunger reciprocating in said casing and provided with a cutting edge for cooperation with said die and means for operating said feed devices, a spring seated upon said casing tending to elevate said plunger, and said plates comprising flat border portions and centrally indented portions arranged to provide flanges along the lateral edges of said plunger and flanges adjacent the filler piece for holding a staple strip thereon.

---

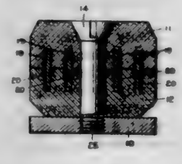
1,561,164. METHOD OF PRESERVING WOOD. JOSEPH HIDY JAMES, Pittsburgh, Pa., assignor to Clarence P. Byrnes, trustee, Sewickley, Pa. Filed Dec. 19, 1921. Serial No. 523,600. 10 Claims. (Cl. 99—12.)

5. The process of preserving wood, comprising impregnating the wood with a liquid mixture containing alcohols, aldehydes and aldehyde fatty acids, derived by the partial oxidation of petroleum hydrocarbons.

9. As a new article of manufacture, a wood preservative containing alcohols, aldehydes and aldehyde fatty acids derived by the partial oxidation of petroleum hydrocarbons.

---

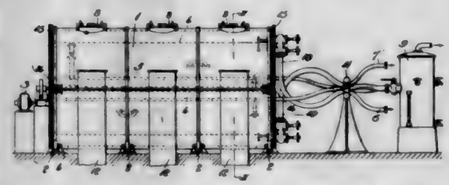
1,561,165. TELEPHONE JACK. LESTER L. JONES, Oradell, N. J. Filed July 18 1925. Serial No. 44,463. 6 Claims. (Cl. 179—96.)



1. A telephone jack structure comprising a bracket having means for attaching the same to a panel, a pair of mating insulating blocks arranged in superposed relation on said bracket, a plurality of jack spring blades mounted between and arranged transversely of said blocks with the planes of the blades lying normal to the plane of said bracket, the said insulating blocks being provided with pairs of mating notches and each of said jack blades having a portion receivable with a dovetailing interengagement by a pair of such notches for securing such blade to and between the insulating blocks, the said bracket and the lower of said blocks being provided with mating elements for positioning the blocks on the bracket, and a securing member joining the blocks together and attaching the same to the bracket.

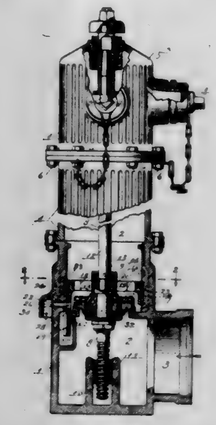
---

1,561,166. DRYING APPARATUS. AUGUSTINUS EDVARD JONSSON, Lidingo Villastad, Sweden. Filed Apr. 22, 1925. Serial No. 25,039. 2 Claims. (Cl. 34—5.)



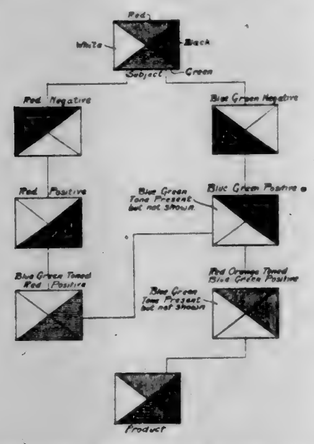
1. Drying apparatus with stirring means, in which the goods is dried under a great vacuum by means of heating surfaces, situated in the apparatus, characterized thereby, that the apparatus is movably mounted upon bearings and connected with a vacuum pump by flexible conduits for the purpose of permitting an oscillating movement of the apparatus one or more turns for stirring the goods without the necessity of using stuffing-boxes or the like.

1,561,167. HYDRANT. HERBERT O. JOYNT, Traverse City, Mich., assignor to Traverse City Iron Works, Traverse City, Mich., a Corporation of Michigan. Filed Mar. 18, 1925. Serial No. 16,369. 4 Claims. (Cl. 137—13.)



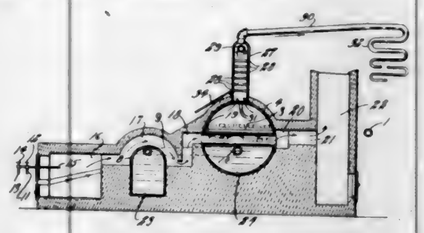
2. In a hydrant: a body having a vertically-extending water passage, a spillway through its side wall, a lateral chamber having a closed bottom below the spillway, a valve seat and a vertically extending guideway; a valve above the valve seat, vertically movable out of and into seating position thereon; a valve carried in connection with the first-mentioned valve, extending below the same and into said chamber and having a guided movement in the guideway, the second mentioned valve having a vent therethrough and being movable with the first mentioned valve to a position wherein said vent registers with the spillway in the first mentioned valve's closed position.

1,561,168. COLOR PHOTOGRAPHY. WILLIAM V. D. KELLEY, Jersey City, and DOMINICK TRONOLONE, Fort Lee, N. J., asignors to Kelley Color Laboratory, Inc., Palisade, N. J., a Corporation of New Jersey. Filed Feb. 5, 1924. Serial No. 690,722. 12 Claims. (Cl. 95—2.)



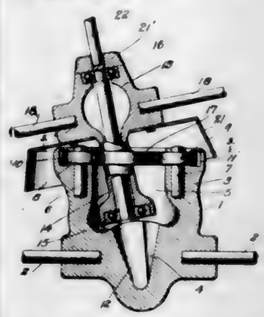
1. A photographic process which consists in forming a latent image in a colloid layer, developing in neutral or acid diamidophenol toning with an iron salt and after clearing with a bath of ammonium bromide and potassium bichromate in water solution forming an image toned with an uranium salt in the same colloid layer in registry therewith.

1,561,169. HYDROCARBON DISTILLATION. HENRY G. W. KITTREDGE, Toledo, Ohio, assignor to Caroline A. Kittredge, Toledo, Ohio. Filed Aug. 13, 1919. Serial No. 317,129. 4 Claims. (Cl. 196—131.)



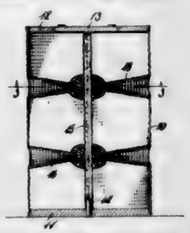
2. A still installation embodying a housing, a furnace, a first reservoir having an arched top for exposure to heating action from the furnace and a lower portion adapted to receive a precipitate in a portion thereof shielded by the housing from said furnace heating action, and a second fire tube reservoir mounted by the housing to receive the heating action from over the top of the first reservoir.

1,561,170. CARROUSEL. JAMES F. KLINE, Amarillo, Tex. Filed July 5, 1924. Serial No. 724,228. 5 Claims. (Cl. 272—50.)



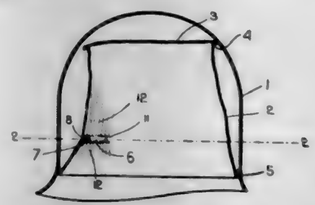
1. A carrousel comprising a base having a recessed member, a spindle mounted in the member to rock back and forth in a definite plane, a hub rotatably mounted on the spindle, passenger-carrying means on the hub, a cam on the hub, and rollers carried by the base, bearing against the cam on the hub.

1,561,171. INSECT TRAP. ANNA HELEN KNIPKER, Clarksburg, Mo. Filed Sept. 9, 1922. Serial No. 587,239. 2 Claims. (Cl. 43—118.)



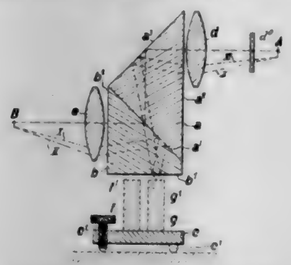
1. An insect trap comprising a base provided with a centrally disposed vertically extending pin, an outer tubular screen secured at its lower end to the peripheral portion of the base, a top secured to and closing the upper end of the screen and provided with an opening giving access to the interior of the screen, a door hinged to the top for closing said opening, an inner tubular screen arranged with its lower end resting on the base and telescoping said pin and its upper end positioned to be engaged and closed by said door, said inner tubular screen being of considerably smaller diameter than the said opening in the said top so as to readily pass therethrough when being engaged or disengaged with the said pin and a series of conical screens extending horizontally between the outer and inner tubular screens, each of said conical screens having its larger end secured about an entrance opening formed in the outer screen and its smaller end closely approaching the inner screen but spaced therefrom.

1,561,172. HAT LINING. DANIEL KOCH, Boston, Mass. Filed Feb. 20, 1924. Serial No. 693,999. 1 Claim. (Cl. 2—190.)



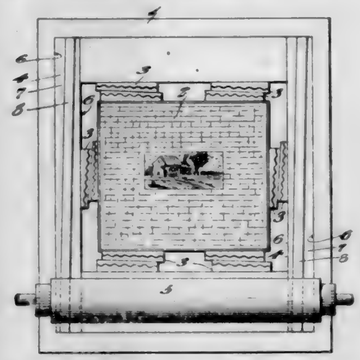
The combination with a hat, of a lining therefor having a side portion and top portion, the lower edge of the side portion being secured to the hat, the side portion at the rear of the hat having a fold therein which extends across the latter only, the remainder of the side portion having no fold therein, and an elastic tape or cord located in the fold and normally having a length less than that of the fold, the ends of the cord being secured to the lining on the exterior thereof at the ends of the fold, whereby the fold is gathered in the direction of its length and a short elastic rib is formed on the wall of the lining at the rear of the hat which fits around the rear of the head, the lining at the front and sides of the hat being full and non-elastic, whereby when the hat is worn the engagement of the elastic rib with the back of the head will cause the front and sides of the hat to fit against the head of the wearer.

1,561,173. METHOD AND DEVICE FOR EXAMINING END GAUGES. WILHELM KÖSTERS, Berlin, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 29, 1921. Serial No. 496,703. 3 Claims. (Cl. 88—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



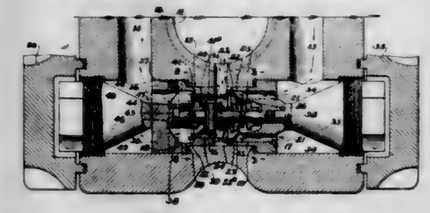
1. In a device for examining end-gauges a support, adapted to receive the end-gauges to be examined, a prism system containing a reflecting surface pervious to light and substantially parallel to an end-surface of the end-gauge to be examined, a second reflecting surface pervious to light and inclined to the first-named reflecting surface, a source of light, a collective lens system disposed between the said prism system and the said source of light at a distance from the latter substantially equal to the focal length of the lens system, the rays, emanating from the source of light, thus being transmitted to the first-named reflecting surface under conditions suitable to cause the rays to interfere with each other after having been reflected at this said end-surface on the one hand and the reflecting surface on the other hand, and a second collective lens system adapted to receive the rays leaving the prism system.

1,561,174. PRINTER'S BEARER STRIP. JOHN KYLE, Philadelphia, Pa. Filed July 16, 1925. Serial No. 43,961. 4 Claims. (Cl. 101—348.)



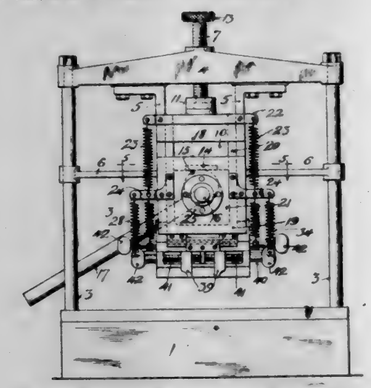
1. A printer's bearer strip of the character stated, comprising an elongated body portion having substantially parallel longitudinal sides and an upper surface of a lesser height than the height of the printing surface, and an elongated bearer strip on said upper surface, disposed at an angle to said parallel sides.

1,561,175. COMPRESSOR-VALVE ASSEMBLY. OTTO A. LABUS, Wisconsin Rapids, Wis. Filed July 3, 1924. Serial No. 724,070. 11 Claims. (Cl. 230—34.)



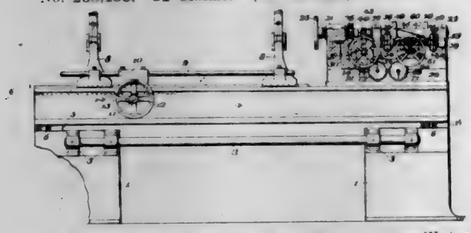
1. In a device of the character described, the combination of a block having a bore with an inlet port at one end and a discharge port at the other end, a cylinder in constant communication with the central part of the bore, an inlet valve cage and an outlet valve cage in opposite ends of said bore, each having an annular series of ports terminating at their discharge ends in a common annular chamber, with the adjacent end of the cage inside and outside of the chamber forming a conical valve seat, a correspondingly shaped valve coacting with said seat, and means normally holding each valve in engagement with its seat and covering the annular chamber, the means holding the inlet valve being responsive to suction in the cylinder to permit said valve to open, and the means holding the outlet valve being similarly responsive to pressure in the cylinder.

1,561,176. EMBOSSING MACHINE. HENRY E. LICHTENSTEIN, Hempstead, N. Y. Filed Aug. 30, 1924. Serial No. 735,188. 9 Claims. (Cl. 101—27.)



1. An embossing press comprising a base, a frame for supporting an impression head over said base, an impression head comprising an upper member and a screw for adjustably supporting said upper member different distances from the base, a lower head member adapted to carry the embossing type, springs tending to move said head members toward each other, and a cam for forcing the head members apart.

1,561,177. BALANCING MACHINE. JACOB LUNDGREN, Philadelphia, Pa., assignor to Carlson-Wenstrom Co., a Corporation of Delaware. Filed June 4, 1918. Serial No. 238,138. 11 Claims. (Cl. 73—51.)

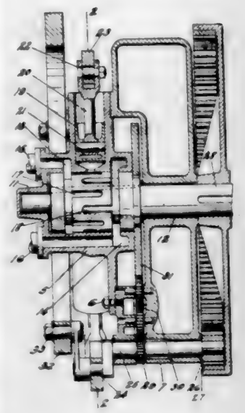


1. A balancing machine, comprising an oscillatory member, a support or attachment for a body to be tested carried by said member, balancing weights also carried by said member, and means to revolve a body upon said support and said weights in synchronism, said weights being simultaneously adjustable in opposite directions circumferentially of their axis of rotation.

1,561,178. GOLF GAME. EDWARD ROY MCGRANN, McKeesport, Pa., assignor of one-fourth to Harry C. Herpel, McKeesport, Pa., and one-fourth to Curt B. Mueller, West Park, Ohio. Filed Oct. 15, 1921. Serial No. 507,916. 16 Claims. (Cl. 273—87.)

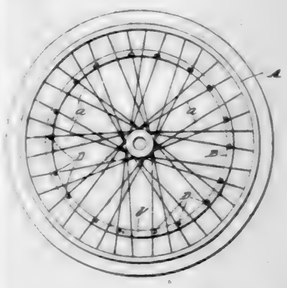
1. A golf game stancer comprising a support fashioned with a spherically surfaced base and a handle at its top, in combination with a golf club carrier turnably and slidably, mounted upon said support whereby adjustment may be selectively effected to suit the preferred tilt of said support upon its base.

1,561,179. PARALLEL-CRANK PUMP OR MOTOR. WALDEMAR F. MAYER, Philadelphia, Pa., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Nov. 12, 1919. Serial No. 337,423. 1 Claim. (Cl. 121—117.)



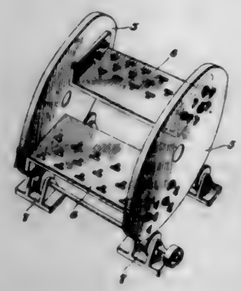
A multiple cylinder motor having a plurality of radially arranged cylinders, a ring about all of said cylinders and having direct and equidistant connection with the pistons of the respective cylinders, a plurality of equally spaced cranks operated by said ring, a power gear, and equally spaced driving pinions operated by said cranks and engaging said power gear and a balance ring carried by the first mentioned ring and movable in opposition thereto.

1,561,180. ATTACHING MEANS FOR USE ON WIRE-SPOKE WHEELS. JOSEPH F. MERKEL, Rochester, N. Y., assignor, by mesne assignments, to The G. R. S. Products, Inc., Colonie, N. Y., a Corporation of New York. Filed Jan. 19, 1922. Serial No. 530,323. 4 Claims. (Cl. 74—28.)



1. In a motorcycle, the combination of a driving wheel having spokes, a driven member, and means for securing said driven member to said spokes, including sheet metal strips bent around and clamped to said spokes, and means connecting the ends of said strips and securing said ends to said driven member.

1,561,181. MEANS FOR GRINDING DREDGE BUCKETS AND THE LIKE. WALTER S. MORGAN, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Aug. 3, 1922. Serial No. 579,404. 2 Claims. (Cl. 51—236.)

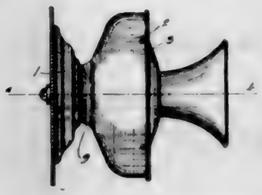


1. In a means for grinding dredge buckets and the like, a rotatable work holder, means for supporting a plurality of dredge buckets therein with the eyes of one alined with the eyes of the others and concentric with the axis of the holder, said holder being formed for the passage of lapping tools through such alined eyes.

1,561,182. DISPENSING PUMP. WILLIAM MORLOK, Philadelphia, Pa., assignor to L. A. Prouty Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1924. Serial No. 688,674. 13 Claims. (Cl. 221—80.)

1. In a device of the character stated, a pump superstructure, a cup, a spout slidably mounted in the superstructure with an end projecting into the cup and capable of being withdrawn therefrom, and means working in the cup to force the contents through the spout or out of the cup when said spout is withdrawn.

1,561,183. TRANSMITTER SUPPORT FOR TELEPHONE TRANSMITTERS. HERBERT F. OBERGFELL, River Forest, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1921. Serial No. 523,491. 14 Claims. (Cl. 179—147.)

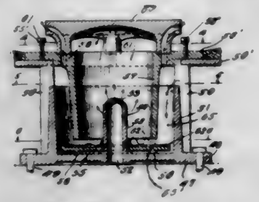


1. A transmitter support comprising a bracket and a microphone shell, and a hinged joint connecting the two including a pin acting as a bearing therefor which pin is located wholly within the said shell.

1,561,184. AUTOMOBILE BUMPER. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed Feb. 7, 1925. Serial No. 7,716. 9 Claims. (Cl. 293—55.)

1. An automobile bumper having its contact portion consisting of a plurality of inflated tubes, holders for said tubes, and a spring bar connected with said holders.

1,561,185. OIL BURNER. JOHN C. QUINN, Staten Island, N. Y., assignor to Quinn Oil Burner Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 7, 1922. Serial No. 599,534. 12 Claims. (Cl. 158—80.)



1. In a device of the character described, the combination with a base plate, an upstanding cylindrical wall upon its upper surface cast integrally therewith, supporting standards rising above the cylindrical wall, and a vaporizing plate adapted to rest upon the base plate, of a cone adapted to rest upon the supporting standards and to depend therefrom, a flanged rim on the cone having air openings therein a baffle plate adapted to rest upon the cone and to spread the flame outwardly, and legs on said baffle plate adapted to fit over said openings having passages therethrough to correspond with the openings in the flanged rim whereby a portion of the air may be diverted to the periphery of the baffle plate.

1,561,186. HURDLE. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 8, 1925. Serial No. 42,258. 4 Claims. (Cl. 272—59.)

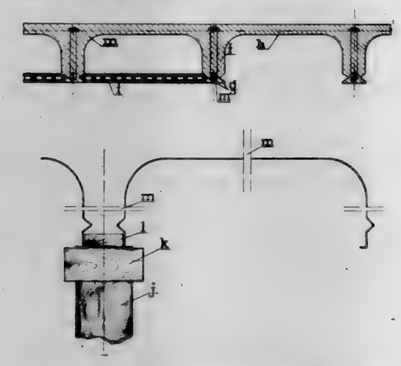
1. A hurdle comprising a pair of supporting standards and a frame comprising uprights and connecting top and bottom cross bars, said uprights being juxtaposed to the outer faces of the standards and having vertical slots,

pivot pins carried by the standards near their upper ends and engaging the slots, means for holding the uprights at any one of a plurality of predetermined elevations

relative to said pivots, the bottom cross bar being connected to the edges of the uprights on one side thereof, and overlapping the corresponding edges of the standards.

---

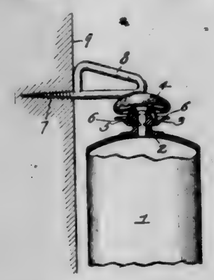
1,561,187. MEANS FOR THE CONSTRUCTION OF REENFORCED-CEMENT FLOORS. RAMÓN RIOS, Madrid, Spain. Filed Nov. 22, 1922. Serial No. 602,558. 2 Claims. (Cl. 25—131.5.)



1. A mould formed of flexible material for reenforced concrete floor construction, means formed thereon for providing a recess or locking groove for supporting ceiling members in the said floor construction.

---

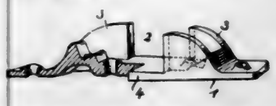
1,561,188. COLLAPSIBLE TUBE. JOHN SAXE, Cartago, Costa Rica, Central America, assignor of one-half to Henry Gerry Purdy, San Jose, Costa Rica, Central America. Filed July 2, 1925. Serial No. 41,024. 1 Claim. (Cl. 221—60.)



As a new article of manufacture, a closure cap having snap fastener engagement with the nozzle of a collapsible tube, a holder integral with and extending substantially right angularly from the axis of said cap, said holder being provided with means for securing it to a fixed support, and bracing means integral with and extending laterally from said holder, said bracing means being centrally arranged relatively to the cap and adapted to coact with the fixed support to resist the pressure applied in forcing the tube nozzle into said cap.

---

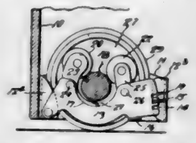
1,561,189. DEVICE FOR FASTENING AND LEVELING RAILWAY RAILS. EUGÈNE SAUTREAU, Nancy, France. Filed Aug. 23, 1924. Serial No. 733,821. 3 Claims. (Cl. 238—266.)



1. A device for fastening and leveling railway rails of the Vignoles type, comprising a chair having jaws between which the rail is supported in an elevated position, wedges of hard-wood arranged at opposite sides of the chair as supports for the rail, and means for clamping the rail to the wedges.

---

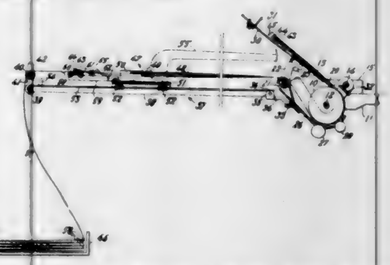
1,561,190. SHAFT-DRIVING MECHANISM. MARTIN E. SEELY, Cleveland, Ohio. Filed Dec. 6, 1922. Serial No. 605,208. 7 Claims. (Cl. 74—26.)



1. In a device of the kind described the combination with a frame, of a flanged driving roller arranged therein, a driven shaft adapted to have an end arranged within the flanged roller, a member connected to the frame and plates connected to said member and carrying friction rollers contacting with the flanged roller and with the driven shaft.

---

1,561,191. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 14, 1923. Serial No. 662,640. 18 Claims. (Cl. 197—126.)



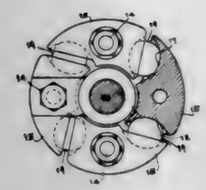
1. In a typewriting machine, a platen, means for feeding a work-web to and around the platen, and means for bending the web alternately to one side and then to the other side of its normal plane of travel to the platen whereby to eliminate cross-folds in the web.

---

1,561,192. FLEXIBLE COUPLING. CLARENCE WINFRED SPICER and GURDON LUCIUS TARBOX, Plainfield, N. J., assignors to Spicer Manufacturing Corporation, a Corporation of Virginia. Filed July 16, 1924. Serial No. 726,359. 5 Claims. (Cl. 64—96.)

1. A flexible shaft coupling comprising two hub members carrying a plurality of radial projections with

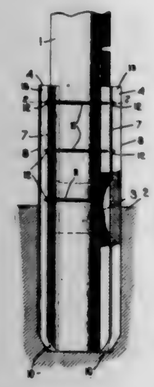
polygonal faces carrying studs or bolts at right angles thereto, members having recesses adapted to fit the polygonal faces of the projections adapted to be carried



by the studs, said members also provided with bowl shaped cavities, balls of rubber or similar material disposed in said cavities and operating to flexibly connect the two parts of the coupling.

---

1,561,193. REENFORCEMENT FOR POLES. GEORGE B. SPRING, Newton Highlands, Mass. Filed June 5, 1925. Serial No. 35,054. 1 Claim. (Cl. 20—100.)

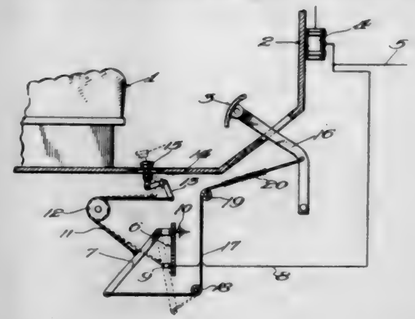


A reenforcement for wooden poles comprising two reenforcing members adapted to be set into the earth at opposite sides of a pole, each member having a concave face to fit the pole and ribs extending longitudinally of said face, said ribs becoming embedded into the pole and affording an interlocking connection between the pole and the members, each member having at each edge a longitudinally-extending wing provided with apertures and also having on its exterior face a longitudinally-extending anchoring rib, the portion of the exterior face between each wing and the rib being convexly curved in a transverse direction and tie rods extending through the apertures of the wing and by which the members are clamped to the pole.

---

1,561,194. ANTITHEFT DEVICE FOR AUTOMOBILES. ARTHUR STIMSON, Chicago, Ill., assignor of one-half to J. A. Risher, Chicago, Ill. Filed Apr. 2, 1925. Serial No. 20,283. 3 Claims. (Cl. 123—146.5.)

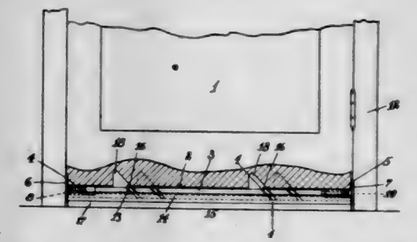
1. The combination with the high tension side of an automobile ignition circuit and the brake lever thereof, of a grounding switch, means normally holding the same in open circuit position but releasable at the will of the driver, and a connection from the high tension side of the ignition circuit to the grounding switch, an operative connection from the grounding switch to the brake lever



tending to close said switch when the lever is operated to set the brake, and a yieldable element in said connection, substantially as described.

---

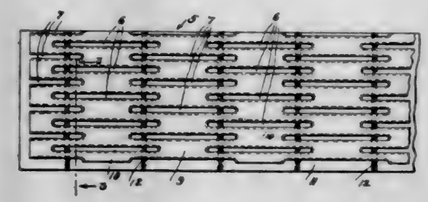
1,561,195. WEATHER STOP. ANTON SZYMKOWIAK, San Francisco, Calif. Filed Dec. 7, 1922. Serial No. 605,467. 2 Claims. (Cl. 20—68.)



1. In combination with a door and a door frame, tubes mounted on said door, a bar mounted in said tubes, a spring positioned against one end of said bar, a bolt projecting from one end of said bar and adapted to engage said frame whereby said bar is reciprocated, a weather stop mounted below said bar, a plurality of inclined cam arms formed on said stop, said bar having a plurality of inclined slots therein for the reception of said cam arms whereby said weather stop is raised and lowered.

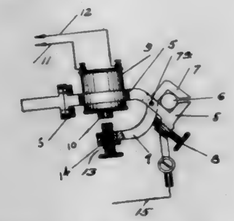
---

1,561,196. BUILDING LATH. JOHN A. WALLER, Los Angeles, Calif., assignor to Walter J. Lumbleau, Los Angeles, Calif. Filed Sept. 13, 1921. Serial No. 500,440. 3 Claims. (Cl. 72—116.)



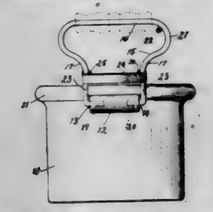
1. A plaster wall board comprising a thin flexible slab of wood, said board provided with a plurality of slots running with the grain, and said slots arranged in staggered and overlapping relation, whereby the board is readily capable of expansion and contraction.

1,561,197. MAGNETIC CARBON HOLDER. WILLIAM WENDERHOLD, New York, N. Y., assignor, by mesne assignments, to Edwin J. Banzhaf, New York, N. Y. Filed Oct. 29, 1917. Serial No. 199,167. 1 Claim (Cl. 176—119.)



The combination of arms pivoted relatively to each other at a point intermediate their ends, jaws on one end of said arms adapted to clamp and hold an electrode therebetween, an adjustable member carried by one of said jaws for bearing against the free arm of the other of said jaw members, and a magnet positioned to further close and clamp the jaw members when energized, by acting on the end of the free arm to thereby retain a constant pressure on the electrode member clamped between said jaws.

1,561,198. JAR AND BAIL THEREFOR. RICHARD P. WHITE, Chicago, Ill. Filed Aug. 23, 1923. Serial No. 658,937. 1 Claim. (Cl. 215—100.)

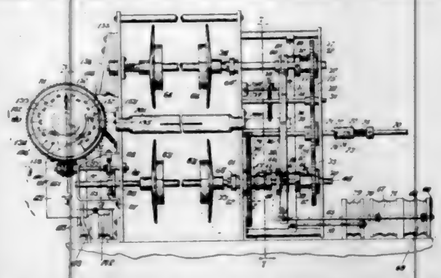


In combination, a jar of frangible material, a plurality of lugs on said jar, each lug being provided with a recess at each end thereof, a carrying bail for each lug, each of said bails comprising a handle, and side portions of relatively light wire having inturned bent ends for engaging in said recesses, and a tie member for engaging said side portions for holding said ends in said recesses, said handle adapted to extend upwardly in substantially a vertical plane with the adjacent parts of said side portions, whereby when said jar is lifted by said bails the weight of the same will be supported by the tensile strength of said side portions without tending to produce a bending action therein above the tie members, thus permitting the use of relatively light wire in the formation of said bail without impairing its normal supporting function.

1,561,199. AUTOMATIC PLAYER PIANO. RUSSELL I. WILCOX, Chicago, Ill., assignor, by mesne assignments, to Western Electric Piano Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1923. Serial No. 649,395. 26 Claims. (Cl. 84—132.)

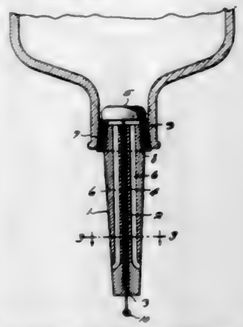
1. In an automatic player piano, a pair of drums, means for rotating said drums in opposite directions to wind the music strip in one direction or the other, and a selecting device for controlling the operation of said drums, said selecting device consisting of a movable element operatively associated with one of said drums, a valve movably supported on said movable element and a co-operating movable element adapted to be manually set.

25. In an automatic player piano, a pair of drums, driving means, means for joining said driving means to said drums for rotating them in opposite directions to wind the music strip in one direction or the other, selector mechanism comprising a rotating element operatively associated with one of said drums, a manually



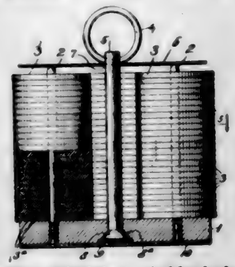
set element adapted to cooperate therewith, means for clutching said manually set element to said rotatable element, and pneumatic means governed by the operation of the piano for controlling said clutching means.

1,561,200. FILLING DEVICE. EARL H. WISEMAN, Cleveland, Ohio, assignor to Raleigh E. Tresise, Cleveland, Ohio. Filed June 11, 1921. Serial No. 476,898. 3 Claims. (Cl. 226—39.)



2. A battery filling device comprising a body portion having a liquid conducting bore and a vent bore extending longitudinally therethrough, said liquid conducting bore being located adjacent to but projecting beyond said vent bore at one end of said body portion, and a valve adapted to close said bores and having a valve stem projecting through said liquid conducting bore and extending beyond the end of said bore opposite said valve.

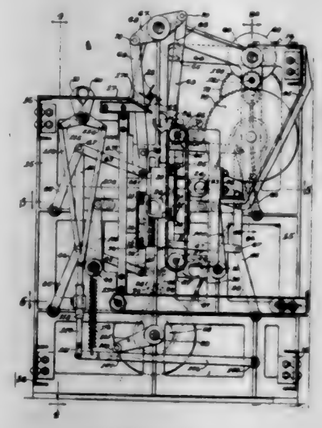
1,561,201. CHIP AND CHIP HOLDER. FRANK E. WOCHL, Whitestone, and EDWARD A. JOHNSON, Brooklyn, N. Y., assignors to Apex Specialties Corporation, a Corporation of New York. Filed Sept. 8, 1923. Serial No. 661,565. 8 Claims. (Cl. 273—148.)



2. A chip-holder embodying a holder-body comprising a base member and a plurality of stacking-posts of similar

length; a carrying handle connected to said holder-body; a cover plate adapted to seat on the top of said posts; and means connected with the handle for locking said plate on its said seat.

1,561,202. MACHINE FOR FORMING CANDY. FRED E. ZAISS, Beverly Hills, Calif. Filed Sept. 28, 1923. Serial No. 665,255. 31 Claims. (Cl. 107—4.)



2. In a machine of the character described, the combination of a gang of devices for cutting a length of candy into pieces, each device comprising a pair of oppositely reciprocable cutters having edges extending longitudinally of the path of reciprocation of the cutters and adapted to roll the candy between them, and mechanism for operating the cutters in a path longitudinally of said edges.

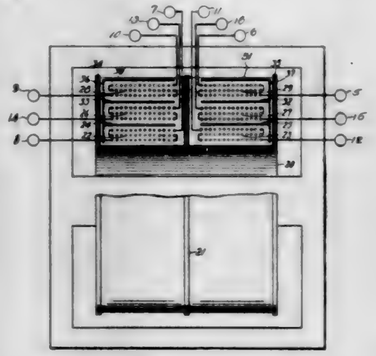
5. In a machine of the character described, the combination of a gang of devices for cutting a length of candy into pieces, each device comprising a pair of relatively reciprocable cutters movable to and from one another to gradually constrict the candy, mechanism for reciprocating the cutters, and mechanism for shifting the cutters together during the operation of the cutters.

30. In a machine of the character described, the combination of a gang of devices for cutting a length into pieces, each device comprising a pair of coacting cutters, cutter heads in which the sets of cutters are mounted, both of said heads being vertically and transversely reciprocable, mechanism for vertically reciprocating the heads in opposite directions, mechanism for shifting the heads transversely to and from one another while being vertically reciprocated, and intermittently operated carrier mechanism for holding lengths in position to be acted upon by the cutters.

1,561,203. ROLLING PIN. CLARA ANDERSON, Hayward, Calif. Filed Nov. 28, 1924. Serial No. 752,589. 2 Claims. (Cl. 107—50.)

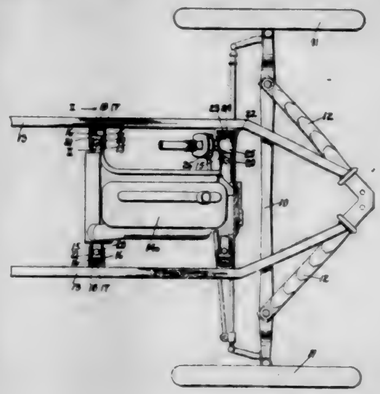
1. A hollow rolling pin comprising two sections of which the outer section is hollow and has a tapered outer surface and the inner section has a cylindrical outer surface to slide in the cylindrical inner surface of the outer section.

1,561,204. TRANSFORMER. ROLAND F. BEERS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 26, 1923. Serial No. 653,870. 4 Claims. (Cl. 175—356.)



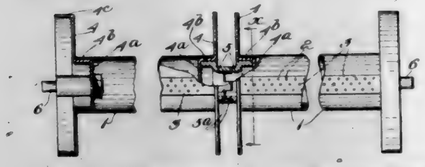
1. A transformer comprising a winding of a plurality of layers, a second winding interposed between the layers of said first winding, said first winding being wound in a plurality of sections located on different parts of the transformer core, the portions of said first winding in the plurality of sections exterior to the second winding being alternately connected with the portions of the first winding on the interior of the second winding to form the said first winding.

1,561,205. ENGINE SUPPORT. EDWARD H. BELDEN, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 7, 1920. Serial No. 371,812. 2 Claims. (Cl. 180—64.)



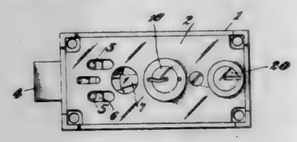
1. In combination, a frame having channel shaped side members the flanges of which project outwardly, an engine base provided with ears, and a plurality of sheet metal box-like brackets having side, base, and end portions, the end portions being at substantially right angles with respect to each other and inclined to the base portions, said brackets being adapted to be secured to the inner face of said side members and supporting said engine base in a plane below said frame.

1,561,206. YARN SPOOL. WALTER BIXBY, Boston, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1923. Serial No. 661,805. 4 Claims. (Cl. 242—123.)



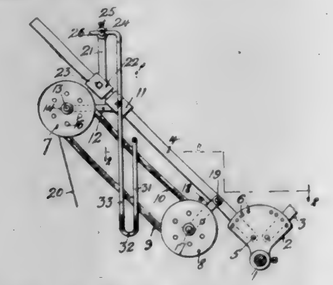
1. A yarn spool embracing a tubular barrel, opposite end heads comprising interiorly cupped disks, formed with annular shoulders adapted to fit inside the ends of the barrel and be secured thereto, the cupped interior portions of the disks being provided with axial projecting journals, one of which is provided with spaced teeth adapted to interlock with a similar journal in another spool substantially as described.

1,561,207. CHANGEABLE-COMBINATION KEY LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Jan. 21, 1925. Serial No. 3,718. 9 Claims. (Cl. 70—72.)



1. In a lock of the character described, the combination with a first tumbler and a second tumbler adjacent thereto, of a bolt bar, and a plate carried on the bolt bar in alignment with the second tumbler and in overlapping relation with said first tumbler.

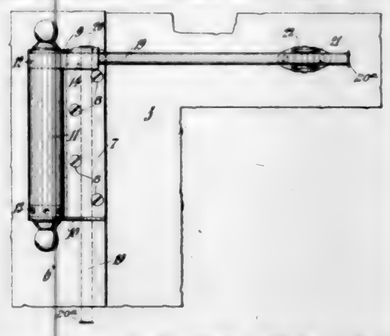
1,561,208. GUIDE FOR YARN. ISIDOR S. BLEENDES, Brooklyn, N. Y. Filed Mar. 5, 1925. Serial No. 13,301. 6 Claims. (Cl. 242—157.)



1. A guard for guiding a skein of yarn while being unwound on a pair of reels, comprising guiding members adapted to straddle the runs of the skein of yarn between the supporting reels, a cross member connecting said guiding members above the yarn, said guiding members being free or disconnected below the yarn, and means for supporting the guiding means.

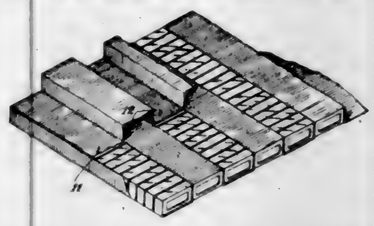
1,561,209. DOOR CLOSER. EMIL BOMMER, Brooklyn, N. Y. Filed July 1, 1924. Serial No. 723,598. 6 Claims. (Cl. 16—80.)

1. In combination, a spring held member mounted upon a door jamb for movement in a horizontal plane and having a laterally projecting arm formed with a longitudinal channel having a seat at the inner end thereof, a rod provided with an enlarged head on one end and adapted for engagement upon said seat when said rod is disposed in a horizontal position, a roller mounted on the door face with which said rod is engaged when in



horizontal position under tension whereby in the swinging movement of the door, said spring held member is rotated and resists said swinging movement of the door, said rod adapted to be moved from said horizontal position to a vertical position and the enlarged head on the end of the rod engaging the upper side of said channel arm to sustain the rod in such vertical position.

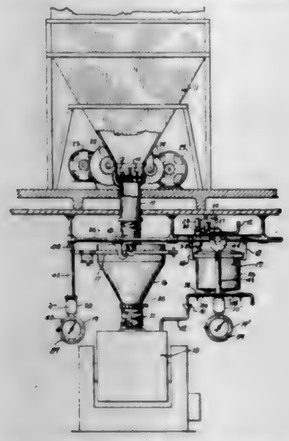
1,561,210. METHOD OF PACKING ENAMEL BRICK. JOHN FRANCIS BOOKAEM, Greenwich, Conn., assignor to American Enameled Brick & Tile Company, New York, N. Y., a Corporation of New York. Filed June 9, 1922. Serial No. 567,067. 1 Claim. (Cl. 206—46.)



The method of packing brick in cars for transport which consists in arranging the brick in superimposed horizontal courses within the car with a plurality of transverse rows of bricks in each course, and interposing between said transverse rows of bricks as the courses are successively arranged in position, a continuous sheet of cushioning material approximately of the same length and width as the interior of the car and having portions extending alternately above and beneath the transverse rows of bricks and between the opposed ends of the bricks in adjacent rows to bond said transverse rows of bricks together and prevent relative shifting movement of the individual brick or contact of the horizontally or vertically adjacent brick with each other.

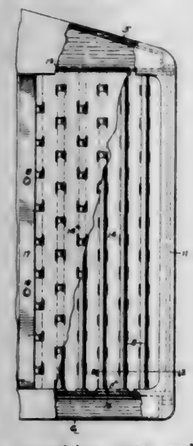
1,561,211. ELECTRICALLY-OPERATED AUTOMATIC WEIGHING MACHINE. EDWARD CHARLES BREMER and WALTER JOHN SCHAEFER, Saginaw, Mich., assignors to Baker-Perkins Company, Inc., White Plains, N. Y. Filed July 8, 1924. Serial No. 724,885. 11 Claims. (Cl. 249—61.)

1. In a weighing machine, a balance arm, a container for the material to be weighed attached to one end of said arm, a rod attached to the other end of said arm, a fixed spring member attached to the free end of the rod, electrically operated means for controlling the supply of material to said container, an electrical circuit, connections to said electrical circuit for said electrically operated means, a mercury cut-out comprising a pair of tubes each containing a column of mercury and a pair of electrically connected pins insulatedly mounted



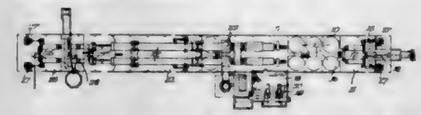
on said rod, means including said mercury cut-out for breaking said connections, a base of insulating material for said tubes, and means for adjusting the position of said base and said tubes so that the pins break contact with the mercury contained in said tubes when the balance arm is in any desired position.

1,561,212. RADIATOR. DEMPSEY C. BRITTON, Connersville, Ind. Filed July 16, 1924. Serial No. 726,284. 3 Claims. (Cl. 257—129.)



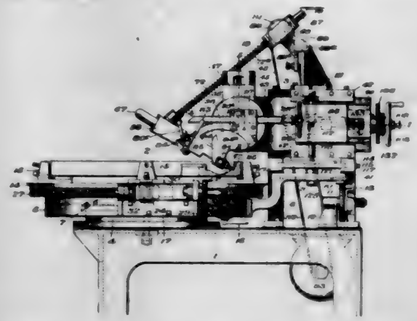
1. A radiator comprising upper and lower headers, means for drawing said headers forcibly toward each other, a plurality of rows of tubes extending across said headers from side to side of the radiator, means for establishing fluid tight joints between said tubes and said headers under the action of said drawing means, plates extending across the radiator from side to side, means carried by the confronting faces of said headers for engaging the upper and lower edges of said plates respectively and cut out elements carried by said plates having semicircular recesses in their ends, said recessed ends bearing against and engaging said tubes, as and for the purposes set forth.

1,561,213. STRAIGHT-LINE CEMENT PLANT. JOHN C. BUCKBEE, Chicago, Ill. Filed Mar. 23, 1923. Serial No. 627,050. 1 Claim. (Cl. 222—3.)



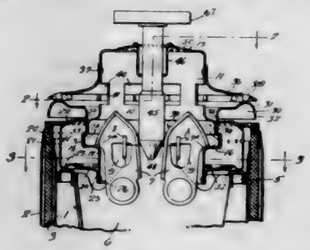
A straight-line cement plant of the class described, comprising a raw mill department, a power station, a kiln department, and a finishing department sequentially arranged and in a direct line with each other, whereby the material introduced in its raw state passes from the raw mill to the finishing department in a direct line.

1,561,214. ENGRAVING MACHINE. ALBERT A. BUSH, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 19, 1922. Serial No. 582,990. 25 Claims. (Cl. 90—13.)



1. A machine for engraving annular objects comprising in combination, an oscillatable support for the object, a movable tool fulcrumed to cut transversely of the object, means operable to move the tool to cut in an arcuate path, means operable to move the fulcrum of the tool to vary the radius of the arc of the cut, means operable to move the tool to cut in a straight path, and means common to each of said other means operable to actuate selectively either of said other means.

1,561,215. AIR-CONTROLLING MEMBER FOR OIL BURNERS. LEE S. CHADWICK, Shaker Heights, Ohio, assignor to The Cleveland Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 29, 1922. Serial No. 571,671. 6 Claims. (Cl. 158—94.)

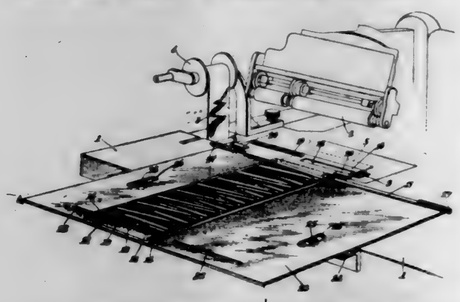


1. In an air controlling member of the character set forth, the combination of a tubular central element having a circumferential enlargement spaced upwardly a suitable distance from its lower end, a flange surrounding said element above said enlargement, the flange having an annular horizontal portion which joins at its

inner edge a sleeve that fits about and is secured to said enlargement and which joins at its outer edge an upwardly bulged portion that terminates at its outer edge in a substantially vertical depending lip, a top surrounding and secured to the central element above and in properly spaced relation to the flange, and a body surrounding the lower portion of said element and comprising a cylindrical wall spaced outwardly from the aforesaid enlargement and joining at its lower edge a bottom wall that is secured to the lower end of the central element, said bottom wall being provided with air openings.

---

1,561,216. ADDRESSOGRAPH ATTACHMENT. EDWARD COLEMAN, Tenafly, N. J. Filed Sept. 12, 1924. Serial No. 737,264. 12 Claims. (Cl. 101—47.)



1. An addressograph attachment comprising a holder for the sheet to be printed, and means adapted to control the motion of said holder to move the same in step by step fashion past the printing mechanism of an addressograph while moving said holder laterally of the printing mechanism between successive stations in its forward travel past the printing mechanism.

5. An addressograph attachment comprising a guard member adapted to overlie the printing plate of an addressograph and being laterally shiftable with regard thereto, said guard member being shaped to expose different parts of the printing plate to the sheet to be printed in different lateral positions thereof, together with means for feeding a sheet to be printed forwardly in step by step fashion past said printing plate.

---

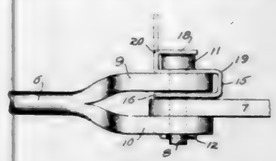
1,561,217. APPARATUS FOR CONSTRUCTING WALLS OF CONCRETE. JAMES R. COMPTON, Kewanna, Ind. Filed Mar. 24, 1925. Serial No. 17,996. 6 Claims. (Cl. 25—131.)

1. An apparatus of the kind described, comprising mold plates spaced apart, tie bolts to retain said plates at position and which said tie bolts are capable of being removed from the concrete material deposited between said plates, cross pins adapted to be disposed in the holes formed by the said tie bolts, longitudinal track bars to rest on the projecting portions of the cross pins and to support a mold plate at each side of the concrete structure, latches to secure the said track bars, and clamping means to hold the mold plates against the wall structure.

---

1,561,218. SAFETY LOCK. GEORGE T. COOKE, New York, N. Y. Filed Mar. 24, 1925. Serial No. 17,889. 1 Claim. (Cl. 85—5.)

In a device of the character described, a member forked at one end, another member extending intermediate the forked ends of the first-mentioned member, said members having registering apertures, a headed pin extending through said apertures for holding said members together, and a sheet metal safety locking device bent to embrace one forked end and extending between the



forked end and the intermediate member and also extending under the head portion of said pin, a portion of said sheet metal device being bent over the outside of said head to hold the same in place.

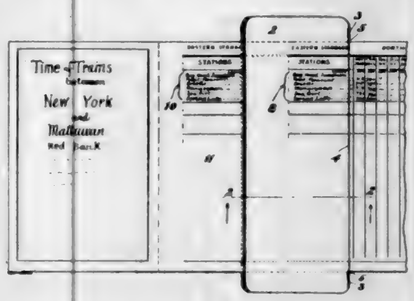
---

1,561,219. COATING FOR NITROCELLULOSE POWDER GRAINS. TENNEY L. DAVIS, Somerville, Mass. Filed Apr. 28, 1922. Serial No. 557,172. 4 Claims. (Cl. 52—5.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A nitrocellulose powder grain, and a coating on said powder grain containing, as one of its elements, urea containing only two alkyl groups symmetrically substituted in the molecule.

---

1,561,220. STATION FINDER FOR TIME TABLES. LEO ENGEL, Asbury Park, N. J. Filed Mar. 14, 1925. Serial No. 15,481. 6 Claims. (Cl. 40—65.)

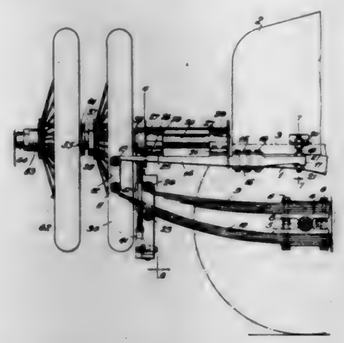


1. An article of the class described comprising a sheet having a pair of reversible flaps separated by a single fold line, a slit on said fold line through which a time table is adapted to be inserted, a list of stations on one of said flaps corresponding to a list of stations appearing on one face of the time table, and a list of stations on the other flap corresponding to a list of stations appearing on the other face of the time table.

---

1,561,221. VEHICLE CONSTRUCTION. THOMAS J. FAY, Brooklyn, N. Y. Filed Sept. 15, 1923. Serial No. 662,857. 15 Claims. (Cl. 267—9.)

1. In a construction for vehicles having a body part and a running gear part which are adapted to approach and separate relatively to one another as the vehicle travels over a roadway, a stabilizer comprising a pair of inertia elements mounted upon one of said parts for movement relative thereto and to one another and a connection between one of the elements and the other of the parts for effecting a movement of the connected element upon a relative movement between the said parts, said elements having between them a yieldable connec-



tion for causing a yielding dragging action of the element that is unconnected to said parts upon the other element.

---

1,561,222. COMPOSITE GEAR. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed June 18, 1924. Serial No. 720,776. 7 Claims. (Cl. 74—28.)

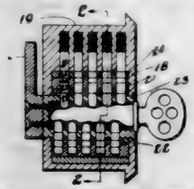
5. The method of producing gear blanks consisting in building up a rim section of layers of woven fabric impregnated with a condensation product binder, the layers being parallel to the plane of the gear and occupying the entire rim, assembling with the rim portion entirely inside the inner diameter thereof a web portion composed of small pieces of the fabric impregnated with such binder, and subjecting all of the aforesaid constituents simultaneously to the action of heat and pressure to harden and consolidate the constituents and produce a structure in which the rim and the web are united into a single unitary structure.

---

1,561,223. MASTER-KEYED LOCK. JULES A. FREMON, Leeper, Mo. Filed Nov. 10, 1921. Serial No. 514,245. 20 Claims. (Cl. 70—93.)

1. In a pin tumbler lock, a plug, a plurality of annular members surrounding said plug, a pinway through said members, pin tumblers in said pinway, and tumbler section reservoirs in different ones of said members.

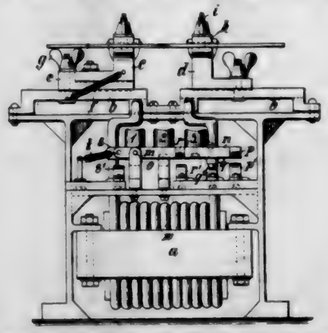
20. In a master keyed pin tumbler lock, a plug a member in which said plug is rotatable, and pin tumblers in



said plug and member, only some of which pins are operable by a master key and all of which pins are operable by a service key.

---

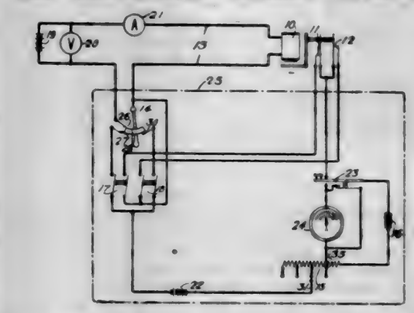
1,561,224. ELECTRICAL SOLDERING DEVICE. RICHARD FRITSCHE, Lippstadt, Germany. Filed Oct. 8, 1924. Serial No. 742,311. 3 Claims. (Cl. 219—13.)



3. An electric soldering device for wires, saw blades, steel bands and the like, comprising a transformer having a two part primary coil and a secondary coil, a centrally pivoted lever, contacts, and electrical connections, whereby when the said lever is moved in one direction it bears against predetermined contacts to close a circuit through the primary coil with the parts thereof in series, and when the said pivoted lever is moved in the opposite direction it bears against contacts to close a circuit through the primary coil with the parts thereof in parallel, and a second lever pivoted adjacent one end thereof and adapted to bear against contacts to close an electric circuit through one part only of the said primary coil.

---

1,561,225. METHOD AND MEANS FOR MEASURING TIME. JACOB R. FRY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,472. 24 Claims. (Cl. 175—183.)

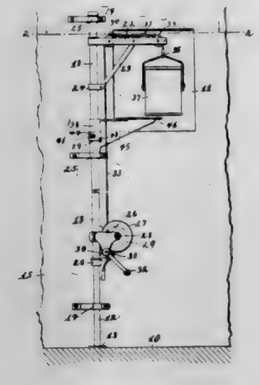


1. A method of measuring time intervals which consists in initiating the charging of a condenser at the

beginning of the energization of a relay and terminating the charging of the condenser at the operation of the relay, and measuring the charge accumulated by the condenser.

---

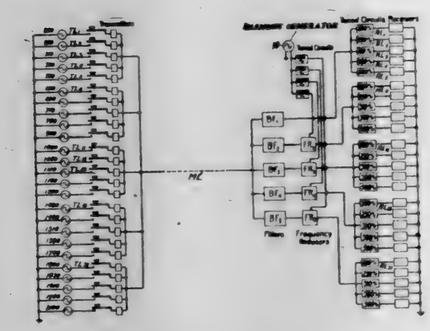
1,561,226. HOISTING APPARATUS. WALTER F. GEOGHEGAN, Great Neck, N. Y., assignor to Gillis & Geoghegan, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1924. Serial No. 687,168. 6 Claims. (Cl. 212—29.)



1. An ash-hoist comprising a vertically disposed member, a crane arm mounted thereon for swinging movement, a swinging platform supported from said member and movable independently of said crane arm, and resilient means cooperable with said platform whereby said platform and crane arm move in unison.

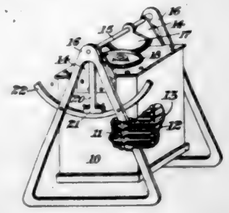
---

1,561,227. CARRIER-CURRENT SIGNALING SYSTEM. ELMER V. GRIGGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. a Corporation of New York. Filed Mar. 31, 1923. Serial No. 628,987. 5 Claims. (Cl. 178—51.)



1. The method of receiving signals in a multiplex carrier signaling system, which comprises separating the incoming signal oscillations of different carrier frequencies into groups, separating the signal oscillations of one group and impressing them upon signal receivers, reducing the frequency of the signal oscillations of each of the other groups, and separating such signal oscillations of reduced frequency and impressing them upon signal receivers.

1,561,228. CAPACITY COMPENSATING DEVICE. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Feb. 16, 1921. Serial No. 445,498. 23 Claims. (Cl. 250—40.)



1. In a wireless apparatus, an antenna operatively mounted upon a movable body, a circuit including said antenna, and means for automatically compensating for variations in capacity of said antenna circuit due to movement of said body.

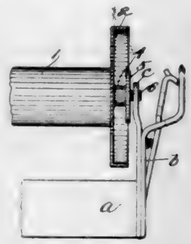
---

1,561,229. PROCESS OF MAKING GIMP. HARRY J. HAON, Newburgh, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 1, 1921. Serial No. 457,716. 2 Claims. (Cl. 154—2.)

1. The process of making gimp which comprises, applying to substantially one entire side of a relatively wide web of material and adhesive capable of adhering to itself merely under pressure when dry, drying the adhesive, cutting the web longitudinally into a plurality of relatively narrow strips, longitudinally folding the adhesive-coated side of one said strip onto itself, and applying pressure to the fold to cause said adhesive to unite the fold and the body of the strip, to provide a strip of gimp from such strip of material, initially joining the end of a second said strip to the end of said one strip by said adhesive, and folding and pressing the second strip into gimp, substantially continuously with the first pressing and folding, and simultaneously pressing the joint of the strips.

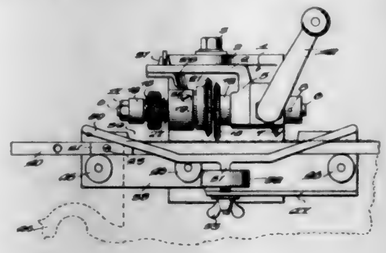
---

1,561,230. YARN SPOOL. EDGAR F. HATHAWAY, Wellesley, Mass., assignor to Shawmut Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1923. Serial No. 666,837. 8 Claims. (Cl. 242—123.)



1. A yarn spool embracing in its construction, a yarn-receiving barrel, an end head secured thereto, an axially movable journal concentrically mounted in the spool and provided near its projecting end with a lateral projection arranged outside of the head to be accessible for retracting the journal from its external bearing, substantially as described.

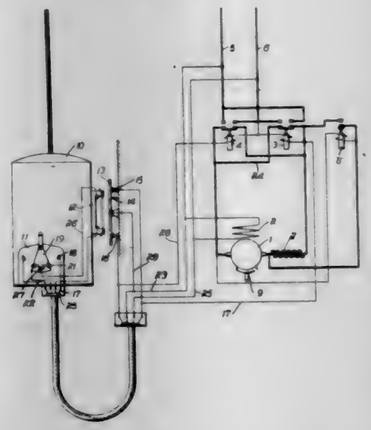
1,561,231. SAW-SHARPENING MACHINE. ALBERT J. HATZ, Prescott, Ariz. Filed Mar. 6, 1925. Serial No. 13,477. 9 Claims. (Cl. 76—37.)



1. In a saw filing machine, means for holding a saw to be sharpened and fed longitudinally of itself, a rotatable shaft extending in the general longitudinal direction of the saw, a rotary cutter fixedly secured to said shaft, a rotary member adapted to be rotated by said shaft, and means to reciprocate said rotary member longitudinally of said shaft.

---

1,561,232. ELEVATOR-CONTROL SYSTEM. RAY P. HIGBEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,483. 27 Claims. (Cl. 187—29.)

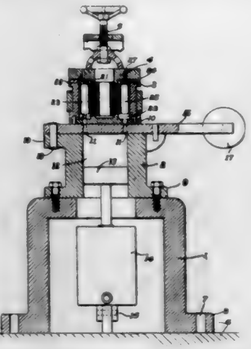


14. The combination with an elevator car and a hoisting motor therefor, of a car switch on the car, an electromagnet on said car energized when the car switch is in its "off" position and a reversing-switch in the hatchway, at each floor, controlled by said electromagnet for controlling the car to effect accurate landings whether the car overtravels or undertravels with respect to any landing.

---

1,561,233. METHOD OF DIE CASTING. SAMUEL C. HOBY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1923. Serial No. 651,222. 4 Claims. (Cl. 22—216.)

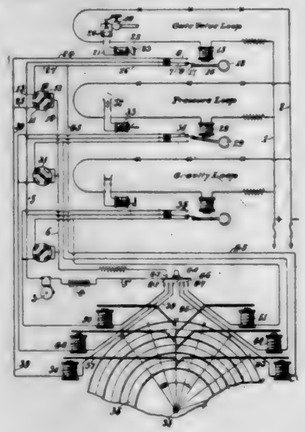
1. The method of casting metal bodies which comprises placing a laminated structure in a mold, placing a metal insert in a recess of said structure and charging said mold with molten metal under pressure to envelop



said insert and to form a casting integral with said laminated structure.

---

1,561,234. AUTOMATIC SUPERVISORY SIGNALING SYSTEM. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1918. Serial No. 254,415. 2 Claims. (Cl. 177—311.)



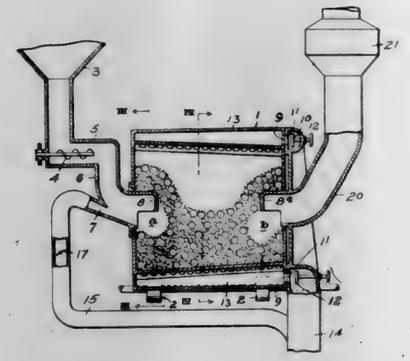
1. In a supervisory signaling system a normally closed supervisory circuit, an alarm circuit including an alarm, a recorder circuit including a recorder magnet and said alarm, means in said supervisory circuit responsive to a change in the condition of said circuit for closing said alarm circuit, and means common to both said recorder circuit and said alarm circuit for opening said alarm circuit and closing said recorder circuit.

---

1,561,235. METHOD OF AND APPARATUS FOR PULVERIZING MATERIAL. JOHN M. HOPWOOD, Dormont, Pa., assignor, by mesne assignments, to The Bonnot Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 27, 1923. Serial No. 659,537. 9 Claims. (Cl. 83—9.)

1. A pulverizing mill of the drum and ball type having an axial opening in one head, a hood arranged above said

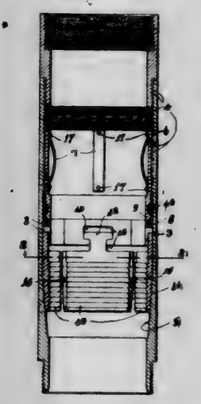
opening and projecting into the drum, means for delivering material to be reduced and air commingled into



the drum through such opening and below and into the hood, whereby the air may be utilized for moving material to be reduced into the drum.

---

1,561,236. RELEASABLE COMBINATION SOCKET. ELIJAH H. HUNT, Montebello, Calif. Filed Dec. 2, 1922. Serial No. 604,571. 9 Claims. (Cl. 294—102.)

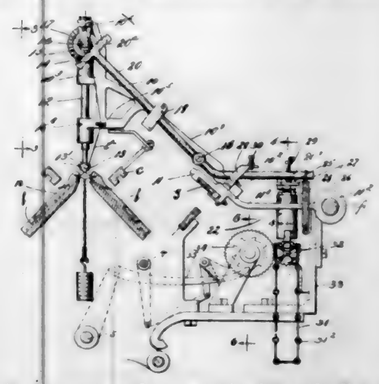


1. In a combination socket, a body member, a threaded sleeve turnably engaged with the body member, and jaw members having mens to engage with the threaded sleeve.

---

1,561,237. JACQUARD-CONTROLLED YARN CARRIER FOR KNITTING MACHINES. ADOLF HUNZIKER and SAM HIRSCH, Brooklyn, N. Y., assignors to Dubied Machinery Company, a Corporation of New York. Filed Jan. 16, 1925. Serial No. 2,826. 12 Claims. (Cl. 66—12.)

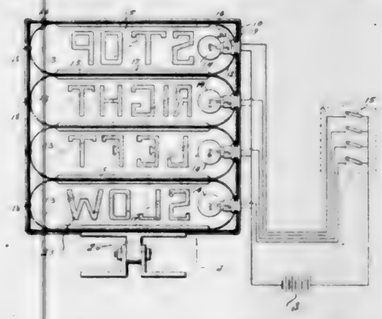
1. The combination with a knitting machine, of a yarn carrier having a plurality of yarn guide openings selectively movable to a leading position relative to a given feeding movement of said carrier and jacquard controlled means movable longitudinally of the machine and



capable of moving said yarn carrier into a leading position during said feeding movement of said carrier.

---

1,561,238. VEHICLE SIGNAL. FRANK M. IAMS, Wheeling, W. Va. Filed Mar. 14, 1923. Serial No. 625,107. 2 Claims. (Cl. 177—329.)



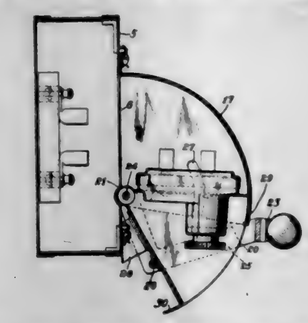
1. In a signal, a rectangular frame, a plurality of housings mounted in said frame having opposed parallel side walls and curved end walls, means engaging with one of said end walls and the adjacent wall of the frame for securing said end of the housing in position, an illuminated element support securing the opposite end of the housing in position upon the frame, and lens plates abutting the opposite ends of said housings.

---

1,561,239. SWITCH. OLIVER S. JENNINGS, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1920. Serial No. 408,881. 1 Claim. (Cl. 200—114.)

A switch mechanism comprising a housing having an opening therein, a terminal contact member within the housing, a switch block pivotally attached to the housing and movable to open and to closed positions, a switch member carried by the block to engage the terminal contact member when the block is in closed position and to be disengaged when the block is in open position, a removable fuse carried by the block and connected to the switch member, a shield covering the said block and permitting movement of the block to open position and having an opening therein through which the fuse is accessible, a cover movable with the block to close the opening in the shield when the block is in closed position and to be moved to open position to expose the block

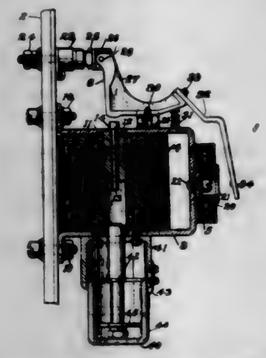
when the latter is moved to open position and an operating handle pivoted for rotation about the axis of rota-



tion of the switch block and straddling the exterior of the shield and attached to the said cover at a point remote from the said axis.

---

1,561,240. CONTROL APPARATUS. HOWARD H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 7, 1920. Serial No. 394,488. 8 Claims. (Cl. 200—94.)

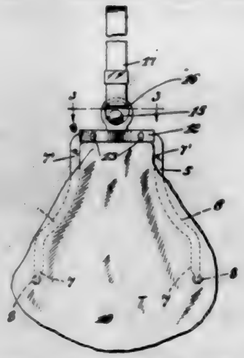


8. Control apparatus comprising, in combination, a movable contact member, resilient means disposed to bias the contact member to its closed position, a plurality of coils adapted to be energized, means disposed for operation by one of the coils to move the contact arm to its open position and means independent of said contact-member operating means cooperative with the other coil to retain the contact member in its open position.

---

1,561,241. BAG OR RECEPTACLE. DAVID KARRON, Brooklyn, N. Y. Filed July 5, 1924. Serial No. 724,528. 1 Claim. (Cl. 150—29.)

A bag or receptacle of the class described, comprising two frame members each formed from a single channel sheet metal strip, said strip being bent to provide spaced legs and the corresponding legs of said frame members being pivotally connected to each other at their extremities, and each of said frame members having an intermediate portion angularly bent to extend laterally in a plane at right angles to the plane of said legs, a head plate for each of said frame members adapted to be engaged upon the edge of the angularly bent intermediate portion of said frame member and having flanges disposed against the outer sides of said angularly bent portion, fastening means extending through said flanges and the frame member, the opposed edges of said head plates also having angular flanges thereon for abutting contact



with each other when the bag is closed, and complementary clasp elements fixed to said head plates adjacent to the latter flanges thereof.

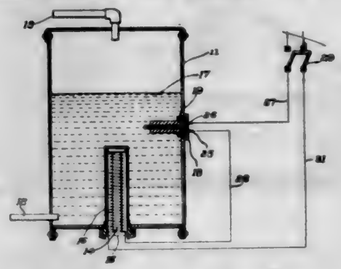
---

1,561,242. WEARING-APPAREL CASE. JOSEPH M. KAYE, Chicago, Ill., assignor to Eiseman Kaye Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1926. Serial No. 31,550. 3 Claims. (Cl. 150—53.)

1. An elongated member of flexible material adapted to be folded with its free ends overlapping in flatwise relation to form a flat case, or to be rolled upon itself to form a circular case, and withdrawable and transferable means carried by the case and adapted to cooperate with fixed means on the case to secure the same in flat or rolled condition.

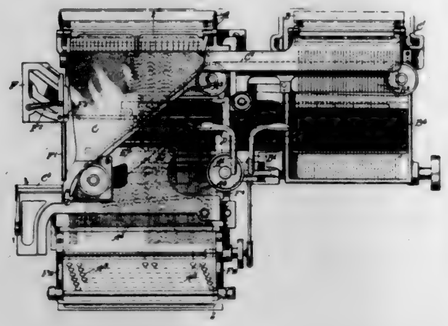
---

1,561,243. CONTROL FOR HEATING SYSTEMS. ALVIN D. KEENE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1924. Serial No. 684,528. 5 Claims. (Cl. 219—20.)



1. In an electric water heating system, the combination with a fluid container, and an electric heating element associated therewith, of a circuit-controlling means located in said container and comprising a pair of spaced terminals, and a porous member therebetween that is electrical-conducting when submerged in water.

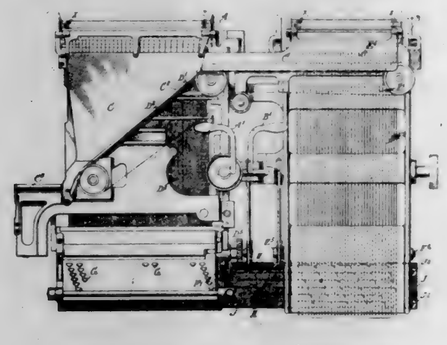
1,561,244. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,656. 30 Claims. (Cl. 199—19.)



1. In a typographical machine, the combination of a main magazine provided with escapements, an auxiliary magazine arranged at the side thereof and also provided with escapements, a set of actuating reeds adjustable into and out of operative relation to the escapements of the main magazine, a second set of actuating devices arranged in constant operative relation to the escapements of the auxiliary magazine, and a series of transverse rocking bails for connecting the corresponding actuating reeds of the two sets, the said bails being constantly connected at one end to the actuating reeds of the auxiliary magazine, and arranged at the opposite end to be directly engaged with and disengaged from the actuating reeds of the main magazine as said reeds are adjusted out of and into operative relation to their corresponding escapements, respectively.

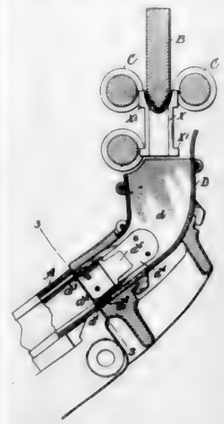
---

1,561,245. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 18, 1923. Serial No. 658,033. 17 Claims. (Cl. 199—19.)



1. In a typographical machine, the combination of two magazines arranged side by side, or in tandem, and each provided with escapements, two sets of escapement actuating devices, one for each magazine, two corresponding independent sets of power driven elements for operating said devices, a keyboard, and means for shifting the control of the appropriate finger keys of said keyboard to either set of power driven elements, as required.

1,561,246. TYPOGRAPHICAL DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Sept. 24, 1923. Serial No. 664,869. 8 Claims. (Cl. 199—33.)



1. In a typographical machine, the combination of a distributor, a magazine formed with a series of matrix channels, and intermediate magazine entrance for conducting matrices from the distributor to the magazine and provided with a series of partitions dividing it into matrix channels, and means whereby said partitions are anchored at their lower ends against lateral displacement.

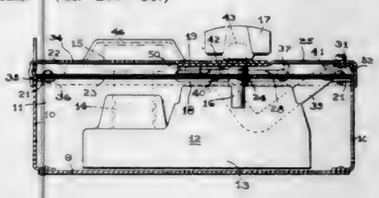
---

1,561,247. METALLIC COMPOSITION. EDWIN F. KINGSBURY, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1923. Serial No. 661,519. 2 Claims. (Cl. 75—1.)

1. A contact alloy comprising the following metals in the following proportions by weight, gold—approximately 72%, silver—approximately 26.2%, and the remainder base metal.

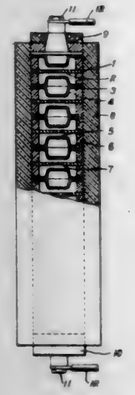
---

1,561,248. SWITCH MECHANISM. HUBERT K. KRANTZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,782. 10 Claims. (Cl. 200—50.)



1. Switch mechanism comprising a housing, a cover therefor having a transverse hinge slidable longitudinally of the housing and a slot adjacent the hinged end thereof, and a switch device within the housing having an operating handle extending through the slot and adapted to engage the cover and prevent opening movement thereof when the switch is in closed position, the said cover being adapted to move longitudinally of the housing during the opening movement thereof and to prevent closing movement of the switch when the cover is in open position.

1,561,249. SPARK-GAP LIGHTNING ARRESTER. SAMUEL B. KRAUT, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 7, 1922. Serial No. 550,277. 3 Claims. (Cl. 175—30.)



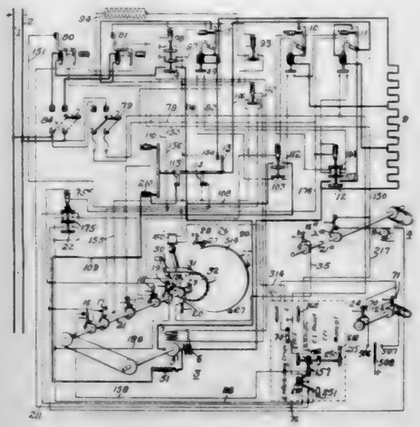
1. In a lightning-arrester, a discharge gap device comprising a flat sheet-metal electrode, two tubular insulating spacers one on each side of said flat electrode, two sheet-metal electrodes enclosing the open sides of said spacers, and having dished portions projecting towards said flat electrode to constitute discharge gaps on both sides thereof, said spacers and electrodes constituting separated chambers one on each side of said flat electrode.

---

1,561,250. CEILING-CLEANING APPARATUS. FREDERICK KUNZE, Bronx, N. Y. Filed Apr. 22, 1924. Serial No. 708,120. Renewed Oct. 8, 1925. 3 Claims. (Cl. 15—50.)

1. A ceiling cleaning apparatus comprising a platform having a pair of spaced tubular uprights, a frame having extensions movable in said uprights, rack and gear means for raising and lowering said frame, a tank mounted in said frame, a pair of cylindrical brushes journaled in the frame, the peripheries of the brushes extending above the edges of the frame and tank, and means for rotating said brushes.

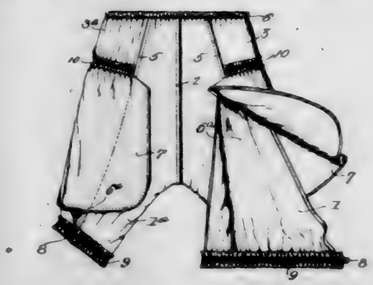
1,561,251. CONTROL SYSTEM. EDWIN S. LAMMERS, Jr., Elyria, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,392. 7 Claims. (Cl. 172—239.)



1. The combination with a machine and a controlling device therefor having two operative positions, of means for controlling said machine when said device occupies one of said positions, means for preventing the control of said machine under predetermined conditions and means for rendering said preventing means ineffective upon the operation of said device to said other position.

---

1,561,252. WOMAN'S UNDERGARMENT. BERNARD LASTER, Philadelphia, Pa. Filed Aug. 21, 1925. Serial No. 51,595. 5 Claims. (Cl. 2—224.)



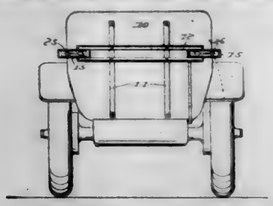
1. In a woman's bifurcated undergarment, the combination of two combined body and leg sections joined by a central seam, each of the said sections having a slit in the rear extending from the bottom to a point near the waist, releasable means for connecting the two edges of each of the slits at the bottoms thereof, and flaps attached respectively at the outer sides of the said slits and overlapping the rear parts of the respective leg portions.

---

1,561,253. DIRECTION INDICATOR. ALBERTO LAZZARI, New York, N. Y. Filed Oct. 15, 1921. Serial No. 507,905. 2 Claims. (Cl. 177—329.)

1. A device for the purpose indicated comprising a transverse frame having uprights terminally attachable

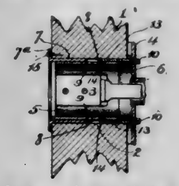
to a vehicle body on the rear end, signal boxes carried at the remote ends of the frame, and brackets on the



frame for supporting said boxes and angularly adjustable to horizontally position said boxes.

---

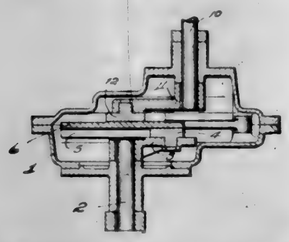
1,561,254. MOUNTING MEANS FOR LOCKS. CHARLES LEDIN, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Feb. 13, 1925. Serial No. 8,963. 6 Claims. (Cl. 70—46.)



1. Mounting devices for cylinder locks, comprising relatively adjustable tubes or shells to enter a bore in a door, one of said tubes or shells having projecting portions to pass through holes in a member of a rim-lock casing, said tube or shell also having a laterally projecting member to engage a face of the door.

---

1,561,255. WASHING MACHINE. IRVIN D. LENGEL, Reading, Pa., assignor to Knoll Manufacturing Company, Reading, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1925. Serial No. 10,773. 3 Claims. (Cl. 74—14.)

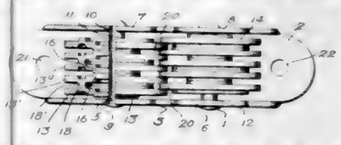


1. A mechanical movement consisting of a power shaft and a secondary shaft, a crank on the end of the power shaft and adapted to be rotated thereby, a block attached to the end of the crank, and a cross-head in which said block moves with a slidable movement, a like block also slidably located on the opposite side of the cross-head, a crank carried by the secondary shaft and attached to the last named block, and a pair of positioning links pivotally mounted at one end and at their opposite ends to opposite points of the cross head, whereby he rotation of the power shaft will cause the secondary shaft to move with an oscillatory movement.

---

1,561,256. BLADE SHARPENER. EDWARD ASHLEY LILLY, Philadelphia, Pa. Filed Jan. 17, 1923. Serial No. 613,142. 4 Claims. (Cl. 76—87.)

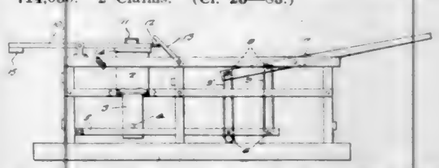
1. A blade sharpener embracing a base having side walls forming bearings, a pair of spaced apart shafts mounted in said side walls and a series of independent disks mounted up on said shafts, the disks of one



shaft overlapping the disks of another shaft, each of said disks having a projecting hub on one side and an annular flange on the other side.

---

1,561,257. MOLDING APPARATUS. LEON LIVERMONT, New Eagle, Pa. Filed May 17, 1924. Serial No. 714,050. 2 Claims. (Cl. 25—83.)



1. Apparatus for molding bricks comprising a frame, a mold body mounted thereon, a plunger mounted for movement in the mold body and having its stem projecting through the bottom of the body, a cross shaft passing through the stem of the plunger, levers fulcrumed on the bottom of the frame and having their upper edges engaging the cross shaft, a manually operable lever fulcrumed on the top of the frame, and a pair of links operatively connecting the manually operable lever with the first mentioned levers and longitudinally spaced in respect to the levers.

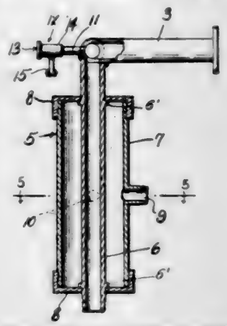
---

1,561,258. PROCESS FOR TESTING SPARK STATIONS. SIEGMUND LOEWE, Berlin, Germany. Filed July 27, 1921. Serial No. 487,821. 8 Claims. (Cl. 250—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

1. The process of testing the purity of the tone of a radio sending system, which consists in connecting a direct-current instrument to a part of the system undergoing periodical electrical changes and observing whether the direct-current instrument gives a constant reading.

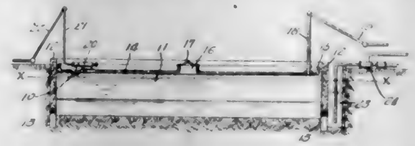
---

1,561,259. INTAKE-MANIFOLD HEATER. EDWARD M. MCDERMOTT, East Orange, N. J. Filed Mar. 17, 1922. Serial No. 544,531. 1 Claim. (Cl. 257—341.)



The combination with an intake manifold having a pipe disposed angularly thereto, of a heater drum surrounding the pipe and having inlet and outlet ports therein, caps screwed on the ends of said drum and having openings through which said pipe extends, and means on the pipe engaged by said caps to prevent longitudinal movement of the drum.

1,561,260. METHOD AND APPARATUS FOR STORING OIL. ELLIS MALLERY, Los Angeles, Calif. Filed May 8, 1923. Serial No. 637,454. 4 Claims. (Cl. 137—21.)



2. In an oil storage reservoir, the combination of: walls forming an enclosure, the greater portion of said enclosure being below ground water level; walls forming a well in open communication with the soil, said well having open communication with the lower part of said enclosure; and means for rapidly conveying water from said well.

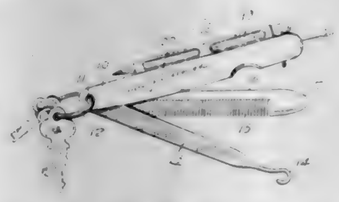
---

1,561,261. LUBRICATING COMPOUND AND ITS MANUFACTURE. ALFRED GEORGE MARSHALL, Purley, England. Filed July 17, 1923. Serial No. 652,182. 4 Claims. (Cl. 87—9.)

1. The process of manufacturing a lubricating compound which comprises heating and mixing together castor oil and a mineral oil until solution takes place, allowing the solution to cool until a separation into layers is complete, drawing off the lower layer and adding to the latter such further quantity of castor oil as will on cooling to 0° C. prevent a further separation taking place.

---

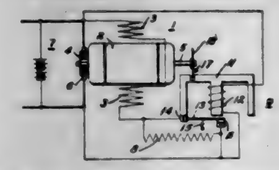
1,561,262. COMBINATION POCKET IMPLEMENT. ELSIE A. MARTIN, née Blackstun, St. Louis, Mo. Filed Feb. 17, 1921. Serial No. 445,834. 1 Claim. (Cl. 7—1.)



A combination pocket implement comprising a handle composed of an integral sheet of material folded to channel formation with abutting flanges forming a partial closure at one end, an eyelet inserted through the end opposite the abutting flanges and upset upon opposite exterior surfaces of the channel, and a plurality of instruments pivoted upon the eyelet and foldable entirely within the channel.

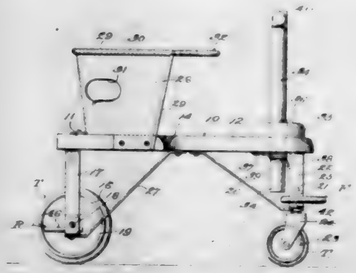
---

1,561,263. VOLTAGE REGULATOR. HAROLD A. MAXFIELD, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1921. Serial No. 502,604. 20 Claims. (Cl. 171—229.)



2. In a voltage regulator, the combination with a magnetizable core, an energizing coil and contact members controlled thereby, of means for automatically and intermittently varying the flux density of said core.

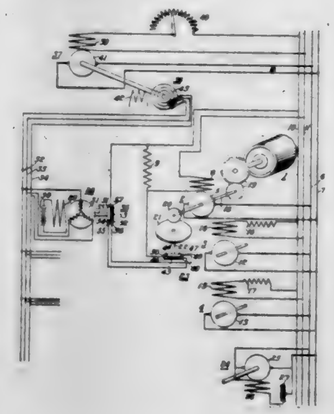
1,561,264. CHILD'S VEHICLE. EMIL M. MAYER, Newport, Ky., assignor to Newport Manufacturing Company, Newport, Ky., a Corporation of Kentucky. Filed Sept. 12, 1924. Serial No. 737,307. 4 Claims. (Cl. 155—22.)



1. In a child's vehicle, a body formed with an enlarged rear seat portion and a reduced forward portion, wheeled supporting frames for said body, a seat back and side forming member secured on and extending upwardly from the seat portion of said body, and a confining member mounted on and supported solely from said seat forming member and extending forwardly from the upper forward ends thereof and thereacross above the reduced forward portion of the body.

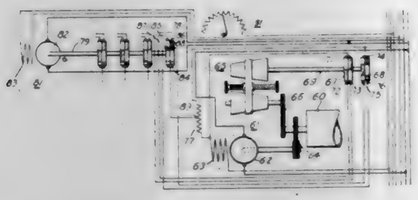
---

1,561,265. SPEED-REGULATOR SYSTEM. WILLIAM E. MENZIES, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 12, 1920. Serial No. 350,734. 7 Claims. (Cl. 172—293.)



1. In a regulator system, the combination comprising a plurality of rolls, a motor for operating each of said rolls, each of said motors having a resistor in circuit therewith, a commutator device operated by each of said motors, and a second commutator device associated with each motor, said commutator devices controlling a shunt circuit for said resistor, and means for varying the time intervals during which said resistor is included in said circuit to maintain a constant speed ratio between the motors.

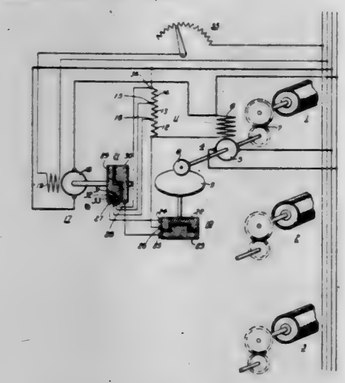
1,561,266. SPEED-REGULATOR SYSTEM. WILLIAM E. MENZIES, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1922. Serial No. 530,708. 14 Claims. (Cl. 172—293.)



1. In a regulator system, the combination with a motor comprising an armature and a field-magnet winding, a resistor divided into sections by a plurality of taps and located in the circuit of said field-magnet winding, and a commutator device operated by said motor, of a second motor, and a commutator device operated thereby, said commutator devices each having a plurality of brushes co-operating therewith and respectively connected to said taps and to opposite sides of said resistor.

---

1,561,267. SPEED-REGULATOR SYSTEM. WILLIAM E. MENZIES, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1922. Serial No. 530,709. 8 Claims. (Cl. 172—293.)

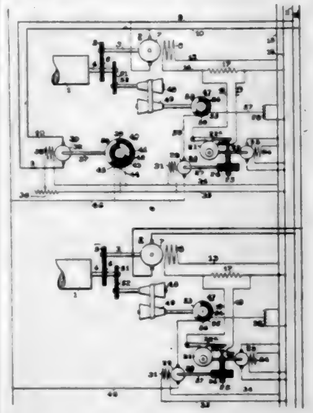


1. In a regulator system, the combination with a motor comprising an armature and a field-magnet winding, a resistor divided into sections by a plurality of taps and located in the circuit of said field-magnet winding, and a commutator device operated by said motor, of a second motor, and a commutator device operated thereby, one of said commutator devices having a plurality of brushes co-operating therewith respectively connected to said taps and to opposite terminals of said resistor.

---

1,561,268. REGULATOR SYSTEM. WILLIAM E. MENZIES, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 14, 1923. Serial No. 645,276. 9 Claims. (Cl. 172—293.)

1. In a regulator system, the combination comprising a motor having a field winding, a resistor in circuit with said field winding, means for intermittently short-circuiting said resistor, said means comprising cam-operated contact members, electroresponsive means for varying the position of one of said contact members, and means for



intermittently actuating said electroresponsive means in accordance with the speed variations of said motor.

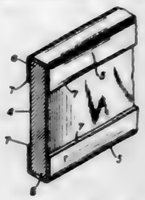
---

1,561,269. CONNECTING-ROD ADAPTER FOR INTERNAL-COMBUSTION ENGINES. CARLTON E. MILLER, Atherton, Calif. Filed May 23, 1925. Serial No. 32,277. 4 Claims. (Cl. 74—47.)

2. A connecting rod adapter for internal combustion engines comprising means introduced in the bearing of the connecting rod for lengthening the same with respect to the crank shaft and piston.

---

1,561,270. BUS BAR. DOUGLAS F. MINER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,896. 7 Claims. (Cl. 173—13.)



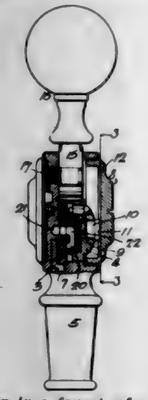
1. A conductor having a non-circular cross-section and means for compensating the skin effect thereof comprising inductive means disposed adjacent the points in the conductor normally carrying more current than other points thereof.

2. A conductor having a non-circular cross-section and magnetic means disposed adjacent the point in the conductor normally carrying more current than other points thereof for compensating the skin effect thereof.

---

1,561,271. FAUCET FOR SODA FOUNTAINS. WILLIAM MORLOK, Philadelphia, Pa., assignor to I. Fischman & Sons, a Copartnership, Philadelphia, Pa. Filed Jan. 19, 1925. Serial No. 3,376. 6 Claims. (Cl. 225—25.)

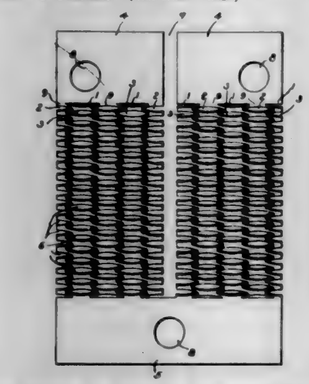
1. The combination in a faucet, of a casing having a valve seat at one side of the center of the casing; a valve mounted on the seat; and an adjustable cap enclosing the valve, said cap being concentrically mounted on the casing and arranged eccentrically in relation to the valve seat so that the cap is not affected by the movement of the valve.



6. The combination in a faucet, of a cylindrical casing having an internal screw thread at one end; a cap having an external screw thread adapted to the threads of the casing and having an internal flange, the casing having a valve seat at one side of the center of rotation of the cap; a rotating valve mounted on the seat and having a recess at its back; an adjustable pin mounted in the recess and having an elongated head bearing against the cap within the flange, the valve having a series of gear teeth in its periphery; an operating lever meshing with the gear teeth; and means for limiting the movement of the lever, the seat having two ports and the valve having a single port arranged to be moved in alignment with either of the ports of the valve seat, on turning the valve.

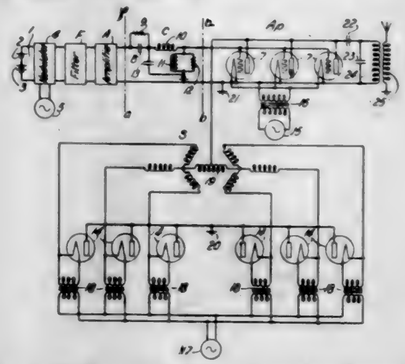
---

1,561,272. METHOD OF MAKING EXPANDED-METAL RESISTORS. HARRY C. NAGEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Mar. 7, 1919, Serial No. 281,154, Patent No. 1,396,871, dated Nov. 15, 1921. Divided and this application filed June 3, 1921. Serial No. 474,839. 5 Claims. (Cl. 164—6.5.)



1. The method of making expanded-metal resistors which comprises slitting an interior portion of a plane metal sheet between two uncut end portions, simultaneously expanding said slitted portion, then actuating said sheet in the plane thereof and repeating said operation, and finally cutting through one of said end portions and said interior portion.

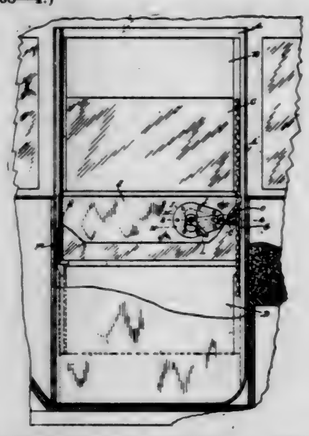
1,561,273. RADIO SYSTEM. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 751,728. 11 Claims. (Cl. 250—17.)



1. A radio transmitting system, comprising means for producing a carrier wave modulated in accordance with speech currents while suppressing the component of carrier frequency, and means for raising said wave to high power comprising an amplifier supplied with energy having an appreciable ripple component.

---

1,561,274. WINDOW-CONTROL MECHANISM. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed May 22, 1922. Serial No. 562,872. 6 Claims. (Cl. 268—4.)



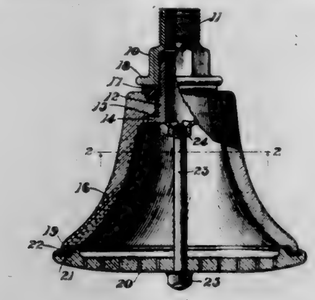
1. In a window control mechanism, a sliding window member, a rack bar carried thereby and extending in the direction of travel thereof, a pair of co-pivotal control arms having corresponding ends engaging said rack and adapted for a limited bodily movement to or from the rack, means yieldably urging said arms bodily toward the rack, a common means for rocking said arms and for alternately withdrawing the same bodily from the rack.

---

1,561,275. SHOWER HEAD. JOHN C. PAGE, Oakland, Calif, assignor to Standard Brass Casting Co., Oakland, Calif., a Corporation of California. Filed Jan. 16, 1924. Serial No. 686,555. 3 Claims. (Cl. 299—141.)

1. In a shower head the combination with a pipe fitting formed with a flange, a clamping nut adapted to be

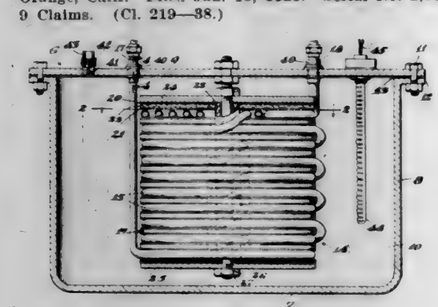
threaded on to said fitting, a porcelain member forming the bell or funnel of a shower head clamped in place between said nut and flange, a spider on said clamping nut formed with a wrench engaging boss, a perforated disk removably fitted to the base of the porcelain member, a bolt extending through the disk and connected to the



boss for clamping the disk in position, said boss also serving when the disk is removed as a means to receive a wrench for turning the clamping nut, whereby when the nut is removed from the pipe fitting the porcelain member may be instantly separated from the parts which connected it in place.

---

1,561,276. FLUID HEATER. CHARLES C. PANKRATZ, Orange, Calif. Filed Jan. 13, 1925. Serial No. 2,140. 9 Claims. (Cl. 219—38.)



3. In a fluid heater of the character described, a conduit for a fluid, a housing in which said conduit is arranged in a space of less than atmospheric pressure, said conduit constituting an electrical conductor and resistance element and having terminal portions extending through and insulated from the walls of said housing.

---

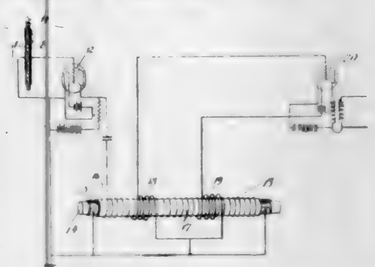
1,561,277. AUTOMATIC CONTROLLING MECHANISM FOR WATER HEATERS. HENRY J. PHILBIN, Buffalo, N. Y. Filed Nov. 3, 1922. Serial No. 598,756. 6 Claims. (Cl. 236—25.)

1. A controlling mechanism comprising a cylinder having a water inlet at its front end and a transfer port in its side, a receiver having a valved outlet and communicating with the rear end of said cylinder and adapted to communicate with the front end of said cylinder through said transfer port, a piston arranged in said cylinder and adapted during its forward movement to uncover more or less of said transfer port, a by-pass valve arranged on said piston and adapted to be opened by a differential in water pressure on the front and rear side of said piston to permit water to pass from said cylinder into said receiver, means for yieldingly holding said piston in its forward position, means for transmitting motion from said piston to a heat controlling element, and means for varying the capacity of said transfer

port comprising a shutter slidable circumferentially across said transfer port on the exterior of said cylinder, and means for shifting said shutter.

---

1,561,278. WAVE SIGNALING SYSTEM. MICHAEL I. PUPIN, Norfolk, Conn., assignor to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1918, Serial No. 215,294. Renewed Jan. 26, 1921. Serial No. 440,225. 6 Claims. (Cl. 179—171.)



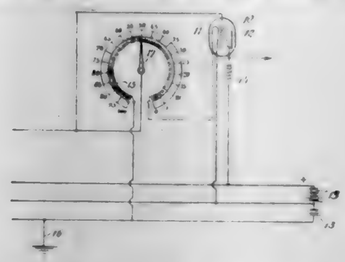
4. The combination with an input circuit carrying received currents of a predetermined frequency and other currents differing in frequency, of a helix having one terminal connected to one terminal of said input circuit, a condenser element connected to the other terminal of said input circuit and constituting, with said helix, a conductor having distributed inductance and capacity, whereby there are one or more half-waves of the predetermined frequency within the full length of the helix, a pair of coupling means in operative relation to said conductor and spaced by substantially an odd multiple of one-half wave-length of the predetermined frequency, and an output circuit operatively associated with said pair of coupling means.

---

1,561,279. EQUALIZING VACUUM-TUBE AMPLIFIER. MICHAEL I. PUPIN, Norfolk, Conn., assignor to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 23, 1918. Serial No. 268,044. 2 Claims. (Cl. 179—171.)

1. The method of measuring the amplifying power of a three-electrode vacuum tube which consists in deriving two periodic electromotive forces of opposite

phase from a common source of periodic energy, applying a measured adjustable fraction of one of said electromotive forces between the grid and cathode, applying



the other of said electromotive forces between the anode and cathode, detecting the presence of periodic current in the anode-cathode circuit, and adjusting said fraction until said current is nil.

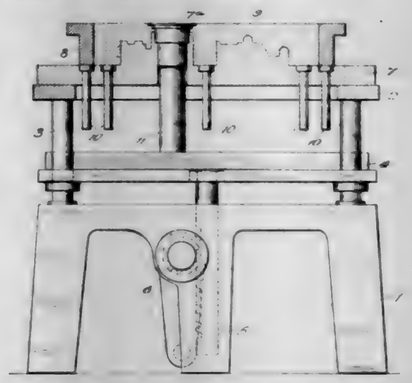
---

1,561,280. ROTARY BRUSH. RUDOLPH R. RADINER, Cleveland, Ohio. Filed Apr. 14, 1924. Serial No. 706,833. 4 Claims. (Cl. 15—181.)

1. A rotary brush comprising a set of bristle carriers clamped together, each carrier consisting of a metal ring having a set of radial tongues at its periphery, a fibre carrying member clamped between the tongues, and a set of axially directed integral spacing fingers formed at the inner edge of the ring and adapted to contact with similarly formed fingers on the next adjacent bristle carrier.

---

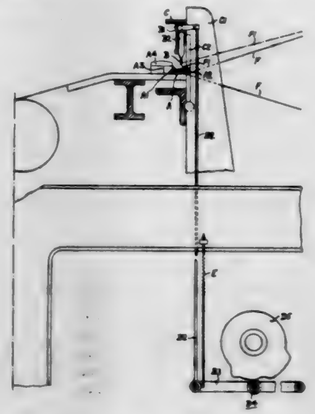
1,561,281. MOLD EJECTOR DEVICE. HERMAN RAU, Hamilton Beach, and CHARLES E. CHAPPLE, Brooklyn, N. Y., assignors to Doehler Die-Casting Co., a Corporation of New York. Filed Oct. 16, 1923. Serial No. 668,807. 5 Claims. (Cl. 22—48.)



8. A mold ejector device comprising an ejector plate and operating means therefor, a pattern supported above the ejector plate having a plurality of countersunk holes therethrough and having an upwardly removable overhanging part for casting an undercut supported in one of the said holes, a relatively long ejector pin in the hole underneath the said removable part of the pattern, and a plurality of shorter ejector pins provided with heads and supported by their heads in the countersunk holes.

---

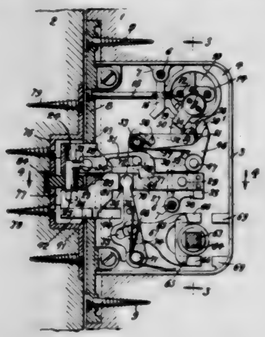
1,561,282. LOOM FOR WEAVING PILE FABRICS. RONALD LEIGHTON SANDEMAN, Bearsden, Scotland. Filed Mar. 11, 1925. Serial No. 14,792. 4 Claims. (Cl. 139—38.)



3. In looms for making pile fabrics, a sley, and loop or tuft-forming mechanism comprising a set of detent elements in combination with a set of coacting presenting elements carried by and bodily movable with the sley during the period in which the pile loops are being formed, and means including a cam for imparting to said presenting elements movements of partial rotation independent of their bodily movements to cause said presenting elements each to engage, retain and release its particular thread and place it on a detent element.

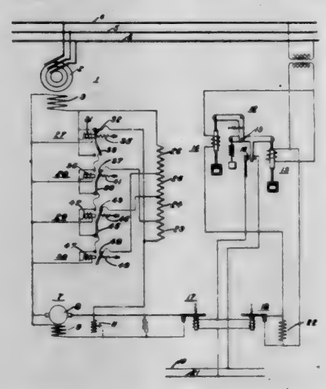
---

1,561,283. MORTISE LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segal Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 7, 1921. Serial No. 459,257. 33 Claims. (Cl 70—46.)



1. In a door lock, a keeper, a latch bolt mounted on the door and provided with a slot and an opening therein and adapted to enter said keeper and a locking bolt mounted in said opening and extending across said slot when in locked position.

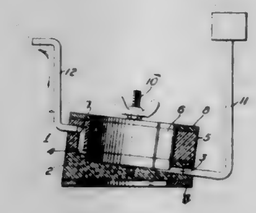
1,561,284. REGULATOR SYSTEM. HOLLIS K. SELS, Pittsburgh, and THEODORE SIMMONS, Homewood, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,356. 8 Claims. (Cl. 171—229.)



1. In a regulator system, the combination with a dynamo-electric machine, an exciter therefor, and a regulator adapted to control the operation of said machine substantially within the range of stable operation of said exciter, of means whereby said regulator may accurately control the excitation of said machine beyond said range of stable operation of said exciter, said means comprising a plurality of resistor sections in circuit with said exciter, and a plurality of electroresponsive means for controlling the circuit to said sections.

---

1,561,285. APPARATUS FOR TESTING THE RATE OF LIQUID ABSORPTION BY FABRICS OR THE LIKE. FRED A. SESLER, Providence, R. I., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1920. Serial No. 352,895. 6 Claims. (Cl. 273—51.)

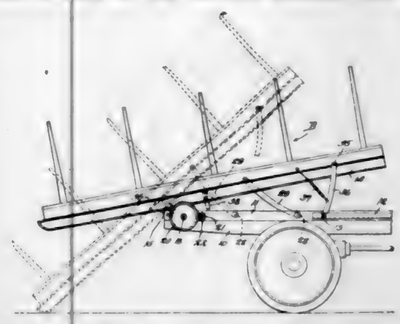


1. A device for testing the liquid absorption of fibrous sheet material comprising a substantially cylindrical receptacle having a beveled base and an opening in one end thereof, means for clamping fibrous sheet material across the opening of said receptacle, means for admitting fluid into the enclosed portion thereof and means for indicating the effective level of the liquid.

---

1,561,286. DUMPING TRUCK. CECIL A. SNYDER, Hampstead, Md., assignor of one-half to Lewis C. Caltrider, Reisterstown, Md. Filed July 11, 1925. Serial No. 42,863. 6 Claims. (Cl. 298—14.)

1. In a dump truck, a chassis, a body supported on said chassis and movable longitudinally thereof, means to move said body rearwardly of the chassis, a pair of arms actuated by said rearward movement for effecting partial checking of said rearward movement and assisting primary tilting of the body and a second pair of arms controlled by the action of the body moving means to effect further tilting of said body.



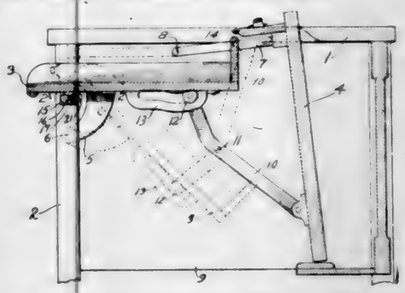
---

1,561,287. METHOD AND APPARATUS FOR DIE CASTING. MARC STERN, Brooklyn, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed Oct. 20, 1923. Serial No. 669,719. 8 Claims. (Cl. 22—200.)

1. The method of die-casting consisting in forming a core of readily disintegratable material, applying thereto a protective coating of metal, casting metal under pressure about the coated core, and then disintegrating and removing the core.

---

1,561,288. DESK STRUCTURE. JENS VAALER, Chicago, Ill., assignor to The Clemetsen Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1924. Serial No. 723,090. 13 Claims. (Cl. 45—52.)

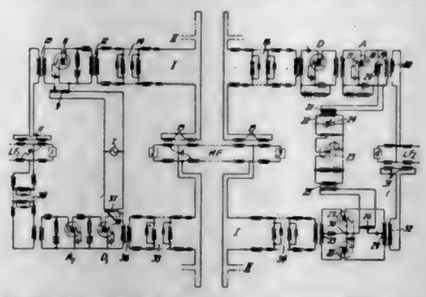


1. A desk of the character described comprising a body provided with a front rail, a table movably mounted in said body, and table-restraining means mounted on the rail and cooperating with a portion of the table contiguous to said rail to limit relative movement of the table and the body.

---

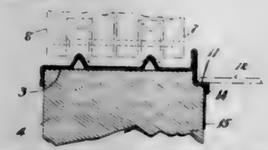
1,561,289. SIGNALING BY HIGH-FREQUENCY WAVES. HARALD J. VENNES, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 29, 1919. Serial No. 327,073. 14 Claims. (Cl. 179—15.)

8. A method of signaling between stations which comprises generating a high frequency wave at one station, modulating said wave in accordance with signals, transmitting both the modulated and unmodulated components of said signal modulated wave to a second station, selecting the unmodulated high frequency component of said signal modulated wave at said second station, controlling said selected unmodulated high frequency wave component in accordance with signals for transmission to the generating station, and transmitting such controlled wave to the generating station.



---

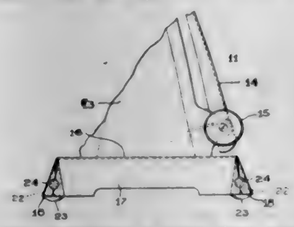
1,561,290. COVER PLATE FOR DISPLAY CASES. CHARLES E. WICKE, Mount Vernon, N. Y., assignor to A. C. Wicke Manufacturing Company, New York, N. Y., a Corporation of New York. Original application filed May 15, 1924, Serial No. 713,393. Divided and this application filed Apr. 6, 1925. Serial No. 21,157. 4 Claims. (Cl. 211—7.)



1. A combined cover plate and track for display cases, comprising an elongated strip of metal having a flat body portion, two downwardly extending flanges engaging the sides of said body portion and integral therewith, two longitudinal corrugations pressed outwardly from said flat body portion in a direction opposite to said flanges, and another longitudinal corrugation extending outwardly from adjacent the edge of said flat body portion in the same direction as said first mentioned corrugations, said first-mentioned corrugations adapted to serve as tracks and said last-mentioned corrugation adapted to serve as a stop.

---

1,561,291. TOASTER BASE AND FOOT. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1923. Serial No. 630,269. 7 Claims. (Cl. 53—5.)



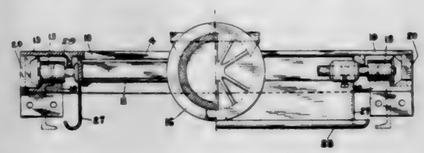
1. A base comprising a metal sheet having integral depending flanges, the end portions of said flanges being angularly disposed relatively thereto and having integral laterally-extending arcuate portions and means operatively engaging said arcuate portions for holding said flanges in proper operative position.

1,561,292. AUTOMATIC TELEPHONE SYSTEM. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany, assignor of one-fourth to Paul Kolisch, New York, N. Y. Filed Aug. 16, 1921. Serial No. 492,828. 33 Claims. (Cl. 179—18.)

1. In a telephone system, calling lines, talking conductors to which the said lines are adapted to be extended, transitorily-engaged two-way call-advancing devices, means for simultaneously advancing a plurality of calls from a plurality of said lines through said call-advancing devices to a plurality of said conductors, and connecting devices for interconnecting talking conductors to which calls have been advanced and the lines from which the calls have proceeded.

---

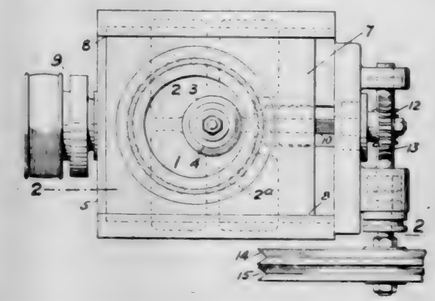
1,561,293. ASH-HOPPER CONSTRUCTION. FRANK B. ALLEN, Cleveland, Ohio, assignor, by mesne assignments, to Frank H. Dunbar. Filed Mar. 21, 1921. Serial No. 454,322. 14 Claims. (Cl. 110—171.)



9. A horizontally movable door, for a hopper having a bottom opening, provided with means for collecting liquid passing through the said opening and discharging the same at one end of the door.

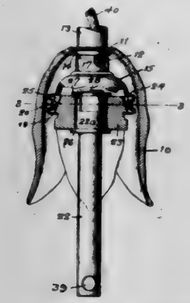
---

1,561,294. ROLLING MACHINE FOR PISTON RINGS. AMANDUS W. ALMQUIST, West Orange, N. J., assignor to Twin Piston Ring Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 2, 1923. Serial No. 672,372. 3 Claims. (Cl. 29—1.)



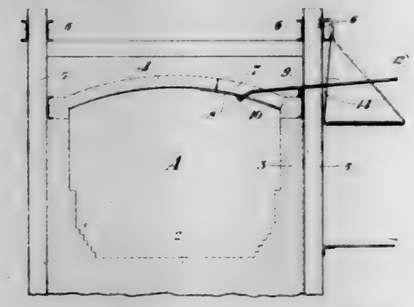
1. A rolling machine for piston rings comprising in combination a horizontal slide, a revoluble annulus mounted horizontally on the slide and adapted to receive a piston ring overlying the slide, a roller die revolubly mounted in the annulus for co-operation with the inner wall thereof and having a portion of its periphery roughened and of cam form to roll portions of the piston ring opposite to its split with different degrees of pressure, means for rotating the die, and a weight for holding the slide and annulus with a constant pressure.

1,561,295. TOOL FOR MANIPULATING SOCKET CAPS. CARL ERIC ANDERSON, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 22, 1923. Serial No. 614,190. 3 Claims. (Cl. 81—3.)



3. In a tool of the character described, a head adapted to enter a socket cap and marginally recessed to engage latching elements on the cap, said head being slotted in a plane normal to its axis, a gripping member pivoted in said slot, together with a tool stem rotatable with respect to said head, but having an operative engagement with said gripping member to displace the latter in the plane of the slot on rotation of the stem with respect to the tool head.

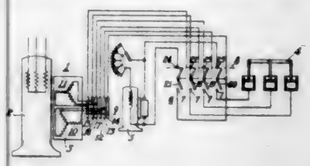
1,561,296. APPARATUS FOR REPAIRING FURNACE ROOFS. JAMES M. ANDREW, Farrell, and RALPH T. HADLEY, Sharon, Pa. Original application filed Sept. 17, 1923, Serial No. 663,153. Divided and this application filed Mar. 28, 1925. Serial No. 18,985. 2 Claims. (Cl. 25—131.5.)



1. A repair tool for supporting bricks and the like when repairing holes in self-supporting roof structures such as the roofs of open-hearth furnaces, comprising an elongated plate for supporting the bricks, said plate being curved longitudinally and a supporting lever pivotally secured to the under side of said plate, said lever being bent at right angles adjacent its pivoted end so as to project outwardly from under said plate and being of such length that it will extend without the structure being repaired.

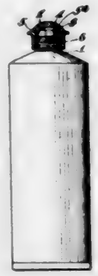
1,561,297. ALTERNATING-CURRENT ELECTRIC MOTOR. WILLIAM EDWARD MILTON AYRES, Hale, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 23, 1920. Serial No. 418,969. 6 Claims. (Cl. 172—274.)

1. A system comprising a synchronous motor having its secondary element provided with a multiple-part winding, a direct current exciter, and means for effecting a series arrangement of the winding parts for separate



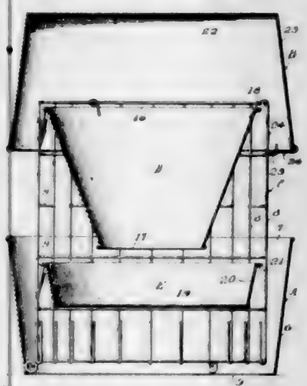
excitation during synchronous operation and a parallel arrangement of all said parts during induction operation

1,561,298. CLOSURE FOR COLLAPSIBLE TUBES. FREDERIC E. BALDWIN, Philadelphia, Pa. Filed June 6, 1925. Serial No. 35,353. 4 Claims. (Cl. 221—60.)



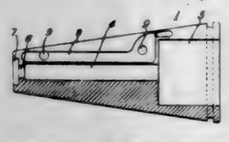
1. A closure for collapsible tubes having a threaded neck and a nozzle above the neck, and a cap adapted to engage the threaded neck, the cap being provided with a cavity adapted to encircle the nozzle and to engage the same with a rotary sliding motion, and the contacting parts between said nozzle and cap being tapered at different angles.

1,561,299. POULTRY FEEDER. VICTOR OWEN BANKS, Ortega, Fla. Filed June 13, 1925. Serial No. 36,866. 10 Claims. (Cl. 119—52.)



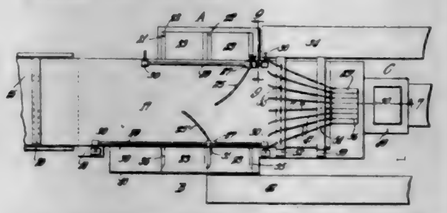
1. In a poultry feeder, the combination with the main receptacle, of a guard frame disposed therein, a vertically adjustable feed hopper disposed within said frame, a hopper pan disposed within said frame below the hopper, and cooperating means between the guard and the hopper for maintaining said hopper in any one of a plurality of vertically adjusted positions.

1,561,300. PROCESS OF AND APPARATUS FOR MOLDING. ARTHUR J. BASTIAN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1919. Serial No. 302,637. 3 Claims. (Cl. 18—42.)



1. A mold comprising a frusto-conical inner mold including a plurality of splits having radial engaging faces and provided with recesses at each end connected by a central opening, a member adapted to seat in one of said recesses to close one end of the inner mold, a member provided with an opening adjacent its center and a plurality of openings adjacent its periphery adapted to fit within the other recess, a plurality of pins adapted to be disposed within the openings adjacent the periphery of the end member and a body provided with a tapered bore adapted to receive the inner mold.

1,561,301. APPARATUS FOR PACKING CONFECTIONS AND THE LIKE. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1923. Serial No. 669,542. 4 Claims. (Cl. 226—14.)



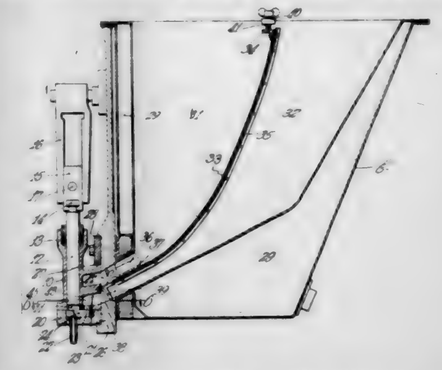
1. In combination, conveying means for confections and the like, supporting means adjacent thereto for plaques on which the candies are to be placed, deflecting means to divert confections on the conveying means toward said supporting means and assist the operator in arranging the confections on said plaques, said supporting and deflecting means being mounted for relative movement in a direction substantially parallel to that of the travel of said conveying means.

4. In combination, conveying means for confections and the like, a plurality of magazines each adapted to contain a stack of plaques, means for supporting said magazines for sliding movement in a direction substantially parallel to the path of travel of said conveying means, means for deflecting confections or the like to the uppermost plaques of the stacks in said magazines, and a delivery conveyer adjacent said magazines and to which the loaded plaques in the latter may be transferred.

1,561,302. DEPOSITOR. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 19, 1923. Serial No. 669,543. 4 Claims. (Cl. 107—1.)

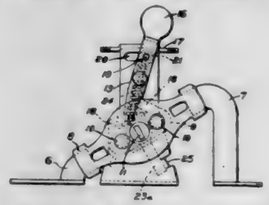
1. The combination in a depositor with the receptacle for the material to be deposited, of a flexible partition wall therefor, an abutment provided in connection with the receptacle to receive the lower end of said wall, abutments on the sides of said receptacle against which the side edges of said wall are adapted to engage, and means for applying pressure to the upper edge of said wall to cause it to engage said abutments.

4. The combination in a depositor with the receptacle for material to be deposited, said receptacle provided with an open upper end and a discharge passage in its front wall, an angle iron abutment on each side wall extending in an arc of a circle from a position adjacent said upper end to a position adjacent said passage and intermediate the upper and lower walls thereof, a thin metal partition plate extending transversely across the



receptacle, an abutment adjacent said passage to receive the lower end of said plate, and an abutment near said upper end of the receptacle for the upper end of the plate, said plate adapted to be engaged with its lower abutment, flexed to engage said curved abutments and held in flexed position by the upper abutment.

1,561,303. TUMBLER SWITCH. HAROLD G. BAXTER, Baldwin, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Jan. 8, 1921, Serial No. 435,829. Divided and this application filed Nov. 15, 1924. Serial No. 750,122. 6 Claims. (Cl. 200—67.)



1. In a snap switch, a frame, a switch member pivoted thereto, an operating lever, and a rod and spring connecting said lever and said member, said member having two projections and said lever having a projection with a lost-motion connection with the projections on said switch member.

1,561,304. BRUSH. HENRY BEATTIE BELL-IRVING, Vancouver, British Columbia, Canada. Filed Nov. 12, 1924. Serial No. 749,469. 2 Claims. (Cl. 15—135.)
